THE TOWN PHILOSOPHER.

HIS EXPERIENCE IN A NORTH-WESTERN BOOM TOWN.

THORSBY IS O. K. IN HIS EYES.

FACTS, IN THE CONTEMPLATION OF WHICH THE READER WILL FIND FOOD FOR REFLECTION.

"That article on boom towns in the last Call was simply admirable," said the Town Philosopher as he seated himself in our journalistic boudoir and took a fresh chew of tobacco. "Yes, sir! It hit the tack on the top-knot every pop. You see, it was along in the '70's sometime. I'd been teaching school for several years in Vermont, and I thought I knew it all. But I didn't. One day a slick chap who called himself J. Peter Jenks, came to our village up there in the Green Mountains and delivered a lecture which he called "The Delights of Dakota." Now, I've always been stuck on alliteration, and so I resolved that I'd spend a cool quarter to learn what the delights of Dakota were. The house was crowded with a parcel of other fools, who were bent on learning the same thing, and I tell you that fellow knew his business. He was the smoothest talker you ever heard. He pictured Dakota as a second edition of Eden before Adam wanted a dress-coat or Eve hankered for Parisian frocks, Tiffany diamonds and things. He said that the climate was superabundantly salubrious; that the soil was rich as Croesus; that the productions were infinite in their variety—even including great, golden bananas superior to the South American brand; that the Territory (it was a Territory at that time) was destined to become the seat and center of civilization, and wound up by saying that if the young men present would give up a few of their hoarded simolians and go with him he'd lead 'em to that bright and blissful land of milk, and honey and spondulicks. Unnecessary to add that we went. Yes, sir; fifteen of us were just blamed idiots enough to go. Well, our guide finally landed us out in the middle of an unending prairie. There wasn't a house in sight, saving a little shanty of a depot. Not a hillock, nor a tree, nor a bush was visible as far as the eye could reach. Nothing but prairie—prairie—prairie, from sky-line to sky-line. But we had stopped at St. Paul on our way west and laid in a supply of tents, provisions, lumber and tools, and weren't utterly forlorn. We pitched our tents, cooked our supper and next morning we began building shanties. Before we had 'em completed there came a train of prairie schooners with an editor, a banker, a doctor, a parson, a blacksmith, three merchants and seven saloon-men on board, together with five carpenters, who soon knocked up a number of clapboard structures a little better than our own. Then the town began to boom, and a whole lot of gudgeons were caught, farmers all of them from the older States. These agriculturists proceeded to plant crops, and, as it happened to be an off year they raised no end of corn, wheat and all et ceteras pertaining to that climate. Well, in less'n no time our little colony had grown to a town of 2,000 people. We called it Bannerville, and we were all doing first-rate, but the winter set in—a winter such as none of us had ever known—a winter seven months long—a winter of blizzards, snows up to our housetops, and all that sort of thing; but the last one of us had grit, so when fair weather began to smile again we took fresh heart of hope. But the drought destroyed the crops; a cyclone knocked our town into kindling-wood and we had to begin all over again. During the third year the only men who prospered were the physician and an undertaker, who knew a good thing when he saw it, and had given us the benefit of his citizenship.

"'I know this country,' he said to me

Land and Improvement Association.

THE FOUNDERS OF

THORSBY,

THE IDEAL . . . . .

NORTHERN COLONY

Of the Sunny South.

Are offering for sale City Property, Vineyard Tracts and General Farming Lands and extend a hearty welcome to all thrifty Northern people whom are desiring coming South to come and join us here in this enterprise. Over 120 families have now cast their lots in Thorsby and every excursion brings new purchasers.

Our next half rate excursion will leave Northern and Northwestern points on April 20th and May 4th and 18th.

Buy your Tickets to THORSBY, ALA., a station on the Louisville & Nashville railway, 48 miles south of Birmingham, Ala.

Send in your name and the Association will mail you their new illustrated catalogue free of charge.

ALABAMA ALL RIGHT.

Every Man Who Goes There Says It Is Entirely as Represented—Interview With Jas. L. Johnston.

(From Albert Lea, Minn. Standard, Jan, 27,' 97.)

James L. Johnston, a prominent and reliable farmer of Mansfield, recently went on one of the low-fare excursions to central Alabama and on his return was seen by a Standard reporter.

"What do you think of Alabama, Mr. Johnston?"

"I was entirely pleased with it, sir. It is a fine country, sir; as fine as I ever saw. A man might seek all his life and find none better."

"How about climate, soil and productions?"

"The climate is fine, very fine, sir. It is mild all the year, very healthy and excellent for invalids—they would get well there. The soil is rich and yields large crops of every kind and better yet, it is one of the best fruit regions of the world. Large profits are made in grape raising in the region about Thorsby where I visited, and other southern fruits flourish there. I found plenty of proof of this."

"What of Thorsby, the people and the prospects?"

"Thorsby village, which is 40 miles each way from Birmingham and Montgomery, has a good start, splendid start, sir; good buildings and more going up. I liked the people very much. They are very hospitable and enterprising; yes, sir, enterprising and prospering, too. The managers of the Concordia Improvement Company are gentlemen and perfectly reliable. I found everything exactly as they represented, the same as Mr. Gillrup told me before I went there. It was better: that's a fact. I was exceedingly well pleased and I picked me out a fine piece of land there. Prices are very reasonable both for lots and land, for acre tracts and farms, and man with a little means can buy and easily payments. There are plenty of good ies for investment, and that region ture, sir; no doubt of it. I would at once and shall do so as

You found every-

THO ALABAMA.

The Mississippi presents problems for the engineer which he has not yet been able to solve. But he will solve them, we have no doubt.

Since the war the South has spent $5,000,000 for the education of colored children. This is not a very strong proof of race hatred, is it?

The National administration is now wrestling with the problem of how to make every quart bowl hold five pints. Office-seekers will please take notice.

Occassionally a woman earns a little money "of her own." But does a man ever have any money that is "his own" in the same sense? asks the Washington Times.

A number of women got together recently and began telling about the number of proposals of marriage they had received. It developed that only one woman present had had as many as two, and she had been married twice.

With fertility which washes away from many a barn yard, and that which is washed into the fields and brooks every season, it is small wonder that some farmers can not make both ends meet. The candle is burning at both ends.

Never forget that by feeding on the farm its produce and sending it to market on the hoof considerable fertilizer is left to be returned to the land. On many a farm sheep are worth more than their cost in what theye do in making the farm productive.

It used to be the fashion to burn straw stacks. It is now doubted if we should ever burn the corn stalks from the field. Too much is burned which should be otherwise disposed of. We will be the better off when more of these "land marks" of the "good old times" are removed.

Potatoes are not much injured by the shade, and are a good crop to grow in a young orchard; and the potash, which is a good fertilizer for this crop, is also good for the trees. Corn is also a good crop to grow there, and it can be grown two or three years in succession.

It is claimed that the floods of the Mississippi will cut the cotton crop short by one and a half million bales. This would be no loss to the South in general, for it would cause an advance in price more than compensatory for the reduced product; but it would be a terrible blow to the inhabitants of the submerged territory, and would doubtless cause much suffering.

The cows, pigs and hens should clothe the family and pay taxes and grocery bills; also, in this way a man may be[illegible] on a run down farm, and by a wise and careful use of the barn manure, helped out by a little fertilizer, can keep the farm continually improving. L[illegible] him be sure his stock is good stock.

The Spanish Government has decided to avail itself of the authority granted at the last session of the Cortes to obtain advances of $20,000,000 at 5 per cent. from the Bank of Spain for the Cuban war expenses, guaranteed by the Cuban 5 per cent. bonds of 1890, and and $30,000,000 from the Hispano-Colonial and other Madrid and Barcelona banks for the expenses of the war in the Phillipine Islands. Both advances are also guaranteed by the Spanish Treasury.

At elections last year voting machines were extensively experimented with in several New York and Massachusetts cities. These experiments were carried further in four Michigan cities, including Detroit, at the elections held a few days ago. The results in all these experiments were fairly satisfactory, and in some of them beyond criticism. Where the new system did not accomplish a[illegible] was expected by the inventor[illegible] machine, the explanation w[illegible] with much show of reason [illegible] was due to the haste [illegible] machines were set up, [illegible] want of knowledge [illegible] voters of their workin[illegible] fairly said that it has [illegible]strated that by the us[illegible] votes may be cast n[illegible] and mechanically reco[illegible]puted in a manner that [illegible] and computation beyon[illegible] their correctness. It [illegible] be demonstrated that [illegible] using the machine to p[illegible] on the voters, by bringi[illegible] other than that intende[illegible] reduced to a minimum[illegible] of these experiments, [illegible] to have convinced a gre[illegible] that by the use of votin[illegible] absolutely f[illegible]

EASTER MORNING.

The springtime flood is borne along
Beneath the ever-widening sun,
Orchestral strains of woodland song
And meadow carols melt in one.
One chant of pure, ecstatic joy
That bonds of death are swept away,
That winter's hosts no more annoy,
While every path is turned to May.

The aureoled twig, the budding leaf,
The genial south wind's tropic spell,
And fresh, green fields bereft of grief,
The summer's opulence foretell.
We hear the brook's exultant flow,
As mad with joy it sweeps away;
No more the bonds of ice and snow
Rule us with their relentless sway.

Upon this sacred Easter morn—
To earth and man an equal boon—
We see the world arise, new born,
And birds and flowers with life atune.
Blow, gentle south wind, o'er the plain,
Bend sky, to-day, your deepest blue,
For sin and sorrow's saddened reign
Must yield—and all be born anew.

—Joel Benton.

AN EASTER MESSAGE.

"So you see, Soft Voice, Easter ought to be the happiest day in the year for us—the resurrection gave such hope to the world. It was the triumph of love. If the great Teacher had not loved us so unselfishly and patiently, perhaps He would not have come back from the grave.

"I can see how there is an every day lesson in this for us. Just as long as we are loving and forgiving to people, we are able to rise above the things they may do to trouble us; but when bitterness and hate control our minds, we are surely dead to the things that make us better than the brutes. Love forces resurrection from that which is lowest in our natures and Easter teaches us its power. It seems very ungrateful to be unkind at Easter time."

Winifred Gray's heart had grown very full while she talked. She seemed to have risen quite out of herself as she stood gazing thoughtfully across the prairie with an eloquent glow on her pretty young face.

Soft Voice's brown eyes watched her admiringly for a moment, then the Indian girl, glancing at the sun lowering to the Bad Lands on the Western horizon, arranged her light blanket about her shoulders and swung herself easily up on the bare back of the pinto pony she was holding by a rope halter.

"Thank you," she said, in the gentle tones that had won her her name; "you help me much."

Winifred looked at her with a pleased smile. "I'm glad if I do," she said.

"When you tell me about things I see clear," added the Indian girl.

"I have a book of beautiful things which Edna and I have been copying from books we've read, and I'll lend it to you, Soft Voice," said Winifred. "I'm sure there are many things in it that would help you. We're all coming out to the camp on inspection day, and I'll bring it then."

Soft Voice thanked her, starting the pony with a little kick in the ribs, and cantered away from Fort Strong across the plain to the Indian outpost, five miles distant, where her father was a sergeant in a troop of Cheyenne cavalry.

Winifred sat down on a raised wooden platform under one of the light cannon that stood in a row just outside of Fort Strong. She had met Soft Voice as she was coming out of school, and had walked thus far with her.

She felt a great interest in her Indian friend. Soft Voice had returned the previous fall from Carlisle, where she had been a student at the Indian school for several years. She had been forced back into the savage dress and primitive ways of her own people, but many of the deeper lessons she had learned at scho[illegible]lung to her. She endeavored [illegible] to live up to the best she k[illegible]e wanted to learn more.

A [illegible]s must be try[illegible] their darkness [illegible]hought Wini[illegible] to her that when [illegible]o choose what her [illegible]ould gladly devote [illegible] She recalled the [illegible]f Soft Voice's eyes [illegible]her explanation of [illegible] mist of missionary [illegible]wn.

[illegible]ce from where she [illegible]e prisoners, with a [illegible]em, were making a [illegible]bish that had col[illegible]t.

[illegible] afternoon in April. [illegible] little wild flowers [illegible]re and there among [illegible] By Easter Sun[illegible]ld be in still fuller [illegible] glorified the pre[illegible]

[illegible]nts disturbed Wini[illegible] and Edna Kent's [illegible] white pinafore ap[illegible]d the cannon. She [illegible]wn on the platform [illegible]and plumped herself

Edna was a slight girl with a pale, sharp-featured face shaded by long auburn curls. She looked out of sorts.

"I called you, Winny, as you were leaving school. I wanted you to wait for me," she said querulously.

"I know, but I saw Soft Voice coming from the post trader's, and I wanted to speak to her," Winifred explained.

"Oh, indeed!"

"And by the way," said Winifred, without noticing the disagreeable tone of the ejaculation, "where is the quotation book? I want it, please."

"What for?"

"I thought I would like to lend it to Soft Voice."

"Well, I like that! It's mine as much as it's yours!"

"Of course it is," said Winifred, rather impatiently, "but I don't see why I shouldn't lend it to Soft Voice for a few days."

Edna's brown eyes snapped. She was in a vexatious mood. "You've no right to lend my property without asking my permission," she declared.

"Oh, how silly!" exclaimed Winifred. "She isn't going to hurt the book."

"That isn't the question; it's your lending my things without asking me."

Winifred's lip curled. "Upon my word, Edna, you do act childishly some times!" she said.

"I don't care if I do," returned Edna. She leaned back against the cannon, and prepared to enter into a wordy contest. "You've got to say, 'Please lend me your book,' before I'll give it to you," she continued.

Winifred's face flushed darkly. "I shan't say any such thing," she said quickly.

"Well, you won't get it unless you do," Edna returned composedly.

"See if I won't," cried Winifred, springing up thoroughly provoked. "I'll go ask your mother to give it to me."

"Well, now you'll never get it!" exclaimed Edna diving into her school bag with a wicked little impulse. "I've got it here, and I'm going to"—she ran quickly toward the bonfire—"burn it up!" she finished by flinging it into the flames.

Through the cloud of anger in Winifred's eyes she watched the flutterings of a paper that had been pulled out of the bag with the blank book.

For a moment she was so completely stunned by Edna's malicious act that she could not have spoken if she had tried. Then, leaving the paper, she turned about and walked quickly back into the post.

It seemed to her that nothing could ever make her forgive Edna or like her again.

At 9 o'clock each morning guard mount call brought a little burst of school children out into the post. The next day, when Winifred came from the house she saw Edna standing before her father's quarters at the other end of the officer's row. She was looking toward Winifred.

"She's waiting for me," thought Winifred. "She'd like to make up now! That's her way. She thinks she can do anything she likes one minute, and pretend she's sorry and be friends the next. But I don't intend to have anything more to do with her."

So, instead of going around by the sidewalk, she cut across the parade ground to the north side of the garrison square, where school was held in a lower room of the soldiers' barracks. Edna glanced at her ruefully when she entered a few minutes later, just as the bell rang for school to begin.

"I'll take the compositions now, girls," Miss Allen said, during the morning. "I'll look over them between now and Monday, and decide who is to have the Colonel's prize."

There was a little murmur of "Edna" through the room, by way of conviction that she would win the prize.

Col. Crane had offered a prize for the best essay on Montana, and all the other scholars had been trying to win it. There were six children of officers, and a dozen or more from the soldiers' families.

When the compositions were brought forth, there was a little stir, and Edna was conscious of a general interest in her direction as she took out her geography. She had the gift of writing easily, and she had been working carefully at her composition for several weeks. She felt no hesitation in submitting it now, and she did hope it would win the prize, as every one expected.

She opened the geography. The paper was not there. She ran over the leaves of the book hastily, then slowly and carefully. Then she put down the book and began to rummage her desk nervously.

Suddenly she let her hands drop at her sides and uttered a dismayed exclamation. Miss Allen looked inquiringly at her.

"My composition is destroyed!" cried Edna. "I remember now I took it out of my geography yesterday and put into another book to take home and—and I threw it into the fire!" She glanced with a scarlet face at Winifred.

A cool expression came to Winifred's face. She bent her eyes on her lesson. The scholars and Miss Allen were very sorry for Edna, knowing how industriously she had worked over her composition. Miss Allen said if she could re-write it she could have until Monday to bring it in.

Edna was so much disturbed that she could not study. Miss Allen kindly let her go. She ran to the place of the bonfire, hoping to find some scraps of her work.

This was Thursday. Edna did not come to school on Friday. When Winifred passed Capt. Kent's quarters on her way to school she saw her writing at a table near the window. At noon Edna was there, and late in the afternoon she was still hard at work. Her little figure had dropped into a tired attitude so that her curls lay on the table.

Winifred's mouth compressed into a hard line. She would not allow herself to feel sorry for her friend.

She was not sorry when she looked out next morning and saw the saddle horses in front of nearly every house but Edna's.

"She doesn't deserve to go," Winifred said to herself, as she fastened on her riding cap. "She ought to have the disappointment."

It was the Saturday of the month on which Col. Crane inspected Camp Cheyenne, and several officers and ladies had made up a party to ride out with him. Winifred and Edna had been looking forward to the trip for several weeks.

Capt. Gray inquired for Edna as the gay little cavalcade rode out of Fort Strong, and Winifred replied indifferently that she believed that some school work was keeping her at home.

It was a perfect day, with a cloudless sky. The prairie turf was still soft and elastic from recent rains. The birds were calling here and there among the sage brush; the wild flowers were beautiful, but somehow in spite of all the loveliness about her, Winifred was not enjoying herself as much as she had expected.

Camp Cheyenne was in a stockade like enclosure, where, in small log houses set in rows, the Indian soldiers lived with their families. Women and children made bright groups about the doors as Col. Crane's party rode into the post.

An Indian trumpeter, with his hair in two long braids, sounded a call on his bugle, and the inspection began at once.

Winifred hooked up her habit, and accompanied Col. Crane and her father as they went from house to house, observing everything critically and giving an order here and there. The majority of the quarters were satisfactorily neat.

When the party came to Soft Voice's home, Winifred inquired for her of her mother, High Ear, who stood by her husband, displaying her good housekeeping to the officers with visible pleasure. She explained by signs that her daughter was outside of the camp.

Winifred ran out toward the place which the Indian woman had indicated and presently discovered Soft Voice's turkey red calico dress gleaming in an immense bed of white flowers. They were a variety of wild pea that grows everywhere on the Montana prairie.

She was filling a large basket of the flowers and was singing softly to herself. When Winifred came up she clasped her shapely brown hands and smiled delightedly.

"Well, Soft Voice, what are you going to do with so many flowers?" Winifred asked pleasantly.

Soft Voice's countenance clouded slightly. She hung her head and kicked pensively at the basket with her moccasined toe. After a moment she glanced up at Winifred with a shy smile.

"I'll tell you," she answered, "but perhaps you'll say I'm very bad. I'm picking them for Arrow, Brave Heart's boy. This morning he came to our tepee—house," she corrected herself, "and he took my pictures from my box—all my pictures of the Carlisle teachers and you—and he set them up and fired his arrow through them.

"He said he was a big chief, and he played to scalp in the old, dreadful way! And I came home and saw what he was doing, and my heart was bad at once. And I ran and caught him, meaning to beat him, soundly. I am very wicked, I fear. The angers come so quick! And then I thought what you had said, that only through love do we help others and my mind is to help all my people, and I was ashamed.

"I could see how like an animal I had been for a moment. I was a she-wolf, to tear him to pieces! I would have struck him, and the blows would have blazed anger in him like the fire my father strikes with his flint. I shut my eyes, and seemed to see a great black spot that was our hate darkening the beautiful Easter to-morrow. And I thought how you said, 'Easter is the love day.' So I let Arrow go gently, though he mocked at me.

"And now I shall take these flowers to his mother, and she will heap him a bed in a corner of the home, and when he lies down he will love the fragrance and go to sleep with kind thoughts, and in the morning he will be sorry to have hurt me. So we will be all peace on Easter day! Love is so good! That is what you have taught me."

Winifred's eyes shrank from Soft Voice's affectionate look. She was overcome with a sudden sense of hearty shame at her words.

"Is it possible that the gentle Indian girl has learned anything of love and forgiveness from me—unworthy me?" thought Winifred. The hard, cold feeling that had held her heart for the past three days melted away.

"It is easier to preach than to practice, I'm afraid, Soft Voice," she said sadly.

She stooped and plucked a handful of the flowers and put them in her belt with a quiet resolve.

The visitors lunched with the officers in charge of Camp Cheyenne, and then returned to Fort Strong. Winifred rode silently besides her father. As soon as they reached home she hurried off to the canon where she and Edna had quarrelled.

Stooping down she peered anxiously under the platform. Then with a relieved look, she fished out a paper with her riding-whip.

A few minutes later she opened the door of Capt. Kent's sitting-room. Edna, pale and tumbled, rose from her writing-table. She sent a downcast glance of inquiry to Winifred's face, to learn in what spirit she had come.

There was no doubt of Winifred's friendly mood. She held out the paper.

"Edna," she said, gently, "I have brought your composition. Oh, dear, I am so sorry! I saw it blow under the platform when you were throwing the book into the fire, and I was too angry to tell you until now. I'm so ashamed!"

Edna's arms were about her when she finished. "I am the one to be sorry," she sobbed. "Forgive me for being so horrible!"

"I have copied this for you," she said, after a minute, handing Winifred a new blank-book almost filled with writing. "I found the old burned stub of the quotation-book when I looked for my composition, with a good many of the references in it, so I knew where to find the things. I've been writing this instead of my composition. You can send it to Soft Voice to keep for an Easter present, if you like."

On Easter morning Winifred carried a bunch of the white wild-flowers to Edna. "Let us each keep one to press," she said. "When I look at mine I shall always think of Soft Voice's idea that anger makes an ugly blot on the world. I want to remember that."

A bugler came out of the barracks and sounded church-call on his shining bugle, and a little crowd of blue uniforms began to move toward the chapel. Winifred and Edna came out arm in arm. Each had a spray of white flowers pinned on her dress.

"We'll call it the love flower," Edna says; and it was the commonest plant on the prairie.—Youth's Companion.

Ark-Like Church Built in a Day.

It is generally accepted that it took Noah 110 years to build the Ark, says the New York World, but it took a number of carpenters at Chicago less than a day to put up a church built on the lines of the ark. On a recent Thursday night the site where the church stands was a vacant lot, but next night there was a building capable of holding 3,000 people on the ground.

The Rev. M. B. Williams, an evangelist, from Atlanta, is responsible for the construction of the building. He has been holding revival meetings in the United Presbyterian Church. One Thursday night he proposed that a church be built on the ground in Ravenswood, a suburb of the city. Inside of a few minutes $700 had been raised. The ground was donated.

By midnight a contractor had taken the job to build a church in a day. At daylight the ground had been levelled. Soon wagonloads of lumber began to arrive at the place. Scores of carpenters were put to work. The frame went up almost as if by magic.

Then the rattle of hammers followed, and the sides were seen to close in. Electric light wires were strung from a plant two miles away, and the organ and choir furniture were put in while the doors were being hung. At midnight the last nail was driven, and in a few minutes the sexton turned the key in the door, which was opened for the dedication ceremonies on the following Sunday morning.

The church will seat 3,000 people. Over 50,000 feet of lumber were handled in the twenty-four hours.

Pipe Line for Coal.

The plan of transporting coal like oil in pipes long distances is being seriously considered by some New York coal merchants. A small pipe line has already been established as an experiment, and it is believed that coal can be carried in this way quite as easily as oil and very economically. The coal is first crushed, which can be done at very slight expense, and then carried through the mains by water pressure. On reaching its destination the coal is dried and burned like any ordinary grade of fine coal. It is believed, says the New York World, that coal may be delivered in this way in very large quantities to mills and consumers at a greatly reduced expense.

Afflicted Kentucky Children.

The Bardwell (Ky.) Star has found a family in Carlisle County "remarkable for nothing in particular except an utter absence of everything that makes life worth living, and the high-sounding, long meter names of the children. One, the oldest, is named Daniel Prophesier Vancaster Bustersquire Hobbob Bush; the second is named Charles William Henry Harrison Dalton Houston Austin Bush; the third and youngest is John Cornelius Edward Vanderbilt Bush. Should there be any who outrank the Bush boys in name we would be glad to hear from them."

Germany announces [illegible]

FOR THE YOUNG FOLKS.

FORGIVENESS.

[I s]at in the evening cool
Of the heat-baked city street,
[M]using, and watching a little pair
Who played on the walk at my feet;
A boy, the elder, of strong, rough mould;
His sister, a blossom sweet.

When, just in the midst of their play,
Came an angry cry, and a blow,
That bruised the cheek of the little maid
And caused bright tears to flow,
And brought from my lips quick, sharp reproof
On the lad who had acted so.

And he stood by, sullen and hard,
While the maid soon dried her tear,
He looked at her with an angry eye;
She timidly drew near.
"Don't be cross, Johnny!" (a little sob),
"Let me fordive 'oo, dear!"

And the cloud is passed and gone,
And again in play they meet,
And the strong, rough boy wears a kinder mien,
And brighter the maiden sweet,
While a whisper has come from the heart of God
To a man, a man on the street.

ABOUT A WISE CAT.

There is in the treasury department at Washington a cat that understands English perfectly. His name is Tom, and when addressed he will quickly respond, even waking out of a sound sleep to go toward the speaker. Sometimes, to confuse him, the clerks will sing out some word or words in which the syllable Tom is emphasized, and to that he pays no attention. But let any one call, "Tom, it's dinner time!" and forthwith he walks across the room, reaches up with his paws to a tin pail, claws it down, and comes bringing it in his mouth. Tom is passionately fond of music. At the cry of "Hand organ!" he climbs to a high window seat, but at the words "Here's a dog," he slinks under a desk.

WHEN QUEEN VICTORIA WAS A GIRL.

Even queens must learn from experience. When Queen Victoria was a little girl she was once paying a visit to a nobleman, and in walking around the grounds ran on in advance of the royal party. One of the gardeners told the little princess that the path she was walking on was very "slape."

"Slape, slape!" said she, "and pray what is 'slape'?"

The man explained that "slape" meant slippery.

But, not heeding the warning, the little girl went along the path and fell down. Seeing what had happened, the nobleman said to her:

"Now, your royal highness has an explanation of the term 'slape.'"

"Yes, my lord," she replied, "I think I have. I shall never forget the word 'slape.'"

ABOUT A WONDERFUL TREE.

Did you ever hear of a tree bearing glue, towels, cloth, tinder and bread?

There is just such a wonder. It is found on the Pacific islands and it is called the bread-fruit tree.

It is about as tall as a three-story house and the branches come out straight from the tree like so many arms. They are covered with leaves nearly two feet long and deeply gashed at the edges, while half hidden among them are the fruits, growing like apples on short stems, but larger and having a thick yellow rind.

This fruit is like bread, and it is in season during eight months of the year, the natives finding a good living in it. They gather it while it is green and bake it in an oven. Scraping off its outer blackened crust they come to the loaf, which is very much like nice white bread. But it must be eaten soon after baking, else it grows harsh and loses its pleasant taste.

As for glue, it oozes from the trunk of [th]e tree and is found useful for many [pu]rposes; the leaves make excellent towels [fo]r the few natives who care to use them; [an]d from the inner bark of the tree a kind [of] coarse cloth can be made. Besides [th]is its dried blossoms are used for tinder [in] lighting fires, and the wood is in great [de]mand for building purposes.

With a few of these wonderful trees in [the] front yard housekeeping ought to be [an] easy matter.

GAME OF TRADE AND COMMERCE.

[T]he six children of the Holt and Wells [fam]ilies had for two hours or more been [play]ing with the sand and clay table in [the] Holt's warm basement. They had [ma]de the bed of the Mississippi where [tha]t river runs between Minneapolis and [St.] Paul had carefull[y] shaped the declivity [int]ended for the foundation of the Great [Fal]ls of St. Anthony, had represented the [bri]dges that span the river at this point, [and] even constructed something that [loo]ked like "the greatest flouring mill in [the] world." Then they turned the stream [fro]m the hose into the bed of the Mis[siss]ippi, and oh! how very nice it all was; [but] alas! the sand gave way before the [wa]ter, and presently it was, as Howard [sa]id, "nothing but sand and water again."

"We'll take clay next time. Let's play [so]mething else," urged Harold.

"All right," was the verdict, "what [sha]ll it be?"

"I know," said Grace. "Let's play [tra]de and commerce.'"

"Tell us how, Grace."

"First, you get something to toss," [sai]d Grace, "a knotted handkerchief, a [rub]ber ball or anything."

"Here's a grace hoop," said Jessie.

"That will do. Then you select three [play]ers one to begin the words in which [you] send the things, like C for car, cab, [etc.]; one to begin the names of the places [wh]ere you send your goods, like H for [Ha]lifax or Havre, and a third to begin [the] names of the things you send."

"We don't understand; you begin it, [G]race," said Ruth.

"Well," said Grace, "suppose we take [th]e three letters S. A. L."

plucked a handful of the flowers and put them in her belt with a quiet resolve.

The visitors lunched with the officers in charge of Camp Cheyenne, and then returned to Fort Strong. Winifred rode silently besides her father. As soon as they reached home she hurried off to the canon where she and Edna had quarrelled.

Stooping down she peered anxiously under the platform. Then with a relieved look, she fished out a paper with her riding-whip.

A few minutes later she opened the door of Capt. Kent's sitting-room. Edna, pale and tumbled, rose from her writing-table. She sent a downcast glance of inquiry to Winifred's face, to learn in what spirit she had come.

There was no doubt of Winifred's friendly mood. She held out the paper.

"Edna," she said, gently, "I have brought your composition. Oh, dear, I am so sorry! I saw it blow under the platform when you were throwing the book into the fire, and I was too angry to tell you until now. I'm so ashamed!"

Edna's arms were about her when she finished. "I am the one to be sorry," she sobbed. "Forgive me for being so horrible!"

"I have copied this for you," she said, after a minute, handing Winifred a new blank-book almost filled with writing. "I found the old burned stub of the quotation-book when I looked for my composition, with a good many of the references in it, so I knew where to find the things. I've been writing this instead of my composition. You can send it to Soft Voice to keep for an Easter present, if you like."

On Easter morning Winifred carried a bunch of the white wild-flowers to Edna. "Let us each keep one to press," she said. "When I look at mine I shall always think of Soft Voice's idea that anger makes an ugly blot on the world. I want to remember that."

A bugler came out of the barracks and sounded church-call on his shining bugle, and a little crowd of blue uniforms began to move toward the chapel. Winifred and Edna came out arm in arm. Each had a spray of white flowers pinned on her dress.

"We'll call it the love flower," Edna says; and it was the commonest plant on the prairie.—Youth's Companion.

Ark-Like Church Built in a Day.

It is generally accepted that it took Noah 110 years to build the Ark, says the New York World, but it took a number of carpenters at Chicago less than a day to put up a church built on the lines of the ark. On a recent Tuesday night the site where the church stands was a vacant lot, but next night there was a building capable of holding 3,000 people on the ground.

The Rev. M. B. Williams, an evangelist, from Atlanta, is responsible for the construction of the building. He has been holding revival meetings in the United Presbyterian Church. One Thursday night he proposed that a church be built on the ground in Ravenswood, a suburb of the city. Inside of a few minutes $700 had been raised. The ground was donated.

By midnight a contractor had taken the job to build a church in a day. At daylight the ground had been levelled. Soon wagonloads of lumber began to arrive at the place. Scores of carpenters were put to work. The frame went up almost as if by magic.

Then the rattle of hammers followed, and the sides were seen to close in. Electric light wires were strung from a plant two miles away, and the organ and choir furniture were put in while the doors were being hung. At midnight the last nail was driven, and in a few minutes the sexton turned the key in the door, which was opened for the dedication ceremonies on the following Sunday morning.

The church will seat 3,000 people. Over 50,000 feet of lumber were handled in the twenty-four hours.

Pipe Line for Coal.

The plan of transporting coal like oil in pipes long distances is being seriously considered by some New York coal merchants. A small pipe line has already been established as an experiment, and it is believed that coal can be carried in this way quite as easily as oil and very economically. The coal is first crushed, which can be done at very slight expense, and then carried through the mains by water pressure. On reaching its destination the coal is dried and burned like any ordinary grade of fine coal. It is believed, says the New York World, that coal may be delivered in this way in very large quantities to mills and consumers at a greatly reduced expense.

Afflicted Kentucky Children.

The Bardwell (Ky.) Star has found a family in Carlisle County "remarkable for nothing in particular except an utter absence of everything that makes life worth living, and the high-sounding, long meter names of the children. One, the oldest, is named Daniel Prophesier Vancaster Bustersquire Hobbob Bush; the second is named Charles William Henry Harrison Dalton Houston Austin Bush; the third and youngest is John Cornelius Edward Vanderbilt Bush. Should there be any who outrank the Bush boys in name we would be glad to hear from them."

FOR THE YOUNG FOLKS.

FORGIVENESS.

I sat in the evening cool
Of the heat-baked city street,
Musing, and watching a little pair
Who played on the walk at my feet:
A boy, the elder, of strong, rough mould;
His sister, a blossom sweet.

When, just in the midst of their play,
Came an angry cry, and a blow,
That bruised the cheek of the little maid
And caused bright tears to flow,
And brought from my lips quick, sharp reproof
On the lad who had acted so.

And he stood by, sullen and hard,
While the maid soon dried her tear,
He looked at her with an angry eye;
She timidly drew near.
"Don't be cross, Johnny!" (a little sob),
"Let me fordive 'oo, dear!"

And the cloud is passed and gone,
And again in play they meet,
And the strong, rough boy wears a kinder mien,
And brighter the maiden sweet,
While a whisper has come from the heart of God
To a man, a man on the street.

ABOUT A WISE CAT.

There is in the treasury department at Washington a cat that understands English perfectly. His name is Tom, and when addressed he will quickly respond, even waking out of a sound sleep to go toward the speaker. Sometimes, to confuse him, the clerks will sing out some word or words in which the syllable Tom is emphasized, and to that he pays no attention. But let any one call, "Tom, it's dinner time!" and forthwith he walks across the room, reaches up with his paws to a tin pail, claws it down, and comes bringing it in his mouth. Tom is passionately fond of music. At the cry of "Hand organ!" he climbs to a high window seat, but at the words "Here's a dog!" he slinks under a desk.

WHEN QUEEN VICTORIA WAS A GIRL.

Even queens must learn from experience. When Queen Victoria was a little girl she was once paying a visit to a nobleman, and in walking around the grounds ran on in advance of the royal party. One of the gardeners told the little princess that the path she was walking on was very "slape."

"Slape, slape!" said she, "and pray what is 'slape'?"

The man explained that "slape" meant slippery.

But, not heeding the warning, the little girl went along the path and fell down. Seeing what had happened, the nobleman said to her:

"Now, your royal highness has an explanation of the term 'slape.'"

"Yes, my lord," she replied, "I think I have. I shall never forget the word 'slape.'"

ABOUT A WONDERFUL TREE.

Did you ever hear of a tree bearing glue, towels, cloth, tinder and bread?

There is just such a wonder. It is found on the Pacific islands and it is called the bread-fruit tree.

It is about as tall as a three-story house and the branches come out straight from the tree like so many arms. They are covered with leaves nearly two feet long and deeply gashed at the edges, while half hidden among them are the fruits, growing like apples on short stems, but larger and having a thick yellow rind.

This fruit is like bread, and it is in season during eight months of the year, the natives finding a good living in it. They gather it while it is green and bake it in an oven. Scraping off its outer blackened crust they come to the loaf, which is very much like nice white bread. But it must be eaten soon after baking, else it grows harsh and loses its pleasant taste.

As for glue, it oozes from the trunk of the tree and is found useful for many purposes; the leaves make excellent towels for the few natives who care to use them; and from the inner bark of the tree a kind of coarse cloth can be made. Besides this its dried blossoms are used for tinder in lighting fires, and the wood is in great demand for building purposes.

With a few of these wonderful trees in the front yard housekeeping ought to be an easy matter.

GAME OF TRADE AND COMMERCE.

The six children of the Holt and Wells families had for two hours or more been playing with the sand and clay table in Mr. Holt's warm basement. They had made the bed of the Mississippi where that river runs between Minneapolis and St. Paul had carefully shaped the declivity intended for the foundation of the Great Falls of St. Anthony, had represented the bridges that span the river at this point, and even constructed something that looked like "the greatest flouring mill in the world." Then they turned the stream from the hose into the bed of the Mississippi, and oh! how very nice it all was; but, alas! the sand gave way before the water, and presently it was as Howard said, "nothing but sand and water again."

"We'll take clay next time. Let's play something else," urged Harold.

"All right," was the verdict; "what shall it be?"

"I know," said Grace. "Let's play trade and commerce."

"Tell us how, Grace."

"First, you get something to toss," said Grace, "a knotted handkerchief, a rubber ball or anything."

"Here's a grace hoop," said Jessie.

"That will do. Then you select three letters one to begin the words in which you send the things, like C for car, cab, cart; one to begin the names of the places where you send your goods, like H for Halifax or Havre, and a third to begin the names of the things you send."

"We don't understand, you begin it, Grace," said Ruth.

"Well," said Grace, "suppose we take the three letters S. A. L."

Then seating herself she directed the children to sit, forming a circle, each child two or three feet from the one next it. Then tossing the grace hoop to Ruth she said: "I send my sloop to the Andes loaded with lettuce."

Ruth tossed the hoop to Jessie, saying: "I send my schooner to Atlanta loaded with larks."

Jessie threw it to Howard, saying: "I send my skiff to Athens loaded with leopards."

Howard sent the hoop to Harold, with the message:

"I send my scow to Asia loaded with lemons."

And Harold put the hoop in Arthur's hand, saying:

"I send my ship to Africa loaded with lamps."

Arthur was a little boy who had not read or spelled very much, but he began bravely:

"I send my s'ip to—to—"

"Something beginning with A, Arthur; what begins with A, dear?"

"Me, Arthur, to me."

"That's right, to Arthur, now, loaded with—" encouraged Grace.

"Loaded wiv—"

"Something beginning with L, Artie dear."

"L, L, Arthur," shouted the impatient children.

"Loaded wiv elbows!" finished Arthur proudly, while all the children shouted with laughter.

Later when the letters had been changed to C, F and Y, the mistake was Grace's.

Howard said:

"I send my cart to Fort Snelling loaded with yokes."

Jessie received the hoop, and tossing it to Harold, said:

"I send my cab to Florida loaded with yeast."

Harold sent to Ruth, calling:

"I send my car to Finland loaded with yarn."

Ruth gave it to Grace with the message:

"I send my carriage to Frankfort loaded with yams."

Grace began rather absent mindedly:

"I send my covered cutter to the Feejee Islands loaded with—what's the letter?"

"Y-Y-Y," was answered in a chorus.

"Oh, yes, loaded with wire—"

Then everybody laughed, and Grace finished by saying:

"Wire Y's, of course."

WHY SHE MARRIED JACK.

How a Maiden's two Suitors Were Put to a Test.

"Oh, you dear thing!'" cried the girl in the empire jacket, as she stepped aboard the cars, "to think that I've only just heard of your marriage. I was away at the time, you know, and I just can't forgive you for not letting me know all about it."

"Well, you see, it was very sudden," said the young woman in the fur collarette, according to a writer in the Chicago Times-Herald. "I only knew it myself forty-eight hours before it happened. You see, I had decided to be married in the spring, anyhow, but I liked Jack and Edgar equally well, and I just couldn't decide which—"

"Yes," said the girl in the empire jacket, breathlessly, "and how did you decide?'"

"I put them both to a test," said the young woman in the fur collarette, "and Jack stood it."

"You didn't make them fight a duel, did you?"

"Mercy, no. That is away behind the times. I took each one of them for a walk and stopped before a milliner's window to—"

"You clever, original thing!"

"Yes—to admire the hats. I said to Edgar, 'I'm trying to decide which one of these suits me best. I've tried them all on and I can't decide. Give me your opinion.'"

"Yes, yes, don't stop; I'm dying to hear—"

"He pointed to one bearing a ticket which said 'Marked down to $1.49,' and said: 'That one, by all means; it would just suit the shape of your head!'"

"Oh, I see; a husband like that would tell you that you looked better in a calico frock than—"

"A silk? Exactly. I rejected him that day. The following afternoon Jack and I went for a walk."

"And stopped before the same window?"

"M'hm. Then Jack displayed his real nobility. He said: 'If I had anything to say to it, I'd select that one.' It was placarded 'The very latest, $22. I knew I'd never find such a noble creature again, so I married him two days later.

"And you were right, too. Of course the first thing he did after you were married was to buy you that hat! How awfully romantic! Of course, you haven't worn it out in two months—you must let me see it when I come to call to-morrow!"

A queer look flashed over the bride's face, and she gasped: "Why, no, he didn't. I—never once thought of that. Conductor, stop the car!"

"Why, where are you going?" asked the girl in the empire jacket.

"To Jack's office," said the bride firmly. "I—we have an errand to do before I go home!"

At the beginning of the present century the Bible could be studied by only one-fifth of the earth's population. Now it is translated into languages which makes it accessible to nine-tenths of the world's inhabitants.

NOTES AND COMMENTS

A company in Lacon, Ill., intends to raise 100,000 cats next year. The fur market is demoralized at present, but that company probably will be able to come to the scratch.

A thoughtful New York contemporary announces that "boiled alligator flesh tastes very much like veal." Those who are in straitened circumstances and are unable to obtain veal will do well to remember this substitute.

The will of C. P. Woodcock, who died on December 17, in Seattle, Wash., was admitted to probate a few days ago. After directing the payment of his debts, the testator bequeathed to his son and daughter the sum of 5 cents each.

Against Greece, which contains a population of 2,200,000, there are pitted seven European powers, containing a population of not less than 380,000,000. The Persian hosts that were arrayed against the Greek twenty-three centuries ago were far inferior in number to the European hosts now arrayed against them.

A Kansas preacher told his flock the other day that the great trouble with the Kansas farmer as a general thing is that he farms too much land too little. He assured them that a man could do better with eighty acres well tilled than with four hundred acres cultivated as most of the farms in the Sunflower State now are.

President McKinley is the only smooth-faced man in his official family. Gage and Wilson are full bearded. McKenna has a beard such as Lincoln wore and Cullom wears now. No mustache. Sherman has his face covered with a fierce stubble of gray hair that is becoming lower and thinner as the years creep on. Gary has a splendid set of waving Burnsides. Bliss has mutton-chops. Long has only a mustache; Alger a mustache and a goatee.

The long-talked of project of a railroad connecting North and South America is being revived. The negotiations between Mexico and Guatemala, which were interrupted two years ago by the strained diplomatic relations of the two countries, have been resumed, and Mexico has just appointed a commission to act with a similar commission to be appointed by Guatemala. It will be the duty of the joint commission to select a feasible route for the proposed road.

The discussion in the British House of Commons of the woman suffrage bill brings out the fact that females are largely in the majority in Great Britain and Ireland. The united kingdom holds 1,200,000 more women than men, and for this reason Sir William Harcourt supports the bill on the principle that the majority should rule. It is said by the Saturday Review, that the proposition to enfranchise Queen Victoria's female subjects is being treated by parliament with unbecoming levity, Harcourt being "the only responsible member of the house who handles the matter in a statesmanlike manner."

The average vote cast for each Congressman through the whole country is almost exactly 38,000. In twenty-four States the average is above this, and in twenty-one the average is below. Nineteen of the States in which the State average is above the general average are in the North, and five are in the South. Of the States in which the State average falls below the general average ten are in the North and eleven are in the South. The high average cast in the seven States of the Middle West is remarkable. The lowest average is 43,967 in Wisconsin and the highest is 49,096 in Illinois.

During the brief period of Mrs. McKinley's reign as lady of the White House she has received thousands of callers. Says the Washington Post society reporter: "The visitors are escorted to the library, which is on the second floor, and the first lady of the land greets them sitting in her chair with the light at her back. She is always handsomely but quietly gowned, a soft blue velvet, with a simple frill of lace at the neck and wrists, being a favorite one. At one side of her bodice is invariably pinned the handsome miniature of the President, with its frame of silver set in pearls. The callers on the President are also numbered by the thousands."

Frank Ruggles, a son of Brigadier-General Ruggles, of the Army, who recently passed his entrance examination for a cadetship at West Point, has shown his contempt of superstition in a striking manner. The "older fellows" at the Military Academy, in view of the stringent regulations against hazing, decided on another way of having a little fun with the "youngster" and made a wager with him that he did not have the nerve to go to the cemetery at midnight, descend into an open grave and bring back some evidence that he had done so. The challengers went to the cemetery in the afternoon and dropped a white handkerchief in the grave, and promptly at midnight Ruggles started on his mission. A few minutes later he returned, waving the handkerchief over his head, and after voting him the pluckiest fellow at the Academy, his companions presented to him an order for a silk hat and a blanket.

Thomas Ewing Moore, the United States commercial agent at Weimar, Germany, says that locomotion by means of electricity is gradually gaining ground in Europe, though not to the same extent as in this country. In mileage of electric railways Germany stands first. Then follow France, Gt. Britain and Ireland, Austria-Hungary, Switzerland, Servia, Russia, Belgium and Spain in the order named. Of the 111 lines operated in Europe in 1895, 91 were worked on the overhead surface system, 12 on the underground system and 8 by means of accumulators. In Germany alone the capital invested is $32,800,000. It is estimated that the number of new lines to be established this year in Europe will exceed those established in 1895. The city of Berlin, which now has only horse tramways and omnibuses, will soon introduce electric tramways. The electric tramway systems of Hamburg and Leipsic are nearly completed.

It is not generally known that all the minor coins of base metals, such as pennies and nickels, are made at the Philadelphia Mint, and that nearly 100,000,000 pennies are coined there every year. This large number is occasioned by the fact that thousands of pennies are lost annually, and the Government has some difficulty in maintaining a supply. The profit of the Government on their manufacture is large. The blanks for making them are purchased for $1 a thousand from a Cincinnati firm that produces them by contract. Blanks for nickels are obtained in the same way, costing Uncle Sam only a cent and a half apiece. Gold is coined in Philadelphia and San Francisco. Not enough of it comes into the mint at New Orleans to make the coinage of it worth while. Gold pieces are the only coins of the United States which are worth their face value intrinsically. A double eagle contains $20 worth of gold without counting the one-tenth part copper.

Of all the diplomats in the service of Russia there are few who have managed to achieve a greater reputation for perspicacity and skill than Count Cassini, who for the past five years has been officiating as Muscovite envoy at Pekin. It is thanks to him that without war and without the expenditure of any treasure the czar has reaped all the benefits—aye, and more—of the victory achieved in China by the armies of the mikado. To-day it is Russia that controls everything at Pekin, the emperor of China being reduced almost to a state of vassalage of the czar. All this has been brought about by Count Cassini, and he has been assisted in his so successful negotiations by his niece, a lovely girl of about 17 years of age. Possessed of a remarkable gift of languages she has attained an extraordinary mastery over the Chinese tongue, and has for the past three years, that is, during the most critical time, officiated as secretary of legation, and more particularly as interpreter to her uncle. Russia having always offered a field for female diplomacy, the young Countess Cassini bids fair to have a great future before her.

Perhaps persons will not be so eager to have their anatomies photographed by the Rontgen ray process, just for the fun of the thing, when they consider the experience of Dr. Waymouth Reid, professor of physiology in University College, Dublin. Having to deliver a lecture, Prof. Reid took a photograph of his own body through the clothing in order to exhibit the contents of his pockets as well as the skeletal structure. The exposure lasted an hour and a half, the Crookes tube being three inches from his waistcoat. Shortly after the exposure marked erythema of the skin of the chest and abdomen was noted, and also of the skin of the back where the rays made their exit. In seventeen days the skin began to peel off, leaving a raw surface. It was not apparent that any of the organs beneath the skin were injuriously affected, but it was obvious that the affected skin did not stop all of the injurious rays, as they passed through the body and affected the skin of the back in a similar manner. It is a curious fact that though the rays passed in close proximity to the nerve terminals there was no accompanying sensation.

Quarantining Plants.

The Secretary of Agriculture, under the provisions of this bill, will be authorized, at the expense of the owner or owners, to place and retain in quarantine all nursery stock and fruit imported into the United States or shipped from one State to another, and at such ports as he may designate for such purpose, and under such conditions as he may appoint inspectors for examining such trees, plants, etc., for the purpose of ascertaining whether they are affected by any injurious insect or disease the importation of which will be prejudicial to the fruit interests of the United States. The bill has been referred to the Committee on Agriculture.

Largest Bridge in the World.

The longest bridge in the world is said to be that which spans an inlet of the Yellow Sea, near the city of Sangang, in China. It is a stone structure five and a quarter miles in length. The number of piers is 300, and each one is ornamented with the marble figure of a lion three times life size. The top of the roadway is sixty-four feet above the water level. The bridge, it is said, is 300 years old and its masonry is still in a state of excellent preservation.

A duck shot by Edward Jackson of Atchison, Kan., had a nine inch fish in its esophagus.

JOKER'S BUDGET.

Jests and Yarns by Funny Men of the Press.

ON TIME.

When asked to pay, but this reply
Tom's creditor can get:
"If 'time is money,' why can't I
Take time to pay my debt?"

CLEVER, BUT UNKIND.

She—There was no one at home last night, so I just sat and sang to the clock.

He—What were you trying to do? Kill time?

HIS OBJECTION.

Dora—He said there was one thing about me he didn't like.

Cora—What was that?

"Another man's arm."

THE TOUCH OF GENIUS.

"What makes you think Jimmy will grow up to be an impressionist painter?"

"He can't write a word without smearing it dreadfully."

MERCILESS.

"If you had half the nerve this tooth has," said the dentist to the quivering wretch in the chair, "you could have this all over in about five seconds."

GUESSED IT.

Spriggins—I heard such a good conundrum the other day. It was: "Can you define a bore in one letter?"

Wilkinson—U.—

HER REASON.

Mrs. Talkerly—So you are going to marry Colonel Lardly, my dear. And I hear you love the ground he walks on.

Miss Sharpleigh—Yes; it belongs to him.

AN UNRELIABLE SOURCE.

He—You musn't believe everything you hear about me.

She—Of course not. I never heard anything about you but what you tell me yourself.

RETURN OF THE NATIVE.

"Did Slapdash come home because he had had enough of Texas?"

From the way in which he was hammered up I think he came home because Texas had had enough of him."

TROUBLE IN THE HOUSEHOLD.

"We had a row at our house yesterday."

"What was the matter?"

"The cook broke my china cup, so she went downtown and bought me another, which was inscribed: 'To One I Love.'"

TRUE TO HIS COLORS.

Kind Old Lady—Give you a drink of water? Why, you look as if you needed a bath, you are so dirty.

Casey de Kidder—Well, yer see, loidy, I wuz always de black sheep of our family.

VARYING TERMS.

Master—"Well, Tommy, you were not present yesterday. Were you detained at home in consequence of the inclemency of the weather?"

Tommy—"No, sir; 'cause of the rain."

UNREASONABLE.

Boarder—This egg is not quite fresh, madam."

Landlady—Oh, of course not. You people will be demanding spring chickens before another month.

A HOPELESS CASE.

Mack—Why did Mrs. Strongmind's relatives contest her will?

Wyld—They claim she was unduly influenced by her husband.

They couldn't have known her very well.

ONE IN A CROWD CUTS NO FIGURE.

"I came to ask your consent to marry your daughter," said the young man with a trembling voice.

"You're a fool, sir!" shouted the irate father.

"Well, really, I didn't think you'd object to having one more in the family, sir."

SHE STOOD CORRECTED.

"Have you any bicycle bloomers?" asked the New York girl, entering a Boston store.

"No, miss," replied the salesman, adjusting his glasses; "I was not aware that bicycles wore bloomers. I can show you some nice patterns for ladies who ride bicycles."

WHAT MABEL THOUGHT.

Mabel was making her first visit to her grand-father's farm and her mother was introducing her to the mysteries of the barnyard. She was enchanted with the big brindle cow that stood by the gate quietly chewing its cud, and when it stuck out its nose and bawled loudly the little girl clapped her hands with delight.

"Oh, mamma!" she cried, "listen to that cow blow its horns."

TWO PHASES.

"Who is that sprightly girl over there?"

"That's Miss Binks, who took part in the amateur theatricals last night."

"And who are those nineteen tired-looking women near her?"

"Those are her mother, sisters, aunts and cousins who helped her get ready."

ON THE TRACK.

A man was sent to a neighboring village with a live hare in a basket. Before starting, he had the direction of the road given to him on a piece of paper. As he was going along he thought he'd have a look inside.

No sooner had he raised the lid than out jumped the hare.

"Never mind, old chap," exclaimed the man, "I've got your direction."

SELF-HELP.

"Yes," said Senator Sorghum, "I must say that the success of the man you have just mentioned was hardly in keeping with the—er—rather limited educational advantages which he had in early life."

"You mean he is a self made man."

"Not exactly—although it is alleged that the first time he was elected to office as many as four hundred of the ballots counted for him were cast with his own hand."

CHILTON COUNTY CALL

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

THE CONVICT QUESTION.

Thanks to the deities or destinies—who or which—preside over this peregrinating planet of dust and dornicks, there are certain truths so tumultuous that every ear must hear them as they thunder on. One of these truths tells us that even the poor, wretched, chained, over-worked and half-starved convicts, of whatever color or whatever crime, have certain rights that the purest, wealthiest, proudest and most powerful of us all are bound to respect. Therefore, the Call will forever set a face of flint against any hell-on-earth like Coalburg.

Jefferson county, our county, every county in Alabama, needs good roads. Therefore, let every one of the poor uniformed devils at Coalburg be turned out into God's sunshine; let them have the proper implements put in their hands and let them be set to work constructing turnpikes of the most improved and approved kind.

That's the Call's ticket, and that's the ticket, too, of every man we believes in progress; of every man who believes in the upbuilding and betterment of our Commonwealth; of every man who has a heart that beats in sympathy with a suffering and stricken human being, no matter how degraded and demoniac that human being may be.

No man is what he makes himself—all the optimistic lies of the centuries to the contrary notwithstanding. Every man is just what his ancestry, his antecedents and his environments have made him. This is one of the eternal verities that can not be climbed over, crowded under nor tunneled through.

Therefore, again, we protest against Coalburg and every other burg in creation of its kind.

Let Alabama utilize its convicts in a way that will uplift them while they adorn it with good roads. And when this is done not only by our own State, but by every other, our country

---

Eleven patriotic Greeks left Birmingham Wednesday night for New York, from whence they will sail for Greece, in response to King George's call for men for the Greek army. Several of them were business men. It is expected that others will follow in a few days.

George Smith, who appropriated Mr. Tom Segrest's horse, carrying it to Montgomery and selling it, and getting drunk and being arrested all in the same day, was sent off for five years. —Tuskegee Reporter.

When Fitzsimmons, or some other strong man, shows his wonderful strength he is applauded by the people, but this poor fellow carried a horse all the way to Montgomery and got five years. Well, perhaps he deserved it for his name is Smith.

PETIT JURORS.

The following are the petit jurors drawn for the first week of the Spring term of circuit court, held at Clanton, Monday May 10, for Chilton county.

Beat 1.—W. R. Lowery, B. F. Robinson.

Beat 2.—J. Alex Moore, S. D. Posey, W. G. Atkinson.

Beat 3.—W. J. Sorrell, W. P. White, Y. O. Freeman, J. S. Jones, W. M. Merchant, Calvin Jones, B. F. Franklin.

Beat 4.—W. M. Wilson, J. N. Maddox, A. A. Ayers.

Beat 5.—John Vinson, Curtis Moore,

Beat 6.—A. T. Hatchcock.

Beat 7.—D. C. Savage, W. D. Lawrence, T. L. Elam.

Beat 8.—J. G. Gay, Isaiah Friday, C. C. Ray, T. D. Parnell, R. T. Carroll.

Beat 9.—W. R. Darden, J. R. Swinford, T. W. Childress, W. P. Murrah.

For criminal cases second week of court, commencing May 17:

Beat 1.—Lewis Littleton.

Beat 2.—J. P. Cast, Allison Sims.

Beat 3.—R. J. Williams, P. G. Hudman, W. R. Baker, J. J. Culp, Lee Foshee, P H. Headley, Martin Franklin, E. J. Hayes.

Beat 4.—J. W. Littlejohn, W. H. Wright, H. E. Culver.

Beat 5.—A. J. Duncan, T. M. Pyron, W. J. Gray, D. S. Robinson.

Beat 6.—Elijah Hadley, T. J. Billingsley, A. J. Gray, G. T. Brigance, A. C. Pool.

Beat 7.—Milton Lawrence, W. Y. Chilton County Call Galley Five. Atchinson, J. S. Bearden.

Beat 8.—D. M. Martin, D. H. Mitch-

Beat 9.—Lee Pate, J. W. Hayes.

GRAND JURY.

Beat 1.—James Vines, A. N. Glas-cock.

Beat 2.—I. N. Langston, John Lowery, Sr., C. L. Hayes.

Beat 3.—Jasper Giles, T. J. Lemon.

Beat 4.—W. H. Merritt, E. H. Parrish, W. J. Mullins.

Beat 5.—N. J. Calloway, P. C. Dennis.

Beat 6.—W. C. Davis, J. R. Brodhead.

Beat 7.—W. E. Bearden, J. W. Adams, J. N. Gentry.

Beat 8.—G. W. Fox.

Beat 9.—D. C. Honeycutt, Samuel Pate, S. E. Cleckler.

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

The Agricultural School for the Fifth District will be located at Wetumpka. Alexander City offered a committee at Montgomery, whose duty it was to decide the location, $5,100 in cash together with 80 acres of land and a school building. Dadeville offered $5,000, 80 acres of land and buildings, and Wetumpka got the plum for an offer of $7,400, 80 acres of land and buildings.

In a half column article the Centreville County Press gives some good advice to land owners who have it in their power to benefit that place if they will take heed, and also gives Caleria business men a slap in the eye in the same article.

It is claimed that W. P. Oden, of Sylacauga, has a dog that is so near human that it will beg a chew of tobacco, and chews and shoots a quid at the store in a country post-office the same as any old codged would.

The Alabama Home, printed at Anniston, came to our desk this week chokful of good pointers to prospective settlers in Anniston and Calhoun county, as well as in the state in general. That's right, brother! Whoop her up!

The Eutaw Mirror man is laid up, and claims he is only able to take a little physic and eat a little. He is now on a level with the average country editor—eats but little and lives on what is owing him.

A farmer who has corn in his crib and meat in the smoke-house, is independent of the world, but the farmer who has a lot of cotton and is unable to dispose of it is not.—Goodwater Advocate.

Notice is given in the Goodwater Advocate that an application will be made to the Governor, on May 10, for the pardon of Robert Berry who was convicted of forgery in the summer of 1895.

John Hendrix, a type-sticker in the Taledega News-Reporter office, stuck his hand with a piece of glass. If John will be careful hereafter and only stick in his stick he won't get stuck.

Anniston suffered a big loss by fire last Thursday morning, amounting to about $35,000. The Palace Shoe Store and Burns and Hussey's stocks were completely ruined.

E. S. Smith called on Thursday and "set 'em up" to "smokes."—Sylacauga Enterprise.

What's that? Are you sure it was "smokes?"

The probability is that there will be a special term of court held in June in Marengo county. It was impossible to clear the whole docket last week.

Evidences of an abundant fruit crop and garden produce gladden the heart of the people of this section.—Uniontown Herald.

A new Baptist church will be built in Prattville. Work will be begun in a few days.

There have been about 400 horses and mules sold in Sylacauga the past season.

Dr. J. L. Simpson has been re-elected city physician of Anniston.

The Uniontown Bicycle club will reorganize this summer.

Fine Liquors Seized.

Charleston, S. C.—Dispensary Constables to-day seized ninety-eight cases of fine liquors consigned to John C. Simonds, one of the leading men of the city. The liquor came from a San Francisco house and was marked for personal use. A drummer of the house was recently in Charleston and a number of leading people of the city clubbed together and made this purchase. It was all consigned to Mr. Simonds for convenience in distribution. These facts are well known and if the Constables persist in their efforts to seize it the matter will find its way into the United States Court at once.

THE CONFEDERATE REUNION

At Nashville Promises to Be Largely Attended.—Much Important Work.

New Orleans, La.—Gen. John B. Gordon, Commander-in-Chief of the United Confederate Veterans, has requested the press of the South and the whole country generally to aid in the patriotic work now on hand by the Confederate Veterans. The reunion takes place in Nashville Tuesday, Wednesday and Thursday, May 22d, 23d and 24th—by publishing the following letter. We gladly give space to same. It reads thus:

It will be the largest and most important United Confederate Veterans' reunion ever held. The personnel of the Nashville reunion committee under the leadership of its chairman, Col. J. B. O'Bryan, is a guarantee that everything will be done for the comfort and convenience of the old veterans and all visitors which is in the power of man; it is a splendid body of very able and distinguished comrades, who are fully alive to the magnitude of the work entrusted to them in entertaining and caring for their old comrades, and it will be their pride to make it the most memorable reunion upon record; and the citizens of Nashville are aglow with enthusiasm, and patriotism, at the prospect of dispensing their far famed hospitality to the surviving heroes of the Lost Cause.

Also to urge Ex-Confederate soldiers and sailors everywhere to form local associations, and send applications to these headquarters for papers to organize camps immediately, so as to be in time to participate in the great reunion at Nashville, and thus unite with their comrades in carrying out the laudable and philanthropic objects of the organization, as only veterans belong to organized United Confederate Veteran camps can participate in the business meeting at Nashville.

Business of the greatest importance to the survivors of the Southern army will demand careful consideration during the session of the seventh annual convention at Nashville, Tenn.—such as the best methods of securing impartial history, and to enlist each State in the compilation and preservation of the history of her citizen soldiery; the benevolent care through State aid or otherwise of disabled, destitute or aged veterans and the widows and orphans of our fallen brothers in arms; to consult as to the feasibility of the formation of a United Confederate Veterans' Benevolent Aid Association; the care of the graves of our known and unknown dead buried at Gettysburg, Fort Warren, Camps Morton, Chase, Douglas, Oakwood Cemetery at Chicago, Johnson's Island, Cairo and at all other points, to see that they are annually decorated, the headstones preserved and protected, and complete lists of the names of our dead heroes with the location of their last resting places furnished to their friends and relatives through the medium of our camps, thus rescuing the names from oblivion and handing them down in history; the consideration of the different movements, plans and means to erect a monument to the memory of Jefferson Davis, President of the Confederate States of America, also to aid in building monuments to other great leaders, soldiers and sailors of the South; also to assist in the promotion and completion of the proposed "Battle Abbey," to vote upon the proposed chage of the name of the Association from United Confederate Veterans to Confederate Soldiers' Association; and to change the present badge or button which is not patentable for the new one proposed which is; and to make such changes in the constitution and by-laws as experience may suggest, and other matters of general interest.

Total number of camps now admitted 900, with applications in for about 150 more. Following is number of camps by States:

Northeast Texas Division 81; West Texas Division 55; Southwest Texas Division 33; Southeast Texas Division 31: Northwest Texas Division 17; total Texas 217; Alabama 89; South Carolina 81; Missouri 71; Mississippi 63; Arkansas 59; Georgia 58; Louisiana 51; Kentucky 39; Tennessee 34; Virginia 34; Florida 30; North Carolina 29; Indian Territory 12; West Virginia 11; Oklahoma 6; Maryland 6; New Mexico 3; Illinois 2; Montana 2; Indiana 1; District of Columbia 1; California 1.

Very Respectfully,
GEO. MOORMAN,
Adjutant General and Chief of Staff.

Got a Life Sentence.

Macon, Ga.—The trial of Shaw, wrecker of a passenger train on the Southern Railroad at Stone Creek, last year, ended at Jeffersonville in a verdict of guilty with recommendation to life imprisonment. Shaw and Criswell wrecked the train causing the loss of two lives. Criswell is now serving a life sentence and Shaw will doubtless be sentenced to the same fate.

Judicious advertising pays.

WORDS OF WELCOME.

THE CALL AS SEEN THROUGH THE SPECTACLES OF ITS COTEMPORARIES.

Vol. 1, No. 1 of the Chilton County Call came to our desk this week. It is published at Thorsby, Alabama, in a purely Northern colony and located in one of the garden spots of the South, situated on the L. & N. about fifty miles south of Birmingham, the coming metropolis of the South. It was our pleasure to spend several weeks at that place in travels last summer and a more delightful place we have never seen. The climate is lovely, and the soil is fertile, and enjoying as it does an altitude almost equal to that of our own, 790 feet, makes a healthful country. It is also absolutely free from any overflows or damaging floods. The colony must certainly be prospering since they have in their midst so neat a paper as the Call.—Fonda (Iowa) Review.

The latest accession to our exchange table is the Chilton County Call, published at Thorsby, Alabama, by M. E. Taylor. Thorsby is one of Alabama's new towns and its inhabitants are thrifty Northern people. Success to the Call.—Goodwater Advocate.

The Chilton County Call is a spicy weekly published at Thorsby, the new colony town.—Alexander City Outlook.

The Chilton County Call, published at Thorsby, is one of the neatest and most carefully edited papers in the state.—Birmingham Daily Ledger.

We are in receipt of Vol. 1, No. 1 of the Chilton County (Ala.) Call, published at Thorsby, in that state and county by M. E. Taylor. It is bright, sparkling and newsy and stands up for Thorsby.—Enfield (Ill.) Clarion.

A copy of the Chilton County Call reached our desk this week, and is neatly printed and newsy.—Gaylord (Mich.) Herald.

ANOTHER LEVEE BREAK.

The Crevasse One Hundred Feet Wide in Twenty Minutes.

Vicksburg, Miss.—The Queen & Crescent train dispatchers report that the biggest levee in Mason parish broke at 10 o'clock Friday night, and the break was 100 feet wide in twenty minutes. The break is four and a half miles north of Delta, La., and one and a half miles above the upper end of Reid's levee. The news was sent to Delta at once, the operator being roused out of bed and the message of warning sent along the line of the railway westward. The levee is a very large one and has been engaging the special attention of the levee authorities for weeks or ever since the Mississippi crevasse. Several hundred convicts have been employed on it, in addition to other laborers, and so greatly has it been strengthened that only to-day the belief was confidently expressed by men living behind it that it would hold. The disaster will be a great one.

Ran into a Hand-Car.

Chattanooga, Tenn. — A special freight train this city Saturday night for Birmingham ran into a handcar on which were three men, near Wildwood, Ga., and Ben Rogers, one of the section foremen of the road, was knocked off and under the wheels and instantly killed, his body being so badly mangled that it was with great difficulty that all the pieces were found and gotten into a box for interment.

Carpets, Rugs and Matting.
Trunks and Stoves.

Don't forget the cheapest place Birmingham.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

We made our first trip to Clanton Wednesday in company with Mr. T. T. Thorson, President of the Concordia Company, of Thorsby. It was a bright and beautiful day, and a fruitful and fair-to-see country through which we passed as we went our way to the county-seat of imperial young Chilton.

One of the very first buildings that we noticed as we entered the embryonic city was the handsome new court house, and it was there we made several acquaintances whom we hope to cultivate into friends. We are pretty hard to suit in the matter of friends, but we believe that the last one of these acquaintances will come up to our standard.

Now, there is Judge R. M. Honeycutt, of the Probate Court, a gentleman of the grand old Southern school, and when we say this much, we need say no more. And there is his handsome young son, whose accommodating ways make him as popular as his father. As long as the Probate office is administered as at present, it cannot be improved upon by any party.

We were also introduced to Dr. Stewart, County Register in Chancery, a prince of good gentlemen, up-to-date in regard to the events of the hour, and posted in whatever topic comes up for discussion.

We next called upon Sheriff J. T. Cooley, a tall, strong, jovial representative of what is best in Southern manhood. We wouldn't like to have him after us with a warrant, but if he makes a soial call at our sanctum, nobody will be more welcome.

We met County Clerk J. P. Van Derveer as we strolled through the court house, one of the brightest young men we have seen in many a day. He is the patentee and sole owner of the Van Derveer Railroad Track and Machine Lock—an invention that only needs to be seen to be appreciated, and one in which he certainly possesses a bonanza.

Leaving the court house we imposed our presence upon Attorney Tipton Mullins, a young man, who has just graduated in the law, but who evidently has the legal mind. He has already captured a fine practice and we feel safe in predicting that he will eventually capture a position on the floor of Congress.

We next met the County Solicitor, Mr. A. C. Smith, who is recognized as one of the most competent officials that ever held that office.

Clanton is a very pretty place, and its people help to make it one of the most pleasant in Alabama.

Capt P. Sid Jones, the genial and gifted passenger agent of the Louisville & Nashville Railroad, who has charge of its Immigration Department, will preside over a reception office at Nashville during the Centennial in the interests of the L. & N. line. He will be "at home" in this office on and after May 1, and will be pleased to receive the general public—particularly home-seekers from the North. He will continue his main office in the Morris building at Birmingham, of course, and all mail sent to that address will be forwarded to him at once.

A. M. Johnson, of Waseca, Minn., has finished arrangements for putting in a large and well selected stock of general merchandise in Thorsby, and has rented the Stein building, facing the railroad track. His line is very complete in staple and fancy groceries, dry goods, hardware and farm implements. The firm will be known as F. Moberk's Cash Supply Store. Mr. Johnson will act as general manager and have full control of the business. We predict a long and prosperous future for the new enterprise.

Sam Thorson reports in behalf of the Bachelors club that a number of young ladies in Chicago are anxiously waiting to cast their respective lots in Alabama with members of the club. Before starting, however, they ask Sam to send them a few samples of teeth to enable them to judge the age, habits, disposition, etc., of the bachelors. The ladies will make their choice while in Chicago so that there will be no war when they arrive.

The christening of Mr. and Mrs. J. B. Grenley's infant daughter took place last Friday afternoon at the parents' home, and the babe received the name of Olga Leonora; Rev. J. E. Hedberg officiated. Mr. and Mrs. Peterson were sponsors, and Mr. and Mrs. T. Thorson were witnesses. Others present were Mrs. Rev. J. E. Hedberg and Rev. and Mrs. George E. Youngdahl.

The next attraction on the boards for Thorsby is an extensive winery, concerning which the Call will speak later.

We next called upon Sheriff J. T. Cooley, a tall, strong, jovial representative of what is best in Southern manhood. We wouldn't like to have him after us with a warrant, but if he makes a soial call at our sanctum, nobody will be more welcome.

We met County Clerk J. P. Van Derveer as we strolled through the court house, one of the brightest young men we have seen in many a day. He is the patentee and sole owner of the Van Derveer Railroad Track and Machine Lock—an invention that only needs to be seen to be appreciated, and one in which he certainly possesses a bonanza.

Leaving the court house we imposed our presence upon Attorney Tipton Mullins, a young man, who has just graduated in the law, but who evidently has the legal mind. He has already captured a fine practice and we feel safe in predicting that he will eventually capture a position on the floor of Congress.

We next met the County Solicitor, Mr. A. C. Smith, who is recognized as one of the most competent officials that ever held that office.

Clanton is a very pretty place, and its people help to make it one of the most pleasant in Alabama.

Capt P. Sid Jones, the genial and gifted passenger agent of the Louisville & Nashville Railroad, who has charge of its Immigration Department, will preside over a reception office at Nashville during the Centennial in the interests of the L. & N. line. He will be "at home" at this office on and after May 1, and will be pleased to receive the general public—particularly home-seekers from the North. He will continue his main office in the Morris building at Birmingham, of course, and all mail sent to that address will be forwarded to him at once.

A. M. Johnson, of Waseca, Minn., has finished arrangements for putting in a large and well selected stock of general merchandise in Thorsby, and has rented the Stein building, facing the railroad track. His line is very complete in staple and fancy groceries, dry goods, hardware and farm implements. The firm will be known as F. Mobeck's Cash Supply Store. Mr. Johnson will act as general manager and have full control of the business. We predict a long and prosperous future for the new enterprise.

Sam Thorson reports in behalf of the Bachelors club that a number of young ladies in Chicago are anxiously waiting to cast their respective lots in Alabama with members of the club. Before starting, however, they ask Sam to send them a few samples of teeth to enable them to judge the age, habits, disposition, etc., of the bachelors. The ladies will make their choice while in Chicago so that there will be no war when they arrive.

The christening of Mr. and Mrs. J. B. Grenley's infant daughter took place last Friday afternoon at the parents' home, and the babe received the name of Olga Leonora; Rev. J. E. Hedberg officiated. Mr. and Mrs. Peterson were sponsors, and Mr. and Mrs. T. Thorson were witnesses. Others present were Mrs. Rev. J. E. Hedberg and Rev. and Mrs. George E. Youngdahl.

The next attraction on the boards for Thorsby is an extensive winery, concerning which the Call will speak later.

The firm of Rolison & Rolison has dissolved copartnership G. W. Rolison having bought the entire business, will assume all liabilities and all outstanding accounts will be payable to him. J. Bice will continue to act as manager. The firm name will remain as Rolison & Rolison.

Mr. and Mrs. H. R. Rierson and son, Oliver, and Miss Berg, daughter of Hon. T. O Berg, arrived here Wednesday night from Esterville, Iowa. Mr. Rierson, Sr., has bought a tract of land near Thorsby and will soon commence work on a village residence. The Call extends a hearty welcome to them.

A representative of the Southern Nursery Co., Winchester, Tenn. was in town last week. His company will put in a number of sample fruit trees in the Thorsby horticultural experimental garden.

The Thorsby horticultural garden is planting an acre of ground with clay beans as an experiment. General Freight Agent Shepard, of the L. & N., furnished the beans

W. T. Hand shipped his sawmill from Jemison to the southern part of the state last Saturday. He took about fifteen or twenty families with him from Jemison.

The many little friends of Claudie Blee gave her a birthday surprise party at her home in Strasburg Wednesday afternoon. It was her twelfth birthday.

A Montgomery firm has placed an order for 400,000 lath with the lath and shingle mill in this place, which are to be delivered as soon as possible.

The Call wishes to secure a reliable correspondent in every township and neighborhood in Chilton county. Send us a card and we will give particulars.

The case of Mullins vs. Foshee, that was tried in Justice Bice's court a few days ago, has been appealed by the defendant to the District court.

Thorsby's brick-yard will soon be a reality. Preparatory work has been completed and such machinery as is needed will soon be put in place.

We learn from the office of the Probate Judge that there have been no real estate transfers put on record in Chilton county this week.

A large amount of green peas are being picked here today and will be shipped to the Birmingham market Saturday morning.

Rev. Youngdahl, of Chicago, preached the Easter sermon last Sunday morning, and Prof. Ryding preached in the evening.

The Thorsby Lumber Company has shipped a carload of bridge timber and two cars of lumber during the past few days.

W. H. Merritt filed a suit at Clanton last Tuesday against the Merritt Bond Lumber Company, of Lomax, for $7,000.

Wednesday morning the lath and shingle mill began running on regular time, and a regular crew was put to work.

An elevated platform that will hold from twelve to fifteen carloads of laths is the latest addition to the lath mill.

J. F. Peterson's family ate home-grown new potatoes for dinner Tuesday, for the first time this season.

The English walnuts and Japanese chestnuts planted early in the spring are now about six inches high.

F. Stein and his attorney, W. R. Oliver, of Chleria, were transacting business in Thorsby Thursday.

John Linden was called home by a dispatch to attend a meeting in Chicago in the interest of Thorsby.

Oscar Johnson, of Chicago, will act as engineer and general machinist in the lath and shingle mill.

There will be one murder case and one rape case tried at the Spring term of Circuit Court, May 10.

The twelve different varieties of grapes planted in the experimental garden are doing finely.

Work of A. Malmgren's new house is progressing rapidly. It will all be inclosed this week.

Daniel Maudling to Miss Addie Carlee. Mr. J. J. Wright to Miss Josephine Willis.

Regular services will be held at the church next Sunday morning at 10:30.

Several thousand tomato plants are being transplanted.

HAVOC PLAYED

In the Lowlands By the Unbridled Mississippi.

MULTITUDES DESTITUTE.

Millions of Dollars Worth of Property Destroyed.

SITUATION VERY SERIOUS.

The Roaring Waters Are Heard Many Miles Crevasse a Mile Wide. Vicksburg, Shreveport & Pacific Railway Under Water. People Perched on Trees.

Arkansas City, Ark.—The Mississippi River has its capricious moods, and every now and then, by way of asserting its claims on the low territory to the east and west, goes on a lark, and then gets back into the traces again, after tearing things up generally to its satisfaction. This season, however, it has become apparently more swelled than ever with its importance. River men who have spent fifty years of their lives plying boats between Cairo and New Orleans, say that never before, as far back as they can remember, has the great river overspread its banks and created such destruction as during the present rise.

Over 300,000 people, it has been estimated, have been rendered destitute, thousands of square miles of land have been inundated, millions of dollars' worth of property have been destroyed and many lives have been lost. The Yazoo-Mississippi Delta and St. Francis Basin are almost completely under water, with small chances of a cotton crop from these fertile sections, while the great Tensas and Atchafalaya basins are threatened, and within the past two days crevasses on the Louisiana side have let in the yellow flood upon other large and fertile sections.

Memphis Contributes Supplies.

Memphis, Tenn.—The break in the levee at Biggs, four miles below Delta, La., which occupied at 10 o'clock Friday night, was widened rapidly and a solid stream of water is passing through an opening more than 1,500 feet wide. The roar of the water as it rushes through the crevasse can be heard for miles. The town of Delta is now inundated, and the waters are spreading over the lowland and will soon cover many fine plantations in Madison Parish. All of the convicts who were at work on the levee, when the crevasse came, have been safely put on board a steamer, and so far no loss of life is reported in the vicinity of this latest break.

A large amount of supplies was forwarded from Memphis Saturday. The steamer Harbin carried provisions and feed up the St. Francis River to supply the relief stations established there. Lieut. Carnahan went on this trip to superintend the distribution of supplies. The steamer Rowena Lee left supplies for the relief stations between Memphis and Ashport. There will be several new stations visited by the Rowena Lee on this trip.

Crevasse a Mile Wide.

Vicksburg, Miss—An official report says the crevasse at Biggs, four miles below Delta, La., is nearly a mile wide and the roaring torrent is spreading over the lowlands of Madison Parish with startling rapidity. This is unquestionably the most destructive break that has yet occurred and the loss to property and live stock will be enormous. Madison, Tensas and Concordia Parishes will be inundated, while the fine farms of Catahoula and Franklin Parishes are in imminent danger. The fertile lands of these parishes have been prepared for this year's crop and in many instances cultivation is well under way.

The water flooded the Vicksburg, Shreveport & Pacific Railroad in a few hours' time, and trains west of this place are abandoned in consequence. The town of Delta is overflowed deeply and planters say that the water will back up to Milliken's Bend, sixteen miles to the north. Three white persons, two men and a woman, passed twelve hours in the midst of the furious waters of the crevasse perched in a tree. The water roused them from their beds, and they had only time to seek safety in its boughs when the mighty flood was upon them. They made known their presence by shouts and pistol shots during the night, and several attempts to rescue them were made, but it was not until 10 a. m., when an adventurous crew from the Government steamer Etta Etheridge, put out a yawl and rescued them. The river is falling here. The levee engineers will now endeavor to save the remaining levees, a task which is very hopeful at this time.

Many Destitute Negroes.

Natchez, Miss.—The guage here shows another rise of four-tenths during the last twenty-four hours. No breaks are reported in the immediate vicinity. Hundreds of refugees are filling the city, some being in a pitiable condition, almost starved, and with nothing on earth left them but the clothes on their backs. The levees at Helena, l'Argent and various other places are still in a dangerous condition. Labor is becoming scarce on account of the negroes leaving in great numbers. The situation is as critical as can be and not exaggerated.

Two Thousand Destitute.

Little Rock, Ark.—Governor Jones received a telegram Saturday from his private secretary, who is distributing funds in the flooded district, stating that a most deplorable state of affairs exists in Monroe county. He estimates that there are 2,000 persons and 1,000 head of stock in that county in need of immediate assistance to prevent starvation.

NEWS FROM CUBA.

More Reports of Conflicts With Insurgents, Wherein They Were Badly Beaten.

Havana, Cuba.—A detachment of the Arragon batallion, it is announced, has captured the five remaining members of the insurgent force commanded by Zaraga. It is not known whether he has surrendered or not. The Marquis of Balboa died Monday.

Col Aldea, with the Quavirro battalion and detachment and local guerillas, has been engaged in the woods near Jacas, province of Mantanzas, with the remainder of the united insurgent forces commanded by Reginald Alfonso Cervantes and Bernito Sorrot. The troops captured the insurgent camp, killed eleven of the enemy and captured the insurgent, Maj. Alvarez. Later the troops pursued the insurgents to the Clerega re Zapata, where, in another engagement, the insurgent Captains, Ferdinado Sabriana and Julio Sabria, Sergeant Charves and Lieutenant Colonel Sorroto, were killed and several others were wounded and are believed to have since died. In a skirmish between the Mariana Christian battalion and an insurgent force commanded by Aiguleir the latter was killed, with six of his men.

The Viscaya battalion at Vegetas, near Trinidad, province of Santa Clara, has had a skirmish with scouts of Quintin Bandera's forces. Zerona battalion, the battalion of Veraga and and the Ybera squadron, reconoitering at Oleaga, province of Pinar del Rio, in several skirmishes have killed twenty-three insurgents, captured a quantity of arms and destroyed seventy-two huts. The column had one man killed and five wounded.

In numerous small skirmishes recently the insurgents lost thirty-one killed and ten prisoners and the troops lost two men killed and twelve wounded.

Messrs. Cornelius Mali Herson, Evan Avoras, American citizens, who have been imprisoned on the charge of disorderly conduct, have been placed at the disposal of Consul-General Lee.

There have been sixty-one deaths from smallpox at Guiness from April 1 to April 15.

A demonstration has been held at Santa Clara, capital of the province of that name, to celebrate the pacification of that part of the country and to do honor to Captain General Weyler. There was a large gathering of inhabitants in front of General Weyler's residence. The latter, through his Adjutant, returned thanks for the ovation which he received, though depreciating such demonstrations in his honor.

Horribly Mangled.

At 2:30 o'clock Tuesday morning the mangled remains of Mr. Williams Brewster, conductor on freight train No. 71, on the Louisville & Nashville railroad, were carried to Birmingham.

While standing on the front end of his caboose near Hartselle he fell forward between the cars and the caboose passed over his body. He was almost instantly killed. Mr. Brewster was one of the oldest and best known conductors on the Louisville & Nashville. He had been with the company for many years as both passenger and freight conductor. His wife lives in Decatsville, but he has been boarding on Avenue E, near Twentieth street. He was about 50 years old.

Murder Pays the Penalty.

Macon, Ga.—Lovett Brookins, colored, was hanged at Louisville, Ga., Friday afternoon at 2 o'clock for the murder of Leila McCrary and Sanders Oliphant, both colored, a year ago on account of jealousy. Brookins made a long talk to his friends, warning them against women. He prayed and sang on the gallows.

THE TOWN PHILOSIPHER.

Continued from Page 1.

confidentially, one day, 'and I know just about how long these tenderfeet can stand this climate and this alkali water.'

"When he had concluded his pleasant little talk, I packed up my traps and left for Chicago. I never went to a new town after I left Bannerville until I came here. By-the-way, Bannerville is now as dead as the historic Hector. Not a soul resides there, and its buildings are rotting to their fall. As for Mr. Jenks, he is still promoting new colonies in the Northwest, though he knows full well beforehand what their final fate will be. O, he's a slick one, as I said in the beginning, and I think that a coat of tar, braided with feathers, would become his figure to perfection."

The Town Philosopher picked up a paper from our X-table, and, after reading it for a few minutes, remarked

"Just listen to this, will you?

"'A news item in an Eastern daily says there are 28,000 white people and only 18,000 negroes in the city of Augusta, Ga., but while only thirty-two whites died of consumption there last year, sixty-four negroes succumbed to that disease. Dr. Eugene Foster, President of the Board of Health, in giving these figures, says that before emancipation the colored race was almost wholly immune of consumption, a negro with consumption, prior to the close of the war, being a clinical curiosity. 'This new susceptibility of the negro race to consumption,' he says, 'is one of the numerous penalties following upon the changed relations of the people consequet to their emancipation.'

"Now," went on the Town Philosopher, "that just goes to show what I've said since I came to know the negro in his native South."

"What's that?" queried the Call, a bit ungrammatically, to be sure.

"Well, I've said, and I say, that while emancipation was a glorious thing for the whites, it was the greatest curse that could have befallen 75 per cent of the blacks. I'm a Yankee, you know, and when I was a young man I was an Abolitionist of the deepest dye; but I've had my eyes opened since I came South. O, yes! By-the-way, there's one thing about Thorsby that I particularly like. It's a white town of, by and for Caucasians only. But there, I don't care to talk of the race question. It talks for itself."

The Town Philosopher was silent for a spell, and then began again:

"There is another thing I like about Thorsby. It hasn't hitched its cart before its horse. Now, up North the custom is to build a town and wait for the farmers to develop the surrounding resources. Here, the farmers ar putting in their crops, the gardeners are planting their truck, and the horticulturists are starting their vineyards and orchards, while the town people are waiting for the result of these efforts before they begin to project grand opera-houses, boulevards, and all such. Sensible, say I! When Thorsby begins to spread out, it will have a solid basis from which to shine. And the beauty of it is, the farmers, gardeners and horticulturists are certain of their harvests. Unlike their Western, particularly their Northwestern brethren, they have no droughts, no blizzards, no cold waves to fight. They have a sure thing, and will have money in their pockets before Thorsby begins to put on frills. A few years hence they'll be putting on frills themselves, and will want town houses and all that. Of course, as Thorsby is their very own, they'll build their homes here, invest in big business blocks, and make things hustle and hum. It won't be a boom. It will be solid, substantial business from the word jump."

With these parting remarks the Town Philosopher put his eye-glasses in his upper left vest-pocket, and with a promise to call again, he went out, mounted his horse and trotted gaily off to look after the welfare of his grapes.

Damage Suit Settled.

Chattanooga, Tenn.—A special to the Times from Cleveland, Tenn., says the Southern Railway representatives today paid the surviving members of the Woodbury family, nine of whom were killed four miles from this city about six weeks ago, by being run into by a Southern passenger train, the sum of $10,000 cash, in full settlement of all their claims for damages. The family was in a wagon coming toward this city when the train struck them, killing nine of the occupants. Former Secretary of the Interior Hoke Smith was retained by them to sue the railroad, the claim for damages amounting to $225,000, and it was settled today as stated.

Judicious advertising pays.

GOSSIP FOR THE FAIR SEX.

SOME ITEMS OF INTEREST ON THE FASHIONS.

Women Official sin Kansas. The Pretty Coral. Batavia Cloth. A pretty Wedding Costume.

WOMAN OFFICIALS IN KANSAS.

The women do not possess full suffrage in Kansas but they secure more public offices in the last election than did the women of Utah or Colorado—twenty County Superintendencies of Publi Instruction, and all the officers from Mayor to Chief of Police in two cities.

THE PRETTY CORAL.

The use of coral continues, and coral buttons have now made their appearance. Bernhardt makes use of this fashion in one of her newest gowns. The bodice is entirely of black musline de soie covered with a pattern of cream applique lace, paillete with coral and jet. The front of the bodice parts to show a full vest of pale green chiffon, which completes an artistic color scheme.

BATAVIA CLOTH.

One of the most available elements in the construction of new hats is the new Batavia cloth, a fabric like thin horsehair with the effect of gauze. The material is made of a vegetable fibre, and in all kinds of windy or moist weather keeps its firmness. It comes in the populars colors and black. In some instances the hat is made of the cloth and trimmed with the same in soft loops and bows. This is particularly adaptable to a trimmed sailor for use on the water or in windy weather.—New York Times.

A PRETTY WEDDING CUSTOM.

One of the pretty features of the modern English wedding is the tiny maid and miniature man who attend the bride as bridesman and page. There may be one little pair or three or four; but they make a very pretty picture in their quaint costumes following the bride to the altar. The small boys are usually dressed in court costume of white satin or cloth embroidered with silver or gold and decorated with paste buttons. Sapphire blue velvet, trimmed with lace ruffles, is another favorite dress, and with the large blue hat and white feather it is very effective.

PRETTY CUSTOMS IN HONOR OF WOMEN.

It is interesting to note how two small communities conspire to do honor to their womankind on account of services rendered in days long past. The Swiss Canton of Argovie yearly celebrates a fete which dates back to the year 1712, when the Seigneur de Hallwyl raised a regiment of Amazons to assist some Bernese troops who were hard pressed by the Catholic cantons. On a given Sunday the women of the communes of Meisterschwanden and Fahrwangen assume lordship over the masterful sex. The married women and girls issue invitations to their husbands and friends, and the whole community assemble at a village inn. The men, who are here entertained to tea, beer and cakes, are obliged to wait till their hostesses appear from an adjoining room to choose them as partners for the dance.

The women shelter and chaperone their guests throughout the evening, and when dancing is done they escort the poor weak men back to their own fireside. A pretty custom, deserving to be perpetuated.

Another small community on the Isle of Man evinces its gratitude in a more practical manner still. On one occasion an invading force seemed likely to overcome the islanders, when the women rushed to the rescue and defeated the enemy. Since then a Manxwoman, after marriage, becomes possessed of one-half of her husband's property, whether possessed then or acquired at a later date. So absolute is her ownership that she may dispose of her share on death in the manner best pleasing to her.—New York Journal.

NEW YORK FASHIONS.

This is to be emphatically a season of transparent fabrics and queer combinations of coloring. Black, fortunately, is still fashionable, but the checks, stripes, and plaids of the rainbow-hued, large-meshed materials are somewhat dazzling. In gray and the different wood shades are some exquisite tones, and these, fashion is good enough to decree, need not be sacrificed inevitably to strong contrasts, but may be made up with linings to match or with black or white or some pale yellow. A plaid of brown and yellow is made up over a cerise lining, and does not look startling, so accustomed are we to vivid contrasts, while a blue —two shades—made up over orange is so successfully treated as to look exceedingly smart. Black over bright china blue is an old favorite, and a gown of black canvas, a basket-weave pattern, profusely trimmed with ruffles edged with black satin ribbon, and black satin ribbon on the waist, which has a full front of china blue, was one of the smartest gowns exhibited at a fashionable opening last week.

Red made up over black, and with black trimmings to tone down the too vivid effect, is smart, and for country wear will be very fashionable this summer. For the city red gowns are too conspicuous to be recommended generally— indeed, in choosing a summer wardrobe, where the gowns are to be worn should be a matter for consideration. Fashion sanctions the wearing of brilliant colors in the city in the spring, but there are many costumes quite suitable for watering-places that in town are so marked as to be absolutely vulgar.

A very thin material which has a cord like poplin is one of the newest things, and as yet there is not enough of it to be had for it to become common. In a snuff brown a charming gown of it is made over black. The skirt, separate from the lining, is finished with a wide hem, inside of which is a quilling of black satin ribbon; and on the silk lining is a double ruche, which gives a pretty flare. The waist is tight-fitting at the back; in front there are four overlapping jackets, the top one of which forms epaulettes over the sleeves; each of these jackets has a quilling of the black satin ribbon inside the edge, and on the outside is a narrow bias fold of black satin. A full front of green makes a charming contrast of color, and relieves what might be too dull a tone.—Harper's Bazar.

OWL FEATHERS ON BONNETS.

Owl feathers are now for the first time in many years figuring conspicuously as a decoration of feminine attire. The proof of this is seen in the very newest bits of finery that have been sent to London from Paris. Ostrich feathers, coq feathers, and even the most fashionable furs have been entirely eclipsed by this astonishing revival of the last variety of feathers that one would ever choose for ornamenting one's gown.

Yet it must be admitted that the Parisian taste has, as usual, not been at fault. The addition of owl feathers really does impart a chic and a newness that are worth having. An especially pretty illustration of the new style was seen in a toque that has just been imported and which is quite the Frenchiest little bit of head gear imaginable.

It was designed to be worn with costume of seal brown. The toque had accordingly a soft crown of seal brown velvet, surrounded by a ruche of dull blue satin. Directly in front was perched the white little head of an owl, his two wings projecting out at either side. The effect seemed very bizarre at first, but one becomes used to the new trimming it seems more attractive than grotesque.

A precisely similar head was used on the fluffy feather neck-piece, which has the pretty soft mottled appearance peculiar to owl feathers. It was thoroughly becoming and would undoubtedly make a happy finish to any dark street gown.

A scheme which is just now being carried out according to the idea of a woman who affects white gowns is that of a perfectly white gown of glistening broadcloth, the trimming to be of white owl feathers. The gown is to be made up with almost tailor simplicity, but the skirt is to have a narrow border about the bottom of the closely overlapping feathers of pure white. The neckpice is also to be of white, with the head placed in front, according to the illustration.

A little toque, planned to be worn with this striking costume, is of black velvet, with an abundance of white satin bows and a white owl's head and wings in front. A similar touch of contrast will be accomplished by a narrow black velvet waistcoat, which will be worn with the gown.

This fashion furnishes an entirely new field of activity for the persons engaged in preventing the wholesale slaughter of birds. In the enthusiasm manifested for birds of paradise and other gay-plumaged creatures the sober owl has been hitherto overlooked. But his time has come, and his protectors should be warned.—New York Telegram.

FIRST WOMAN BANK CASHIER.

A new business career has opened for women. She is now a cashier. Mrs. Mary A. Costa, of San Jose, Cal., has just taken the position of cashier in a bank.

Mrs. Costa's husband is the principal owner of the bank, but that does not detract from the fact that the lady fills the position as well as any salaried employe would. The position is in nowise ornamental, and Mrs. Costa has undertaken a task that at no time can be termed light. She has demonstrated that she has no fear of her ability failing to justify expectations. The pistols always at her hand show she is, too, prepared for robbers.

Out in San Jose a bank such as the new cashier officiates in has a multitudinous amount of detail to consider. It has not only difficulties in English the cashier must meet, but in this particular institution she has to confront financial sorrow in Italian, with an occasional experience with German and French. To understand how to handle an emergency that arises under the auspices of one's own tongue is not so difficult a task, but when you have to meet it from the standpoint of other countries, it is decidedly different. This is why Mrs. Costa demonstrates that while she is not a new woman in the ordinary significance of the term, she is certainly a very capable one.

The woman cashier is a born and bred American, and is a native of San Jose. Her girlhood went on in a country town, a few miles from San Jose and her education was of that quality which the pupil of the district school succeeds in gaining.

After marrying her business instincts, which had been struggling for recognition for quite a period, began to assert themselves, and presently she became the secretary of her husband and soon came to be his principal business assistant. The charms of business grew upon her, and her knowledge received great additions. From an embryo woman of business, she became fully fledged and an adept in the mysteries of the various transactions which her husband, as a financier, engaged in.

Mrs. Costa is as attentive to her home as she is to business. There is in all San Jose no pleasanter home than that which the head of the banking house of Costa & Co. has in his mind's eye. The delicate touch of the woman, the evidence of dainty feminine taste in adornment, are everywhere visible about the house. It has every mark of the home of the womanly woman, and all goes to show that a woman may be bright and businesslike, and at the same time retain the attributes which have won her her place in the domestic world.

The fact of Mrs. Costa's becoming a genuine bank cashier has caused something of a sensation in banking circles and has suggested a yet larger sphere for woman's actions. Another thing which Mrs. Costa's partnership suggests is that no reason now exists why women should not become the business partners of men, just as they become their business employes. It has been suggested that one of these days we may see a sign reading "Miss Jones Smith & Co." And all this is not theory, but the actual sort of fact, of which Mrs. Costa's assumption of the position of bank cashier has caused San Joseans and many other residents of California to talk of. They believe that it has actually broken the ice into a new field for women; that there is no line of business which she is physically able to perform that will hereafter be of an ogreish nature to her.—New York Herald.

Queer Equipage of a California Stage Line's Quadrupeds.

An enterprising stage line out in the Sierras, in California, has equipped its horses with snowshoes. The Sierra snows frequently fall to a depth of from thirty to forty feet, but the horses shod in this extraordinary way are always able to cover their routes on schedule time, when there is a crust sufficient to bear the weight of the wagon. Snow shoes are regularly used on the horses on the stages between Oroville and Quincy, and between Marysville and Downieville, during three months of the year.

The deepest drifts which these stage lines encounter are caused by snow sliding in avalanches from the upper sides of the mountains. The routes of the stage often pass through orchards of fragrant orange blossoms and then encounter immense snowdrifts separated from them by but a few feet

The snow shoes are usually carried along and fitted to the horses when necessary.

The first snow shoes were made of square wooden plates of ash plank, one inch thick, thirteen inches square and rounded at the corners. While the object of the ordinary snow shoe worn by men is to glide or skate over the surface of the snow, those worn by horses are intended merely to prevent the horse from sinking. It may hardly be expected that a horse can acquire the habit of skating, since it has four instead of two feet to manage.

The earlier shoes were discarded, because it was found that the snow stuck to the wood and made walking impossible. The next step was to construct the shoes of metal. The latest and most improved shoes are ten inches square and are lined with rubber on the bottom. The snow has no affinity whatever for rubber, and the shoe remains always clear of snow.

The plate has holes so arranged that the corks of the shoe pass through them and are fastened with screws, and straps passing over the hoofs. It requires about two hours to attach these shoes to a team of four horses.

The horses who wear these shoes soon become very expert in managing them, and seem to have an intuitive knowledge of what the shoes are for. When passing over snow each animal carefully lifts his foot higher than he would ordinarily. They also learn to move one foot forward and one shoe over the other so skilfully that they rarely touch each other. The trick of getting the shoe of the front foot out of the way of the rear foot is also soon learned. The gait of the snow-shoed horses in going up a hill is usually a slow walk, since there is more or less danger of slipping, but in going down hill it is customary for the horses to break into a trot.

Finding a large number of ducks in a pond, a boy huntsman of Abilene, Kan., took a pot shot and got seventeen of them.

PIRATES OF THE PRESENT.

DARING CORSAIRS ABOUND ON THE CHINESE COAST.

They are Desperate and Difficult to Catch. Efforts of European and American Warships to Drive Them From the Sea.

The thrilling stories of the pirates of the Spanish Main have been responsible for a vast amount of sensational literature, and even to-day, says the Detroit Free Press, the imagination loves to recall the scenes of daring bravery and reckless adventure that the buccaneers of the Carribean sea participated in during the seventeenth and eighteenth centuries. The desire to hear the stories of their wild life recounted is made more conspicuous because of the absence of any such adventurous life to-day, and because of the gradual disappearance of the pirates from our North American coast. In the age of iron and steel gunboats, when swift cruisers are built to overtake the fastest sailing craft launched, the opportunities of pirates in leading a lawless life on the high seas are limited indeed.

And yet we have pirates to-day in considerable numbers—men as bloodthirsty and careless of life as any who ever followed a Louis Scott, Captain Kidd, or a greater Morgan. Along the Chinese coast, in Malay waters, and off the shores of Africa, well-organized and desperate pirates operate on a scale commensurate with the value and extent of the commerce carried on in those waters. American and European warships have repeatedly attempted to wipe out these corsairs, but owing to the irregularity of the coast line, and the numerous safe hiding places in the bays and rivers the pirates have successfully eluded capture.

The Riffian pirates of North Africa have openly attacked sailing vessels upon the high seas hundreds of miles from the shore, and after taking everything of value away with them they have marooned the crew and passengers or carried them off into slavery in the interior of Morocco. The Malay and Chinese pirates prey chiefly upon the Chinese junks that may happen to fall into their hands, and they swarm in numbers at the mouths of the huge rivers of Cochin China, or among the straits of the Malay Archipelago. But even these Oriental survivors of the old school of pirates do not hesitate at times to attack a German, English, or American merchantman. They preserve the ancient reputation of the craft for bloodthirstiness by mercilessly cutting every throat with their curved creeses or knives.

There is not a sailing vessel which navigates in these pirate-infested waters that does not run the risk of being captured by the outlaws of the high seas, and insurance companies exact special fees for this risk. The regular steamers which ply in the waters off the Chinese coast are not subject to the same danger, for they can usually escape the junks and sailing vessels of the pirates. Occasionally, however, a slow steamer is caught napping, and the pirates swarm over her deck with the ferocity of wild beasts. One of the chief duties foreign men-of-war have to perform in the Chinese waters is to keep down the pirates, and to make navigation for their countrymen more safe.

The Chinese take to pirating as a duck does to water. The extreme poverty of the lower classes drives many to this bloody work, and they generally make the worst sort of corsairs. It is estimated that there are thousands of Chinese pirates along the coast who have confederates in the towns and cities to keep them apprised of the state of affairs, and that scarcely a sailing vessel or a steamer leaves port without having on board a number of these agents. Should the vessels be attacked at any time by the pirates they are ready to lend assistance, and to handicap the craft in a race for life by cutting ropes or sails or by injuring the machinery. So well known is this danger that the hardy captains of those waters keep the strictest watch and discipline, and they never employ a new man for a sailor unless his past history is investigated.

The Chinese pirates are united by secret oaths and signs, and the organization is so extensive that when a foreign war vessel starts off after some of the piratical junks that have been reported in a certain latitude the news is generally conveyed to the outlaws beforehand. In order further to avoid capture the junks are built in such a way that they can be beached at any convenient point. They are simply tied together by heavy thongs, and when beached they can be rapidly taken apart by simply cutting these thongs. The pieces of wood, the sails, and other parts of the queer craft can then be carried upon the beaches and hidden from view. When the war vessels arrive upon the scene there is not a sign of a pirate. Under such circumstances it is very difficult to corner and capture the corsairs.

American war vessels have done good service in the last dozen years in exterminating nests of these pirates along the Chinese coasts, but with the combined fleets of the English, German, French and American navies the pirates cannot be totally destroyed. Their warfare is like that of the American Indians. They hide behind islands and headlands, or run up into rivers and straits where no heavy vessel can go, and then rush out suddenly upon a helpless vessel before assistance can arrive. The best sort of vessel to fight them with is not one of our modern battle-ships or crack cruisers, but the old steam tubs that look more like ancient sailing vessels and merchantmen than men-of-war.

Several of our old wooden war vessels have been stationed in Chinese waters for years, and their recall to make room for the later products of our naval architect's skill may not be entirely satisfactory from one point of view. The ease with which these old tubs could deceive the pirates rendered them of great service to merchantmen. By covering their sides with painted tarpaulin the character of the vessel could be quickly changed, and from time to time they would steam along slowly in a dress of jet black, white, brown or some other color. The pirates invariably chose the old steamers for lumbering merchantmen, and they would swarm around them in great numbers.

But suddenly the tarpaulin sides would be drawn up by means of ropes and pulleys, and broadsides of guns would reveal to the frightened pirates the true character of their anticipated prey. Before the junks could change their course a broadside of shot and shell would be poured into them, and many of their number be sent to the bottom of the sea. This method of deceiving and fighting the Chinese pirates has been employed so many times that they are more particular than ever in attacking a steamer. A sailing vessel they know is safe, but steamers have such an unexpected way of changing from an ordinary merchant vessel into a dangerous man-of-war that most pirates avoid them entirely.

It was a Yankee captain who first taught the pirates of the Barbary states to respect and fear the American flag, and it has been their successors who have fought successfully the Chinese corsairs in their own waters, and made them distrustful of every steamer. But this has been accomplished through ingenuity more than by any particular acts of courage and bravery. It is a question whether our new cruisers, fine as they are, but incapable of disguise, will accomplish as much in keeping down the Chinese pirates as the old wooden gunboats that we have so long kept in China.

A Bird Whips a Cat.

Recently a singular fight between a bird and a beast was witnessed at Chula Vista, in San Diego county. While Mr. Henderson of Iowa was visiting his brother, G. L. Henderson, and was being shown about the country, they were treated to the novel spectacle.

It was the first roadrunner Mr. and Mrs. Henderson had ever seen. It came running gracefully down the gravelled avenue to meet its friend and owner, Mr. Ballou. A favorite kitten also claimed special attention as a pet and general favorite. The pugnacious bird wheeled upon its feline competitor, and a battle ensued that terminated in the routing of the cat, which spat and scratched and lashed its tail with tiger-like fury. The roadrunner took good care to keep out of the clutches of its enemy. It struck with its beak and jumped with an agility that was most amazing. No acrobat or pugilist could jump better or strike more effectively. The victorious bird stepped forward with a proud, elastic step to receive the caresses of its owner. It seemed to be as proud of the applause of the onlookers as it had been jealous of the competition of the cat.

The domestic tiger had not given up the desire to redeem his reputation and wreak his wrath on his pitiless antagonist. He reappeared, taking care to keep in the shelter, and jumped at his adversary. The feathered warrior used every device to drive the cat from its stronghold. The roadrunner seemed cautious at first, but soon began a most vigorous assault by a succession of leaps over the cat, each time dealing it a terrible blow, while in every instance it eluded the teeth and claws with a dexterity that defies description. At last the cat could stand these attacks no longer. It darted down the steps to escape, but its tormentor caught it by the tail and held on like a devilfish till both disappeared from sight behind the woodshed. The road runner soon returned, and manifested by every motion all the pride of the conqueror. The vanquished cat came back no more.

Mr. Henderson declared that it was the most ably conducted war between feathers and fur that he had ever seen, and that he would never forget the most beautiful and the most pugnacious bird in California.—San Diego (Cal.,) Tribune.

Lincoln's Grave.

About a mile and a half north of Springfield, Ill., Abraham Lincoln lies buried under a towering pile of marble granite and bronze. The height of his monument is 120 feet. The cost was $250,000, the money being collected through popular contributions. Several attempts have been made to steal the body. Not until the leaden coffin was sunk deep in the crypt and covered with six feet of concrete did the robbers desist.

In the police court of Louisville, Ky., a prisoner charged with disorderly conduct secured his dismissal by answering, when asked where he lived, that he didn't live, just boarded.

How's This!

We offer One Hundred Dollars reward for any case of catarrh that cannot be cured by Halls Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him to be perfectly honorable in all business transactions, and financially able to carry out any obligation made by their firm.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00, at all druggists.

Some how the wittiest girl isn't the one a man picks out to marry.

Just try a 10c. box of Cascarets, the finest liver and bowel regulator ever made.

The year 1897 is predicted to be one of great note as a big crop year.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c.a bottle.

Quaint English Customs.

There is scarcely a manor in England where some queer old custom dating back to the feudal times does not survive, recalling the former prestige and glory of the "lords of the manor." Thus at Broughton, on each Palm Sunday since time immemorial, the so-called "gad whip" manorial service takes place. The lord of the manor, leaving his pew in the chancel, advances to the steps thereof and cracks a heavy carriage whip three times, while the rector is reading the first lesson. At the beginning of the second lesson he approaches the parson with the whip in his hand and a purse with gold pieces tied to the end of the lash. This he waves thrice in the air and then holds the whip so that the purse hangs directly over the priest's head, until the conclusion of the chapter, when the priest takes possession of the purse and reverently places it on the altar. Volumes might be written about these queer manorial customs, the origin of most of them being lost in antiquity.

The figures of the losses by fire, month by month, during the years 1894, 1895 and 1896 are published, those of December last alone being estimated. The aggregate losses during 1895 were $123,246,400; during 1894, $129,339,700, and $115,295,500 during 1896. The losses the past year from June to December show a large falling off compared with the same months during the previous years, but the estimates for December are in excess of the losses of that month during the two preceding years. The loss by fire during these years is about equal to the receipts of the treasury for customs, and more than one-third of the receipts of all the railroads in the country after paying operating expenses. This is a large amount of money to charge off mainly to carelessness and recklessness.

A Massachusetts minister has declined to receive $1,000 increase in his salary and the congregation is about evenly divided as to whether this indicates remorse of conscience or lunacy.

Maggie Mitchell has lately put up an apartment house costing $250,000. The actress has had a great many good houses, but this seems to be the best of all.

Not the least lamentable feature of Mme. Melba's mishap is that the loss of her emphasizes the presence of a vast number of singers who cannot sing, but who are persistent in trying.

The The The

Best. Rest. Test.

There are two kinds of sarsaparilla: The best—and the rest. The trouble is they look alike. And when the rest dress like the best who's to tell them apart? Well, "the tree is known by its fruit." That's an old test and a safe one. And the taller the tree the deeper the root. That's another test. What's the root,—the record of these sarsaparillas? The one with the deepest root is Ayer's. The one with the richest fruit; that, too, is Ayer's. Ayer's Sarsaparilla has a record of half a century of cures; a record of many medals and awards—culminating in the medal of the Chicago World's Fair, which, admitting Ayer's Sarsaparilla as the best—shut its doors against the rest. That was greater honor than the medal, to be the only Sarsaparilla admitted as an exhibit at the World's Fair. If you want to get the best sarsaparilla of your druggist, here's an infallible rule: Ask for the best and you'll get Ayer's. Ask for Ayer's and you'll get the best.

SPRING CLEANING.

Valuable Hints for Renovating Old and Soiled Articles.

An efficient and economical housewife will always welcome suggestions in matters of cleanliness and renovation. To begin with the best cleanser of hair brushes is spirits of ammonia and warm water. Take a tablespoonful of ammonia to a quart of water, dip the bristles up and down in the water but without wetting the back of the brush, and rinse in clean warm water, then shake well and dry in the air, but not in the sun. Soap and soda soften the bristles and will turn an ivory-backed brush yellow, so in the case of the latter the following treatment is recommended: Rub plenty of flour well in, wrap up in paper and leave all night, give a good shaking and remove the remaining flour by blowing the brush. All brushes and combs should be kept in the dressing case, or in a bag so as to keep them as much as possible from the dust. Ivory that has become yellow from age or usage may be whitened by a good rubbing with fine sand paper or moist powdered pumice stone.

Tortoise shell combs or ornaments that have lost their polish may be renovated by rubbing them with finely powdered rotten stone mixed with a little olive oil. The rotten stone should be sifted through a piece of fine muslin before mixing it with the oil. When all marks are removed polish again with a piece of very soft chamois leather and a little jeweler's rouge.

Dust may be removed from velvet much more thoroughly and expeditiously by rubbing with a piece of crape rather than by using a brush, although it be a soft one.

Glass which has become dull may be brought back to its original brightness by washing with diluted hydrochloric acid and afterward rubbing with moist chalk or whiting.

Marble may be cleaned with common dry salt, which requires no preparation, but may be rubbed directly in the soiled surface, leaving the marble beautifully clean. Alabaster may be washed with soapsuds. If stained, whitewash the stains and let it remain for several hours, then clean it off. Take the finest quality of ground pumice stone and mix it with verjuice; let it stand two hours, then take a sponge and rub the alabaster with the mixture. Wash it with a linen cloth and fresh water, and dry it with clean linen rags.

To clean brass and copper a mixture of oil and rotten stone applied with a piece of leather and then rubbed bright with clean chamois skin will give a beautiful polish. Furniture to be polished should be washed with soap and water, little by little, and each little quickly dried. Afterward the cream should be applied. Here are two good recipes. Boil thoroughly in a gallon of water one pound of beeswax, four ounces of soft soap and two ounces of pearl ash; the second, which should be made at least a day before it is used, is compounded by melting together at a gentle heat eight parts of white wax, two of resin, and half a pint of turpentine. Pour into a jar, shake it well, and add six parts of rectified oil of turpentine.

A careful housekeeper is frequently troubled by the tannin stains in fine china teacups. They may usually be removed by rubbing them with a little whiting on flannel. Salt will have the same effect, but it sometimes scratches very fine ware.

To clean wall paper use bread about a day old. If the paper is only dusty, flick and rub it with a soft yarn mop. If it is marked with grease, hold a piece of blotting paper over the spot with a hot flat iron for a few moments.

Rubbing silver or plated eggspoons with a little liquid ammonia and salt will remove the discoloration caused by the sulphur in the egg. The very best way to clean mirrors and windows is to rub them with a paste of whiting and water. When this dries polish with chamois skin and remove the powder. A little alcohol in cold water also gives a brilliant polish. Soapsuds should never be used.

When grease has been spilt upon matting, apply powered French chalk and benzine. Cover the grease with the chalk and sprinkle lightly with the benzine. When the latter has evaporated, brush off the chalk, and the spot will also vanish. When grease is spilt on wooden flooring, cold water should immediately be poured over it. This hardens it so that it can easily be scraped away, otherwise it sinks in and repeated scrubbing will not get rid of it.

Queer Cave Dwellers.

Even the most barren parts of the earth manage somehow to acquire inhabitants. One would hardly expect that an animal with any choice left to it at all would care to take up an abode at the hem of the Alps's eternal skirt of snow. Yet the marmot seems rather to enjoy such a habitat, and does not mind being shut up in its underground winter quarters the greater part of the year. Its winter dwelling is a habitation of some pretension, to be sure, consisting of a pantry and a parlor. A London landlady would describe the parlor, no doubt, as a bed-sitting room.

Last year 14,094,918 head of cattle were delivered at the Chicago stock yards.

REMARKABLE RECOVERY

Of a Young Lady of Gasport, New York, from Anaemia.

From the Courier, Buffalo, N. Y.

Miss Lulu Stevens, daughter of George Stevens, the well-known blacksmith, of Gasport, Niagara, County, New York, has surprised her neighbors considerably, by not dying five months ago, when the physicians said she could not live.

This was quite a remarkable case. The young woman, who is very well known, on account of her musical ability, had been a very healthy girl, until about one year ago, when she began to fail, and grew so pale and apparently bloodless and so weak that after a few months she was given up to die.

Last winter a physician who was a visitor at Gasport met Miss Stevens, and seeing her emaciated condition, and hearing from the local doctors that the disease was anaemia, prevailed on the girl's mother to make her try Dr. Williams' Pink Pills. Directly she commenced the treatment she began to mend, and now since February, when she decided to take them, she has become well and strong and the picture of good health. The mother of the girl, Mrs. Stevens, says: "Every one in Gasport knows that Pink Pills cured Lulu, and I feel very thankful that we heard of them in time to save my child's life."

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are also a specific for troubles peculiar to females, such as suppressions, irregularities and all forms of weakness. They build up the blood, and restore the glow of health to pale and sallow cheeks. In men they effect a radical cure in all cases arising from mental worry, overwork or excesses of whatever nature. Pink Pills are sold in boxes (never in loose bulk) at 50 cents a box or six boxes for $2.50, and may be had of all druggists, or direct by mail from Dr. Williams' Medicine Company, Schenectady, N. Y.

JUST THE BOOK YOU WANT to refer to constantly, is our handy CONDENSED ENCYCLOPEDIA OF UNIVERSAL KNOWLEDGE, as it treats upon about every subject under the sun. It contains 520 pages, profusely illustrated, and will be sent, postpaid, for 50c. in stamps, postal note or silver. When reading you doubtless run across references to many matters and things which you do not understand and which this book will clear up for you. It has a complete index, so that it may be referred to easily. This book is a rich mine of valuable information, presented in an interesting manner, and is well worth to any one many times the small sum of FIFTY CENTS which we ask for it. A study of this book will prove of incalculable benefit to those whose education has been neglected, while the volume will also be found of great value to those who cannot readily command the knowledge they have acquired.

AN ENCYCLOPEDIA FOR 50c.

BOOK PUBLISHING HOUSE, 134 Leonard St., N. Y. City.

NEW REPUBLICS.

Example of the United States Upon Neighboring Nations.

Eighteen Governments Have Become Free and Independent.

Since the birth of the present century no less than 18 governments on this side of the Atlantic have joined the sisterhood of free republics.

Without attempting to name them in strict chronological order, these several republics are as follows: Chile, Argentina, Bolivia, Peru, Mexico, Paraguay, Uruguay, Colombia, Ecuador, Honduras, Nicaragua, Costa Rica, Gautemala, San Salvador, Hayti, San Domingo, Venezuela and Brazil.

As to the geographical location of these various republics, Hayti and San Domingo are among the West Indies; Mexico, in North America; Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Peru, Paraguay, Uruguay and Venezuela, in South America, and Honduras, Guatemala, Costa Rica, Nicaragua and San Salvador, in Central America.

While the various Central American states have maintained separate and independent governments during the greater part of the century, a union between three of these states, viz., Honduras, Nicaragua and San Salvador has recently been formed under the provisional name of "The Greater Republic of Central America." As soon as the two remaining states, Costa Rica and Guatemala, enter the union it will then be known as "The Central American Republic."

Of the 18 republics above mentioned, there is not a single one which does not owe its existence to Spanish despotism and which has not been carved out of Spanish territory. The loss which Spain has sustained, therefore, during the past century, with the single exception of Cuba, includes her entire possessions in the new world. Unless a miracle intervenes to prevent Cuba from achieving her independence the last vestige of Spanish rule on this side of the Atlantic will be obliterated.

Excepting Mexico and Venezuela but little is known of these American republics save in a very general way. From the latest official returns the chief executives of these republics are as follows: Mexico, Porfirio Diaz; Venezuela, Joaquin Crespo; Argentina, Jose Uriburu; Brazil, Prudente de Moraes; Bolivia, Severo Fernandez Alonzo; Colombia, Antonio Caro; Costa Rica, Rafael Iglesias; Ecuador, Eloy Alfaro; Guatemala, Jose Maria Barrows; Hayti, Tiresias Simon Sam; Honduras, Policarpo Bonilla; Nicaragua, Jose Santos Zelaya; Peru, Nicholas de Pierola; Salvador, Rafael Gutierrez; Paraguay, Juan Egusquiza; San Domingo, Ulysses Heurlaux, and Uruguay, Juan Borda.

Had it not been for the success of the American revolution these countries would no doubt still be under the dominion of Spain. It is due in a large measure, therefore, to the inspiration which our own experiment at self-government has furnished that South America is today the abode of freedom. With something of the same spirit which inspired the mother of the Gracchi, this country can point to the young republics of the new world and exclaim: "These are my jewels!"—Atlanta Constitution.

A Warning Against Brazil.

Brazil is not a profitable place to go to without capital. Our consul at Para utters this warning to Americans, declaring that "energy and push" are not enough for emigrants to start with. He says: "No Americans coming to Para without the means to maintain themselves while acquiring the language and seeking employment can have much chance of success.

"That language is Portuguese, and one must know it in order to find employment. Para has more applicants than positions. Salaries are small, and living the most expensive in the world.

"Nearly everything consumed here is imported, and pays a very high import duty. Salaries for clerks are from $15 to $45 a month. The uncertain and ever-changing value of the money has an injurious effect upon trade. None suffer more from it than they who work for wages, for while the cost of living is made dearer by the financial condition of the country, salaries undergo little or no change as the money fluctuates in values. As to outdoor labor, no white American who exposes himself, as he would be compelled to do, to the sun's burning rays and daily rains that fall here in the wet season could hope to escape the yellow fever.

"It is true, money is plentiful and the exportation of natural products guarantees a permanent prosperity to this part of Brazil; but no one can successfully deal in rubber unless he has a large capital. The competition is great. In the rubber field, men without money can play no part unless they become rubber gatherers, in which case they would have ten chances for death against one for life. On some of the rivers 50 percent of the natives die who go there.

"The value of the milreis is the lowest in the history of Brazil, as it now requires over 6 1-2 milreis to buy $1 (United States), which, in the middle of the coffee and rubber season, is an unlooked-for condition. Business is flat."—New York Press.

Sources of Gutta-Percha.

Gutta-percha, like India rubber, is obtained from the juices of certain trees and climbers. The best is produced by a tree, the Isonandra gutta, of the order Sapotaceæ, which formerly abounded at Singapore and in all Malaysia, but which now tends to disappear under the ravages committed by gatherers. Gutta, in Malay, signifies gum or lime; percha signifies scrap. Incisions are made in the bark, as on rubber trees, and the liquor flows of perfect whiteness, darkening at contact of air. Coagulation takes place spontaneously in a short time. Like rubber, the liquid forms a film on top. This cream is removed, kneaded into a large lump and plumped into boiling water. Under the action of a high temperature it softens and forms the cake usually found in commerce. Other trees in Malaysia and Farther India, in Cambodia and Cochin China, produce good gutta. In Hindustan different grades are mixed by the natives. Chinese merchants, in their depots, mix and manipulate to give a good superficial appearance to the product, as the price is constantly advancing. As the gathers also do not scruple to add vegetable debris, earth, or sand, it has become difficult to secure a pure article. An inferior quality is obtained from trees and climbers in Africa and Madagascar, and, with the development of those countries, more may be expected.—Appleton's Popular Science Monthly.

Rifles That Shoot Two Miles.

Practical science is still engaged upon the problems suggested by recent changes and improvements in guns, projectiles and gunpowders. The rifles adopted for use in the United States navy have bores less than one-quarter of an inch in diameter (accurately 0.236 inches), and, with smokeless powder, they send their slender projectiles over a range of about two miles, starting from the muzzle with a velocity of some 2,300 feet in a second! Similar rifles have been selected for use in the navies of several foreign countries, but the question is still under debate, in some quarters, whether the immense range and great penetrating power of these arms are not fully counterbalanced by the difficulties connected with their manufacture and use, and by the lack of "stopping power" of the projectiles.—Youth's Companion.

The Long Polar Night.

Generally speaking, we figure Europe as being wholly within the temperate zone, but when we come to investigate matters, we find that North Cape (the most northerly point of Norway) is in the shadow of the North Pole. At that point you can see the "midnight sun" in all its ghastliness, that great luminary being constantly above the horizon from May 5 to Aug. 6, or just one day over three months. But the long wintry night makes up for this 100 days of constant sunshine. It begins on Sept. 22 and constantly increases in length until Nov. 6, when the "polar night" commences in earnest, the sun never appearing above the horizon from the last-mentioned date until Feb. 5, one day less than three months.

ONE WATCH AHEAD.

Remarkable Way in Which a Surgeon Acquired Another Timepiece.

A well-known surgeon who lives on Forest Park boulevard has had an experience with a highwayman that he would like to suppress, if his conscience would let him. But it will not, and to a reporter he told the following remarkable story:

"There have been so many highwaymen at work, and I am obliged to be out at such unseasonable hours, that my wife persuaded me to carry a revolver, a practice I have always avoided. I bought a 38-caliber bulldog, and about a month ago began to carry it around in my outside overcoat pocket. I seldom have much money on my person, but my watch is an unusually valuable one, set with diamonds of considerable value, and I would hate to lose it.

"One night about ten days ago I was called to visit a patient on West Pine near Spring avenue, and was detained there until after midnight by the extremely critical condition of my patient. I had the satisfaction to see her well over the crisis and rallying nicely, and therefore left the house in a very complacent frame of mind. I suppose my chest was swelling with pride, for my overcoat was open, and I had my hands stuck in my trousers pockets. I walked east on Pine to Spring avenue and south on Spring to Laclede, where I intended to catch a west bound car for home.

"At the corner of Laclede and Spring I almost collided with a man, who thrust a revolver in my face and told me to hold up my hands. I saw I was up against the real thing and promptly put up my hands.

"'Don't move,' said the highwayman with an oath, and he pushed the gun under my moustache with one hand, while he rifled my watch pocket with the other.

"Yell? I was too scared to move a muscle, and I did not even think of my revolver until the thief started up Spring avenue at full speed. Then I thought about the gun in my overcoat pocket and resolved to recover my watch if I had to fight for it. I felt in my vest and found my money and watch were gone. The thief had a good start, however, and before I could open fire on him he dodged into an alley on the west side of the street. My blood was up, however, and I charged after him. Just as I reached the alley the man emerged, coolly fastening the watch chain in his vest buttonhole.

"'Throw up your hands, you villain,' said I, leveling my gun at his nose. He was just as easy as I had been a moment before, and I jerked the watch and chain out of his clothes. 'Now run, you rascal; you can keep the two dollars.' And my whilom highwayman ran up Spring avenue like a scared dog. I slipped the watch and chain into my pocket and caught an owl car home. When I got into my house, I was the proudest doctor in St. Louis. I told my wife that her forethought had prevented me from being killed and robbed; how I had been held up by a quick highwayman, who secured my money and watch.

"'Watch?' said my wife. 'Why, you didn't have your watch with you!' and she ran upstairs to find my valued timepiece while I pulled out another man's watch. I had actually held up an innocent man, while the sure-enough highwayman was scurrying up the alley with my two dollars in his pocket. I began to recall the respectable appearance of my victim, his terror and the prompt way in which he gave up, and the watch itself, a plain gold one, was there in my hand to prove that my highwayman was not the only pebble on the beach that night.

"Now, I don't want that watch," continued the doctor, "and although I have advertised it as 'found,' no one appears to claim it. It has no engraving by which to identify the owner, and as I acquired it in a way that makes me feel ridiculous every time I think of it. I have not yet been able to bring myself to face the jokes and ridicule that will be showered on me if I tell my friends about it. My wife gives me the laugh every time she looks at a clock, and I spanked my little boy for asking me what time it was when I was robbed. Fix it up for me, will you? Good-bye."—St. Louis Republic.

The Double Glasses.

One of the clever devices of the optician is the glasses designed for both near and far vision. Looking straight ahead, they adjust the eyesight for objects at a distance; glancing downwards they bring things to a quick focus. Thus they do the work of two pairs of spectacles.

These glasses are familiar enough, but the manner in which they are put together is interesting. Opticians nowadays secure the double adjustment in three ways. One is to fit into the lower edge of a lens designed for far vision and shaped something like a melon slice a section of a lens designed for near vision and shaped something like the melon itself. They so fit as to form the ordinary elliptical shaped glass. The frame holds them in place.

Another way is to take a strong lens designed for near vision and grind upon the upper edge a slight convexity for far vision. There is no need of a frame for this arrangement.

The common way is to grind out what is substantially a slice from the lower edge of one side of a lens designed for the far vision. In the place of the slice is pasted on a segment of a lens designed for near vision. The only adhesive substance available that is perfectly transparent is Canada balsam, and all workmen use it. No frame is needed.—The New York Mail and Express.

THE IVORY TRADE.

An Elephant Yields About 120 Pounds of the Merchantable Article.

The kingdom of Belgium has extensive colonies in Africa in the Congo State, which covers an area of 800,000 miles (a territory larger than Mexico), and has a population of nearly 15,000,000, but yields very little in commerce to the home country. In one particular, however, the possession, even in name, of the control of the Congo State, south of the Soudan and north of Zambesi, has had a favorable commercial effect in Belgium in booming the trade of Antwerp, the chief port of Belgium, the foundation of which is traced to the eleventh century. Antwerp has become the great European market for African ivory. The recent sale, the fourth of last year, was of tusks weighing 125,000 pounds. Among them was one weighing 330 pounds.

In assorting tusks, those are considered the choicest which permit of the making of billiard balls from the largest part of the tusk. Among the tusks most sought for are those which weigh from 50 to 150 pounds. The mercantile value of ivory varies considerably. An ordinary elephant—if these quadrupeds can ever truthfully be said to be "ordinary"—yields about 120 pounds of merchantable ivory of the value of about $250, though recently the wholesale price of ivory has declined in consequence of the largely increased supply available through the opening up of new districts of Africa to colonization by European governments. Until a few years ago the wholesale value of ivory was $3 a pound; now it is $2. It is necessary to kill 12,000 elephants to supply 650 tons of ivory to the English market, of which Sheffield consumes about one-third. A tusk weighing 163 pounds was shown at London in 1851, but Gordon Cumming got one eleven pounds heavier. Tame elephants have risen in price in India from $105 in 1835 to between $750 and $4,000—Asiatic elephants, that is. But for the African discoveries, the European demand for ivory would have exterminated elephants in Asia. Some years ago, Stanley calculated the consumption of ivory at 750,000 pounds a year in Europe, 130,000 in India, and 75,000 pounds in the United States; that is, 1,000,000 pounds in a year; but the average consumption of ivory from 1889 to 1893 was 1,500,000 pounds, of which America took 200,000. Up to about five years ago Sheffield was the chief ivory market, but now Antwerp has succeeded to so much of Sheffield's former business that it has become the largest ivory trading point in the world. The sales of genuine ivory in Antwerp for 1896 amounted to 600,000 pounds, of which 450,000 pounds came from the district of the Congo. Some days before the quarterly sale at Antwerp there is an exhibition for the benefit of dealers.—New York Sun.

Fishermen Overturned by a Sturgeon.

The other morning about 11 o'clock an accident occurred on the river about three miles east of town, resulting in the drowning of two Indians, John Williams and Jim Walters, who were engaged in sturgeon fishing by Jake Andrews. They, with an Indian boy about 9 years old, were taking up a sturgeon line, when in some manner the boat swung in the current and one or more of the hooks caught over the gunwale of the boat. A sturgeon on the line pulling hard and assisted by the current, turned the boat over throwing all the occupants out. The two Indians were carried down by the current, and soon succumbed to the chill and the whirling waters. The boy more fortunate, managed to secure three oars which floated out of the boat, and with their aid reached the shore, and from him the particulars of the accident were learned. The boat was caught a short distance above town.

Jake Andrews, for whom the men were working, offers a reward of $20 for the recovery of each of the bodies.—Dallas (Or.) Chronicle.

The Greatest Murderess.

Aqua Tofano, the poisoner, who lived in the latter part of the seventeenth and beginning of the eighteenth centuries, was probably the greatest murderess the world has ever known. It is estimated that her victims numbered 700, mostly men. The poison was a colorless liquid, devoid of taste, and put up in small bottles bearing the image of St. Nicholas, a martyr, who is said to have been boiled in oil. The illness produced by the poison resembled cholera. Among the noted victims was Pope Clement XIV. In 1709 the arch-poisoner was arrested, and it was given out that she had been secretly strangled, but some historians insist that she lived until the year 1730, the Naples authorities making good use of her abilities as a poison-maker.

England has a horseless ash wagon

ECCENTRIC CHARACTER GONE.

Death of a Money Miser Whose Room Was a Curiosity.

Eccentric John Weisbrode, of Cumberland, Md., is dead. He had lived as a recluse and was eccentric to the utmost degree. During his illness he refused medicine until this morning, when he took the first dose in his life. Mr. Weisbrode was a native of Germany. He leaves a sister, residing in New York, and a niece by marriage, Mrs. Maggie Wiesbrode, a widow, living in Cumberland. He owned a store building on Center street, nearly opposite the city hall, which he rented, living in rooms in the rear. He also owned a city lot, which he cultivated, raising tobacco, besides vegetables. He was reputed to be worth $25,000, but he lived in squalor.

His rooms are a curiosity. In one of them he had nearly 1,000 pounds of leaf tobacco, which he had saved since the war, when he was a cigarmaker and barber. He was also a shoemaker and a tinner. In his room are also thirty sewing machines, which he kept since the war, when he was an agent. He refused to sell them except at the original price. He also had two printing presses and many cases of type, and nearly a car-load of crocks and jars. His food was bread and milk. He did his own cooking, and his expenses were not over 15 cents a day. He made his own clothes. Some years ago he operated a steamboat on the canal. He made the most of the machinery himself. Notwithstanding his apparent penury, he practiced charity, but made every effort to shield his identity. He was noted for his honesty.—Cumberland (Md.) dispatch.

Ohio Village Destroyed.

Fremont, O.—Fire destroyed the business portion of Lindsey village, eight miles west of Fremont, on the Lake Shore Railroad. The postoffice, the drug store, grocery, meat market, the new Produce Exchange building, town hall and Grand Army of the Republic hall were destroyed. The destruction was complete before aid could arrive from Fremont.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

WHAT HIS OPINION IS OF PRIZE-FIGHTING.

HIS COMPARISON OF CLIMATES.

HE SAYS SOMETHING ABOUT THE VINEYARD TRACTS.

"Well!" exclaimed our Town Philosopher, as he settled himself in the easy chair that we pushed forward for his use. "We-e-ll! This climate beats Banagher, as we used to say in Ireland."

"You are not an Irishman?" we inquired, tentatively.

"O, no! I'm a Norske man, but I lived in Dublin-town full many a day, and a fine climate they have; but I thought that Norway and Sweden had the boss breezes, the sovereign skies and all that sort o' thing—in the summer time, I mean, until I struck Thorsby! Why, the ozone here seems to be permeated with an elixir like that of which Ponce de Leon went in search. It pumps fresh life into every atom of the human anatomy, and sends an intoxicating thrill to the seat of the very soul itself."

The Call looked at the Old Philosopher suspiciously.

"Now, young sir, don't begin eyeing me in that tone of voice. I mean what I say. I'm not half-capsized. I've only had a little sip of unfermented juice from grapes grown in my vineyard, and if I'm tight on that I'd get tight on goat's milk.

***

The Town Philosopher took out his old, historic snuff-box and offered us a sneese, which we declined with thanks, whereupon he picked up a paper from our X-table, and, after scanning it rapidly for a few moments, read the following aloud:

"The Corbett-Fitzsimmons fight has not escaped attention from the learned in physics. The Medical Press and Circular has this to say about the deciding buffet: 'By the laws of the ring the blow is a fair one. By the rules of common humanity, however, it is a cowardly outrage, little short of a deliberate attempt at assassination. The fatal nature of a severe blow to the net-work of visceral nerves, known as the celiac plexus, makes such punches as those which finished Corbett among the most deadly that can be inflicted with the fist.'

The old man paused in his reading, to remark:

"And yet the laws of a sovereign State, pertaining to our States-Union, not only permitted this blow to be struck within its borders; but it arranged a place for the combat, and its Governor headed its 'best citizens' in welcoming the combatants to the Capital City of their Commonwealth!"

The old man reddened with rage as he went on: "Yet we brag and babble of our civilization! Out upon such civilization! It smacks of savagery in its most satanic form. Well, thank our Southern stars, we have no such civilization in Chilton county; but I'll tell you what I have on my Thorsby farm: I've a big, lazy mule, with heels like a battering-ram. He hasn't any 'science' in his composition; isn't acquainted with the Marquis of Queensbury rules, and never had a moment's 'training' in his life, but if I were a betting man, I'd bet my bottom cent that he could knockout Fitzsimmons or any other plug in less'n the fraction of a flying moment. He'd just hoist his heels gaily, and there'd be a disgruntled prizefighter lying on the grassy award about 15 feet away! Some men seem to think it a high and mighty honor to be physically superior to their fellows, forgetting that any old donkey in creation can lay the best of 'em but in the first round."

***

"I think this is one of the greatest grape countries in creation," said our Town Philosopher, after a pause.

"Now, there is Mr. A. Malmgren, formerly of Estherville, Ia. He located in Thorsby; purchased a vineyard-tract, in three acres of which vines were planted on the 20th of last May, and to-day there is from 25 to 35 bunches of grapes on each vine. Think of that, will you? Why, even California can't equal it. Mr. Malmgren is so entirely satisfied with his new environments that he has built a handsome home, and contemplates other improvements, one of which will be a beautiful lawn, devoted to roses and other shrubbery.

"Then, there is the Rev. John Hedberg. On the third of this month he set out 1,650 vines of the New York variety, in his vineyard-tract, and several bunches of grapes are already beginning to peep forth from the leafy tendrils!

"I could mention many other instances, if I had the time, to show not only what the soil and climate of Thorsby can do for grapes, in a very brief space of time, but what they are doing under our very eyes.

"Thorsby has a fortune in its vineyards. There can be no doubt of it, and when the outside world begins to realize the fact, there will be such an influx of immigrants hereaway that our colony will become one of the richest and most renowned centers of grape-culture on the continent.

"But, I must go. I will call again when I have something fresh to say," and the Town Philosopher picked up his hat, and with a jaunty bow, walked off as briskly as a boy.

INCORPORATED Feb. 6, 1896. CAPITOL STOCK $150,000.00

THE CONCORDIA
Land and Improvement Association.

THE FOUNDERS OF

THORSBY,

THE IDEAL . . . . .
NORTHERN COLONY

Of the Sunny South.

Are offering for sale City Property, Vineyard Tracts and General Farming Lands and extend a hearty welcome to all thrifty Northern people whom are desiring coming South to come and join us here in this enterprise. Over 120 families have now cast their lots in Thorsby and every excursion brings new purchasers.

Our next half rate excursion will leave Northern and Northwestern points on April 20th and May 4th and 18th.

Buy your Tickets to THORSBY, ALA., a station on the Louisville & Nashville railway, 48 miles south of Birmingham, Ala.

Send in your name and the Association will mail you their new illustrated catalogue free of charge.

ALABAMA ALL RIGHT.

Every Man Who Goes There Says It Is Entirely as Represented—Interview With Jas. L. Johnston.

(From Albert Lea, Minn. Standard, Jan. 27, '97.)

James L. Johnston, a prominent and reliable farmer of Mansfield, recently went on one of the low-fare excursions to central Alabama and on his return was seen by a Standard reporter.

"What do you think of Alabama, Mr. Johnston?"

"I was entirely pleased with it, sir. It is a fine country, sir; as fine as I ever saw. A man might seek all his life and find none better."

"How about climate, soil and productions?"

"The climate is fine, very fine, sir. It is mild all the year, very healthy and excellent for invalids—they would get well there. The soil is rich and yields large crops of every kind and better yet, it is one of the best fruit regions of the world. Large profits are made in grape-raising in the region about Thorsby where I visited, and other southern fruits flourish there. I found plenty of proof of this."

"What of Thorsby, the people and the prospects?"

"Thorsby village, which is 40 miles each way from Birmingham and Montgomery, has a good start, splendid start, sir; good buildings and more going up. I liked the people very much. They are very hospitable and enterprising; yes, sir, enterprising and prospering, too. The managers of the Concordia Improvement Company are gentlemen and perfectly reliable. I found everything exactly as they represented, the same as Mr. Gillrup told me before I went there. It was better: that's a fact. I was exceedingly well pleased and I picked me out a fine piece of land there. Prices are very reasonable both for lots and land, for acre tracts and farms, and any man with a little means can buy and easily make his payments. There are plenty of good opportunities for investment, and that region has a great future, sir; no doubt of it. I would like to move there at once and shall do so as soon as I can."

"Well, this is interesting. You found everything, then, as was represented?"

"Entirely so, yes sir, and better, and it was one of the most interesting and pleasant trips I ever made."

NOTES AND COMMENTS.

The New Orleans Picayune says that "a few swallows of bock beer makes a man feel like spring." And a few more make him feel quite fall-like.

Last year a Chicago girl took a header from her bicycle, and was picked up by a young doctor, who married her the other day. We predict that bicycle accidents this year will be more numerous than usual.

A Nebraska legislator has introduced a bill making it a misdemeanor for any citizen to have in his possession a deck of cards with more than four aces or kings in it. In many sections of the West this is a capital offense which calls for a funeral, and Nebraska shows marked forbearance in refusing to make it at least a felony.

Some interesting facts have been published respecting the teetotal colliery village of Roe Green, in Lancashire, England. Twenty-five years ago the houses of the village belonged almost exclusively to the Bridgewater trustees, who employ most of the men. To-day, out of 140 houses, eighty-one are inhabited by their owners. The Rechabite Tent has a membership of 270; the Band of Hope, 285.

The Rev. Dr. Mayo declared the other day that "the sixteen Southern States are to-day paying as much for the public schools as the British Parliament votes every year for the public school system of the British Islands—between $20,000,000 and $30,000,000." And he adds that since the war the South has expended "$250,000,000 of its own money for education—$75,000,000 of it for the children of the colored people.

The City of Paris has a wonderful system for teaching her mendicants the nobility of labor. The municipality maintains extensive establishments where the poor are permited to earn by congenial labor all the comforts of a model home. The city not only enables them to earn food and shelter in homes that represent the highest type of cleanliness and sanitation, but she strips each unfortunate of his rags and tatters and puts him in clean raiment.

The London Relief Fund for the starving people of India now amounts to more than $2,000,000, but large as that sum is, it will hardly suffice for the work that is to be performed. The most gratifying feature of it is that the sum is great enough to show that sympathy has been awakened in England for the condition of the people in India, and as a consequence it is reasonable to expect that the government will be compelled to undertake reforms which will go far toward removing the cause of famines in the future.

In trying to make a point against vegetarianism a member of the Ethnographical Society in Paris read a paper before that body a short time ago in which he insisted that cannibals are exceedingly strong and vigorous, far exceeding in strength those tribes not addicted to such food. He said that the savages who abstained from human food rarely ate meat of any kind and were a puny lot. The most curious part of his argument was that the flesh of women was much more digestible and far more nutritious than that of men; many tribes recognize the fact and eat only women, until the supply gives out.

"There is but one genuinely live town in the West," says A. W. Lyman, of Helena, Mont., "and that is Butte. The Anaconda copper mines, that vast concern which makes a profit of from $5,000,000 to $6,000,000 a year, explains the status there. It is employing more men and has a bigger payroll than ever before, and its employes get the highest rate of wages paid anywhere. No wonder that Butte is prosperous, for where several thousand men get steady work and high pay there can be no stagnation. Life is never stagnant in the big copper camp. The street cars run all night and likewise the saloons, and if a man wants a shave at 2.30 a. m., he will find several barber shops open.

The Overland Telegraph Line, which connects England with her great Indian Empire, passes through Persia, and has recently been subjected to an interruption of a serious character, due to the fanaticism of the populace. It seems that there has been a terrible drouth, which the subjects of the Shah, instead of attributing to Providence, ascribed on the contrary to the telegraph poles, and, above all, to the posts and signs of the survey department of the company. Accordingly all the obnoxious poles, wires and survey signs were destroyed by a priest-led mob. Strangely enough, heavy rain fell immediately afterwards, and now, in spite of the severe punishment inflicted by the Teheran Government upon the ring-leaders, the masses of the population throughout Persia are firmly convinced that telegraph and survey posts are productive of drouth and inventions of the devil.

Of the fourteen reputed centenarians who died during the past year, no fewer than eleven were women, says the Illustrated London News. Out of the one hundred and eighty-eight persons who were declared as over ninety years of age at death, one hundred and eight were women. The superior longevity of the female sex is a well established fact. To some extent it depends, of course, on their more sheltered way of living, but by no means exclusively, as the women of the laboring classes show a great vital tenacity as well as those who have an easy time of it in the world. The vital power of girls is shown in babyhood, for though one hundred and four boys are born to every one hundred girls, the females have more than overtaken the deficiency before the end of the first year. In other words, the belief of old nurses that boys are harder to rear than girls is a true one.

There is, among the nations of the world, none whose history is like unto Greece. For centuries before history was made for modern eyes to read she was a power and her people more enlightened than any other known to exist. With such a background, it is small wonder indeed that she has held her own in the memories and minds of men where other and greater nations have fallen into oblivion and left no works behind them to rescue their name from everlasting silence. Greece is not a large country. No part of her is forty miles from the sea nor ten from the hills. Her area is 24,977 miles, a trifle more than one-half that of the State of Pennsylvania. Her population, according to the last census, was 2,187,208, and should she, despite the intrusiveness of the other European powers, succeed in annexing Crete, she will have added 300,000 more to the sum total of her inhabitants, and a territory of 150 square miles. The addition of Crete would also give her further claim to the perhaps unenviable distinction of being more thickly populated than any other country in Europe, with the exception of Sweden and Prussia. About one-half of her people are agriculturists and shepherds.

One of England's little wars has just been brought to a successful termination on the frontier of Assam. A tribe known as the Apatanangs had raided a tea estate in North Lakhimpur, murdering two native servants and carying away three others. Immediately a force of 300 military police under an English Captain was sent out to teach the Apatanangs a lesson. It started on Feb. 1, and had to penetrate a region never before entered by civilized men. The route for three marches was over boulders along the bed of the Ranganadi, and the precipices in the gorges had to be surmounted by bamboo ladders. After this came the crossing of a range of mountains 8,000 feet high, then the descent to the Pangi river, and the crossing of another range of 7,000 feet. After some further difficulties the plateau of the Apatanangs was reached. It is ten miles in length, is laid out in terraces artificially irrigated, and magnificent paddy crops are raised. Primroses, daphne, wild strawberries, raspberries, and currants abound, and every small hill is laid out with plantations of pines and dwarf bamboos. The Apatanangs, who possess about 4,000 houses, are allied in race to the Abor Daphlas, but are especially distinguished from their latter by their custom of wearing cane tails dyed red. The captives were recovered, and the offending villages punished, and six Daphlas prisoners were also released. One interesting discovery made was that the Apatanangs have direct relations with the Lamas of Thibet.

Modern mining methods and American and English capital are soon to be applied to the working of the ancient El Dorado of the Iberian Peninsula. Mr. Harmony, United States Consul at Corunna, in a report to the State Department gives the views of American experts who have been investigating the mineral fields of Galicia, which have been famed for their riches from a very remote period. The Phoenicians, and later on the Carthagenians, worked the gold and silver mines of Spain. Hannibal extracted daily near Carthagena a quantity of those metals equivalent to 6,000 pesetas ($1,158). The most renowned of ancient historians mention the riches of Iberia in precious metals and relate that in the time of Justinian gold was found in the fields worked by the plough. Pliny, the younger, says that in his time 2,000 pounds of gold were extracted annually from Galicia, Asturias and Portugal. The immense quantities of this metal drawn from Spain restored and replenished Rome's public treasury. Cato on his return from governing Spain handed over eighteen tons of silver and nearly 2,000 kilograms of gold. The discovery of the New World put a stop to the mining industry in Spain, but it now seems probable that some of the famous old mines will be worked again on an extensive scale. Rich ores of tin, copper and antimony are also common in this district, and iron is so abundant that Consul Harmony says in any other country but Spain it would have received special attention from the Government. A thousand million tons is the estimate of the quantity in Galicia alone. Consul Harmony says the question of gold is well worth the attention of American miners and inventors who have been used to work low grade refractory ores.

This year is the centennial of the silk hat, which first came into common use in Paris in 1797.

HOW PRISONERS COMMUNICATE.

Ingenious Methods Employed by Them to Talk to Each Other.

The prisoners make every conceivable effort to hold intercourse of some kind with their fellow-culprits, if only to relieve the silence and solitude—intolerable to persons of their class, who have not sufficient cultivation of mind to supply them with food for thought. Knocking on the walls of separation between the cells, scratching sentences on the sides of the baths or the bottoms of the tins used to contain their gruel, and many other devices of that inadequate nature, are instantly detected and stopped by the officials. The chapel is perhaps the most favorable ground for enabling them to let their presence at least be known to acquaintances who have been incarcerated at an earlier or later period from themselves. The male and female prisoners are, of course, rigidly separated during the services. A high and strong wooden partition divides the portion of the building they respectively occupy, but they do not allow this serious obstacle to deter them altogether from the communications they specially desire to hold with the opposite sex. In singing the hymns they often try to introduce words of their own, or make very peculiar responses, which can be understood over the wall. A male prisoner will be afflicted with an extremely bad cough, which in measured attacks, makes known to a lady friend on the other side that he is "in quod," but he is seldom oppressed by this bronchial malady on more than one occasion, since the governor informs him that as his cough is so distressing, he is to remain in his cell, and not be exposed to the air of the chapel until he is better—a cure for his complaint which is at once perfectly complete. On the female side of the partition a woman permitted to take her infant, born in prison, to chapel with her, pinches the unfortunate mite until its shrill yells reveal her proximity to its father, attentively listening through the wall.

Recently the governor of one of our county prisons was greatly perpleved by the discovery that the female prisoners in his charge managed in some mysterious manner to ascertain the presence of every individual man on the other side of the impervious dividing barrier. One of the women inadvertently let drop the fact that she had recognized her husband, whose position there must, according to rule, have been completely unknown to her. None of the officers could account for an unpermitted knowledge which was found to be shared by all the other women. At last a very careful examination of the chapel gave an explanation of the mystery. Although strictly divided, as we have said, both the male and female prisoners faced the altar in their seats, and over it had been fixed a very large brass cross against the wall, so highly polished as to form a very good mirror. In its clear surface the women saw the reflection of every man as he passed to his place and had enjoyed the spectacle with impunity till a wife, much interested in the appearance of her spouse, had made an imprudent remark to one of the officers, which revealed the fact. The brass cross instantaneously disappeared, and the bland wall behind it no longer tells any secrets.—London Hospital.

An Expert Marksman.

The llama of South America is an expert marksman, though it never uses its craft in the procurement of its food. Only when annoyed and angry does it give an exhibition of its wonderful skill in hitting the object aimed at. The llama's weapon is its mouth; its bullet is composed of saliva and chewed hay.

Several years ago at the fair grounds in St. Louis, I witnessed an exhibition of this creature's power of expectoration, in which the victim was a country beau, who came very near losing his sweetheart thereby. This young man was one of those self-sufficient individuals who imagine that knowledge sits enthroned in the temples of their own personal intellects; "that what they don't know is not worth knowing." He was annoying the llama (the animal stood in the center of its pen, probably fifteen feet or more from its tormentor) by throwing clods of dirt at it and by beating on the rails of the pen with his cane.

I saw by the creature's actions that it was angry; the rapid movements of its jaws indicated that it was preparing to attack its persecutor. I warned the young man, telling him what to expect; his sweetheart begged him to desist and to come away. But he treated my warning with derision, and told the girl that "he knew his business." Suddenly there came a whizzing, whistling noise, followed bp a sharp spat; the young wiseacre lay supine upon his back with his eyes and forehead plastered with a disgusting mixture of saliva, hay, and mucus.

"I hate a fool!" said the girl, as she shouldered her parasol and walked away.

I saw them again in the monkey house some time afterwards, but the man was a changed being; he had learned his lesson in decorum; he had been taught modesty by the good marksmanship of a llama.—James Weir, Jr., in Lippincott.

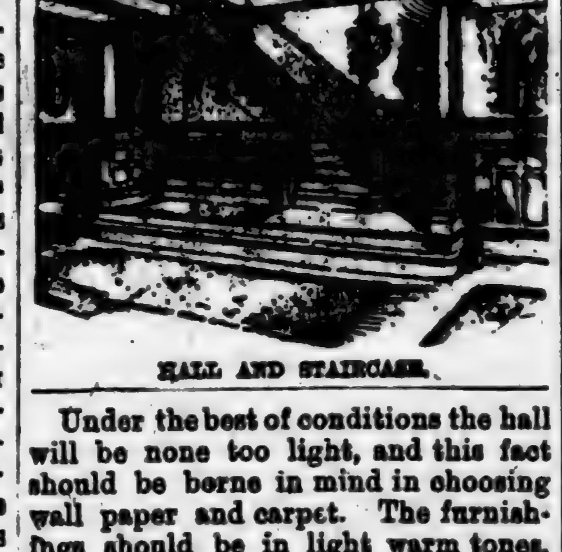
THE HALL OF A HOUSE.

An Attractive Feature of the Modern Dwelling.

In the furnishing of a modern house the hall constitutes one of the most serious problems, but there is one

PERSPECTIVE VIEW.

consolation. If one solves it successfully the hall becomes one of the most attractive features of the entire house. It then ceases to be a mere passageway, and becomes a veritable room, and one which, strangely enough, will be more generally used than almost any other in the house. In the conventional city dwelling, when the hall is long, narrow and dark, with a high ceiling and a flight of stairs that makes an unbroken sweep to the floor above, very little can be done to give a true artistic effect. If the front door is of solid paneled wood a great improvement will result from replacing the upper panels with glass. This can take the form of a sash of small leaded panes in fanciful design, or a single sheet of plate glass, protected by a neat iron grill. The mistake should never be made of using colored glass unless one can afford a masterpiece of genuine stained glass, for the ordinary so-called "cathedral" glass is crude in colors, and an abomination. The hall stand or hat rack, which is often found just within the front door, should be banished to some rear corner, if it is to be tolerated at all, where it will not be so much in evidence. These racks become "catchalls," and old coats, hats, umbrellas and canes are not at all ornamental. In place of these conveniences a broad hall chair, of formal design, or better still a mahogany settee, will serve every purpose. These should be reserved for the use of casual callers. If there are no convenient closets that can be made for the garments of the members of the household, a neat clothes tree such as are imitated from the antique, will prove a great deal more sightly than the hall racks that are made nowadays. It takes up but little room and can find a place in some rear corner.

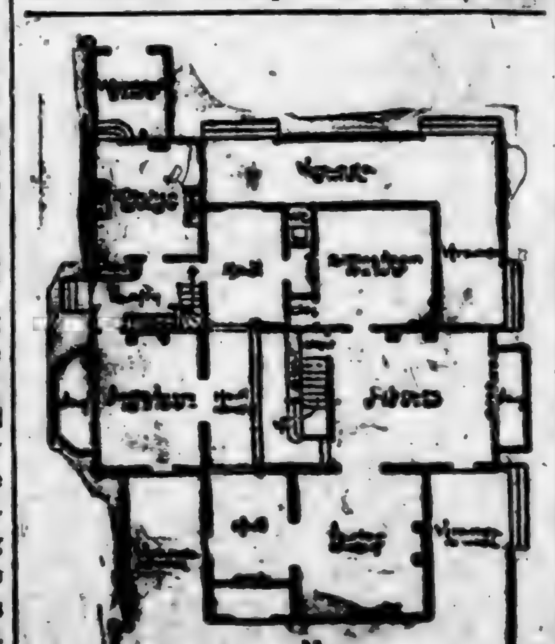


HALL AND STAIRCASE.

Under the best of conditions the hall will be none too light, and this fact should be borne in mind in choosing wall paper and carpet. The furnishings should be in light warm tones, and only the most formal designs are permissible. Few people seem to realize the effectiveness of pictures in the hall. It is customary to hang one or two large frames on the side walls, and allow the long stretch above the stairs to go uncovered. In the latter place pictures are needed, if anywhere in the house, for there is no other way in which the vast wall space can be broken.

All of this has reference to the fitting and furnishing of the ordinary city hall.

In the villa house the architect generally plans a square hall that has all the effects of an ordinary room. There may be windows on the side, an open fireplace, and plenty of contrivances that lend themselves to decorative effect. Here the treatment should be the same as in any other room, with

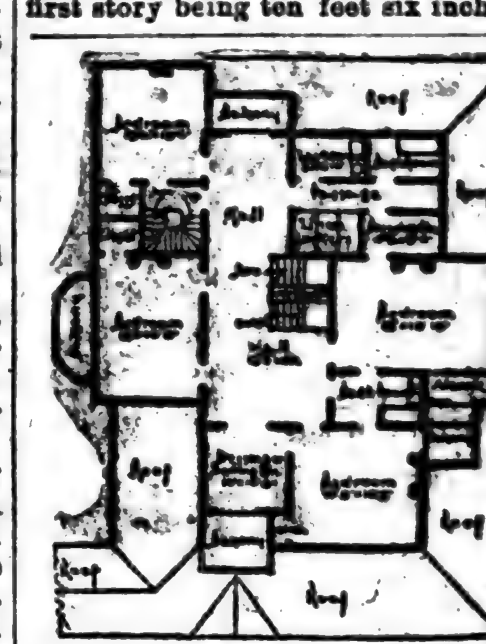


FIRST FLOOR.

this restriction. The purpose of the hall must never be forgotten. Easy chairs and sofas will not be out of place if they do not detract from the formal character, or do not obstruct free passage. These should never be a profusion of ornaments or bric-a-brac. In a general way the hints as to the city hall apply equally well to one in the suburbs. A hall chair, or settee should be placed in close proximity to the entrance door, and the fittings of the walls and ceilings should be in the light, warm tones.

The design illustrating this article lends itself readily to a most beautifully artistic treatment; the hall is a host in itself. Its ceiling is paneled to represent open timber work, and the walls finished in hard white plaster, with wainscoating four feet high from the floor, above which is tinned with a formal design planted on in stucco work, representing the fleur-de-lis of France.

The residence is sixty-two feet wide, by seventy-eight feet in depth, the first story being ten feet six inches in



SECOND FLOOR.

height. The arrangement and size of rooms is shown by the floor plans.

The sum of $8405 will build the design, not including the cost of mantels ranges, and heating apparatus.

Copyright 1897.

UNCLE SAM'S ORIGINAL ATTIRE.

Somewhat Different From the Modern Figure.

The original Uncle Sam of song and cartoon was so different from the modern figure, with its long striped pantaloons, that our readers will be interested to see the costume as some of the students of history say it should be. In the first place, say these authorities, he should wear a high hat, slightly bell crowned and of felted fur. His shirt should be portrayed with a frilled bosom projecting out, pouter fashion, and generally with a breastpin in it. His shirt collar should be high and connected with his shirt. His cravat should be wide and tied with a "pudding," as it was termed in former times. The waistcoat should be a buff, single breasted affair, with gold or gilt buttons. The swallow-tailed coat should be made with high rolling collar and high pointed lapels.

The greatest difference between Uncle Sam as he is and as he should be lies in the pantaloons. They should be made with a "trap door" in front and fitted below the knee for the wear-

ing of the boots outside. These boots should have tassels in front. Colored shirts were unknown until about 1829. Striped pantaloons are of a comparatively late date, and straps under the boots were not known until 1825. They were a part of the pantaloons and were fastened on the boot in front and buttoned under it. Goatees were not worn until late in the 30's.

The accompanying picture shows the correct Uncle Sam of a century ago, but times change and our good uncle with them.

Governor Smith, the new Executive of Montana, advises the amending of the State constitution to provide that the million acres of land owned by the State be not sold, but leased, and that persons residing on these lands be exempt from all taxation on personal property and improvements.

The Rev. Somebody defines for a New York paper "news" as "anything that the general public ought to know." According to that the multiplication table is a highly important piece of news, comments the Louisville Courier-Journal.

When a "friend" tells you something about a neighbor just "saw wood" and say nothing.

No-To-Bac for Fifty Cents.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00, at all druggists.

Public men learn in time that it is better not to talk when they have nothing to say.

Hall's Catarrh Cure is a liquid and is taken internally, and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free. Sold by Druggists, 75c.

F. J. Cheney & Co., Props., Toledo, O.

Several Chippewa Indians in Douglas county, Wisconsin, are profitably engaged in slaying wolves, for which they receive $10 a head.

Just try a 10c. box of Cascarets, the finest liver and bowel regulator ever made.

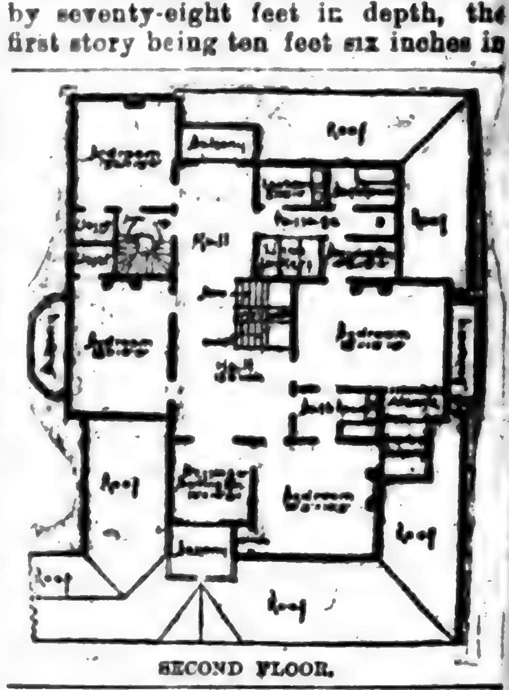
The design illustrating this article lends itself readily to a most beautifully artistic treatment; the hall is a host in itself. Its ceiling is paneled to represent open timber work, and the walls finished in hard white plaster, with wainscoting four feet high from the floor, above which is tinned with a formal design planted on in stucco work, representing the fleur-de-lis of France.

The residence is sixty-two feet wide, by seventy-eight feet in depth, the first story being ten feet six inches in



SECOND FLOOR.

height. The arrangement and size of rooms is shown by the floor plans.

The sum of $8405 will build the design, not including the cost of mantels ranges, and heating apparatus.

UNCLE SAM'S ORIGINAL ATTIRE.

Somewhat Different From the Modern Figure.

The original Uncle Sam of song and cartoon was so different from the modern figure, with its long striped pantaloons, that our readers will be interested to see the costume as some of the students of history say it should be. In the first place, say these authorities, he should wear a high hat, slightly bell crowned and of felted fur. His shirt should be portrayed with a frilled bosom projecting out, pouter fashion, and generally with a breastpin in it. His shirt collar should be high and connected with his shirt. His cravat should be wide and tied with a "pudding," as it was termed in former times. The waistcoat should be a buff, single breasted affair, with gold or gilt buttons. The swallow-tailed coat should be made with high rolling collar and high pointed lapels.

The greatest difference between Uncle Sam as he is and as he should be lies in the pantaloons. They should be made with a "trap door" in front and fitted below the knee for the wear-

ing of the boots outside. These boots should have tassels in front. Colored shirts were unknown until about 1822. Striped pantaloons are of a comparatively late date, and straps under the boots were not known until 1825. They were a part of the pantaloons and were fastened on the boot in front and buttoned under it. Goatees were not worn until late in the 30's.

The accompanying picture shows the correct Uncle Sam of a century ago, but times change and our good uncle with them.

Governor Smith, the new Executive of Montana, advises the amending of the State constitution to provide that the million acres of land owned by the State be not sold, but leased, and the persons residing on these lands be exempt from all taxation on personal property and improvements.

The Rev. Somebody defines for a New York paper "news" as "anything that the general public ought to know." According to that the multiplication table is a highly important piece of news, comments the Louisville Courier-Journal.

When a "friend" tells you something about a neighbor just "saw wood" and say nothing.

No-To-Bac for Fifty Cents.

BASQUE AND WAIST.

JAUNTY DESIGNS IN THESE ARTICLES OF FEMININE DRESS.

Plain But Stylish Basque With the New Sleeve Models—Attractive Shirt Waist Developed in Flowered Dimity.

MASTIC cashmere, green satin and Irish lace are here stylishly united in this plain but stylish waist, the front of which, writes May Manton, lies smoothly across the shoulders

LADIES POINTED BASQUE.

and bust with the additional fulness below laid in forward-turning plaits that meet at the centre-front in pretty pointed outlines. Glove fitting lining fronts, having double bust darts and closing at centre front, is the foundation upon which the fanciful front is arranged. Full double ruffles of Irish lace are sewed at yoke depth with three bands of satin above, producing a decidedly stylish and dressy effect. The closing is effected invisibly at the left shoulder arms-eye and under arm. Smooth under-arm gores separate the front from the back, which is seamless; close overlapping plaits at the waist line, holding the scant fulness to position.

The sleeves, exhibiting the radical difference between the new and the late models, are gathered at the top and finished at the wrists with three bands of satin and a full ruffle of lace falling deeply over the hand. A standing band that closes on the left side, completes the neck, above which rise an upright ruffle of lace.

The model will be found particularly becoming to youthful and well developed figures, affording a wide range of variations in the selection of materials and decorations. Blue bengaline, with yoke of all-over batiste embroidery, in a combination of etamine in deep red in connection with black satin and chiffon, would be exceedingly French.

To make this basque for a lady in the medium size will require three and three-fourths of forty-four-inch wide material.

LADIES' SHIRT WAIST.

The shirt waist, says May Manton, has become a necessary part of every woman's wardrobe, but the shirt waist of '97 is like the wheel of '97, inasmuch as there are changes and improvements. The sleeves are smaller; the gathers at the wrists being very scant, while the fulness of the front in the model here shown is distributed at the neck and along the yoke's shoulder edges.

The waist depicted in the large engraving is an exceedingly attractive model developed in flowered dimity, and is neatly finished with machine stitching. The fulness at the neck and shoulder edges produces a soft and becoming effect over the bust, and is arranged at the waist line by overlapping plaits, the lower edge being concealed under the dress skirt. A box-plait finishes the right-front edge, through which button-holes are worked to effect the closing. The back is arranged in three graduated box-plaits that are widest at the top and joined to the lower edge of a short yoke which can be cut with or without a centre seam; the seam being desirable when striped material is used, as the yoke can then be shaped with bias black edges, as shown in back view. The stylish sleeves are gathered at the upper and lower edges, a straight cuff finishing the wrists, and openings being made in back of sleeves that are finished with pointed overlaps. A shaped neck band completes the neck upon which the adjustable collar of white linen is arranged. Serviceable and stylish waists can be made in any fancy shirting, including percale, dimity, batiste, organdy or gingham, with collar to match, or of white linen, as our model portrays.

LADIES' SHIRT WAIST.

MISSES' DOUBLE-BREASTED ETON JACKET.

This jaunty little Eton jacket for young misses is carried out in red cloth with decorations of braid in two widths. Smart walking hat of red straw with narrow satin band encircling the crown, finishing at the left side with cravat bow and coque feathers. The jacket, of becoming length, overlaps the wide belt, the front extending in pretty pointed outline. The wide backs can be made with or without a centre-back seam, meeting the fronts, which are shaped with single bust darts. The garment laps in double-breasted style, closing at the left side with a decoration of black brandebourgs in true military fashion. The upper edges of the fronts are reversed above the closing to form wide coat lapels that meet the rolling collar in uneven notches. A chemisette with bow tie is worn, and a wide belt encircles the waist. The coat-shaped sleeves fit the arm comfortably loose from the wrists to above the elbow, where the fulness stands out in stylish effect, and is arranged at arm's-eye in box-plaits. The free edges of the collar, coat lapels and sleeves are finished with a flat braid in medium width, while the wrists have an additional trimming above the flat braid.

Jackets of this description are exceedingly popular and may be developed in serge, tweed, covert cloth, etc., in colors such as red, hussar, military or postman's-blue, or a pretty

JAUNTY ETON JACKET.

shade in dove-gray or tan. In washable fabrics, canvas, duck or pique can be employed, and the garment can be made to match a skirt, thus completing a costume, or worn independently as a top garment. As a cycling jacket the model is exceedingly correct.

A Cheerful Landlord.

"I stopped at a very small town in Kansas a few weeks ago," said L. M. Martinez, of Chicago, at the Raleigh. "I had been in the place once before and knew where the hotel was. It was late at night when I got off the train and went to the hotel. After repeated knocking and shaking the door the landlord came down and let me in. The next morning breakfast was not ready when I got up, but the landlord was in a good humor about it, saying, 'Everybody is sick about the house. You are the only guest, so I didn't get breakfast ready.' He went out into the kitchen and in half an hour served a very good meal for me. I found that my customer was out of town, so had nothing to do but stay around the hotel all day. The landlord got dinner and supper for me and I asked, 'Who is sick?'

"'My wife, two children, the cook, the waiter and the porter.'

"'I should think you would get some one else.'

"'Can't. They won't come.'

"'Why?'

"'They are all afraid of the smallpox. I'm the only one who hasn't got it, and I feel the symptoms. I'll be in bed to-morrow, but I think the porter will be well enough to run the hotel by that time. He is sitting up to-day.'

"I paid my bill very suddenly and put myself under medical treatment when I reached the next town."

All Foreigners.

The Philadelphia North American quotes the saying of a man who is disturbed about the future of his native land.

Mr. Banner—The foreigners are getting an awful hold in this country.

Crosby—They are, indeed. Why, I read over a list of men naturalized by the court yesterday, and every one of them was a foreigner.

Ponder Over It.

A prominent building owner, with years of experience, gave the following instructions to his architect: "I have had my experience with kalsomine and other goods claimed to be just as good as Alabastine. I want you to specify the durable Alabastine on all my walls; do not put on any other manufacturers' dope, if they furnish it for nothing. Alabastine is right, and when I cease to use it I shall cease to have confidence in myself or my own judgment."

Pincers are made by a machine which, in one operation, cuts out the handle and jaw. The two parts are afterwards joined by hand.

The average number of novels issued one hundred years ago in America and Great Britain was sixteen. Now the average is two or three a day.

That Everlasting Irritating Itch.

That describes Tetter, Eczema and other skin diseases. 50 cents will cure them—stop the itch at once. 50 cents pays for a box of Tetterine at drug stores or postpaid for 50 cents in stamps from J. T. Shuptrine, Savannah, Ga.

The largest iron bridge is over the Frith of Tay, Scotland. It is 18,612 feet in length and has eighty-five spans.

BUCKINGHAM'S DYE

For the Whiskers, Mustache, and Eyebrows.

REASONS FOR USING
Walter Baker & Co.'s
Breakfast Cocoa.

1. Because it is absolutely pure.
2. Because it is not made by the so-called Dutch Process in which chemicals are used.
3. Because beans of the finest quality are used.
4. Because it is made by a method which preserves unimpaired the exquisite natural flavor and odor of the beans.
5. Because it is the most economical, costing less than one cent a cup.

Be sure that you get the genuine article made by WALTER BAKER & CO. Ltd., Dorchester, Mass. Established 1780.

DON'T YOU OFTEN come across expressions and references in the newspapers and books which you don't fully understand, and which you would like to look up if you had some compact book which would give the information in a few lines?—not be obliged to handle a twenty-pound encyclopædia costing $25 or $50. 50c. in stamps sent to BOOK PUBLISHING HOUSE, 134 Leonard Street, N. Y. City, will furnish you, postpaid, with just such a book, containing 520 pages, well illustrated, with complete handy Index. Do you know who Croesus was, and where he lived? Who built the Pyramids, and when? That sound travels 1125 feet per second? What is the longest river in the world? That Marco Polo invented the compass in 1260? and who Marco Polo was? What the Gordian Knot was? The book contains thousands of explanations of just such matters as you wonder about. Buy it at the very low price of half a dollar and IMPROVE YOURSELF. 50c. 50c.

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

WHY?

A Civil Service paper puts the following query:

"What is there about the administration of a postoffice that makes necessary the limitation of its incumbency to a term of four years?"

The Call will answer that question by asking why the President and his Cabinet should be limited to a term of four years, or why Governors, Legislators, both State and Federal, et al., should only be elected for a specified time. It is a very dangerous thing for republican institutions for any man or paper to create a sentiment in favor of continuing an officeholder in office for an indefinite period. It smacks too much of monarchic ideas, and we want nothing that savors of imperialism upon our shores —no!

ERRATUM.

"A single erratum," said the poet Cowper, "may knock out the brains of a whole passage." We know that one of them knocked out the whole sense of a closing paragraph of our editorial on "The Convict Question" in the last issue of the Call. In the hurry and worry of going to press, one-half of the last sentence in that editorial was omitted, with the consequence of leaving nonsense. That sentence was written, and should have read, as follows:

Let Alabama utilize its convicts in a way that will uplift them while they adorn it with good roads. And when this is done, not only by our own State, but by every other, our country

"Will break its bands,
And, silencing the jealous lands,
Stand in the searching light of God
With sinless heart and stainless hands!"

The Call would modestly suggest that the citizens of Thorsby proceed to organize a Farmers' Debating Society. It could meet at the homes of its members till we have a town hall, and it would be a most delightful break in the monotony of daily life. It could, in time, introduce a circulating library of books devoted to agriculture and horticulture, and it would prove a potent factor for good in a great many ways. It could discuss questions of general interest to Chilton county—questions pertaining to crops—to the best methods of cultivating our fields, vineyards and orchards, and to other subjects of a like character. Who will be the first to fall in line with this suggestion? Don't all speak at once.

It is proposed by the Boston City Council to spend $124,000 on Faneuil Hall to insure its safety from fire and other disintegrating forces. This old landmark the people of Boston cherish as an honorable man does his family's good name.—Cincinnati Times-Star.

Yes, they don't! Faneuil Hall has been permitted to become a rotten old rookery, and for years its lower story has been dedicated to markets for the sale of fish, tripe, poultry, vegetables and all that sort of truck! It takes the South to preserve old landmarks with a proper pride.

"Aim high if you do hit low," advised a sage of other days; but Thorsby proposes to aim high, and hit its target every time. That's what its here for.

HE LIKES IT.

Clanton, Ala., April 26, 1897.

Editor Call: In your issue of the 23d instant you say, in an editorial on "The Convict Question:"

"No man is what he makes himself —all the opthmistic lies of the centuries to the contrary notwithstanding. Every man is just what his ancestry, his antecedents and his environments have made him. This is one of the eternal verities that cannot be climbed over, crawled under nor tunneled through."

Therein is a big chunk of true philosophy, and, if discussed fully in all its bearings upon men's relations one to another, and to other animals, it would fill a very large volume. It would be news to most people, and, if put in practice by a responsible government, would improve the morals of our people to an equality with those of China and Japan.

The sentiment quoted above catches your humble servant,

L. A. THORNTON.

BANKRUPTCY MADE EASY.

The Nelson Bill Which Passed the Senate a Simple Measure.

The bankruptcy bill passed by the senate Thursday was framed by Senator Nelson, of Minnesota, and is very brief and simple compared with the bill reported from the judiciary committe, known as the Torrey bill.

The Nelson bill provides that any debtor other than a corporation owing $200 or more, who is unable to pay his debts, may file his petition in the district court of the United States for the district or division thereof in which he resides, asking for a discharge from his debts, and offering to surrender all his property for the payment of his debts, except such as is exempt by the law of his domicile from execution and liability for debts.

The provision as to involuntary bankruptcy is as follows:

"That if any debtor being a banker, broker, merchant, trader or manufacturer who owes $500 or over, and who is unable to pay his debts shall at any time within four months of the time of the filing of the petition hereinafter mentioned, assign, transfer or defraud any of his creditors, he shall be deemed a bankrupt, and may be poceeded against in a court of bankruptcy as hereinafter provided. A creditor or creditors having debts against such a bankrupt to the amount of $500 or more, may, within four months after the act of bankruptcy has been committed, file in the court of bankruptcy in the district in which the bankrupt resides, petition, under oath, setting forth, among other things, the acts of bankruptcy aforesaid, and praying for an adjudication of bankruptcy against the bankrupt and the distribution of his estate among his creditors."

Sympathy for Greece.

The first reference in congress to the Turko-Grecian war came soon after the senate opened Thursday, when Mr. Allen, of Nebraska, introduced the following resolution:

Resolved, That the established policy of the United States of avoiding entangling alliance with the European powers is in no respect violated by our sympathising with the Christian people of Greece in their present heroic struggle against the advancement of the Ottoman empire; and that, in the judgment of the senate, it would be a recognition of the wishes of all, for the executive to express to the government of Greece the sympathy of the American people."

Mr. Allen supported the resolution by citing precedents in which the United States had expressed sympathy for those struggling against oppression. He also read from manuscript a detailed statement of the affairs of Crete from early times.

At the request of Chairman Davis, of the foreign relations committee, the Allen resolution was referred to the foreign relations committee, Mr. Davis promising speedy action.

Senator Morgan, of Alabama, made a sensational speech against the disorganized condition of the senate and house committees, and declared that the speaker of the house, who was called "The Great White Czar," should be known hereafter as the "Great White Filibuster."

CONGRESSMAN HOLMAN DEAD.

For Many Years a Member of the House of Representatives.

Representative Holman, of Indiana, who has been ill at his home in Washington with spinal meningetis, died Thursday afternoon.

Hon. W. S. Holman was born in Dearborn county, Indiana, September 6, 1822. He was judge of the court of common pleas from 1852 till 1856, was then elected to congress as a democrat and has been nominated successively since, suffering only three defeats, in 1874, 1876 and 1878, and serving with those exceptions from 1859 to the present time.

He has been an uncompromising enemy of trickery and won the name of the "Great Objector" from his fearlessness in opposing doubtful measures and the schemes of lobbyists. Perhaps no man in either branch of the national congress was better versed in statutes.

GEORGIA EPWORTH LEAGUERS

Meet In Their Fifth Annual Convention In Atlanta.

The fifth annual conference of Georgia Epworth Leagues was called to order in the Sam Jones tabernacle at Atlanta Thursday night. Two thousand delegates were in attendance. The big building was packed by a large and enthusiastic audience.

The Mexican Treaty Passed.

The treaty between Great Britain and Mexico settling the boundary line between this country and the colony of Belize or British Honduras, has passed the Mexican senate.

Garibaldi Is Patriotic.

Lieutenant Manlio Garibaldi, of the Italian navy, has sailed from New York on the Teutonic with the purpose of aiding the Greeks in their present struggle, as his brother is about to do.

Young Sewall for Hawaii.

President McKinley sent to the senate Thursday the name of Harold M. Sewall, of Maine, to be envoy extraordinary and minister plenipotentiary of the United States to Hawaii.

GOES THROUGH A TRESTLE.

MORE WORK OF TRAIN WRECKERS IN ALABAMA.

THREE MEN KILLED THIS TIME.

The Rails Were Removed and Engine Makes Headlong Plunge Into the Water Below.

Another disastrous wreck, caused evidently by the band of wreckers which has played havoc with the Louisville and Nashville's roads in Alabama of late, was visited on that company's No. 3 southbound passenger for New Orleans about 1 o'clock Thursday morning.

As a result three men are dead, two others are said to be dying and a number of others are less seriously injured.

The train left Montgomery at 9:40 p. m., loaded down with passengers. It was going rapidly when it reached Wilcox, a little station seventy-two miles south of Montgomery.

Just beyond Wilcox is an ugly trestle. When the engine reached it the wheels left the track, broke through the trestle and the engine, the mail, baggage and smoking cars were piled in a heap in the little stream below.

Engineer Alvin Adams, of Mobile, and Fireman Jordan Jones, colored, were fatally injured, being scalded. Both have since died. An unknown tramp, who was stealing a ride, was also killed.

How the other occupants of the cars which went down escaped as they did with only a few bruises is a mystery, as the cars are said to have been demolished. The sleepers and all of the passenger coaches, except the smoker, were derailed, but remained upon the roadbed.

As soon as day broke it became apparent that the train had been feloniously wrecked and after the almost identical method employed in the disastrous Cahaba wreck last January and the McGee switch wreck of a few weeks before.

The spikes holding the rails on the crossties had been drawn and the rails pushed seven or eight inches out of line and pinned down again.

The heavy engine when it struck the crossties crushed through the bridge, the foremost cars following it, but the other part of the train broke loose and saved perhaps a hundred lives.

Dogs were put on the trail of the wreckers about noon and two negro suspects have been arrested. The chase is being continued, however, with all vigor. The detective force of the Louisville and Nashville road have been working assiduously for months trying to discover the mysterious wreckers, but with little effect.

FIVE-STORY BUILDING COLLAPSES

Two Hundred People Employed Therein Have a Fortunate Escape.

Half of the five-story brick building owned and occupied by the Atlanta Paper Company, at Atlanta, collapsed and fell in a mass of debris at 7:30 o'clock Thursday night.

The big building was being repaired and the front wall on Pryor street had been propped up so that the lower sections of it could be strengthened. The supports were evidently not sufficient to sustain the great weight of the top floors, and without warning the crash came.

Had the building collapsed two hours earlier the death list would have been very large. About 200 persons, mostly young girls, are employed by the Atlanta Paper Company and the Empire Printing Company and they left the building just before 6 o'clock for their homes, leaving only the night watchman and an office boy in the building. Both of the latter narrowly escaped the collapse.

TEXAS CONFEDERATE SHAFT.

First Monument in the Lone Star State Unveiled at Sherman.

The Confederate monument erected in Sherman by the Mildred Lee camps of Texas was unveiled Wednesday with appropriate ceremonies. The monument is the first of the kind erected on Texas soil, and is made of granite from the quarries of Stone Mountain, Georgia. The unveiling was attended by prominent ex-Confederates from every section of the state, and the day was fittingly observed.

PETTIGREW CHARGES FRAUD.

Files a Salty Minority Report on Perrine Land Grant Case.

Senator Pettigrew has filed a minority report on the result of the investigation of the Perrine land grant in Florida, conducted during the last session.

He takes issue with the majority and contends that it is the duty of congress to declare the grant forfeited and of the executive department to cancel the patents and punish the offenders.

The report all expresses the opinion that "there is both fraud and mistake of fact of the officers of the government in issuing the patents."

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

Last week, Wednesday night, A. A. Ayers' store, near Lomax, was broken into and several pounds of candy, some cigarettes and about $10 in money were taken. A warrant was sworn out, Thursday, for Love Kidd and Lone Kidd, two colored boys, about twelve and fourteen years old. They were suspected of the theft, and were given a justice trial before 'Squire Bice, Friday. The boys were let go, as the evidence was not sufficient to convict them.

Sheriff Cooley went over to Centreville, Tuesday, with two warrants for Wiley Reidy, formerly of the southern part of this county. He is wanted on a charge of train-wrecking and grand larceny. Reidy was sent up for thirteen months in 1895. After serving his time he returned to this county, and has since been arrested three times by deputy officers, but escaped each time before he could be landed behind the bars.

W. L. Sampey has the foundation laid at Clanton for a large brick store. He expects to have it completed by August 1st. This will be Clanton's first brick store building. Mr. Sampey is Chilton county's leading merchant, and does enough cash business to make a great many merchants in the city envious of him.

A. Thorson expects to start a livery, feed and sale stable in a few weeks. He has begun drawing the lumber to build a large barn near the railroad track, across the street from the new supply store. Mr. Thorson is a hustling young business man, and will, no doubt, work up a good paying business.

The baseball season was opened in Chilton county last Saturday, by a game of ball, at Jemison, between a team from that place and a Clanton nine. The game resulted in favor of Clanton. Score, 19 to 20. A return game will be played at Clanton, Saturday, May 8th.

Dr. J. P. Givhan has some oats in Jemison that he can well be proud of. They are about three or four feet high and are nearly all headed. He claims he will have off of one acre about one hundred bushels of oats and fifty bushels of corn.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

Mrs. Rolison, formerly of the firm of Rolison & Rolison, has opened a general store in the store building belonging to the Thorsby Lumber Company. She has a large acquaintance, and will do a good business.

F. Mobeck's new supply store has been opened with a splendid new stock, and Mr. Johnson, the genial and popular manager, reports a good business so far.

The Call wishes to secure a reliable correspondent in every township and neighborhood in Chilton county. Send us a card and we will give particulars.

Oscar Johnson left here Monday for Chicago. He goes in the interest of a new colony of Chicago people that expects to locate here.

H. R. Rierson has commenced the erection of his new house, and expects to have it completed in about two weeks.

The Call will be sent to any address in the United States or Canada for one dollar per year.

Emanuel Bostrom has been employed as night police and watchman for the village.

Subscribe for the Call, and get a good, up-to-date county newspaper.

Henry Discher left here, Sunday morning, for parts unknown.

REAL ESTATE TRANSFERS.

List of real estate transfers recorded in office of Judge of Probate for the week:

A. J. and Alice B. Cox to M., T. & M. Railway Co., right of way. Consideration $1.00.

TURKS STRIKE HEAVY BLOW.

FALL AND EVACUATION OF LARISSA IS ANNOUNCED.

END OF WAR IS NOW PREDICTED.

A Probability That the Powers Will Intervene to Stop Further Bloodshed—Greeks Despondent.

The Turkish legation at Washington has received the following dispatch from the minister of foreign affairs at Constantinople, confirmatory of the press dispatches of the fall of Larissa. The dispatch was dated Sunday, the 25th:

"Larissa has been occupied today by the cavalry of the Ottoman army. The Hellenic troops fled in disorder, abandoning a great quantity of arms and ammunition."

The legation also received the following dispatch from Constantinople:

"The imperial troops took in Tyrnavo a great quantity of rifles and ammunition for cannon and rifles; also provisions. The Greek soldiers who were taken prisoners were sent to Elassona. The village has been surrounded by a military cordon.

"Ottoman patrol make continual rounds and efficient measures have been taken to prevent any depredations. The wise and proper behavior of our troops has been the subject of admiration of the foreigners who are on the spot."

Rejoicing at Constantinople.

The triumph of the Turkish arms has caused the liveliest satisfaction at Constantinople. The following telegram from Edhem Pasha is posted everywhere.

"Larissa was occupied today by the cavalry of the imperial army. The Hellenic troops fled in disorder, abandoning a large quantity of arms and ammunition."

This has been put as a bulletin in many places, while the people are also reading Edhem Pasha's dispatch announcing his possession of a strategic position on front of Tyrnavo.

Beginning of the End.

A cable dispatch from London says: What seems likely to be the last week of war was entered upon Sunday. It is difficult from the tangle of conflicting telegrams to understand the exact position of affairs.

Following the Greek defeat at Larissa, London opinion today is almost unanimous that the end is in sight, and this view is probably shared by the powers, as they are already moving to intervene.

It is believed that intervention will first take the form of a suggestion of armistice, to which the combatants would no doubt agree. Since yesterday afternoon the British foreign office has been in close communication with the other powers of the European concert, Great Britain suggesting that the time has now arrived for them to act. The French, German and Italian governments have already responded, offering to agree, though the German government adds as a condition that it would be necessary to exact a pledge from Greece to obey the mandate of Europe when this mandate is again given."

The British foreign office believes that Greece will give this pledge, as the disaster which has overtaken her has demonstrated that Turkey still possesses a formidable fighting machine—a fact which must have a sobering effect upon the popular demand for war at Athens, and which will permit the Greek nation to climb down without disgrace, after a superb vindication of the personal courage of the Greek troops and a gratifying demonstration of Hellenic patriotism.

REAR ADMIRAL MEADE ILL.

Retired Naval Officer May Recover From Present Low Condition.

The condition of Rear Admiral Richard W. Meade, retired, who has been ill in Washington for some days, is not so favorable. About ten days ago he was operated upon for appendicitis. Until Sunday an improvement was noticeable.

During the afternoon he had a chill, which left him in a weakened condition. From this there was some rally during the evening. He is very weak and takes liquid nourishment.

CYCLONE PLAYS HAVOC.

Several People Injured and Property Destroyed In Michigan.

A special from Omer, Arenac county, Mich., says that a cyclone struck that town about 5:30 o'clock Saturday evening, completely demolishing the store of W. R. Clowston, whose residence was also torn down.

Mr. and Mrs. R. H. Hagley were blown sixty feet into the air, and both are fatally hurt. Mr. Clowston received a serious scalp wound, and is thought to be fatally injured.

The cyclone lasted but a moment and was followed by a terrific rain. The cloud was funnel-shaped and took a northeasterly direction.

RESULT OF COURTMARTIAL.

The Atlanta Artillery Company Is Practically Disbanded.

Captain Joseph F. Kempton, of the Atlanta Artillery, has been dismissed from the military service of Georgia, forfeiting all pay and allowances due him as witness or otherwise.

Sergeant Guy Thurman, Corporal H. G. McCord and Private W. A. Sanger are dishonorably discharged from the service.

All other members and officers of the Atlanta Artillery on trial are dismissed. This verdict dismissed twenty-six men from the state service, practically disbanding the company. Sixteen members only are left.

The sweeping decision of the courtmartial was handed down Saturday night and the decision, printed in tabulated form, containing the charges, specifications and pleas, were mailed to every officer and private of the company by Captain Brown. The decision came in the nature of a startling surprise to the friends of the Atlanta Artillery.

Captain Kempton claimed that he had been treated badly by his men and was not guilty of the charges which had been preferred against him. His friends were of the opinion that he would be vindicated and that all would be satisfactorily arranged.

The privates scarcely dreamed of dismissal and the announcement will cause a tremendous sensation in the city among the companies in the service of the state.

The story of the rupture in the ranks of the Atlanta Artillery is one with which the public is familiar. Captain Kempton was disliked by his men and there was no congeniality among the members. Dissatisfaction and discontent grew as time passed by and mutiny arose in the camps. Insinuations were strongly thrown out by the men that they were not pleased with their captain. Captain Kempton turned a deaf ear to these mutterings in the ranks and persisted in the command of the company.

The fire was smothered for a time, but only to break out afresh with renewed fury. The men talked of the situation and the story would reach the ears of their captain. Rumors innumerable were afloat, but no change was made in the command and the battery held together until the charges were brought, which resulted in the courtmartial.

BUCK IS DINED.

Japanese Minister Highly Compliments the Georgian.

The dinner given at the Japanese legation at Washington Saturday night in honor of A. E. Buck, of Atlanta, Ga., the new minister to Japan, was one of the most notable of the season's diplomatic affairs. The Japanese minister, Mr. Toru Hoshi, was, of course, the host.

Among those present at the dinner were: Hon. A. E. Buck, Secretary John Sherman, Secretary Lyman J. Gage, Attorney General Joseph McKenna, Mr. Frances M. Hatch, minister of Hawaii; Mr. J. D. Rodriguez, minister of Greater Republic of Central America; Senator C. K. Davis, Senator John T. Morgan, Senator John L. Mitchell, General Nelson A. Miles, Mr. John W. Foster, ex-secretary of state; Mr. Toru Hoshi. It was a social dinner with no set speeches.

DEADLOCK STILL ON.

Kentucky Joint Session Yet Fails to Elect a United States Senator.

The largest crowd of the extra session of the Kentucky legislature assembled in the house shortly before noon Saturday, the hour for the joint session at which it was expected that the long and tedious wrangle would be ended by the election of W. J. Deboe to the United States senate.

There were rumors to the effect that Senator Linney, of Louisville, who was one of the bolters in the Hunter race, would not be present and that Representative Lieberth, of Newport, would also be missing, both without pairs. This caused the republicans great uneasiness.

To add to this the gold democrats held a caucus at noon and decided to assist the silver democrats in an effort to break a quorum.

Earthquake in Illinois.

A severe earthquake was felt at Cairo, Ill., at 10 o'clock Sunday. It lasted twenty seconds. The largest structures were shaken with a swaying motion, and people rushed in terror to the streets. No damage has been reported.

SECOND PROPOSITION MADE.

Coal Company of Alabama Submits Another Plan to Miners.

At a meeting at Birmingham, Ala., Saturday of representatives of the seven thousand miners working for the Tennessee Coal, Iron and Railway Co., the proposition made by the company two weeks ago, looking to a reduction of 5 cents per ton for coal mining was considered.

Another proposition was offered the miners by the company. The offer is 35 cents per ton for coal mining on the sliding scale with pig iron prices as the basis, the price of No. 1 foundry iron at $7 is the quotation, and for every 50 cents per ton for coal mining

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

I take pleasure in receiving the Call, the new paper just brought over the Eastern horizon by Mr. M. E. Taylor, at Thorsby, Ala. It bubbles all over with good words about Thorsby. Alabama is one of the best of the Southern States, and every town in the State should have a champion built on the style of the Call, when real estate values would look up amazingly.—Memphis (Tenn.) Sunday Times-Figaro.

The Call will soon have a neat, new home, with a fine plate-glass front. Work will begin on the building next week. By the time it is completed our new power press and other material will be at hand, and we will be in a position to publish the best country paper in seven counties, and turn out the most acceptable of job work. Now is the time to subscribe.

The Chilton County Call is the name of a neat eight-page, five columns to the page, paper just started at Thorsby, Chilton county. The Sentinel has received two numbers of it, and finds it neatly printed and well gotten up, with a fair amount of reading matter, such as will interest the local patronage.—Calera Sentinel.

The law-firm of Hogue, Lavender & Fuller has been appointed as local counsel for the M., T. & M. railroad in the counties of Bibb and Chilton.—Centreville Press.

Colored men found twelve copperbelly moccasins under a bridge at Tuscaloosa. The snakes were all full-sized, and made a disagreeable-looking family.

The L. & N. Company offers $3,000 for the capture and conviction of the parties or party who wrecked passenger train No. 3, near Wilcox, Ala., last week.

The sawmill belonging to Mr. W. D. Hendrix, at Warm Springs, was burned down, Tuesday night. The property was valued at $1,000, with no insurance.

The Wilson & Dahl Land Company, located at Calera, are having a neat catalogue printed, showing up the advantages of that place.

The Goodwater Advocate claims that there is a chance of that place having a large cotton-mill in the future.

The Shelby County Medical Society will hold its 20th anniversary meeting in Calera, Tuesday, May 4th.

Wetumpka got the agricultural school, but is not satisfied, and wants a cotton factory.

A second large oven for the Oxford Pottery plant will soon be completed.

Tuscaloosa will make an effort to get the M., T. & M. R. R. shops.

The grand jury of Coosa county reports the county out of debt.

Goodwater will soon have a new depot.

AN ATLANTA SENSATION.

The Gate City Comes to the Front With Its Usual Sensation.

Atlanta, Ga.—A profound sensation was created in this city by the announcement that Harry W. Cassin, cashier of the Georgia Loan, Savings and Banking Company, had misappropriated some $45,000 of the funds of that institution. Cassin has always been known as a young man of exemplary habits and fine business qualifications.

Cashier Cassin applied the funds of the bank to private enterprises in which he wished to invest, and lost all, until finally his defalcations reached the sum already stated and discovery followed.

Friends and relatives of the young man have made up the shortage and the bank will not lost a dollar of the sum stolen.

Young Cassin will not be prosecuted. His connection with the bank ceased yesterday, and he will begin life anew in Atlanta.

BIG TRUST QUITS BUSINESS.

The Sash, Door and Blind Combine Ceases Operations.

Twenty-four members of the National Manufacturing company, commonly known as the sash, door and blind trust, held a meeting in Oshkosh, Wis., for the purpose of disbanding and adjourning sine die. The authorities have restricted the operations of the organization to such an extent that it was decided to discontinue operations.

More Trouble For Spain.

Madrid, Spain.—A dispatch to the Heraldo from Manila, capital of the Philippine Islands, says that 20,000 insurgents, who have not submitted to the Spaniards, have taken up a position in the mountains and are offering a stout resistance to the troops. The recall of General Polavija, it is added, has produced a bad impression in the Philippine Islands.

A BREAK AT BATON ROUGE.

Crevasse Was Quickly Blocked By Engineers and Laborers.

A break in the levee at Button's sawmill, a few miles south of Baton Rouge, La., occurred Saturday, and for a while it look as if a disaster similar to the Biggs crevasse had befallen that section.

The engineers and laborers went to work with a will, however, and a few hours later succeeded in mending the crevasse, and the strong current is passing on to the gulf of Mexico.

The water continues to rush pell-mell through the Biggs crevasse.

GENERAL MILES WILL GO.

President Approves His Suggestion of Seeing the Eastern War.

General Miles has been notified of the approval of his projected visit to the seat of war in Europe. He will leave Washington early in May.

At Paris the general will board the Oriental express and go through without stop to Constantinople. His future movements will depend entirely upon the progress of the war, but it is his intention to keep as near as possible to the scene of actual hostilities, so that he may be in either camp.

FATAL MINE EXPLOSION.

Two Miners Were Killed and Others Injured.

In mine No. 2 at Blocton, Ala., at 3 o'clock Saturday morning gas exploded in a heading. Four Italians, driving the heading, were out of from escape by part of the mine falling in and two of them were killed and the others badly injured.

A large gang of men set to work to rescue them. The men were 1,600 feet below the surface

NO QUORUM IN SENATE.

Members Go to New York to Attend Grant Ceremonies.

There will be no quorum in the senate during the present week, owing to the absence of a large number of senators in New York, in attendance upon the ceremonies over General Grant's tomb. Consequently no business of importance will be transacted.

The work of preparing for the reorganization of the senate committee will proceed informally.

DR. O. T. DOZIER,

(The Renowned Southern Specialist)

Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice, Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)

We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Address

DR. O. T. DOZIER,
Lock Box 112, BIRMINGHAM, ALA.

LANGVILLE & SON,

General Blacksmiths and Wagon Makers.

Prices reasonable and first-class workmanship.

TALKING IN THEIR SLEEP.

"You think I am dead,"
The apple tree said,
"Because I have never a leaf to show,
Because I stoop
And my branches droop,
And the dull-gray mosses over me grow!
But I'm alive in trunk and shoot;
The buds of next May
I fold away,
But I pity the withered grass at my root."

"You think I am dead,"
The quick grass said,
"Because I have parted with stem and blade
But under the ground
I am safe and sound,
With the snow's thick blanket over me laid.
I'm alive and ready to shoot,
Should the Spring of the year
Come dancing here;
But I pity the flower without branch or root."

"You think I am dead,"
A soft voice said,
"Because not a branch or root I own?
I never have died,
But close I hide
In a plumy seed that the wind has sown,
Patient I wait through the long winter hours,
You will see me again—
I shall laugh at you then,
Out of the eyes of a hundred flowers."

—EDITH M. THOMAS.

The Town Clock.

BY ANNIE WESTON WHITNEY.

The heat was terrible; but Barbay did not seem to mind it as she hurried along the close, dusty street, her clean calico gown giving her a bright, fresh look that it did one good to see on such a day. In her arm she carried a queer-looking bundle. She smiled happily as she hurried on, her thoughts all of Father, dear Father, to whom she was going.

Stopping as she reached the City Hall, she looked up, half expectantly and hopefully, up at the tall tower reaching so far, far above her. A brighter smile came into her face as loud, clear and distinct came from above the clang—clang—clang—clang—clang—clang that told the hour of day.

She looked a moment longer, but Father was not to be seen; dear Father who was so good and kind and whom everybody loved. And why shouldn't they? How could they help it, and how could they do without him? Why, Father was the old Town Clock, or one-half of it, as Mother used to say, Mr. Harper being the other half. Poor Mr. Harper! she was so sorry for him, because his little baby boy was dead.

She was at the foot of the long flight of steps now; the steps leading to Father, dear Father, the Town Clock; for strange as it may seem, there is in one of our Southern cities a town clock whose only face is a human face; whose only hands are human hands, and whose machinery is the muscle of a strong man's arm.

Any one else might have thought the long flight of steps leading to the tower a tedious climb in the heat; but Barbay only stopped a moment to look up. She loved the long climb, because it took her always nearer dear Father; and then it seemed so odd to be going up, up over the tops of the houses and stores, and to look down every little while through the funny little windows and see the people growing smaller and smaller until they looked like fairies then to look up at the beautiful sky and wonder about the dear Heavenly Father who loved every one so dearly and who watched over them always. Up higher and still higher the little feet climbed, until there was only a wooden door between her and Father. Softly she opened it and peeped in.

"Bless my soul and body!" said a pleasant voice; and the next moment Barbay was in her father's arms.

"What brought you here this hot day, Sweetheart, and what's in the bundle?" he asked, after she had almost smothered him with kisses.

"The dressmaker next door let me do an errand and gave me this," said Barbay, taking up the bundle she had laid aside and proudly displaying a big cantaloupe.

"And you brought it for Father to look at?" he said, with a twinkle in his eye.

"For Father to eat," she said, sweetly.

"You always remember your old father, Sweetheart," he said, lovingly. "Well, I will try to manage one-half if you'll attend to the other. I could not possibly eat more than that while you are here. It would be so impolite, you know."

"If I go away will you eat it all?" she asked, again putting her arms round his neck, but looking into his face as though she loved every curve and impress on it.

"I could not touch it, I would be so disappointed," he said taking off her hat and kissing her forehead. He always called her his little sweetheart; but every one else called her Barbay, a name she had given herself when she was very little.

It was in a queer corner of a still queerer room in this tall tower that they sat down by a narrow table pushed close to the wall to enjoy their feast.

A hanging cupboard, from which a couple of spoons, some salt and a knife were taken, suggested certain housekeeping arrangements, while on the table were pen, ink and paper, with a book or two, evidently taken from the hanging shelves in another corner. Indeed, there were only corners in which to hang things, for the sides of the room were great windows looking over the city in all directions. But the most curious thing in this curious room was the great bell, reaching almost from the ceiling to the floor; a tongueless, clapperless bell, that had made no motion of any kind since the day it had been placed in position, many, many years ago. Hanging in another corner was the iron hammer that, guided by the hand of him who watched in the tower, struck on the rim of the great bell those clear, loud notes that kept record of the passing of time over the alternately waking and sleeping city. The fourth corner held the tall, old-fashioned clock, as old as the bell itself, that had served in all that time, to tell the exact moment when the town clock must strike. To Barbay it was a matter of great interest; for its face was always changing as it told of the moon and the tides and the seasons.

"Barbay," said her father when their feast over, he saw a rapidly approaching storm; "much as I love to have you here, I must send you home now as fast as you can go. You would not like to be way up here in such a storm as those angry looking clouds are bringing us."

"Oh, Father," said Barbay, "I should not mind anything where you are. Let me stay, please. I love to watch the clouds play hide and seek from here."

He looked at her hesitatingly a moment, and as he did so a sudden flash of lightning almost blinded them, while great drops of rain splashed on the windowsills. There was hardly time to close the windows before the flashing and booming of the heavenly artillery began; for it was one of those storms that come suddenly, only to leave a sad story behind.

To Barbay it was grand and beautiful. It seemed as though she could look right into Heaven if the flashes would only last longer, she seemed so close to it. She could not talk, but looked occasionally at her father, who smiled on her from his seat in the great easy chair for which Mother had made soft, comfortable cushions.

Suddenly she wondered what made her feel so queer, and why she was on the floor. She must have been asleep. She picked herself up and wondered what made her go to sleep all in a moment. And Father, why he had fallen asleep in his chair too. Dear Father, he looked so white and tired; but then he had been the Town Clock all day and all night, so that Mr. Harper could be at home with his little baby boy.

Would he sleep long and get rested, she wondered. Before Father came the Town Clock had fallen asleep and failing to strike the hour on time, had been discharged. It gave her such a happy, helpful feeling to think she was here now to wake Father in time. She was so glad she had stayed. She would let him rest a few moments longer, but it would soon be time for the town clock to strike.

She stood at one of the windows and looked down, down on the busy city, then up at the rapidly moving clouds, already being kissed by the Sun, as he bade them a loving good-night. She loved to watch him from here as, his day's work done, he slowly disappeared from view leaving such beautiful and hopeful promises behind. But better still she loved to be here with her Father when he watched over the sleeping city. Once she and Mother had stayed till they could hear him call out, so loud and clear, "Twelve o'clock, and all's well!"

Sometimes he was forced to rouse the sleepers when a fire broke out, lest their beautiful city should be damaged or destroyed. No wonder every one loved the Town Clock who warned them of danger and watched over them sleeping or waking.

It was time to wake him now.

"Father," she said, softly, going to his side. "Father," she repeated louder, as he did not reply.

How soundly he slept. She called, called again and again, even shook him; but he would not wake. What must she do? If she could not wake him, the clock would not strike and they would discharge him as they did the other man; and then what would become of Mother and the children?

With the tears rolling down her cheeks, she made one more agonizing effort to waken him, and then looked in helpless despair at the clock and at the motionless bell. Suddenly a thought came to her that made her start and tremble. Could she? Dare she. She must try for dear Father and the Mother and children.

Climbing on a chair, she took down the hammer that felt so heavy, and then, pushing the chair close to the great bell, she climbed into it again, this time on her knees so she would be where she could strike well. Her little eyes went up to the clock, that still marked one second of the time. She was not too late.

Clang—cla-ng—cla-ng—cla-ng—cla-ng—cla-ng—clang.

The hammer dropped to the floor, and burying her face in her hands on the rim of the bell, Barbay caught her breath and gave a terrified sob.

Had she counted right. It had never sounded so before. It seemed as though the first sound had deafened all the others and would never stop. Did it sound so to those who were listening? Did everybody know it was not Father, dear Father? How dreadful it all was! Would they do anything to Father—or to her—if it was all wrong?

She looked up. How soundly Father still slept! Mr. Harper would soon come now and let him go home. He would not mind his going to sleep, for he had been kind to him.

There were footsteps on the stairs. Mr. Harper was coming. No, there were voices. In an instant Barbay was at her father's side and, putting her arms round his neck, kissed the white, tired face and called him by every endearing name she could think of. As the door opened, she drew her arms more tightly round him, as though she would protect him from threatened harm.

"Hullo! What's this?" said the Mayor, as he and the janitor entered.

"Don't, please don't let them discharge him," said Barbay, her big, sad eyes looking anxiously at the two men. "He couldn't help it, indeed he could not; for he's been the Town Clock all day and night. Oh, don't—please don't!" she pleaded, the tears beginning to roll down her cheeks.

"This is more serious than I thought," said the Mayor, gently drawing the child away, and putting his ear down to her father's heart.

"How long has he been this way?" he asked quickly.

"I don't know. I went to sleep all of a sudden, and when I waked up I was on the floor, and Father was asleep too."

"Get a doctor here as quick as possible," said the Mayor to the janitor. "He is stunned and may be so for hours; but I think he'll come out of it all right. I confess I do not know what to do myself."

"Now," he said, turning to Barbay, who was again leaning protectingly over her father, "tell me who made the clock strike just now?"

With a terrified look Barbay crept closer to her father as she said:

"Oh, please, I couldn't wake him; and I was afraid they would discharge him."

"Well," said the Mayor, "who made the clock strike?"

"I did," said Barbay, trembling all over.

"You," said the Mayor, looking her over carefully—"you made the big town clock strike?"

"Please, please, don't let them do anything to Father!" said Barbay. "I tried so hard to do it right."

She half sobbed out the last words, as her head went down on her father's shoulder.

The Mayor's eyes threatened to give him trouble, as he said kindly:

"Come here, little woman. Do not be afraid. No one shall do anything to your father that you do not like. Come and tell me how you made the big clock strike."

Encouraged by his words and by the tone of his voice, she loosened her hold of her father and had soon given an account of how she had tried to be the Town Clock.

"Did I count all wrong?" she asked, wistfully. "Oh, it was so dreadful!"

The Mayor put his arm round her gently and drew her to him, his eyes glistening and a lump rising in his throat, as he thought of all she had gone through.

"You are a dear, brave little woman," he said, earnestly, brushing her hair back from her eyes. "Yes, you counted all right and everybody knew what as though it was almost too weak and time it was; but the old clock sounded too tired to strike; that was all."

"And they won't discharge Father?"

"No, he shall not be discharged; but I think we must see that he has a few days rest before he goes to work again."

"Oh," gasped Barbay—oh, how beautiful! Then I don't mind—no, I don't mind anything"—and putting her head on the Mayor's shoulder, she burst into tears.

The next day the story was told all over the city of how the tall tower had been struck by lightning and the Town Clock had been stunned and unconscious for hours; and of how Barbay, who had been stunned too for a few moments, had tried to be the Town Clock herself, so that Father, dear Father, might not be discharged.—The Independent.

Odor of Sweet Peas.

The odor of the sweet pea, according to a contributor to the Medical Record, "is so offensive to flies that it will drive them out of the sick room, though it is not usually in the slightest degree disagreeable to the patient." It is, therefore, recommended that sweet peas be placed in the sick room during fly time.

LIKE A BIRD.

A NEW FLYING MACHINE INVENTED BY A GERMAN.

The Inventor Thinks He Has Solved The Problem of Aerial Navigation—Huge Wings Driven By Carbonated Gas.

A BERLIN correspondent of the Pittsburg Dispatch says: Herr Arthur Stentzel, of Altona, believes he has solved the problem of aerial navigation. It has long been the aim of the flying machine enthusiast to construct something that would practically be the prototype of a bird. It is on this principle that he has constructed his machine. Its two great sections resemble the wings of a gigantic bird more than all else. With them the inventor claims that he can move through the air for four or five minutes and alight without injury.

Experiments that have been conducted with this newest of flying machines have been undertaken very privately. Experts say that the Altona inventor has shot far nearer the mark in his effort to counterfeit the bird than any of his predecessors in the study of aerial problems.

The wings of the Stentzel machine have a spread of about seven yards, and their surface is eight and two-fifths yards all told. They move through an angle of seventy degrees and are curved according to a parabola in a proportion of one to twelve. Compressed carbonic acid gas is employed as a motive agent, and the machine is driven by an engine also of Herr Stentzel's invention. It is stated that the speed of the engine can be readily controlled so that the machine can fly at varying velocities. The inventor believes that within a year, if he can raise the necessary capital to build a machine on a large enough scale, he will be able to fly above the Kaiser's palace in Berlin.

THE SUCCESSFUL ARTIFICIAL WINGS OF A GERMAN INVENTOR.

A UNIQUE BANNER.

An American Flag Made Entirely of Butterflies.

Patriotic Americans have depicted the National flag in all manner of ways with all manner of substances, but, says the New York World, it remained for an Englishman, John Hampson, of Newark, N. J., to make the Stars and Stripes in butterflies.

For four years Mr. Hampson has labored with the delicate little beauties in making his flag, which is about [illegible] inches.

The butterflies and beetles are so arranged as to give the flag the appearance of waving against a background of delicate pink wings.

Mr. Hampson has many cases filled with collections of gaudy colored insects from almost every known land. He has been collecting thirty years.

QUEEREST OF BIRDS.

An Ungainly Apteryx From New Zealand and Its Curious Habits.

The Zoological Society of Regent's Park, London, has recently secured a fine specimen of the queer bird known as the kiwi or apteryx.

This bird, which is a native of New Zealand, has been interesting to scientists ever since the first specimen was captured, nearly one hundred years ago. The use of the long, snipe-like beak was a puzzle for naturalists until Sir W. J. Buller made a study of a kiwi he captured and kept captive while in New Zealand. He took one of the large glow-worms found in New Zealand and threw it to the captive kiwi. By the light of its own lamp the glow-worm was seen to quickly

THE APTERYX.

pass from head to tail inside the portals of the kiwi's beak, and leave behind it enough of its slime to set off the bird's beak in a phosphorescent glow so that the head of the bird was visible in the darkness. The kiwi was torpid and lazy in the daytime, but at night it was seen to dart about, thrusting its illuminated beak in every worm burrow it came across, gently feeling for the inhabitant of the burrow and dragging it forth, little by little, taking the greatest care not to break its prey.

THE BEST FARM DOG.

It is impossible to state definitely which is the best farm dog, as this is governed a good deal by individual preferences. For our own use, we prefer a good Scotch Collie, but Newfoundlands make excellent farm dogs, too. On the whole, the usefulness of a dog depends generally more upon the way he is brought up and trained than in the breed.—New England Homestead.

CLEARING MEADOWS OF STONE.

The farmer who has meadows on stony land is obliged to have his annual spring cleaning, much as the housewife has. His advantage is that he can begin earlier, and, in fact, any time after the fields are uncovered. No matter how thoroughly surface stones are removed one season, the horse rake brings more or less above the surface before fall, and still more are lifted by alternate freezing and thawing of the soil around them. It is this lifting of stone by frost that used to make the inexperienced believe that stones grow. That soil may be hardened into something like stone is true, but it is a very slow process, even where lime water trickles through it. Such stone is very unlike the rough or rounded cobble stones, which were doubtless here in the earth's earliest stages, and once parts of large rocks from which they have been broken off.

HANDLING FOWLS.

"There is no great loss but some small gain," and if experience has been a dear teacher to me this season, writes Ida Kays, of Kansas, I think I have learned some lessons; and one of them is, the most convenient method of handling chickens to administer medicine or local treatment for roup or other ailments. I have suffered many a painful scratch on my hands or unsightly rents in my garments at the hands—no, feet—of refractory fowls, but I think I have them now.

If many chicks are to be handled, I have an attendant catch and hand them to me where I sit upon a low box with plenty of clean straw before me. Grasping the fowl's legs with my left hand, I lay it upon the straw, breast down, and feet extended backward; then placing my left foot firmly across its legs I have both hands free—the left to hold the mouth open, the right to administer treatment, and any amount of struggling avails the captive nothing.

In this way one can go over a hundred fowls in a very short time. In case of roup, thorough and persistent effort is needed to battle with it successfully; and the continued treatment of a large flock of fowls is no small item of time or labor—hence, this lesson from experience.

SUCCESSFUL MELON CULTURE.

Watermelons are excessive feeders, and many fail in attempting to grow them because they do not furnish sufficient plant food to supply the necessary strength for vigorous vine and fine fruit. Not infrequently watermelon vines turn yellow and die when they should be just in their prime, simply from plant starvation.

I prepare the ground as for corn. Lay off in rows twelve feet apart each way. I dig a hole about one and a half feet deep and perhaps three feet in diameter. In the bottom of this I put a peck or more of good stable manure, tramping it lightly. Next put in a layer of soil, and follow with a layer made up of equal parts of soil and fine rich manure thoroughly mixed, and lastly, where the seeds are to be placed, another layer of pure soil. Sow seeds thickly and cover about one inch. When the second or third leaf shows, thin out to two or three plants in the hill. If exceptionally large melons, regular "prize takers," are desired, thin to but one plant in the hill. I cultivate about as I do corn, hoeing each hill after entire patch is plowed. If very dry, cultivate often, particularly about the hills. It is some trouble to thus prepare the ground, but it more than pays in the size, number and quality of melons produced, also in the increased length of time that the vines are in bearing, as they remain green and in good condition until killed by frost.—American Agriculturist.

RAISING CALVES.

Mrs. Jennie Snyder, butter maker for Mrs. Tremain at Hill View Farm, Lake George, writes in the Jersey Bulletin: Mrs. Tremain wishes me to inform you of her method of rearing calves up to twelve months. At birth the calf is taken from the cow; she seldom sees it. The calf is at once rubbed perfectly dry, and in winter it is wrapped in clean blankets with warm bricks or water bags put around it. We find that care of the calf from the first me-

RAISING CALVES.

Mrs. Jennie Snyder, butter maker for Mrs. Tremain at Hill View Farm, Lake George, writes in the Jersey Bulletin: Mrs. Tremain wishes me to inform you of her method of rearing calves up to twelve months. At birth the calf is taken from the cow; she seldom sees it. The calf is at once rubbed perfectly dry, and in winter it is wrapped in clean blankets with warm bricks or water bags put around it. We find that care of the calf from the first moment is of the greatest importance.

After four or six hours we feed the calf the dam's milk—from two to four quarts, depending upon the condition of the calf and how well it drinks. We never have any trouble in teaching the youngsters to drink, because our motto is patience and kindness. The calf is fed six times daily during the first week from eight to twelve quarts a day, according to its capacity.

About the eighth day they are fed four times, and this is continued, still giving the whole milk, if we possibly can, for a month. The fifth week we give only three meals; and the skimmilk, when thickened just a little with fine wheat middlings, well cooked. We also give at five weeks, and from then on, a pint of whole oats and a half pint of oil meal each day, divided into morning and evening mess, of wheat bran and a little cut hay, or cured fodder corn—that which has been cut several days at least. We always give a little salt from the calf's first week. Also give long hay or fodder corn leaves from about the second week, and after a few tastes this food is much relished.

One thing we are very careful about: Always feed the milk very warm. And another point of importance: Always have a clean and dry bed for the calf. Then, too, we comb and brush all calves every day. Mrs. Tremain thinks this necessary. She insists that their little coats ought to shine. We separate the heifers from the little bulls at four months always.

The heifers are bred at from twelve to fifteen months, depending upon conditions at the time. When our heifers drop their first calves we find them nearly always just like old cows at milking, because Mrs. Tremain has them handled and milked from the time they are born. Our heifers at their first coming in make from ten pounds eight ounces to fourteen pounds four ounces of butter, and milk from twenty-three to forty pounds.

DRAINING SWAMPS AND SWALES.

A. S. C., of Belknap County, N. H., wants information as to the cost and profit of draining meadow and swamp lands. The cost will depend largely upon the way the work is done, thinks A. Tomkins. In draining my farm I employed a man or two by the month, at moderate wages, to do general farm work, and in slack times to work at draining. I followed this plan a few years and found myself and my farm greatly benefited. This plan applies to those, like myself, who have little or no capital to invest. I worked with my man. I came in possession of a farm of less than sixty acres, composed largely of swamp and swale land, whereon had been kept five cows and one horse. I so improved the farm by draining and good farming as to enable us to keep about thirty head of live stock, mostly cows. The drains were made mostly of stone, thereby clearing up my land. The dimensions of the ditches were two feet wide by two and a half feet deep. They were always covered when practicable. Always keep the land over the drain the highest, to prevent damage from surface water.

A swamp whereon has stood much water, when well drained, is much easier made into meadow land than one closely covered with bogs. After a swamp is drained, it may be very hard work to plow and subdue it, taking perhaps two years. To avoid this, have the bogs cut very close, and spread over the surface an inch or two of earth, and some fertilizer, if needed, and then sow grass seed. I have had excellent results in this way, saving both time and labor. It made meadow of a very unsightly swale in this way that could not be plowed, and after five years of very good crops of hay, it plowed easily. In one instance the fall was so slight in a drain of forty rods that the silt got in the stone drain and made it a failure. A new drain was made of 2 inch hemlock plank, which has worked well for several years.—New York Tribune.

SUBSTITUTE FOR OATS.

The past season has been a poor one for the production of a crop of good oats, says A. A. Berry, of Iowa. Rust caused great loss, especially on rich corn lands. Where the ground is kept very fertile by clover rotation, there is often a failure in oats. Iowa farmers have found that it pays to keep it in this condition, although they know full well the great value of oats as a feed for horses and all young stock. If posible, select a variety that can be grown on rich land and is but slightly affected by rust.

Barley is a good substitute. Its feeding qualities are much superior to oats for horses and young stock. On an average, it will yield a greater number of pounds. It can be grown on rich land without danger of lodging and is better than oats as a nurse crop in starting clover.

The best substitute for oats, however, is a combination of equal parts peas, oats, barley and wheat, which I have raised for several years with exceptional success. I sow like oats, using the same quantity of seed and harvesting as any other grain, cutting with the binder and threshing. I call it the bonanza mixture. It yields from thirty to sixty bushels per acre and can be produced on rich land without danger of straw falling. If not sown too thick, it also makes an excellent nurse crop for clover. The straw is more valuable than that from oats. Varieties of grain were selected that ripen about the same time. For grinding, the mixture cannot be surpassed, using one-half corn and one-half of this mixture in preparing slops for pigs. Better satisfaction results than from any other feed I have tried. This season I fed about 500 bushels of such chop to 75 pigs and am greatly pleased with the result. Sown for pasture for hogs or for soiling crop, it does well. The different grains form a variety which is relished.

Why He Limped.

A Washington correspondent sends to the New York Tribune a story of a Southern member of Congress "whose mind is never on earthly things." The daughter of one of his oldest friends was to be married, and he was invited to the wedding.

At the very last moment an affair of some importance demanded his attention, and he found it impossible to be present at the ceremony in church, but he sent his wife, promising to meet her at the reception an hour afterward. They met accordingly, and no one of all the guests was happier than he in his wishes to the bride. His wife was so filled with pride in her husband that it was some time before she discovered that he was limping badly.

"Are you lame, dear?" she whispered.

"No, certainly not," he said. "Why do you ask?"

"You limp so," she answered.

Then, looking down at his feet, she discovered the cause. Her better half had on one foot a heelless slipper, and on the other a shoe with a military heel. He had been interrupted, it seems, while changing his shoes, and when at leisure forgot to complete the operation, and following the custom inaugurated by "Diddle, diddle, dumpling, my son, John," went to the wedding with one shoe off and one shoe on.

Meat Fed Horses.

"Of all fads that fashionable people indulge in over their pets, I think the strangest idea is that of giving their horses meat as a variation to their ordinary diet," said a veterinary surgeon in London Answers.

"Beef only is used. It is baked until quite dry and hard, then minced very fine, and given mixed with oats or meal. The animals, so far from refusing, seem to relish the mixture, and it is thought to improve their condition and courage, but if continued too long they become vicious and their coats deteriorate.

"A well known titled lady expends a good sized sum altogether in meat for her numerous horses and hacks. She has one mare that will greedily eat a beefsteak unmixed with meal if minced small, and it has one per week. I know a retired army colonel, too, a famous hunting man, who frequently gives his hunters beef tea and other 'meat extracts' in their bran mash. Possibly it's not entirely mere fad, for there is one London brewery whose horses are similarly treated, and a famous race horse that won some important events last season was given a partial diet of meat at intervals."

Two Musical Prodigies.

Most of the boy prodigies who have come to the front of late years have been musicians. Two very noticeable examples of this variety of child wonder are still fresh in the minds of New Yorkers—Josef Hoffman, the boy pianist, and Bronislaw Hubermann, the boy violinist. Hubermann was born in Warsaw in 1883, and after a few lessons from a local teacher was placed under the tuition of Joachim. He seemed to learn both the technique and the forms of composition by instinct. Joachim declared he could teach him nothing, and when Goldmark heard him play he said that hereafter he would believe in miracles. When he was here last year at the age of 13, he was one of the finest professional players on the violin in the world.

Little Josef Hoffman was a professional pianist as well as a composer when he was seven years old. He was born in 1877. He was compared with Mozart, who at the age of four was a good player and at five years was attempting composition. When Mendelssohn was twelve years old he had composed five symphonies, two operas and part of a third, besides a great number of fugitive pieces.

Wedding Months.

There is a popular idea that June is the favorite month for weddings, and that the young woman who loves romance and wishes fortune to smile upon her nuptials in every way must choose this of all months. Cold and unromantic fact, however, shows that the three most popular marriage months are October, November and December. Fifty years' records show this to be true, and also demonstrate the fact that the most unpopular months for marriage are January, February and March.

JOKER'S BUDGET.

Jests and Yarns by Funny Men of the Press.

LOST HIS BREATH.

Beggar—Please, sir, I'm so exhausted I can't get my breath and——

Gentleman—Here's 5 cents; go and buy one.

HIS CONVENIENT SIZE.

Employer—You lazy good-for-nothing loafer! Didn't you tell me you were a hard worker?

New Hand—Well, boss, it does come hard!

LONG WINDED.

She—Our minister does not jump at conclusions.

He—I should say not. I never knew him to reach a conclusion in less than an hour.

HAD A VOUCHER FOR IT.

She—Are you sure it was a year to-day that we became engaged, dear?

He—Yes. I looked it up in my check book this morning.

A WARM RECEPTION.

It was 3 a. m.

He had just come home.

She regarded him for a moment in silence.

At length she spoke.

Furthermore, she spoke at length.

NOT A PEER COW.

"No," sighed the farmer, as he sadly contemplated his poster cow, "I can't say that I consider her a very likely animal, but we all have our shortcomings, I suppose.

DIRECTIONS WANTED.

Dr. Ende—There's nothing serious the matter with Patsy, Mrs. Mulcahey. I think a little soap and water will do him as much good as anything.

Mrs. Mulcahey—Yis, docther, an' will Oi give it t him befoor or afther his males?

MEN ARE GAY DECEIVERS.

Mr. Elwell—It's strange, but true, nevertheless, that the biggest fools always marry the prettiest girls.

Mrs. Elwell—Oh, now, go on, you flatterer!

A GOLDEN RULE.

"How in the world, Mrs. Wisely, do you manage to have all of your three daughters in so early when they spend the evening out?"

"I've made a rule that the last one home has to get breakfast next morning."

THE LOAF WAS CONDENSED.

Mistress—Did you ask for milk bread?

Domestic—Yes, mum.

"What a miserable little loaf they gave you!"

"Yes, mum; it's my opinion, mum, that that baker is usin' condinsed milk."

ENCOURAGING AMERICAN ART.

Angelo Daubbins—Do you think my picture will be admitted to the academy this Spring, Miss Maymi?

Maymi Sushkins—Oh, I'm sure they'll let it in. I saw some awfully poor things in the last exhibition.

HE WOULD TRY.

It was a children's party, and supper time. Little Tommy Tucker had eaten and was filled, but he would not give in.

"Have some more cake, Tommy," said his hostess.

"I think I could," said Tommy, "if I stood up."

CRITICISM.

Hallroom—"Old Earwig says Miss Peroxide's a fine pianist."

Topfloor—"Could anything be more absurd? Why, Earwig's as deaf as a post."

Hallroom—"Yes; but his eyesight's all right."

ENGRAVED ON HIS MEMORY.

Mrs. Jones—Do you remember that night in June, Henry, when you first asked me to marry you?

Mr. Jones—If you refer to that first, last, single, solitary and only occasion upon which I ever asked you to marry me, I do—and you never gave me another chance, either.

MUCH BETTER FOR THE PURPOSE.

Drummer (to woman traveller)—Pardon me, madam, but would you mind lending me a handkerchief to wipe the dust off my face?

Woman—I have a pumice stone for my nails which you might use instead. Contact with brass would injure my handkerchief.

Blondin's Rope.

A. J. Hamlin, an old resident of Niagara Falls, declares, says the Buffalo Express, that he was instrumental in getting Blondin the means for crossing the gorge the first time. Everybody was skeptical over the pretensions of the acrobat, and he was unable to get money enough to buy the rope till Hamlin looked him over and made up his mind that he was equal to the task and was sincere in the undertaking. He then went surety for the rope, and it was bought and put up—1,300 feet of manilla, with many small ropes for guys. When Hamlin went to Blondin's room just before he was to make the first trip he found him playing on a fingerboard as unconcerned as though he was anticipating a pleasure drive, and he declared that he was not the least bit nervous or nervous.

The British in Africa.

The English forces have struck three telling blows against the savage kings who have lately been committing horrid outrages in the Niger provinces in Africa. They have utterly routed the King of Benin, near the coast, who caused a party of unarmed Englishmen, on a peace commission, to be assassinated; another body, supported by a river flotilla, all under the auspices of the Royal Niger Company, drove the army of the King of Nupe to his capital, which was carried by assault, the cruel slave raider and his supporters escaping by flight; the third conquest has just been made of Ilorin. The Nupe forces retreated, as was surmised, to the neighboring province of Ilorin, whence the company's little army, with its effective arms and machine guns followed them, and the Ilorins have, in turn been routed. They tried, by treachery, to entrap Major Arnold. They sent messengers to his camp as though they were desirous of peace, while an attack was being arranged. Their trick was discovered just in time. Surrounded by a body of 5,000 men, with 800 horses, the English leader only saved his forces by forming them into a solid square. The modern weapons did effective service on the enemy, to whom they were entirely new. There was sharp fighting for a day or two, then the town was bombarded and captured, the fanatical Ilorins being utterly routed. These three campaigns have been accomplished within two months. The result must inspire great respect for British rule, and make for peace in a region which has been terribly ravaged.—New York Independent.

The Tiger Snake.

There is no known antidote for the bite of the tiger snake of Australia. Persons bitten die almost instantly, and the government has a standing offer of $5000 for anyone who will discover a remedy. Some few years ago a man named Underwood actually discovered an efficacious antidote. To prove its value he allowed himself to be bitten repeatedly by snakes in full possession of the power to kill. He offered his discovery to the government for $10,000, but this amount they thought exorbitant. One day he gave an exhibition before some government officials, but being much under the influence of liquor, he did not recollect what he had done with his antidote, and he died shortly after the snake bite, his secret perishing with him.

About the Sapphire.

It is commonly believed that the sapphire is known only as a gem of a rich velvety blue in color. As a matter of fact the sapphire occurs in various hues. In Ceylon, where the finest specimens of this gem are found, it ranges from the soft, velvety blue to the peacock blue, graduated in the latter to an almost faultless white. It also occurs in whites, greens and yellows, the latter shade being known as the Oriental topaz and the green the Oriental emerald. The white sapphires are often found clouded or streaked with blue, so that many specimens are cut which are white when looked at transversely, but having a bit of fine blue tint on the under point. Then there is the red sapphire, or Ceylon ruby. It is valued as highly as the finest Burmese rubies. Those most highly prized are of a rich pigeon blood or rose red color.—Pittsburg Dispatch.

Sad Ending to a Wedding.

A sad ending to a wedding occurred at Udine, in Italy. Teresa del Bianco and Signor Nicodemo were being married in the presence of numerous friends, and the service has proceeded to the point where the priest asks: "Wilt thou have this man to be thy wedded husband?" when the bride having whispered "I will," fell down and expired. Apoplexy was the cause of death.

The town of Liberal, Barton County, Mo., has suffered a blow. Its founder, George Walser, at one time the most noted infidel in the West, has renounced his former views and has become a member of the Presbyterian Church at Lincoln, Neb. His old friends in Liberal say that his conversion is due to the influence his third wife exercises over him, and that her ambition to shine socially in Lincoln accounts for Walser's apparent change of heart.

Electric Light in the Arctic.

Electricity played an important part in the Arctic voyage of the Fram, Dr. Nansen's staunch vessel. The electric lights were daily used on board, according to the Elektroteknisk Tidsskrift, of Christiana, until May, 1895, when the wearing out of the gearing and the fact that portions of the apparatus were needed for making snow shoes made it necessary to dispense with the use of the dynamo, which was worked by a windmill. Though at times the accumulators froze solidly, yet the acid-blended ice proved a fast friend. Electricity, too, fired the mine shots which freed the Fram from the ice floes.

About $2,000,000 worth of American whisky is annually sent abroad, most of it from Baltimore.

Worth While.

It is easy enough to be pleasant,
When life flows along like a song;
But the man worth while is the one who will smile
When everything goes dead wrong;
For the test of the heart is trouble,
And it always comes with the years,
And the smile that is worth the praise of earth
Is the smile that comes through tears.

It is easy enough to be prudent,
When nothing tempts you to stray;
When without or within no voice of sin
Is alluring your soul away;
But it's only a negative virtue
Until it is tried by fire,
And the life that is worth the honor of earth
Is the one that resists desire.

By the cynic, the sad, the fallen,
Who had no strength for the strife,
The world's highway is cumbered today;
They make up the item of life.
But the virtue that conquers passion,
And the sorrow that hides in a smile—
It is these that are worth the homage of earth,
For we find them but once in a while.

—Ella Wheeler Wilcox in the Congregationalist.

Daisies for Remembrance.

They were walking slowly side by side through the fields on a fine afternoon. He was tall and dark, with a grave, determined face, and his every look and gesture showed his strength. She was slim and fair, her eyes were blue and eager, and somehow the sunshine of the summer day seemed to have gotten into her face.

"So you are going to Newport tomorrow?" the man asked, turning toward the girl abruptly.

The wind had blown the loose ends of her wavy hair about her face and the dimples came into her cheeks as she smiled up at him. She was very pretty.

"Yes, tomorrow," she answered. "You must confess it is rather dull here, is it not? And Newport is gay. Mamma says it is the gayest place she was ever in, so I persuaded her to take me there."

She stooped as she spoke and pulled off a daisy head, pinching it in her fingers.

"Don't," said the man sharply, reaching out and almost roughly unclosing her fingers from the crushed little flower. "I beg your pardon. I did not mean to hurt you. You see you care for Newport and balls and things and I care for the meadow here, and the flowers, and——" He paused, leaving the sentence unfinished.

But she laughed brightly. "Oh, of course, I care for the meadows, too," she said. "But I could never live here as you do. I must be where there are people and dinners and dances—society, you know. I do love to waltz, don't you? And I adore fine clothes, and—and admiration, I must confess."

She spoke half shame-facedly, and glanced almost unconsciously at the man's shabby gray coat and grave, indifferent face.

"I don't think I was ever so happy in my life as I've been these last three months since I came out."

"Yes," he answered, slowly. "I've heard you say that before. But I've only known you two weeks, and it seems to me you suit the fields and the flowers far better than the opera and the ballroom, Miss Davis."

His voice and manner made the little speech a compliment, and the girl laughed again gayly. He thought sometimes that she laughed too often.

"There is something more in life," he went on, his eyes fixed on the daisies in their path, "than just society, I think. I have to get along without parties and fine clothes," and this time it was he who glanced at the worn coat, "but there are things broader and better and nobler than a good time, are there not, Miss Davis?"

She looked at him in surprise, quite uncomprehending and somehow disappointed.

"I don't know" she began slowly. "I like the good time best of all, I think. Anyhow, Mr. Paul, I will leave the other things for you. You must not speak ill of my dear, gay society, and I won't hurt your flowers. Isn't a bargain?" And she picked a daisy very carefully this time and fastened it in his buttonhole, laughing.

Boston, Dec. — ——

My dear Miss Davis—You will be surprised at a letter from me, I know, and I fear more than surprised at what I have to tell you. I shall not enlarge upon the subject, and I can only say very simply, "I love you."

I never expected to share my secret with you, for I am aware that it can hardly be of a moment's interest to you. But my sudden departure [illegible] to Boston Friday, and a remark of yours made long ago, that a "man owed it to a woman to let her know he loved her," has caused me to write to you tonight.

Perhaps, too, I "owe" it to you to tell you that my love for you began with the two weeks we spent together last summer at L——. Since then I have met you but rarely, but I have watched from a distance your social successes and have been truly glad for the happiness I am sure they have brought you.

I can only hope that this society which you enjoy so well may never disappoint you, and that you will let me say a word of farewell to you at the ball on Thursday, as your devoted friend, PAUL MOSHIER.

It was the night of the charity ball.

The great hall was ablaze with light; the orchestra, in a bower of palms at the far end of the room, played brilliantly; everywhere there were men in their ugly conventional black suits, and beautiful women, dressed in satins and silks of every color, and gay with jewels and flowers.

The dancing had begun an hour ago, but still Paul Moshier was standing in the little crowd of men always to be found about the door. He was waiting for Miss Davis. He did not think that he would say "good-by" to her after all—he did not know as he ever meant she should see him. But he must get a little glimpse of her before he went away to India.

To tell the truth, Paul was hurt and angry at Miss Davis. He had sent his letter to her three days ago and he had had no word from her since. He thought to himself that she was rude—a lady should make some acknowledgement, however slight, of a letter like that. But she was spoiled by much admiration; society had turned her head.

Nevertheless, he had come to the charity ball in his shabby dress suit and his best gloves, simply to see Miss Davis and to say "good-by" to her silently in his own heart.

He waited patiently at the door, craning his neck to catch sight of each new face, and paying no heed to the brilliancy of the ball. Hundreds of radiant women passed and repassed before him, the dance music sounded in his ears, the lights blazed into his dark eager eyes, but he never turned his attention from the door.

Once someone spoke his name, but he did not answer, and many times he was jostled and did not feel that he moved.

The minutes dragged by slowly. Nearly everyone had come, and the great clock on the wall behind the matrons struck 12 faintly through the music. Still he waited silently, though he was thinking now that perhaps she did not mean to come at all. Perhaps that was to be her answer to the letter.

Fifteen, twenty minutes, half an hour went by—she had not come.

Then suddenly the crowd about the door drew back on either side and Paul, stepping hastily out of sight behind the other door, saw that she was coming.

He watched her with narrow, intense eyes as she came in on her father's arm. She wore a plain white dress, cut low, and finished about the neck with fine old lace; her gloves did not quite reach to the puff of her sleeve and showed part of her white arm; one of her little white slippers had lost its ribbon rosette. Paul noticed all these details of her costume unconsciously; it was [illegible] know he saw them. It was the sweetness of her pale, fair face and the light in her eyes that made him start.

"Miss Davis looks more stunning than ever tonight," said a man standing in the crowd.

But Paul did not hear him. He had pushed the man hastily aside, and stepping proudly, his head held high and his face shining with happiness he had gone to meet her.

For in the belt of her white muslin gown there was a great bunch of daisies.—Boston Post.

Borrowing His Own Capital.

"I have an old college friend who has been on his uppers here," said a LaSalle street business man. "About a year ago he began dropping in to borrow $5 or $10 at a time from me. He would always repay me and be effusive in his thanks. He never owed me more than $10 at a time. One day he came in to pay me, and when he offered me $5 I asked him if the amount was not $10.

"'I thought it was $5,' he answered, but your recollection is better than mine;' so he paid me the $10, although I protested against it.

"Later on my stenographer, who remembered the circumstances, told me that he borrowed only $5.

"I laid a $5 bill out on the desk for him. He came in during my absence and borrowed it, and left an I. O. U. A day or two after, while I was out, he came in and left the money for me. I put it back on the desk, under a paper weight, and within a week he came in again, while I was out, and borrowed it. That has been going on for three months. He has borrowed and paid back his $5 bill at least six times, but he never comes in the office while I am there. I'm waiting to catch him and let him know that he is borrowing his own capital."—Chicago Record.

A Remarkable Book.

The most curious book in the world is neither written nor printed, says the St. Louis Globe-Democrat. Its pages are composed of the finest quality of vellum, and the letters were with infinite pains and trouble cut out of the material with a sharp-pointed knife or pair of delicate scissors. It is interleaved with blue paper, and the letters can, therefore, be read as easily as any print. It formerly belonged to the Prince de Ligne, and is now in the library of a noble French family. The title of the book is "Liber Passionis Domini Nostri Jesu Christi, cum Characteribus Nulla Materia Compositis"; in English, "The Book of the Passion of our Lord Jesus Christ, in Characters, Without Materials of Composition." The matter is a homily probably composed by some monastic preacher of the Middle Ages. A remarkable circumstance connected with this book is the fact that, although it bears the royal arms of England, no mention of it can be found in any English writing. The book is believed to have been made some time in the thirteenth or fourteenth century. In 1640 the Emperor Rudolph II offered for it 11,000 ducats, which in the money of our time would equal about $66,000, and the offer was refused.

Queen Victoria's Favorite Apple.

In Montgomery county, Virginia, on an extensive plateau of a spur of the Blue Ridge, an apple is raised that in size, symmetry, and flavor can only be surpassed, if surpassed at all, by the genuine Albemarle pippin. Unfortunately, it would seem that the real home of this last most delicious fruit is limited to a small area in and around Rockfish Gap, partly in Albemarle and partly in Nelson county. But a pippin much resembling it, even though not in all respects so excellent, may be advantageously cultivated through a stretch of a hundred and fifty miles along the slope of the Blue Ridge. More than forty years ago a barrel or two of the Albemarle pippins were sent as a present to Queen Victoria, and from that day to this it is the favorite apple at her court.—Lynchburg (Va.) News.

Inconsiderate Father.

Hattie—What's the matter with Gustavus? He never calls any more?

Hortense—Why, one night when he was at the house I called him the "light of my life," and papa came in and said it was about time the light was [illegible]—Boston Globe.

A UNIQUE HERMIT.

For Twenty-Five Years He Has Lived in a Hole in the Ground.

Disappointed in Love He Withdrew From Human Society.

In the town of Blaine, Me., there is a unique hermit. For twenty-five years he has lived in a hole in the ground. This picturesque recluse, George Monroe, is now sixty years old, but stays in his singular abode in spite of increasing age and infirmities. He spends his existence like a prairie dog.

A New York press correspondent saw the old man in his dugout the other day. It is a place unfit for human abode. In the side of a hill he has dug a hole and roofed it over with poles and sod. A rude door is stoutly made and fastened by a number of hooks and hasps, and locked with a big, rusty padlock. The only other vent is a little window with an outside shutter.

Housecleaning is simple with this hermit. When his house gets musty and odoriferous he moves, digs a new hole and takes his roof with him. Then he has a new house, fresh and clean. His only implement is an old spade which he has worn down sharp. There are two rooms to his house, an outside store room, about five by eight feet, and his living room, where in a low space about four by eight he has his cook-stove, his bed and his provisions (which consist of a barrel of flour, a can of molasses, and a piece of pork). This old man has lived in this miserable hole for a quarter of a century without a bath, change of clothes or decent food; yet he is in good health, has good lungs, a good digestion, and not a trace of rheumatism.

The hermit's costume consists of only two articles, a tattered pair of trousers and a dirty red shirt. The way in which they are kept together and prevented from dropping off from his gaunt frame by sundry pieces of string, strands of rope, and bits of yarn, instead of buttons, is something to marvel at.

But he was not always thus. He has seen better days. It is the same old story—the same sad story of disappointment and bitterness. When he started out in life he owned a large and fertile farm, and lived in a comfortable dwelling house above ground. Nothing save a wife was lacking to make his life one of happiness and peace. Then came the love disappointment, and the consequent dejection. He gradually became more taciturn, and finally withdrew from his associates. It was too much trouble to run a house just for himself, he said, and then there was the likelihood of a fire; so he gave it up and retired to his hole in the ground, where he has lived ever since. The world will never know the whole story of the old man's career, for he refuses to speak of his past.

The Chin as an Index.

Protruding chins characterize men and women of the get-there type. Successful people usually carry their chins thrust forward, with compressed lips. This chin, if heavy, with broad rami and swelling masseters, indicates fighting blood.

A retreating chin shows lack of force, mentally, morally, and physically; usually of the yielding sort; soon discouraged; desires protection; small executive force. The development of other faculties often make up for this defect.

A small, well-rounded chin, with mobile and red cushion of flesh upon, indicates a pleasure-loving owner. If dimpled, all the more so, for dimpled chins belong to coquettes. People with dimples love to be petted and loved; like admiration and praise, generally fickle. Usually this chin is healthy, recuperative and long lived.

Broad chins signify nobleness and large dignity, unless vertically thin, when, if with it there be thin lips of bloodless kind, you find cruelty.

Square chins with little flesh denote firmness and executive ability. These make good haters.

Drunkards usually have a circular line about their chins.

Sloven have wrinkles about their chins.

Long, thin chins are [illegible] stable and delicate in constitution. Such people are subject to bowel derangements. If thin through the angles of the mouth, too, they are prone to tuberculosis. Generally shortlived.

Medium chins with a suggestive bifurcation in the centre, with small mounds of flesh on either side, characterize generosity, impulsiveness, cheery natures. (The same sized chins with a dab of flesh just under the centre of the lower lip, indicate meanness, selfishness, brutality.)

N. B.—No one feature can be taken in judging character. Often development of other faculties of mind or feature entirely governs. In each case take the "totality of indications" before judging.—St. Louis Clinique.

Why Physicians Should Shave.

It may be claimed by some, writes Dr. W. A. Hockemeyer to the Medical Brief, that the beard is provided by nature, and should be allowed to remain. So it may be with the layman, but when with the faculty it might prove a serious means of contagion, it were better that no chance should be taken. In listening to the action of the heart, or in making other examinations, the face of the examiner must necessarily come into contact with the person or clothing of the patient, and a bearded face would be much more liable to be affected thereby than the cleanly shaven skin. Dr. Marion Sims was under the impression that disease had often been conveyed by this means, and was always a firm believer that the less the face was encumbered, the better it was for both the doctor and patient. There is beyond all that, this fact which cannot but be generally admitted; the perspiration of summer and the frosty breath of winter, or the dampness from rain in all seasons, are not pleasant things for a doctor to carry into a sick room. In winter he may divest himself of his overcoat and hat in the hall, but the beard, with the effects of the outside atmosphere, cannot be so easily laid aside, and oftentimes, especially if the call be a hurried one, the patient may become nauseated by aware that the doctor was interrupted in the enjoyment of his pipe.

A Dog Fired the Rifle.

The accidental discharge of a twenty-two-calibre rifle recently, ended the life of Albert Cooper, an eighteen-year-old boy, at Stevens, Cal..

Cooper and two friends left Kansas City on a hand car in the morning for a rabbit hunt. At about four in the afternoon they were ready to return and placed their guns on the floor of the car. Cooper was standing in front of the car. One of the party had already boarded it, and the other lifted their hunting dog from the ground and placed him on top of the weapons. There followed immediately the discharge of Cooper's rifle, the bullet entering the abdomen and perforating the aorta. Death came within fifteen minutes from internal hemorrhage.

The firing of the gun must have been caused by the dog striking the trigger with his foot. It is supposed that the victim of the accident had neglected to lower the hammer when he laid the weapon down. The family of young Cooper have resided here for several years, his father being a locomotive engineer of long service with the railroad company.—San Francisco Chronicle.

The Morning Drink.

A glass of water should always be taken the first thing in the morning. It exercises a two-fold advantage. First of all, when sipped slowly it acts as a stimulator to the excretory organs. Secondly, during sleep a great deal of mucus is secreted by the membrane lining the mouth and other organs of the alimentary canal, and this morning drink removes it. Many a morning headache will be cured if the habit is carefully and systematically carried out.—New York World.

Surgery.

Consulting Surgeon—What is the matter here?

House Surgeon—This is a man who ate the first dumpling his wife ever made.

Consulting Surgeon—Um—his heart is pretty weak. I guess we'd better not probe for the dumpling yet awhile.—Boston Transcript.

HE RESUMES HIS REMARKS ON THE COTTON-BELT CLIMATE.

WON'T SWAP HIS VINEYARD FOR MOST VALUABLE FARM IN YANKEEDOM.

When Our Town Philosopher rode up to our sanctum on his bicycle, one day this week, he was smiling as serenely as a May morning.

"Tell you what it is," he said as he left his steed of steel and crossed the Call threshold, "tell you what it is, the climate of the Cotton-Belt makes me feel twenty-five years younger than I did in the old days when I was living in the Northwest. I saw in the Minneapolis Times last week that the people in South Dakota had been having the most divers and sundry kinds of weather that one could think of—and all in the space of twenty-four hours. In the language of the old song:

"First it blew,
Then it snew
And then it thew."

But that wasn't all. The thermometer had been monkeying down 'round zero; and then it began to rise at a fast and furious pace till it reached the 90 degree mark in the shade! The prairies were white with snow, but in a few hours the last flake was melted and the soil was parching hot!

"No wonder the folk up there have lung-troubles, rheumatism and other complaints that are seldom known in this region. The only wonder is that the last one of 'em doesn't pull up stakes and pitch his tent in a land like this—a land where life is really worth the living all the year 'round.

"First year I spent in Dakota—that was before it was split into a brace of States—a drought of weeks, weeks and weeks came on, and when it was over our crop wasn't worth the harvesting; alkali water had given the last one of us the rheumatism, and then a long, cold, brutal Winter set in that lasted until the following May. Well, we managed to plant another crop, and, strange to say, it turned out well, so we began to pluck up courage; but the third year came 'round, and with it came a cyclone that tore the seed out of the ground; keeled our house over; crippled one of the children, and snapped the last one of our young fruit-trees in twain as if it had been a pipestem.

"Finally, we concluded that it was high time for us to leave, and that's how it came to pass that we are in Thorsby."

"You lived in the Red River country of South Dakota, didn't you?" queried the Call.

"Yes."

"Well, isn't it very fertile?"

"I presume it has the best wheat-growing soil of any spot on earth; but there are other things to be taken into consideration—droughts, cyclones, prairie-fires, army worms and heaven knows what. If a Red River crop escapes one of these calamities it may fall a prey to one of the others. So, taking it one year with another, the Red River country, as a wheat-producer, isn't what it was pictured by the flamboyant pens of immigration agents up there.

"Now, since settling in Thorsby I've made money out of my vineyard—made it right along. On a single acre of ground I grow enough grapes to make from 300 to 4,000 gallons of wine, which I sell at from 50 to 75 cents a gallon; and I feel safe in saying that I can make more money in a year out of my ten-acre tract than I could out of any 100-acre tract in the West or Northwest.

"They can only raise one crop per year of corn, wheat, potatoes and other staples, while we can raise two in the same time, and remember that we are not subjected to the rigors of six-months Winters as they are in the North, but can work comfortably in the open air from New Year's day till New Year's day again.

"O, I wouldn't give up my Alabama home for any spot in the North, and I am thoroughly acquainted with that section. No, sir, I wouldn't swap my Thorsby vineyard for the most valuable farm I ever saw in the higher latitudes—that is, I wouldn't swap it, if I had to leave here and live in that frigid fraction of our common country."

Our Town Philosopher looked at his watch. "Later than I thought for," he said, and bidding us a genial good-day, he mounted his bicycle and was soon lost to sight in the distance.

INCORPORATED Feb. 6, 1896. CAPITOL STOCK $150,000.00

THE CONCORDIA
Land and Improvement Association.

THE FOUNDERS OF

THORSBY,

THE IDEAL . . . . .
NORTHERN COLONY

Of the Sunny South.

Are offering for sale City Property, Vineyard Tracts and General Farming Lands and extend a hearty welcome to all thrifty Northern people whom are desiring coming South to come and join us here in this enterprise. Over 120 families have now cast their lots in Thorsby and every excursion brings new purchasers.

Our next half rate excursion will leave Northern and Northwestern points on April 20th and May 4th and 18th.

Buy your Tickets to THORSBY, ALA., a station on the Louisville & Nashville railway, 48 miles south of Birmingham, Ala.

Send in your name and the Association will mail you their new illustrated catalogue free of charge.

ALABAMA ALL RIGHT.

Every Man Who Goes There Says It Is Entirely as Represented—Interview With Jas. L. Johnston.

(From Albert Lea, Minn. Standard, Jan, 27,' 97.)

James L. Johnston, a prominent and reliable farmer of Mansfield, recently went on one of the low-fare excursions to central Alabama and on his return was seen by a Standard reporter.

"What do you think of Alabama, Mr. Johnston?"

"I was entirely pleased with it, sir. It is a fine country, sir; as fine as I ever saw. A man might seek all his life and find none better."

"How about climate, soil and productions?"

"The climate is fine, very fine, sir. It is mild all the year, very healthy and excellent for invalids—they would get well there. The soil is rich and yields large crops of every kind and better yet, it is one of the best fruit regions of the world. Large profits are made in grape-raising in the region about Thorsby where I visited, and other southern fruits flourish there. I found plenty of proof of this."

"What of Thorsby, the people and the prospects?"

"Thorsby village, which is 40 miles each way from Birmingham and Montgomery, has a good start, splendid start, sir; good buildings and more going up. I liked the people very much. They are very hospitable and enterprising; yes, sir, enterprising and prospering, too. The managers of the Concordia Improvement Company are gentlemen and perfectly reliable. I found everything exactly as they represented, the same as Mr. Gilirup told me before I went there. It was better: that's a fact. I was exceedingly well pleased and I picked me out a fine piece of land there. Prices are very reasonable both for lots and land, for acre tracts and farms, and any man with a little means can buy and easily make his payments. There are plenty of good opportunities for investment, and that region has a great future, sir; no doubt of it. I would like to move there at once and shall do so as soon as I can."

"Well, this is interesting. You found everything, then, as was represented?"

"Entirely so, yes sir, and better, and it was one of the most interesting and pleasant trips I ever made."

HOTEL CONCORDIA

JOHN STEVENS, Prop'r.

THORSBY, ALABAMA.

RATES, by the day, $1.00.
by the week, $4.00.

WORTH WHILE.

'Tis easy enough to be pleasant
When life flows along like a song;
But the man worth while is the one who will smile
When everything goes dead wrong.
For the test of the heart is trouble,
And it always comes with the years,
And the smile that is worth the praise of earth
Is the smile that comes through tears.

It is easy enough to be prudent
When nothing tempts you to stray;
When without or within no voice of sin
Is luring your soul away.
But it's only a negative virtue
Until it is tried by fire,
And the life that is worth the honor of earth
Is the one that resists desire.

By the cynic, the sad, the fallen,
Who had no strength for the strife,
The world's pathway is cumbered today;
They make up the item of life.
But the virtue that conquers passion,
And the sorrow that hides in a smile—
It is these that are worth the homage of earth,
For we find them but once in a while.
—Ella Wheeler Wilcox.

A RACE FOR THE BORDER.

BY GEORGE P. LYON.

It was in the fall of 1893 that the western wheat crop was so unusually abundant, especially so in eastern Kansas and western Missouri, and along the fertile river valleys of this region, where perhaps the drouth of that summer was the least felt of anywhere in that section, while still further east, as far as Indiana, the wheat crop was almost a failure in comparison.

The incident which I am about to relate happened early in October of that fall, just after my twenty-first birthday. Clayton Fisk, a young man about my own age, and myself had resolved to start west, with the intention of investing our little savings in the wheat business in some way that would pay us a good interest on our investment. We were full of pluck and enthusiasm, determined to venture our last dollar in our enterprise. Kansas was just about this time developing some immense wheat sections along its border, and it was in this direction we took our course. We had a little over $800 between us, and after more or less careful consideration of the matter and the outlook ahead, we concluded to purchase a traction engine and threshing machine, and with this outfit strike off directly westward through the wheat regions. We went by rail to Jefferson City, where we stopped over and went to look at the threshing equipments manufactured there. Fisk had no knowledge whatever of engineering—in fact, I do not believe he knew the steam chest from the eccentric—but I had had a little experience and understood the points fairly well, and felt quite confident that we would have no trouble as far as operating the outfit was concerned. I remember the peculiar thrill of pleasure I felt as I looked over the big black silent masses of iron at Jefferson City, and thought that before long one of those iron monsters would be pulsing and throbbing under my hand. After some little uncertainty and a great deal of advice, we finally selected a thirty-horse-power engine as one in every way the best adapted for our purpose, but upon asking the price of the machine in view we were informed that we might have it at a bargain—only $1,200 for the whole outfit, consisting of the engine, thresher and equipments. The price was considerably more than we had calculated upon paying, and for a moment we were feeling rather discouraged, for, with only a capital of about $800 between us, the price was beyond us, and, as we stood there talking it over, and considering whether to buy a cheaper outfit or give the enterprise up, a young man, well dressed and appearing, stepped up to us and said:

"I accidentally overheard some of your conversation, from which I understand you lack $400 of the price of the outfit you want. Now, I have just about that amount by me, and I am out of work, and if you will take me as a third partner we will buy the outfit and start out. I am willing to risk what little I've got, for I think we can make a good thing out of it. Of course," he went on, "I am a stranger to you, and you are the same to me, but I'll risk it if you will."

He did not seem like a bad sort of a fellow at all, and we wanted that particular thresher pretty badly, so after [illegible] and I had talked the matter [illegible]tween us we decided to accept [illegible]anger's offer at once. After [illegible]ast the next morning we went [illegible]down to the works and closed [illegible]argain, and we became owners of [illegible]Gonic," as we concluded to call [illegible] After carefully inspecting and [illegible] the machine, I began firing the [illegible]e, which was an immense con- [illegible] the huge six-foot drive wheels be- [illegible]wo feet broad in order to prevent [illegible]sinking in to the soft soil of the [illegible]re wheat fields.

Clayton and Gleason (our new partner) were busy about the thresher, leaving me to my special charge of the engine. At last, about 9 o'clock, we were all ready to start; the tender was full of coal and the thresher was coupled on behind, and the "Gonic" was making steam rapidly. Already the indicator began to creep up—40, 50, 60 pounds. I waited until the needle began to tremble at 80 pounds, then, seizing the lever, I pulled the throttle slowly open. The monster shivered as the steam rushed into the cylinders; then, as the great drive wheels began to slowly revolve, I blew the whistle, and with Fisk and Gleason feeding the fire and looking after the thresher, we were off out along the country roads and across the prairie.

Probably no mechanic feels the peculiar love for his machine that the engineer does. As he works over it, watching and tending it as carefully as a mother does her child, noting the willingness and quickness, and, one might say, the intelligence with which it responds to every desire of its master, a feeling grows in his heart akin to the love one person bears for another.

I began to experience this feeling as we were rumbling along over the rolling prairie as fast as a man could run, our great iron steed answering its levers as steadily and as easily as a well-broken horse would his reins, and hauling the heavy thresher behind. We took a southwesterly course, and after crossing the Osage river, struck some extensive wheat fields just beyond. Here the wheat is bound and piled in great stacks and the thresher is run alongside them, and as fast as one stack is threshed the machine moves to the next. We had good luck, and in about a month's time we came to the Kansas line, which we struck nearly parallel with Fort Scott, and about 150 miles southwest from Jefferson City. We could have worked much longer in Missouri, but we were anxious to take only such jobs as lay in our direct course across to Kansas. After crossing the Kansas line we settled down to business, and as the wheat crop was unsually heavy this year, business was plentiful, and the high power of our machine enabled us to run the wheat through with surprising rapidity, and we began to notice with pleasure that our hitherto deplorably flat pocket books were beginning to swell to quite a respectable size. Fort Scott is situated about twelve miles from the border line between Kansas and Missouri, and while we were threshing in the vicinity of that place Clayton and I began to notice that our third partner, Gleason, apeared rather strange, and that he was over at Fort Scott almost every night, returning in the small hours of the morning.

"Where does he go?" asked Fisk, one evening after Gleason had as usual started off, leaving us to look after everything alone. "He sneaks off every night just this way, and I don't like it."

"Oh, well," I answered, "as long as he uses us square it's none of our business where he goes."

"That's just it," Fisk exclaimed. "How do we know he is not up to some game or other? Then, sinking his voice a little lower, he continued: 'We don't know anything about this chap, although he seems a good fellow enough. He never says much about himself to us, and I think we had better keep our eyes open a little anyway."

"How can he do us any harm?" I asked. "He has an interest in the thing."

"That is more than I can tell," he replied thoughtfully, "yet I think he will bear watching all right."

"All right," I repeated, starting up. "I'll go and fix the fire for the night, and we'll pull out of this the first thing in the morning. We had finished a large stack that day and all hands had gone off except Fisk and myself, and one of us generally stayed with the machine night and day. Just as I had finished banking the fire in the fire box for the night, I thought I heard a slight rustle in the straw like a step, at the other end of the engine, but it was too dark for me to see anything, and as I did not hear it again I concluded that it was only a field mouse among the straw. Gleason did not show up that night. In the morning by sunrise I had a roaring fire in the furnace, and the steam had begun to make a little, when I noticed it escaping in small white clouds from the cylinder heads. This surprised me a little, for I knew that they were all tight when we shut down the night before, and I stepped around to investigate, and upon a close examination I found that the cylinder head had been unbolted and the packing removed. The throttle had also been tampered with, and it would not close tightly, thus letting the steam escape into the cylinder, and showing us the loss before we otherwise would have noticed it. I hastened to the tender, where the spare packing was kept, but it was gone. I was by this time somewhat excited, and calling Fisk, we made a more careful examination of the entire machine, but found nothing else disturbed. It was only too evident that some person or persons had removed the rubber packing from the cylinder heads for the purpose of disabling us. Who could it have been, and what was their object [illegible] [illegible] seem unnecessary, as there was no rival machine in the vicinity. While we were talking the matter over and wishing that Gleason would come, a man in a light buggy drove rapidly up and asked: "Is this the Gleason and Fisk outfit?"

Fisk quietly informed him that it was.

"Your other partner, Gleason," the man in the buggy began, "has been investing rather heavily in stocks or something of that kind, on security of property owned by the company, and as the investment has turned out badly, and Gleason can't pay, I've been instructed by the proper authorities to ask you to settle the matter at once."

"What have we got to do with his investments?" asked Fisk, with a scowl.

"One member of a firm binds the rest in Kansas," suavely remarked the stranger.

"And if we refuse to settle?" I asked inquiringly.

"Then, I'll have to serve an attachment on the outfit, that's all," said the man.

"Let me see your papers," said Fisk, stepping up to the side of the buggy. The man unbuttoned his coat and began to fumble in his pockets. As I did so I noticed a sheriff's shield pinned on his vest front.

'Confound the luck," he exclaimed angrily. "I've left them back at Fort Scott, but never mind; it's all straight enough anyway. I don't think you will doubt my authority," and he exposed his shield to us.

"Well," cried Fisk, wrathfully. "I don't think you will attach anything here without the papers—perhaps not then."

"Forewarned—forearmed," laughed the sheriff, as he glanced at the steam hissing from the crack around the cylinder head "I dont' think that you will be apt to run away with the property before I can serve the papers," and then he drove quickly away in the direction of Fort Scott.

"Say, sheriff!" I called after him. He stopped his horse and looked back. "Is this bill of Gleason's all straight, or is it a game of his to fleece us?"

The sheriff laughed a little at this, and then he said: "Well, to tell the truth, his ways are a little dark. I know him; he likes to catch a tenderfoot occasionally, but he's got the advantage of you fellows all right, because he's got the law on his side."

Fisk was about to make some warm reply, but I shook my head warningly at him and the sheriff went on.

"It won't do to make him mad," I said. "We are in a bad fix, and it will only make matters still worse to get the officials down on us.

"But," groaned Fisk, "to think what a precious pair of fools we are."

"Yes, it's pretty tough, old man," I remarked, sadly. "All our money and all our prospects gone at one sweep, and all owing to the rascality of that Gleason and our greenness.

"Clayton," I exclaimed a moment later, springing up electrified with an idea, "bring me your rubber boots, and step quick, too."

He brought them wonderingly, and I quickly slit open the legs and then drew several circles upon the rubber and began cutting them out with my knife.

"I guess this will work all right for a little while. If it does," I cried, we may give them the slip yet. Break up that old tar barrel and stick it into the fire box. If I can get the cylinder to hold its steam, I'll bet five to four that we can out-travel that apology of a horse the sheriff had."

Not a breath of air was stirring, and the dense black smoke from the burning tar barrel rose from our funnel perpendicularly in the clear morning sunshine, giving our pursuers an inkling of our intentions before they could have otherwise imagined it possible for us to escape. The smoke could be plainly seen at Fort Scott, which was about three miles away. I soon had the packing rings cut out and the cylinder heads bolted back into place again, and all we could do now was to wait for the steam to rise before we could start, and it seemed as if the indicator never moved so slowly before. If we could only get back over the line into Missouri, the laws there would protect us and we would save the Gonic. Only twelve miles lay between us and the border line—could we reach it before they overtook us?

The gauge showed 100 pounds pressure. I ran the governor belt off so that we could travel to the full capacity of our power without being automatically checked; then I pulled open the throttle, and the next moment we were rolling out across the open prairie toward Missouri, in a race with the stake $1,200.

The Gonic did nobly. With a roar like small thunder she belched up huge clouds of back smoke and steam, and fairly quivered with the full pressure upon her, as she rolled along. Now and then we ran afoul a line of barked wire fence, but we tore through it like a network of twine.

I looked back just after we had got well started, and saw on a knoll about a mile back the pursuing party—three of them—the sheriff and two men with him in his buggy, and their horses at a run, and then I opened the throttle a little wider. It was now all a question of speed—if they overtook us before we reached the State line they might take us and the machine, too; if, however, we crossed first, we would be beyond their jurisdiction, and they could not serve the attachment. One, two, four miles we passed over, our engine at full speed, with an average of 90 pounds of steam on, and we could plainly see that we were holding our own against them. Eight miles we had traveled now, and I was beginning to feel pretty highly elated over the success of our scheme, when I heard Fisk utter a cry of dismay.

"The coal's all gone!" he exclaimed.

It was true, for, in the excitement, I had not noticed its rapid depletion, until now, and not more than four or five shovelfuls remained. This new calamity almost stunned us both for a moment—perhaps we might be able to make it hold out—but I doubted it greatly. Ten miles—the coal was all gone now, and I emptied one of the oil cans into the fire box to keep up the steam, and then we began to break up the woodwork about the tender.

Eleven miles—only one mile more now and we would save the Gonic, but the last stick of fuel was gone even to the last splinter, and I could see that the speed was already beginning to slacken down.

The sheriff seemed to notice that we were beginning to slacken up a little, for he now laughed and rose to his feet and stood upright in the buggy and began to urge his almost exhausted horse on with shouts and free use of the whip. The light vehicle swayed and plunged about from side to side as the horse broke into a headlong gallop, while [illegible]wo men hung desperately on as the horse plunged frantically forward, still urged by the whip and the furious shouts of the sheriff [illegible]ere rapidly overtaking us now [illegible] the Gonic was lost unless we could manage in some way to keep up the [illegible] a few moments longer. I locked [illegible] and saw that the sheriff was still coming and was now within 100 yards of us and still gaining on us at the rate we were moving. He saw me as I glanced back, and he began to shout something at me, but the engine made so much noise that I was unable to understand what it was that he said, but I could guess almost, for I could see the look of exultant satisfaction in his face and hear him laugh as we began to slack down and almost stand still—the fire in the furnace having died down to a few smouldering embers. They were now almost within speaking distance and still coming nearer every moment. I could plainly hear the labored breathing of the sheriff's exhausted horse, and I knew that he could not go much further at that speed, and then I heard the sheriff shout tauntingly: "Hold on—you can't get away now. We've got you all right."

This was almost too much—especially with neutral ground not a mile ahead, and then with a grim determination that I would make another effort to save the Gonic in spite of them all, I pulled off my heavy woolen coat, and, pouring what oil there was left in the can on it and saturating it thoroughly, I opened the fire box and shoved it quietly into the furnace among the smoldering coals.

In another moment it blazed furiously up and we began to increase our fast diminishing speed a trifle. The sheriff was now near enough to see plainly what I was doing, and as we began to gain headway a little he began to curse and swing the whip more furiously than ever upon his plunging horse. In a moment the coat was consumed, but we had held our own while it lasted, and feeling somewhat encouraged by our momentary success I threw in my cap, while Fisk went me one better by following suit with his coat and overalls. This we did not a moment too soon, however, for as the fire died down the sheriff had begun to gain again, but as soon as the fire blazed up we began to make steam rapidly once more and the sheriff barely held his own with us now.

The coat and overalls did not last long and I saw that something more must go to keep up the fire, for we were beginning to lose ground—with Missouri half a mile away straight ahead. I took another quick look back at our pursuers; they were still coming at a headlong gallop. I opened the fire box and looked in—the fire was almost gone now—not a handful of embers remained. Then, without a moment's hesitation, I slipped off my own overalls, shoved them into the furnace and shut the door. By these heroic means we managed to keep just enough steam to keep in motion a little—just out of the sheriff's reach—until we at last crawled slowly over the line into Missouri, the sheriff and his party within 150 yards of us as we did so, our engine barely moving as we slipped out of Kansas into Missouri and came to a dead stop just beyond the border line. We never saw anything more of our third partner [illegible]on—and all that autumn we continued to thresh in Missouri, and being [illegible]satisfied with our investment [illegible]e up the idea of going further [illegible]ard, and ran the Gonic [illegible] for several seasons before we finally sold out.—Washington Star.

A Spaniard named Julio is said to have invented a new machine, which makes lace equal in beauty and quality to the hand-made article, and at the price of the machine-made.

EGGS OF COMMERCE.

The Big Business Done in the International Trading in Them.

Notwithstanding the reduction in the price of eggs, and the almost unlimited supply of them in all countries that have developed their agricultural resources, it is a fact that the trade in eggs, their exportation from one country to another, has become a large item of international commerce, as most recent figures show. The case of Denmark is in point. Denmark's trade in eggs with foreign countries, chiefly with England and Scotland, has grown enormously. Twenty years ago the annual Danish export of eggs was 600,000; now it is reckoned at 110,000,000. In the same period the importation of eggs into England has increased tenfold, but only a part of the whole number comes from Denmark, the two other exporting countries from which England draws its supplies being Holland and France. France exports to other countries 600,000,000 eggs in a year and Italy exports 500,000,000 eggs in a year, chiefly to Austria and Germany.

The dairymen of the United States depend chiefly on the enormous home market, and they have rivals in the export of American eggs in the Canadians, Canada ranking next to France and Italy and ahead of Denmark and Holland as an egg-exporting country. Canada exports to other countries 300,000,000 eggs in a year. For the fiscal year of 1895 the Treasury figures give as the total exports of American eggs to foreign countries 151,000 dozen, which is equivalent to 1,812,000 eggs. In the fiscal year 1896, however, the total exportations of American eggs increased to 328,000 dozen, or 3,936,000 eggs, a little more than twice as much. The export figures for this year indicate a still further increase, and a market for American eggs is likely, therefore, to be secured in what the political campaign orators are accustomed to call, somewhat vaguely, the near future.

It is a somewhat curious fact, that the weight of eggs is materially larger in Northern than in Southern climates. Canadian eggs, for instance, are heavier than those shipped from the United States, and eggs in the Northern States of this country are heavier than those from the South.

The Cocoanut.

The cocoanut is one of the most valuable fruits known. In its native land it furnishes food, shelter, clothing and a pleasant livelihood, says an exchange.

The majority of the cocoanuts used in this country come from Central America, as far down as Columbia and the Spanish Main. The different islands of the West Indies, especially the Islands of Caynon and St. Andrew, contribute large numbers. The little island of San Blas furnishes the nut of the heaviest meat, the handsomest nut and easiest to work. The number of them, however, is extremely small.

The only cocoanut trees in this country are in Southern Florida, but they are insignificant in number. The trunk of the tree is a hard, firm wood, and is used largely for building purposes, wharves, dams and bridges.

The cocoanut is singularly wormproof. There is, however, one worm, a kind of borer, which attacks the tree itself. It starts from the ground and works its way up through the middle of the tree (where the sap runs) and eventually kills the tree. The leaves of the cocoanut tree are like palm leaves, fifteen feet long.

The blossoms and buds are treated by the natives to produce a liquid called arrack, which is very intoxicating.

The tree grows from fifty to 150 years, and yields every year about 100 nuts. There are on one tree at the same time buds, blossoms and fruit ripe and green and in all stages of ripening. The fruit drops off at night. A pulled nut is worthless. The milk inside of it turns sour shortly afterward and becomes green. Brushes are made of the fiber of the trees. The cocoanut wood takes a very fine polish, and it is largely used for floors, being polished with the husk of the nut and a little beeswax. The nut in its native state is soft, tender and spongy. To take off the shell when the nut is perfectly fresh is very easy.—Philadelphia Press.

Trinidad's Pitch Lake.

A remarkable phenomenon in the Island of Trinidad is the "Pitch Lake," situated at La Brea, about sixteen miles from the Port of Spain, the capital of the island. It is about one and a half miles in circumference and elevated eighty feet above the level of the sea. The water is covered almost entirely with a stratum of asphaltum, traversed by fissures and crevices filled with water. The pitch at the sides is perfectly hard and cold, but as one walks toward the middle the heat gradually increases and the pitch becomes softer and softer. At last it is seen boiling up in a liquid state and the air is strongly impregnated with bitumen and sulphur. During the rainy season it is possible to walk over nearly the whole lake, but in the hot weather a great part cannot be approached. The pitch is much used in the island for roads, pavements and roofs, and is exported in the [illegible] [illegible] also.

FOR THE YOUNG FOLKS.

THE POP-CORN MAN.

There's a queer little man lives down the street
Where two of the broadest highways meet,
In a queer little house that's half of it glass,
With windows open to all who pass.
And a low little roof that's nearly flat,
And a chimney as black as Papa's best hat.
Oh, the house is built on this funny plan
Because it's the home of the pop-corn man!

How does he sleep, if he sleeps at all?
He must roll up like a rubber ball,
Or like a squirrel, and store himself
All huddly-cuddly under the shelf.
If he wanted to stretch he'd scarce have space,
In his bare little, spare little, square little space,
He seems like a rat cooped up in a can.
This brisk little, frisk little pop-corn man!
I know he's wise by the way he looks,
For he's just like the men I've seen in books,
With his hair worn off, and his squinty eyes,
And his wrinkles, too,—oh, I know he's wise!
And then just think of the way he makes
The corn all jump into snowy flakes,
With a "pop! pop! pop!" in his covered pan,
This queer little, dear little pop-corn man!
—[Clinton Scollard.

THE VALUE OF GOOD HABITS.

Boys and girls who grow up without forming bad habits generally make useful citizens and seldom lack for employment, writes John Jackson. One of the most common habits that boys of the present time are learning to follow, is that of using tobacco in some form. Ask the merchant, banker or railroad manager if he prefers to employ a young man with this habit. Profane language is another habit that has become so common as to attract but little attention. Yet how little excuse there is for its indulgence. It shows lack of refinement, or thoughtlessness on behalf of others, and every true gentleman will try to avoid it. As we all have more or less influence in society, and as our everyday habits have much to do with the influence which we exert, we should cultivate habits of a pleasing and agreeable nature, and avoid all those that seem coarse or vulgar.

GOING TO SLEEP.

Did you ever think of the way in which you fall asleep?

It is a gradual process, the senses sinking off one at a time until they are all unconscious. The first to be affected is the eyesight. The eyelids quiver and blink, and you say that you are drowsy. After the sense of sight is fast asleep often you will continue to hear and feel for some time. Taste follows sight to sleep, and then come smell and hearing, and finally, last of all, touch. Touch never sleeps very hard unless you are worn out with fatigue. Frequently, as you know, if you so much as lay your finger on a friend who is asleep, up he will jump, wide awake. The quickest way of arousing even a sound sleeper is to lay a cool hand on his forehead.

With cats, however, it is different. Sight, hearing, taste and touch may all go to sleep and sleep very soundly, but the cat's sense of smell never sleeps. Some of you who have pet cats will find lots of fun in experimenting with them. When puss is fast asleep get a juicy bit of meat or a mouse and very quietly place it near her nose. Instantly her eyes will pop open and she will be ready for dinner.

A LITTLE PRINCE WHO WOULDN'T WASH.

Little princes are much like other children. The son of the crown prince of Prussia did not like to be washed in the morning, and he often made a great fuss about it.

One day his governor reported him to his father. "Very well," said the crown prince, "after this let him go unwashed."

So the next morning the prince did not have his face washed, nor his hands, and he went out to walk with his governor, feeling proud to think that he had got his own way.

Around the palace of the prince there were many soldiers, who watched to see that no harm came to the royal family. These soldiers always saluted the children whenever they went by. This time, however, the first soldier the little prince passed stood still and straight, and did not salute. The prince looked displeased, but said nothing. Presently he came to another soldier, but he also stood still and did not salute. When the walk was finished and they had passed many soldiers, none of whom paid any attention to the prince, the little fellow dashed into his father exclaiming:

"Papa! papa! You must whip all your soldiers! They refuse to salute me when I pass."

"Ah, my son," said the crown prince, "they do rightly, for clean soldiers never salute a dirty little prince."

After that he took a shower bath every morning.

A GREAT ARTESIAN WELL.

It was sunk in the Rocky mountain plateau by a railroad company, to command water for their locomotives. The revelations as to sorts and conditions of things at the great depths below the surface, were like hand-shakings of some strange, unseen world. Boys especially flocked to the fascinating spot, and early began talking about "depths," "flows," "pressure," "finds," etc.

It was sunk in a valley of the plateau, but a valley of altitude, as are all the plateau valleys. These are from 3700 to 10,000 feet above sea level, the mountain peaks reaching some 10,000, 12,000 and 13,000 feet above the sea.

The well was begun with six-inch pipe. From start to finish, the boring was through strata of sand and clay, alternating with measurable regularity, though of

EGGS OF COMMERCE.

The Big Business Done in the International Trading in Them.

Notwithstanding the reduction in the price of eggs, and the almost unlimited supply of them in all countries that have developed their agricultural resources, it is a fact that the trade in eggs, their exportation from one country to another, has become a large item of international commerce, as most recent figures show. The case of Denmark is in point. Denmark's trade in eggs with foreign countries, chiefly with England and Scotland, has grown enormously. Twenty years ago the annual Danish export of eggs was 600,000; now it is reckoned at 110,000,000. In the same period the importation of eggs into England has increased tenfold, but only a part of the whole number comes from Denmark, the two other exporting countries from which England draws its supplies being Holland and France. France exports to other countries 600,000,000 eggs in a year and Italy exports 500,000,000 eggs in a year, chiefly to Austria and Germany.

The dairymen of the United States depend chiefly on the enormous home market, and they have rivals in the export of American eggs in the Canadians, Canada ranking next to France and Italy and ahead of Denmark and Holland as an egg-exporting country. Canada exports to other countries 300,000,000 eggs in a year. For the fiscal year of 1895 the Treasury figures give as the total exports of American eggs to foreign countries 151,000 dozen, which is equivalent to 1,812,000 eggs. In the fiscal year 1896, however, the total exportations of American eggs increased to 328,000 dozen, or 3,936,000 eggs, a little more than twice as much. The export figures for this year indicate a still further increase, and a market for American eggs is likely, therefore, to be secured in what the political campaign orators are accustomed to call, somewhat vaguely, the near future.

It is a somewhat curious fact, that the weight of eggs is materially larger in Northern than in Southern climates. Canadian eggs, for instance, are heavier than those shipped from the United States, and eggs in the Northern States of this country are heavier than those from the South.

The Cocoanut.

The cocoanut is one of the most valuable fruits known. In its native land it furnishes food, shelter, clothing and a pleasant livelihood, says an exchange.

The majority of the cocoanuts used in this country come from Central America, as far down as Columbia and the Spanish Main. The different islands of the West Indies, especially the Islands ofCaynon and St. Andrew, contribute large numbers. The little island of San Blas furnishes the nut of the heaviest meat, the handsomest nut and easiest to work. The number of them, however, is extremely small.

The only cocoanut tress in this country are in Southern Florida, but they are insignificant in number. The trunk of the tree is a hard, firm wood, and is used largely for building purposes, wharves, dams and bridges.

The cocoanut is singularly worm-proof. There is, however, one worm, a kind of borer, which attacks the tree itself. It starts from the ground and works its way up through the middle of the tree (where the sap runs) and eventually kills the tree. The leaves of the cocoanut tree are like palm leaves, fifteen feet long.

The blossoms and buds are treated by the natives to produce a liquid called arrack, which is very intoxicating.

The tree grows from fifty to 150 years, and yields every year about 100 nuts. There are on one tree at the same time buds, blossoms and fruit ripe and green and in all stages of ripening. The fruit drops off at night. A pulled nut is worthless. The milk inside of it turns sour shortly afterward and becomes green. Brushes are made of the fiber of the trees. The cocoanut wood takes a very fine polish, and it is largely used for floors, being polished with the husk of the nut and a little beeswax. The nut in its native state is soft, tender and spongy. To take off the shell when the nut is perfectly fresh is very easy.—Philadelphia Press.

Trinidad's Pitch Lake.

A remarkable phenomenon in the Island of Trinidad is the "Pitch Lake," situated at La Brea, about sixteen miles from the Port of Spain, the capital of the island. It is about one and a half miles in circumference and elevated eighty feet above the level of the sea. The water is covered almost entirely with a stratum of asphaltum, traversed by fissures and crevices filled with water. The pitch at the sides is perfectly hard and cold, but as one walks toward the middle the heat gradually increases and the pitch becomes softer and softer. At last it is seen boiling up in a liquid state and the air is strongly impregnated wth bitumen and sulphur. During the rainy season it is possible to walk over nearly the whole lake, but in the hot weather a great part cannot be approached. The pitch is much used in the island for roads, pavements and roofs, and is exported in the [illegible] ade.

FOR THE YOUNG FOLKS.

THE POP-CORN MAN.

There's a queer little man lives down the street
Where two of the broadest highways meet,
In a queer little house that's half of it glass,
With windows open to all who pass,
And a low little roof that's nearly flat,
And a chimney as black as Papa's best hat.
Oh, the house is built on this funny plan
Because it's the home of the pop-corn man.

How does he sleep, if he sleeps at all?
He must roll up like a rubber ball,
Or like a squirrel, and store himself
All huddly-cuddly under the shelf.
If he wanted to stretch he'd scarce have space,
In his bare little, spare little, square little space,
He seems like a rat cooped up in a can,
This brisk little, frisk little pop-corn man!
I know he's wise by the way he looks,
For he's just like the men I've seen in books,
With his hair worn off, and his squinty eyes,
And his wrinkles, too,—oh, I know he's wise!
And then just think of the way he makes
The corn all jump into snowy flakes,
With a "pop! pop! pop!" in his covered pan,
This queer little, dear little pop-corn man!
—[Clinton Scollard.

THE VALUE OF GOOD HABITS.

Boys and girls who grow up without forming bad habits generally make useful citizens and seldom lack for employment, writes John Jackson. One of the most common habits that boys of the present time are learning to follow, is that of using tobacco in some form. Ask the merchant, banker or railroad manager if he prefers to employ a young man with this habit. Profane language is another habit that has become so common as to attract but little attention. Yet how little excuse there is for its indulgence. It shows lack of refinement, or thoughtlessness on behalf of others, and every true gentleman will try to avoid it. As we all have more or less influence in society, and as our everyday habits have much to do with the influence which we exert, we should cultivate habits of a pleasing and agreeable nature, and avoid all those that seem coarse or vulgar.

GOING TO SLEEP.

Did you ever think of the way in which you fall asleep?

It is a gradual process, the senses sinking off one at a time until they are all unconscious. The first to be affected is the eyesight. The eyelids quiver and blink, and you say that you are drowsy. After the sense of sight is fast asleep often you will continue to hear and feel for some time. Taste follows sight to sleep, and then come smell and hearing, and finally, last of all, touch. "Ah, my son," said the crown prince, "they do rightly, for clean soldiers never salute a dirty little prince."

After that he took a shower bath every morning.

A GREAT ARTESIAN WELL.

It was sunk in the Rocky mountain plateau by a railroad company, to command water for their locomotives. The revelations as to sorts and conditions of things at the great depths below the surface, were like hand-shakings of some strange, unseen world. Boys especially flocked to the fascinating spot, and early began talking about "depths," "flows," "pressure," "finds," etc.

It was sunk in a valley of the plateau, but a valley of altitude, as are all the plateau valleys. These are from 3700 to 10,000 feet above sea level, the mountain peaks reaching some 10,000, 13,000 and 15,000 feet above the sea.

The well was begun with six-inch pipe. From start to finish, the boring was through strata of sand and clay, alternating with measurable regularity, though of varying thicknesses, hard pan of course appearing, this last being first encountered at 170 feet.

The varieties of clay were gray, blue, soft blue, sandy gray, blue clay shale and tough blue. The sands were red, gray, blue, sand and gravel, granite sand, forest bed sand, coarse gravel, quicksand and a fine blue granite sand.

At 200 feet they struck water, a small flow. In general, thereafter, when sand was met, there would be a flow of water. At 438 feet they had a remarkable find, viz, blue sand, water fifteen to twenty gallons the minute, and forest wood decomposed. At 667 feet they again encountered forest remains, this time undecomposed. At 730 feet the forest remains again appeared. At this depth the flow was a hundred gallons a minute. Short of this depth a number of small flows could have been combined and sufficient water obtained, but boring was continued to get greater pressure.

At 500 feet the methods used to drive the pipe proving unsatisfactory, the six-inch pipe was abandoned, and a four-inch pipe was adopted, being driven inside the other; and they began a method of boring ahead of the pipe, instead of driving it. The apparatus for this was a revolving column of two-inch pipe, inside the well, that could be raised or lowered at pleasure. A cutting, auger-like tool was at its lower end; the upper end connected by hose with a powerful pump, which forced water to the bottom, and washed to the borings. This apparatus made the pipe driving unnecessary, since the tool could be driven and revolved to a depth beyond the pipe, which would settle as far as allowed. The precaution required was to prevent the pipe from dropping into the earth. Thus the pipe remained loose, and could have been recovered had the well proved a failure.

From the fine flow of a hundred gallons, there was a decrease that discouraged the boys, as the boring went on and on, until it was but three gallons. At 909 feet there was pumped up coarse gravel wash, large as a walnut, so round and smooth that some were used for marble playing.

At the three-gallon flow the depth was 1033 feet; but sixty-six feet more of boring brought them to fine sand and a flow of 112 gallons. In five feet more, they went to hard blue clay, a triumph of pressure, and 120 gallons a minute, rising four feet above the surface and raising fifty-nine gallons a height of thirty feet, discharging into the tanks 85,000 gallons every twenty-four hours.

At 1047 feet, the well's depth, a piece of hard-pan was found, weighing about five ounces, through which the auger tool had cut.

All this was a great object lesson to the students of physical geography and geology.

ADVENTURES OF COWRIE TOT.

Away out upon the bosom of the broad Pacific, upon a low-lying coral isle, covered with stately cocoanut trees and beautifully colored flowers of every kind, lives Cowrie Tot, the little, dark-skinned savage. It is always warm and summer-like where Cowrie lives, and his mamma is never compelled to wrap him up in coats and woollen stockings. In fact, neither Cowrie, his mamma nor any one else upon the island have ever seen such a thing as ice or snow, and would probably be very much frightened if it was shown to them.

For this reason the houses they live in are not at all like our own. They are merely sheds built of small poles and palm leaves, with quite a high and heavy slanting roof, and both of the ends are left completely open, so as to allow as much cool air as possible to pass through. Instead of bedsteads and cribs, they have hammocks swung from wall to wall, and their dining rooms, parlors and kitchens are out in the open air.

Like all other little boys and girls upon the island, Cowrie Tot is extremely fond of playing in the water. From early morn till late in the daylight he and his merry playmates spend the best part of their time in swimming and diving. Cowrie and the other boys and girls are very venturesome and daring; in fact, much more so than little children who have not spent as much of their time in swimming as the little coral islanders should ever think of being.

One day when the grown men were along the shore turning big turtles on their backs to catch them, Cowrie became very much interested. These turtles, which are very large, come to these islands in great numbers at certain seasons of the year and climb up on the white sand beach.

Now, Cowrie was not strong enough to turn one of these big fellows over, but he picked out a little one and threw himself upon its back. He thought his weight would be too much for the little turtle to carry, and that he could easily hold him until some of the men came to help. But Mr. Turtle had his own ideas about the matter as well as Cowrie Tot.

Away went Mr. Turtle scuttling over the smooth beach toward the dancing waves, and away, perched upon his smooth back, and crying lustily for help, went little Cowrie Tot.

"Jump off!" cried his father to him, but Cowrie did not have time. Into the water they both went together, with a great splash and splutter. Now, of course, Cowrie stood in no danger of drowning, for he was a most excellent swimmer, and as the turtle kept at the top of the water, swimming easily along, he rather enjoyed the novel ride and determined to stick to the turtle's back.

In a very few minutes he was much further out at sea than he had ever been before, and he began to think about coming back. All of a sudden the turtle seemed to become frightened and dived down, leaving Cowrie all alone upon the water.

All at once he saw a long black object coming directly toward him, with glistening eyes and sharply pointed head. It was a shark; a cruel, man-eating shark. Cowrie Tot knew all about sharks. So he began to splash with his feet and hands with all his might and main, and Mr. Shark kept away from him. But not very far, though. Over the water came bounding a small boat and in the bow sat Cowrie's father, with a long keen knife in one hand. Just as Cowrie came to the top again in order to get breath, his father jumped into the water, almost upon top of the shark. The other men hauled Cowrie into the boat. The water was splashed all around while Cowrie's father was fighting the shark. And the next thing Cowrie knew the big body of the shark was floating out to sea.

MINOT'S LEDGE LIGHTHOUSE.

The First One Was Swept Away With Its Occupants.

Lighthouses form the subject of an article in the St. Nicholas, written by Lieutenant John M. Ellicott, U. S. N., and entitled "The Lights that Guide in the Night." Lieutenant Ellicott says:

The first lighthouse on Minot's Ledge, (near the entrance to Boston harbor), was built in 1848. It was an octagonal tower resting on the tops of eight wrought-iron piles eight inches in diameter and sixty feet high, with their bases sunk five feet in the rock. These piles were braced together in many ways; and, as they offered less surface to the waves than a solid structure, this lighthouse was considered by all authorities on the subject to be exceptionally strong.

Its great test came in April, 1851. On the 14th of that month, two keepers being in the lighthouse, an easterly gale set in, steadily increasing in force. People on shore, and no doubt the keepers themselves, watched the heavy seas sweep harmlessly through the net-work of piles beneath the house, and feared no harm. On the 15th, however, the wind and sea had greatly increased, and the waves were flung higher and higher toward that tower in the air. Yet, all thought they surely could not reach sixty feet above the ledge!

That night was one of keen anxiety, for the gale still increased; and all through that dreadful driving storm and darkness, the faithful keepers were at their posts, for the light burned brightly. On Wednesday, the 16th, the gale had become a hurricane; and when at times the tower could be seen through a mist and sea-drift, it seemed to bend to the shock of the waves. At four o'clock that afternoon an ominous proof of the fury of the waves on Minot's Ledge reached the shore—a platform which had been built between the piles only seven feet below the floor of the keepers' room. The raging seas, then, were leaping fifty feet in the air. Would they reach ten feet higher?—for if so the house and the keepers were doomed. Nevertheless, when darkness set in the light shone out as brilliantly as ever; but the gale seemed, if possible, to increase. What agony those two men must have suffered! How that dreadful abode must have swayed in the irresistible hurricane, and trembled at each crashing sea! The poor unfortunates must have known that if those seas, leaping always higher and higher, ever reached their house, it would be flung down into the ocean, and they would be buried with it beneath the waves.

To those hopeless, terrified watchers the entombing sea came at last. At one o'clock in the morning the lighthouse bell was heard by those on shore to give a mournful clang, and the light was extinguished. It was the funeral knell of two patient heroes.

Next day there remained on the rock only eight jagged iron stumps.

Slack-Wire Walking.

"The secret of slack-wire walking," remarked Caicedo, the champion wire-walker, now appearing at the Alhambra, while in conversation with an Answer contributor one day recently, "lies in the padding. The wire used is only a quarter of an inch in thickness, and, if it were not that I take good care to have my breeches well padded, it would cut me in two when I come down upon it in the manner you saw me do just now.

"The breeches," continued the "King of the Wire," producing an article that looked like a cross between the pantaloons of a Spanish toreador and the peculiar bell-bottomed and pipe-seamed variety of "trousis" affected by the Whitechapel coster, "are made from the skin of the South African grysbok, one of the toughest and, at the same time, one of the most pliable dress materials known. It is practically indestructible. You cannot tear it, and to wear it out is next door to an impossibitity. No fewer than twenty-five complete skins were used for that one garment, and in places it is over three inches thick. Expensive? I wouldn't take a hundred dollar note for that old pair of breeches."—London Answers.

Too Cold for Moths.

The Department of Agriculture, through its entomologist, Doctor Howard, some time ago instituted experiments to determine at how low a temperature it is necessary to keep furs and woollen goods in order to save them fro mthe ravages of moths, carpet beetles, etc. The results show that a temperature of 40 to 42 degrees F. during the summer is sufficiently low for the purpose.

CRUEL KING OF BENIN.

An English Traveller Describes a West African Potentate.

A writer in the London Standard thus describes an interview with the cruel monarch of Benin:

Being at last informed that the king was ready, we were led through a gateway into what I suppose was his house. It was of the same shape as the other Benin houses, only larger and loftier. A number of natives were assembled in the first half or court, but we were ushered into a second, into the king's presence. The scene which met our view was weird and bizarre enough to be described by Rider Haggard. The hall was of considerable size and height, and the roof was open, as usual. There was a large well or bath in the centre of the floor to catch the water from the roof. At first, in the hazy light of the smoky, palm oil cressets, we only noticed a large hall, with people crowding around it. But as we looked up the length of the hall we saw the king standing on a raised step with his arms supported by members of his court. On his right, along the hall, were arranged the personal attendants of his household. None of these were allowed to wear so much as a waist cloth, but all had necklaces of Benin coral and agate.

On his left were the nobility of his court, their costumes of silk and cotton skirts padded out to look big, and the upper part of their bodies bare, save for many necklaces of coral and agate.

Right in front of the king was a "juju" altar, composed of some white-looking compound, the top studded with nail-like protuberances. In the centre of these, and smeared with red, which we took to be blood, but found to be palm oil, was a human skull, looking ghastly in the dim light. On one side of the altar, painted on the floor, was a "juju" hieroglypic, and up to this we were led, but told not to go beyond. Behind us were ranged our Kroo-boys and the profanum vulgus, which had entered with us. Our interpreter stood beside us, but did not address the king directly. He communicated with the four messengers, who passed on his speech to one of the big men, and the latter told it to the king.

His majesty was dressed in a cloth of gold tinsel, and covered with coral necklaces. He was a man of about thirty, with an intelligent, or, rather, amiable, face. Certainly to look at him no one would suppose him capable of slaughtering some hundreds of people as a sacrifice to the shades of his father. He was very pressing for us to stay in his town, and said he had many things to show us and talk about. He wanted to know the truth of the statement that Nanna was stopping the trading and grasping everything into his own hands. We told him that we were forbidden by the big queen to carry tales, or make mischief among the natives. Finally we consented to stop over the morrow, when he promised to see us more privately, and then retired, leaving us to be regaled with the tombo.

Cost of Special Trains.

Special trains are readily provided to meet any emergency—such as illness, business necessities, or the unexpected delay of public entertainers and opera companies. In addition, there are numerous other occasions of almost daily occurrence where special trains are contracted for in advance to be used by parties making trips to conventions or other events, or for pleasure. Although circumstances, such as the amount of trouble experienced in securing the necessary rolling-stock and in arranging to keep other trains out of the way of the special, often must govern the cost of special trains requested upon short notice, railroads have a fixed rate of about one and one half dollars per mile for a single car and engine. For an unusual distance a reduction is made in the cost, in that instance averaging one dollar. Where a number of persons desire a special, whether a "rush" order or requested in advance, the cost is equal to the full fare of the destination for as many as the train could accommodate with comfort. If the number in the party equals this number then the expense for each passenger is what the trip would ordinarily cost on a regular train. If the number falls short, of course the deficiency must be made up. For a short haul the rate is naturally raised to two and a half to three dollars per mile.

New Device for Illuminating.

A Pacific Coast inventor is just about putting upon the market a device which comes within the scope of the nickel-in-the-slot idea. It is a complicated and ingenius registering machine that will furnish a given amount of light when the coin is dropped into the slot. One can use a certain number of feet at a time, when the supply stops. The registering is said to be accurate and just to both consumer and producer. By watching the indicator one can see just how long the light is to burn and can drop in another coin or allow it to go out. Twenty minutes before the light paid for is consumed, the light begins to waver and grow dim, thereby giving sufficient warning to the householder to put in another coin, when up comes the current as bright as ever. There have been many amusing comments on this new system, and one can but wonder how the town lights or public buildings are to be supplied and whether there must be a peripatetic dropper of nickels in order to keep the highways illuminated. Some one suggests that after a few months of use these slot machines will furnish a good field for burglars, and to break into them would pay better than safe-cracking.

PORPOISE HUNTING.

Sport of the Passamaquody Indians in the Bay of Fundy.

In the northern part of Maine and in New Brunswick there are still many Indians of the Passamaquody tribe, and these follow a pursuit that is almost unknown to the outside world. They shoot porpoises.

The Passamaquody Indians make their living mainly out of porpoise, and a living well earned it is, too, for there is no occupation in the world that calls for more bravery, skill and endurance. The money is obtained by selling the oil, and pure porpoise oil brings the Indians about 90 cents a gallon; the oil obtained from the paws sells higher; it is tried out by itself because of its superiority, and is valued by watchmakers and others who want an oil of very fine lubricating quality. The Indians eat the porpoise flesh—it is very much like fresh pork, and many white fishermen around the coast like it well enough to give the Indians fresh fish in exchange for it.

There are no game laws to protect porpoises, and the hunting goes on the year round, though the blubber is something like two inches thick in winter, against one and one-half in summer; but then, the danger and suffering to the Indian are far greater in cold weather.

Birch bark canoes are still used by the Indians for this sport, and the way they handle them in the wide, stormy waters of the bay of Fundy is a revelation as to the seaworthiness of these wonderful little crafts. Boys must begin their training as porpoise hunters when they are ten or twelve years old, going out with an older man in good weather first. The Indians generally go two together, for, while shooting the porpoise can be done easily by one in smooth water, it is not the shooting, but the handling of him that is the ticklish business. After he is shot, he is speared to finish him, ando then the Indian runs two fingers in the blow-hole, takes hold of his fin with the other hand, lifts the great fellow until at least half his length is above the canoe's gunwale, and then drags him aboard.

The usual thing is for two to work together, and their accidents are comparatively rare. A man has to stand up to shoot if the water is rough. Of course he could not see his game if he didn't. One of these Indians can stand and shoot and at the same time adapt every movement to the swaying of his boat, keeping her on an even keel. Eastport, Me., is the market where the Indians sell most of their oil.—New York Sun.

How Fires are Started.

The ease with which a fire may be started, and the apparently inexplicable causes which may produce one, are both emphasized by a happening in an uptown house last week. The mistress of the house was seated in the extension parlor in the afternoon alone and perfectly quiet, when without warning a hanging bookshelf broke from its fastenings and slipped to the floor. On its way it struck a small table standing beneath it and knocked over a box of matches, igniting two or three of them. These flew off, one touching the light gauze scarf which had hung from the table, which fell blazing against the curtain near by. The frightened screams of the mistress brought a servant, and it took energetic measures on the part of the two women to extinguish the rapidly spreading fire. Had the room been unoccupied, as it had been all the morning and would have been again fifteen minutes later, it would have been a case of fire department succor to have saved the house.

Muddy Boots.

When a boot is muddy let it dry before trying to knock the mud off. Then lightly rub, being careful not to rub into the leather. Take a soft cloth dusting carefully, when it will clean with very little stain. Take a damp woollen cloth, which will remove all the stain. Warm water is best to use. This simple process will keep the shoes in nice order, while if the shoes are blackened each time, the grain will soon become so filled with it it will stiffen and crack.

Horseflesh in Germany.

Horseflesh appears to be a popular food in the larger towns of Germany. According to an official statement, [illegible] 620 horses were slaughtered in Berlin and 2234 in Breslau, while more than 1,000 were sold at Munich, Dresden, Magdeburg and Cologne respectively. The total number of horses slaughtered and consumed in Germany during [illegible] reached the astonishing figure of [illegible].

CHILTON COUNTY CALL

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

A QUESTION OF CHARITY.

A late Topeka (Kan.) telegram says:

"The Rev. T. De Witt Talmage was advertised to plead in this city tonight for sufferers in India.

"Gov. Leedy declined to preside at the meeting, saying:

" 'I am opposed to asking the people of Kansas to contribute for sufferers in a foreign land when our neighbors in the Mississippi Valley and Oklahoma need our help.' "

Bravo for Gov. Leedy! Strikes the Call that the starving sufferers in India should look to their miserly old Empress for help. She could easily afford to give a few million pounds in the premises. She is the richest woman in the world, and yet she never did a lick of work to earn the money. It all came from her over-taxed subjects in India and elsewhere, and at least a part of it ought to go back to them in their hour of hunger.

Talmage should learn that charity begins at home, and we thank Gov. Leedy for the glorious snub that he has flung in the face of the pharisaical old Brooklyn humbug.

QUEER.

They have a queer way of doing things down at Montgomery at times. A fellow named Hall shot Capt. Joseph, a distinguished citizen, to death—shot him because of a quarrel that might have easily been patched up without bloodshed. What was done with the murderer? Well, he has just been admitted to bail in the sum of $2,500. Bad enough, you may say; but listen to this from the Advertiser:

"During his brief confinement Mr. Hall was visited by hundreds of devoted friends and his cell was kept bright and pretty by loads of flowers."

The action of the court and the action of the friends in question will be regarded as rather queer by every one who has a vestige of respect for the law.

The Tuskegee Reporter, in referring to the subject, says:

"In order to become popular, and be made much of, one has only to kill some one. It used to be a crime—not now.

The Bellefontaine (Ohio) Examiner of the 3d inst., says:

Yesterday we had—

"A ragged trail of snow along the hedge
That marks where Winter's lingering feet have passed."

Think of "a ragged trail of snow" being visible as late as May 3, and thank your stars that you live in Alabama instead of in Ohio.

In the rapid development of Southern cotton manufacturers Southern mills are sending their products directly to Chicago and other regions of the far East.—Philadelphia Record.

And now, what do the New England mill-owners propose to do about this latest "rebel outrage?"

There is not a single vacancy for the sixty-two young fellows who will graduate from West Point in June—Chattanooga Times.

If these gentry had graduated in farming, or some other peaceful pursuit, they wouldn't be out of a job.

Will Reedy, of the St. Louis Mirror, remarks:

"The more Christian a nation is, the less ought its fighting quality to be."

Yet every Christian nation in Europe is struggling to surpass the others in the matter of military strength.

Let the farmers of Chilton county diversify their crops; let them follow this policy for a decade, and at the end of that period they will find themselves a hundred-fold better off than they are today.

The Greeks are adding to the gayety of nations by fighting between themselves. It's an old proverb that "When Greek meets Greek then comes the tug of war."

The Memphis Commercial-Appeal says that "Nobody accuses Mr. Cleveland of being a fool." Certainly not. It is very seldom that a knave is a fool.

When a politician or a paper upholds a Trust, there is certain to be "something rotten in Denmark." We never knew it to fail.

The Call will be sent to any address in the United States or Canada for one dollar per year.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

BANQUET TO BUCK.

Atlanta Friends of Minister to Japan Do Him Honor.

Minister Plenipotentiary and Envoy Extraordinary Alfred E. Buck was the recipient of honor at Atlanta Saturday. He was tendered an elaborate banquet at the Kimball House by his fellow citizens, and they broke bread in his behalf.

It was a notable assemblage, made up every class, all were out to do honor to the man who will represent the United States in Japan.

It is safe to say that it was one of the most representative gatherings ever held in Atlanta, for class and circles were thrown away and the people were out simply to give tribute by their presence to the Georgian who has made such a huge political success. There was present, of course, the political coterie which has stood by Colonel Buck during his campaign.

There was also there men of every profession, and all entered into the occasion as one of great significance.

In response to a toast Colonel Buck replied in part: "Mr. Chairman and Gentlemen of Atlanta: I wish to thank you for the honor done me by the citizens of Atlanta. I am a Georgian and have the interest of my state at heart, and in my new sphere I hope you will not be disappointed in me.

"I wish to thank you for this expression of your kindness from those who oppose me politically, and yet it is evident that outside of the political hall, you are my friends. I am fully convinced that political enemies can be personal friends. (Applause.)

"I love Atlanta, it is my home, and some day I hope to return to it and again shake the hands of my friends. This city will be my home upon my return. I love the old red hills of Georgia and too dearly to bid adieu for good.

"I wish to thank you again for this magnificent show of appreciation and say to you the honor will never be forgot."

"Colonel Glenn said that we all loved Georgia, and that there was a man seated around the board who is a brave man and a thorough Georgian. If this man had been an Indian he would have been named 'Not Afraid to Do His Duty,' but by the grace of God he is a white man and is called the 'governor of the state.' "

Governor Atkinson said: "I don't see why my friends call me a brave man as I came here tonight to meet our friend, and I have been meeting him ever since I have been in public life. (Laughter.)

"If we can't get the offices, and we ought to have them, then let us be thankful that southern men get them, though of different political conviction. What we want is to send abroad men who will advertise our country and what Georgians want is to send abroad men who know this state, her resources and who can do us good. I believe in this man we have the right minister to Japan. What we ask of him is to let the people of Japan know that we are the greatest nation on the globe and that Georgia is the greatest state." (Loud applause.)

"Colonel Glenn said that he knew Colonel Buck would be the greatest man in Japan, and that there was one individual around the board who was going to see to it that Georgia cotton was sent from his factory to the east and not returned, and that gentleman was Major J. F. Hanson, of Macon."

Major Hanson made an eloquent speech in behalf of the industries of this country, and implored Col. Buck to see that the cotton of this section was brought to Japan and not returned.

He hoped that the appointment of his friend would lead to the opening of the ports of the eastern countries to the commerce of this country.

Hon. Hoke Smith was introduced here and made a speech that called for frequent applause. He said that he was sorry to see that the republicans had an opportunity to fill the offices, but he rejoiced that they had at least filled one of them wisely.

"We are proud that the representative of Japan has been chosen from our midst. We are thankful that we are in a position that does not cling to either party to have the interests of the south looked after."

A number of other prominent men made brief speeches.

Just before the clock struck twelve the banquetters sang "Auld Lang Syne" and "We Won't Go Home Till Morning," and then closed by drinking to Colonel Buck's good health.

VICTIMS OF EARTHQUAKES.

Buildings Thrown Down Crushing Many People to Death.

A dispatch to The New York Herald from Kingston, Jamaica, says:

"News has just been received here of an awful series of earthquakes throughout the Leeward islands that caused the loss of hundreds of lives. All the islands in the group are said to have been affected.

"The loss of life has been very great, but at this time, owing to the imperfect means of communication between the islands, it is impossible to estimate it definitely. Many buildings collapsed during the most serious shock which occurred Saturday

TENNESSEE'S GREAT FAIR.

GATES OPENED UNDER AUSPICIOUS CIRCUMSTANES.

M'KINLEY PUSHES THE BUTTON.

Governor Taylor and Other Prominent Men Deliver Addresses; All In Praise Of the Commonwealth of Tennessee.

The Tennessee Centennial Exposition was opened at Nashville Saturday with appropriate ceremonies in the presence of many thousands of people.

The procession formed on the public square and marched through College street to Market, Market to Union, Union to Sumner, Sumner to Church, Church to Spruce, and Spruce to Broad and the exposition grounds.

At 8 o'clock the gates of the exposition were opened and the people began to arrive. By 11 o'clock, the hour fixed for the exercises in the auditorium, that building holding 6,000 people, was filled.

The brief, simple, but impressive programme was carried out before one of the most brilliant gatherings ever assembled in Tennessee.

On the platform were the exposition officers and committees, Governor Taylor and his staff, the chief justice and associate justices of the supreme court, members of the woman's board, the mayor of Nashville, United States Senator W. B. Bate and hundreds of prominent citizens.

President John V. Thomas, at 11 o'clock, with a historical gavel, rapped for order, and Rt. Rev. Thomas F. Gailor, coadjutor bishop, of Tennessee, offered prayer.

After "America" had been played in a most impressive manner, Major J. W. Thomas, president of the Tennessee Exposition company, arose and was received with cheers and applause. He spoke shortly but eloquently.

Loud and continuous cheering followed the conclusion of President Thomas' remarks, and the band struck up "The Star Spangled Banner" amid tumultuous cheering and waving of hats and handkerchiefs.

The next address was by Hon. Robert L. Taylor, governor of Tennessee. As he advanced toward the front of the platform the crowd arose as one man, and it was several minutes before his excellency could proceed with his address.

The governor's address was principally devoted to a recapitulation of the stirring events of the first century in the history of the commonwealth of Tennessee and was a masterful effort.

At the conclusion of the address the band struck up "Dixie," and then the very earth itself seemed to shake with the thunders of applause. It was a sight never to be forgotten.

When order was restored, or rather when quiet once more reigned, Major E. C. Lewis, the director general of the association, under whose skillful guidance the marvelous project materialized and came into being, stepped forward. His address was brief and characteristic and was well received.

Chief Justice Snodgrass, William McCarthy, John Thompson, speaker of the senate, and Morgan C. Fitzpatrick, speaker of the house of representatives, delivered brief addresses. After the addresses President Thomas dictated from the state the following message to President McKinley:

"To the President of the United States of America, Washington.—The people of Tennessee send greeting and request that you now put in motion the machinery of the Tennessee Centennial exposition."

In a few minutes the roar of artillery was heard echoing and re-echoing through the buildings and over the grounds. President McKinley had pressed the button; the exposition was opened; the machinery had started at 12:14 o'clock.

The exercises in the auditorium ended and the people gathered around the immense fountain representing Electric City, built by Moretti, to witness the ceremony of its presentation to and acceptance by Mrs. V. L. Kirkman, president of the woman's board.

Governor Taylor introduced Mrs. Kirkman in a bref but happy speech. Mrs. Kirkman briefly accepting the honor, touched the button and the waters gushed forth.

A luncheon was then served to the members of the woman's board and guests and a reception followed. During the afternoon one of the most charming buildings, the children's, was formally opened with kindergarten exercises, and this building was one of the chief centers of attraction during the afternoon.

Among the distinguished visitors upon the auditorium stage were: Ex-Vice President Adlai E. Stevenson, of Illinois, and Governor Stephens, of Missouri.

An open-air concert and music in the auditorium attracted the growing crowds, and as the afternoon lengthened the attendance increased until after 4 o'clock, when the tide set city-ward.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

Don't forget the cheapest place in Birmingham.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

There is a report through the county that the Call will be short-lived; that it is only a temporary affair; that the work and printing of it are being done abroad, and then brought to Chilton county for circulation. This report is not true. The Call now has the best-paying advertising patronage in the county, as well as a substantial and rapidly-increasing subscription-list. It was impossible to print the Call in Thorsby the first few weeks, as there was no unoccupied building to put the printing-outfit in. The outfit, which is owned by the publisher of the Call, is being brought to Thorsby this week, and hereafter the work on the Call will be done here.

H. J. Young, M. D., of Waseca, Minn., arrived here, Thursday night. the Doctor is one of Waseca's old and most reliable practitioners, as well as a prominent citizen in social and business circles. He is the owner of some of the finest bred horses and cattle in the north. The stock he expects to bring to Thorsby with the view of running a large stock farm. As a physician of high standing, a staunch believer in well-bred stock, as well as a good citizen, the doctor is most heartily welcomed to our new and thriving colony.

Mrs. A. Malmgren and family, of Estherville, Iowa, in company with her brother, Alfred Anderson, of Des Moines, Iowa, arrived here, Thursday night. Mr. Anderson comes as a prospective settler, and, if he decides to stay, will take a vineyard tract across the street from A. Malmgren, and will build a very extensive and costly home.

The Call had the pleasure of meeting Mr. Geo. W. Ely, of Montgomery, last Tuesday. Mr. Ely is the Traveling Passenger Agent of the Southern Pacific Railway, and is doing much for the upbuilding of this section. He is a most genial gentleman, and one whom we hope to meet frequently in the future.

Mrs. E. F. Mead, of Manhato, Minn., arrived here, Wednesday night. Mr. Mead has been here some time and is one of our most thrifty citizens.

B. Kerber, the gardner of the Experimental Gardens, received $3.30 per bushel for the green peas that he sent to the Birmingham market two weeks ago.

It was reported that an attempt would be made to have the regular two weeks term of Court for this Spring finished in the first week, but it will be impossible to do so on account of the amount of business and number of important cases to be tried.

The Thorsby Lumber Co. put in a planing-mill this week, and are now able to turn out any kind of building material. They will do a large business for several years, as there is now, and will be for some time, a great demand for building material.

Sheriff Cooley is one of the busiest men in the county this week. He is hustling around serving summons and other papers, preparing for Circuit Court.

This week Mr. Peterson, Secretary of the Concordia Company, planted one acre of tobacco, in Thorsby, for the State Experimental Department of Agriculture.

The latest arrival at the county jail is Pane Carter, a negro He was arrested on a charge of wrecking an excursion train, at Verbena, on the night of April 25.

The airship hasn't been seen in Chilton county thus far. This shows that our people refrain from red licker.

Chilton county attorneys are all busy this week preparing for the spring term of Circuit Court.

The machinery for the Thorsby brickyard is now nearly placed in position.

Next Monday is the first day of the Spring term of Court for this county.

REAL ESTATE TRANSFERS.

List of real-estate transfers recorded in the office of Judge of Probate, from April 29 to May 5.

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

The Chilton County Call, one of the cleanest and most sprightly weeklies printed in Alabama, issued from the young and flourishing town of Thorsby, has the following to say of The Home:

"The Alabama Home, printed at Anniston, came to our desk this week chockful of good pointers to prospective settlers in Anniston and Calhoun county. That's right, brother! Whoop her up!"

Outside people see what paper is doing the best "whoop her up" racket for Anniston and Calhoun county, even if many Anniston people do fail to recognize it in dispensing their advertising patronage. But the Home will probably be here "whoopng her up" when some otheys are looking for new fields and pastures green.—Anniston and Oxford Home.

Geo. Pierce, a negro, was arrested and put in jail at Wetumpka. Pierce blossomed out as a full-fledged confidence man, and began to work his colored brethren in a professional manner. By telling them that, under a new law, they were entitled to a pension, he gained their confidence. Then, by acting as pension agent, he wrote their applications, collected his commission n advance, and was doing a land-office business when the officers gathered him in.

A few days ago Deputy Collector Nabers and Tutwiler, in company with Deputy Marshals from the Middle District, discovered a brace of illicit distilleries near Shelby, in Shelby county, and affidavits were sworn out against Jim Whitten, Jim Hooper, Monroe Hope, Sambo Williams and Aleck Williams. They were taken out to Birmingham, where Hooper and Hope were turned loose, and the others were held to court.

The "hobo" immigration to the sunny South will commence in a short while.—Wetumpka Advocate.

We can't catch on. If it's the tramps you mean, you are mistaken, for this is the season when they begin to migrate Northward. If it's some other class of immigrants you mean, you should designate them a little more distinctly.

Jessie Goodwin, alias Jessie Franklin, was arrested by Sylacauga's marshal last week on a charge of bigamy. Goodwin has a wife and two children in Chambers county, but tied himself last Winter to a second wife at Alexander City, and was trying to get wife No. 3 when arrested.

Last week, Tuesday night, a negro tramp, hailing from Montgomery, was shot in the side of the head, in the railroad yards, at Calera. Several negro boys have been arrested by the city authorities on suspicion of having had something to do with the shooting.

The seventh annual State convention of the Alabama Christian Endeavor Union will be held in Talladega, on the 6th, 7th, 8th and 9th of this month. Rates of one and a third fare to the convention have been granted by the railroads on the certificate plan.

The handsome home of ex-Sheriff Joseph Smith, at Birmingham, was destroyed by fire at 2 a. m., Monday. It is regarded as the work of an incendiary.

The Chilton County Call, published at Thorsby, is a bright and spicy paper, and is doing good work for its town.—Birmingham Daily News.

The Epworth League of Alabama will meet in convention at Montgomery May 11 and 12.

A telephone line between Goodwater and Sylacauga is being talked of.

Centreville is looking forward to a railroad building boom.

The Call wishes to secure a reliable correspondent in every township and neighborhood in Chilton county. Send us a card and we will give particulars.

PORT OF BANES RECAPTURED.

Spaniards Proved Too Much for the Forces of General Garcia.

A special of Saturday from Havana states that the port of Banes, in Santiago de Cuba, held by General Calixto Garcia and 6,000 Cubans ever since the Laurada landed Roloff's expedition, has been recovered by the Spanish combined army and naval forces under General Gomez Rubert and Admiral Navarro.

LIVELY IN A. P. A. CIRCLES.

A Hot Fight To Be Made Against Echol's Re-Election.

A Washington special says: There is a big fight on in the American Protective Association. The annual meeting of that order is to be held here on the 11th of May, and at that time some interesting developments are expected.

John W. Echols, who has for two years been the executive head of the order, is a candidate for re-election and the outlook now is that he will have strong opposition.

GOSSIP FOR THE FAIR SEX.

Notes of Interest in Feminine Topics.

A Charming Young Queen. The Rage for Shirt Waists. Eccentricity in Foot Gear, Etc., Etc.

A CHARMING YOUNG QUEEN.

The young queen of Holland, who is now "out," continues to charm everybody with the grace and youthful dignity of her manner. Her Majesty, now that her hair is dressed high upon her head instead of hanging down her back, looks very sweet, although she can scarcely be called a beauty. It is thought that the young sovereign will bestow her hand and heart upon Prince Bernhard of Saxe-Weimar later on in the year. Meanwhile, various suitors of German princely origin are pining for her smiles.

THE RAGE FOR SHIRT WAISTS.

Shirt waists made of every possible sort of material will be quite as generally worn as ever. There is not the least diminution in their popularity; on the contrary, the rage for out-of-door amusements, which waxes more and more universal, renders this style of easy, neat, and natty dressing still more generally adopted. Of course the wearing of shirt waists is no longer a fad, but their usefulness and undeniable comfort have become so thoroughly well established that every complete summer outfit includes at least half a dozen sorts in linen, wash silk, dimity, lawn, and similar light fabrics.—New York Post.

ECCENTRICITY IN FOOTGEAR.

Just what the connection between fancy shoes and the Queen's year may be it is hard for the American mind to discover, but if the London journals are to be believed, the Diamond Jubilee is among other things to be signalized by every eccentricity in the way of footgear. Chief among these will be gilded shoes covered with straps of close set white kid. Other freakish inventions of the hour are in brocade of all varieties and colors. The most exquisite materials are pressed into service; for example, white satin with velvet brocade, rich red roses and apple green brocade mingled with silver. Five-inch high heels are a feature of these novelties. The base of some of the heels, no bigger than a twenty-five cent piece, have silver gilt tips. Buckles are much in evidence.

DANGER IN FACE WASHES.

A bit of scientific reading that women will do well not to skip is that pertaining to a report of analysis of face washes by chemists. Of many examined nearly ninety per cent. contain corrosive sublimate in solution, many of them nearly pure. One showed a large proportion of mercury and chloride. When the lotion was not powerfully harmful it was usually perfectly useless, a composition of soap, borax, alcohol, and water, for which it was wicked to ask the price of a dollar a bottle. There is a law which makes it obligatory to place a red label on a bottle holding a poison, a statute which the manufacturers of these lotions evade as far as possible by placing it on the bottom of the bottle.—New York Post.

HEADGEAR IN SHAPE OF A CROWN.

Among the newest shapes in headgear is the semblance of a Russian crown. Thousands of hats and bonnets of every imaginable shape are being made in vegetable silk, but there is no doubt that we shall wear more bonnets than we have done of late, and that they will be considered far better style than the large hats. The manufacturers call these bonnets toques, but the world in general associates this term with a soft round form, which the new bonnets are not. They have crowns of some sort, some of them pinnacle shaped, some jam pot, and many have a pleated straw brim, the ruche brim being introduced also on the hats. The Java and the Japanese straws and the vegetable silk are all light and permit of being ruched and pleated and treated in altogether different ways from the old-fashioned straws. In the nats which are not sailors, and of these there is an enormous range, the crowns are generally sunk in and have a point in the centre like the tuft of the Prophet. Nearly all the crowns widen toward the top and diminish where they join the brim, and Switzerland is contributing many of the straws which are used to make them. Both toques and hats alike fit closely to the head, and we have by no means forgotten the comfortable boat shape, while in hats the jam pot crown is quite a feature; so also is another class of hat with a wider brim and the Mother Shipton crown, very high and pointed. When trimmed this is generally rendered almost invisible by the bunches of black feathers which are placed on either side of them. Many of the hats have a double brim, this underneath is often of contrasting color to the exterior. Colored chips are in fashion and are frequently used for the crown or for the brims.—New York Sun.

TRAINED NURSE DEVELOPMENT.

A modern, if not a brand new idea is the school for training nurses, as well as its useful and accomplished graduate. Started to improve hospital service and to relieve physicians of much purely mechanical work, it has done these things, and has also opened a new and congenial field for woman's industry.

From a novelty the trained nurse has become a necessity. From a handful she has grown into an army. There must be over 20,000 to-day in this country and Canada. With this numerical growth there has been organizing and specializing. There are now over a hundred alumnae associations and also mutual benefit associations. In New York they have a club and a central bureau, and in Brooklyn a club and a registry office.

They have their own organ, a fine intellectual and scientific magazine. They are now busy forming or planning larger societies.

In Boston, New York and elsewhere they have begun to pursue specialties. One nurse confines her work to very old patients, another to infants, a third to nervous diseases, a fourth to wounds, a fifth to contagious disorders, and a sixth to eye and ear ailments. A "light-case nurse" is one whose specialty is those cases where attention, quickness, delicacy and precision are required, but not much muscular work.

A "heavy" attends those patients where lifting, massaging and other severe physical labor is required. In New York at present the nurses are extending their central office system, while in Brooklyn they are about completing a registry system, which promises to save time and trouble to the physician, patient and nurse alike. The system is ingenious, and will no doubt be applied ere long in other cities.—New York Mail and Express.

FASHION NOTES.

Striped pique, with a fancy border woven in the material, is another novelty for girls from 6 to 14 years.

There is a great rage just now for black velvet ribbon trimmings in wide, medium, and very narrow widths.

Plaid organdies with cross-bars of open lace work in artistic combination of colors make quite the most charming frocks imaginable.

A belt of gold galloon studded with imitation jewels is worn with chic toilets, the belt being one of the attractive parts of the costume now.

Long boas of chiffon or lace are worn. One of these boas about a yard and a half in length, made of black chantilly lace in cascade effect, is very elegant.

Grass-linen frocks are rather elaborately trimmed with colored pique collars and ribbons, for the dull shade of this material needs to be brightened before it suits children.

For street wear one finds the full ruffs of silk or chiffon still popular, useful and most becoming. Black liberty silk makes a durable and useful affair for everyday wear.

Colored fish-scale belts are of a metallic enamel and very brilliant. Fine white kid belts ornamented with jewels, especially blue and purple stones, are for light summer gowns.

A decorative affair for evening wear is a short, full cape of accordion-plaited chiffon. A soft, fluffy ruche of the same plaited chiffon trims the neck, ending in two down-hanging ends at the throat, where it ties with broad satin ribbons.

Dresses of black cotton grenadine, flowered in pale pink or blue, and trimmed with ruffles of the material, edged with ribbon to match the flowers, are as quaint as an old picture, and sure to be becoming to the little ladies for whom they are designed.

Bodices laid in tucks either horisontal or perpendicular are a special feature of the spring modes. They are sometimes graduated in width, but oftener of even measurement, and like puffings, cordings, and lace insertions they form yokes, vest girdles, sleeve-puffs, and pretty little bolero jackets.

Summer jackets show mother-of-pearl buttons of a large size, just three being needed on the front. To wear with belts of satin or velvet are fancy jewel, filigree, enamel and steel designs of a medium size. They are entirely for ornamental purposes, as the belt really hooks over and the two buttons are used just as a buckle is.

A graceful dinner dress for a young girl, just admitted to the pleasures of society, is a princess gown of turquoise-blue silk with bretelles of white silk set into the armholes in front, clasped by gold buckles on either side of the waist, outside of the silk corselet, and hanging like long sash ends to the ground. From the high collar escapes a flaring ruche of white lace.

The beautiful, very natural looking French violets seem to be in greater favor—if possible—than ever, and the great liking for these blossoms will probably continue for two seasons, as they are still in great use in Paris, and are likewise finding market favor in the eyes of English women of rank, including the Princess of Wales and her daughters and the Duchess of York. Mention should also be made of a small cluster of violets with which it is said the Queen herself has frontened up her last year's spring bonnet.

NAVAL SUMMER DRILLS.

North and South Carolina and Georgia Turn to Work Together.

Lieutenant Gibbons, of Washington, charged with the arrangements for the summer drills of the naval militia, is now busy in completing the programme for each state.

The department has encouraged the encampment of the militia from adjacent states in groups and the states have fallen in with the movement in most instances, though some of the state organizations will act alone this summer, either by preference or from a lack of near-by neighbors.

North and South Carolina will join with Georgia, and although the final selection has not been made, it is likely that Port Royal will be the head of operations.

WATERSPOUT KILLS FIVE.

Wave Struck a House and Completely Demolished It.

A special from Monticello, Ky., says:

From a wagon driver who has arrived here news of a terrible disaster on White Oak creek, across in Tennessee, several miles from this town, is reported.

A watersprout struck the farm house of a farmer named Branders, demolishing the house and killing the farmer, his wife and one child. Two farm hands, who were sleeping up stairs, were so badly mangled they died in a few hours after the sheet of water struck the house. No further damage was done in the neighborhood, so far as the teamster had learned.

MONEY FOR MEXICO.

Contractors to Improve Vera Cruz Port With British Money.

An important company has been incorporated at Mexico City with a million dollars capital, the larger part of the shares being taken by Pearson & Son, English contractors, having in hand the drainage of the valley of Mexico and the port works at Vera Cruz, with a few Mexican shareholders.

The new company will be known as the Mexican Land, Navigation and Railway company.

The first object of the company is to build a railway from some suitable point on the National Tehuantepec railroad to a desirable point in the state of Vera Cruz.

LANGVILLE & SON,

General Blacksmiths and Wagon Makers.

Prices reasonable and first-class workmanship.

DR. O. T. DOZIER,
(The Renowned Southern Specialist)
Birmingham, Ala.
Successfully treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice, Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)
Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his unparalleled success has given him a leading position in the medical profession.

(Masonic Guide.)
Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)
We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow (as it can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)
• • • Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(Sunday Weekly Tribune.)
As a specialist Dr. Dozier is unexcelled by any living physician. • • • He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)
Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)
His (Dr. Dozier's) commercial standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Address
DR. O. T. DOZIER,
Lock Box 118, BIRMINGHAM, ALA.

FARM AND GARDEN NOTES.

Lively Topics For Tillers of the Soil.

Curing Cowpeas. Wood Ashes in Strawberries. Preparing Nests. The Best Floor, Etc., Etc.

CURING COWPEAS.

The cowpea vines should be mowed when the first seed pods appear, wilted and put in bunches to dry.

The vines cure slowly and may be made into small stacks, or housed in an airy loft before they are entirely dry, as they pile loosely and are cured in part after being stacked or housed. They should not be handled when very dry else the leaves will fall off.—New England Homestead.

SAWDUST OR SHAVINGS.

In answer to D. W. Marion I see you advocate sawdust as better than shavings for bedding without qualification, writes S. N. H. In most cases sawdust is taken from green logs, full of sap, or from logs taken from the water, full of water, with no ability to absorb moisture, making it nearly worthless as bedding or manure. In this case I should rather use dry shavings. The one that has the largest capacity to absorb the liquid is the best for the comfort of the animal or the value to the garden or cornfield.—New York Tribune.

SEEDS IN APPLES.

There is great variation in number and size of apple seeds, even in fruit of the same variety. While the small natural fruit has usually the most vigorous seeds, this fact is often due to such trees being isolated, and having larger supplies of potash and other mineral elements than do trees in the orchard. It is known that potash is necessary to grow the seed. It is possible that the liberal use of potash, as a fertilizer, may make fruit seeds plumper and perhaps more numerous. This would only be an advantage to those who wished to plant the seed. In the fruit the seed and its attendant, the core, is commonly thought a necessary nuisance.

WOOD ASHES IN STRAWBERRIES.

The Practical Farmer replies as follows to an inquiry regarding the use of wood ashes on strawberry beds:

"Wood ashes may be applied in fall, winter or spring. If the ground is rather thin, we would recommend to put the ashes on as soon as possible. At any time in the winter would be early enough. But this food should be ready for the plant roots as soon as they begin to take a new start in the early spring. Don't wait until the fruit stalks have already begun to push. On the other hand, it should be remembered that the plant foods in wood ashes are quite soluble, and we can expect quick results from them, no matter when applied."

PREPARING NESTS.

It requires some practical knowledge to be able to make a hen's nest properly, in spite of the old saying about things that are easy to do as to set a hen. If the season be early, the nest must be so made that it will be warm and dry or the hatch will be a poor one. If the hen is set late in the season, it is better to make it so the air can get to it and circulate about the eggs.

The best nest we ever used is to take a box such as two dozen cans of fruit is packed in and take out one side, except three inches. This strip should be on the lower side of the front when the nest is in position. The nest proper is made of garden soil mold into nest shape and covered with two or three inches of straw. With such a nest a good hatch is almost invariably obtained, and the hen sits on it contentedly, because it is comfortably conformed to her shape.—The Silver Knight.

SKIM MILK.

Professor H. B. Alvord says skim milk is worth ten cents per one hundred pounds simply as a fertilizer. It is worth twenty-five cents per hundred pounds for feeding purposes, and at two cents per quart, or $1 per hundred, it is cheaper as human food than any other animal food.

Skim milk is not appreciated as it deserves. It is not only the cheapest animal food, at its usual selling price, but it is far the easiest to digest, and the most wholesome. Instead of prohibiting its sale, or throwing round it vexatious restrictions, cities should encourage it by every possible means. They could confer no greater benefit on poor people, and charitable organizations could do no greater good, than by establishing depots at convenient places in thickly settled quarters where pure, fresh, sweet skim milk should be retailed at two cents a quart. Pure skim milk, fresh from the separator, could be had at this price in most of the cities, if it were consumed in large quantities.

THE KIND OF CORN FOR ENSILAGE.

Quality of feed put in the silo counts for as much there as it does if fed dry. This has an important bearing on the kind of corn to plant for the silo. It is not now the practice, as it used to be, to look exclusively or even mainly to a great bulk of forage without regard to its quality. But where the large Southern corn that will not ear so far north is sown thickly, the immense growth of stalks without any grain and with very small nutritive value, makes a feed so poor that it needs a great deal of grain or meal to perfect the ration. Some good farmers of our acquaintance have sown this Southern corn for the last tme. The early Flint or Dent varieties, drilled thinly enough to make at least a nubbin on every stalk, can be made to grow twelve to fifteen tons of green fodder per acre on rich land. If this corn is cut and put in silo when the grain is in the milk, there will be more valuable nutriment in it than in twenty to twenty-five tons of pale white stalks that have hardly enough carbon in them to heat and form the carbonic acid gas that preserves the ensilage from spoiling. The richer the stalks, so that they be green and succulent, the sweeter the ensilage will be. Sour ensilage always indicates that the quality of the fodder was too poor to get up rapid fermentations, which would exclude air and prevent the ferment going to the point of making vinegar, thus destroying much nutrition.

THE BEST FLOOR.

The subject of floors for poultry houses has been discussed more than almost any other point about poultry buildings. The best authorities are now nearly agreed that earth is the best floor that can be made if it is properly prepared. The reason for this is that earth is in the first place a good disinfectant and deodorizer, and for this reason adapted to this purpose, and in the second place, such a floor can be renewed at only the cost of the labor used in replacing it. The best floor is made of hard-packed clay, covered with two inches of loose garden mould.

The land on which the poultry house stands should be drained in such a manner as to carry off surplus moisture readily and prevent flooding by the hardest rains. This can best be accomplished by filling in until the floor of the poultry house is six inches higher than the surrounding surface. The filling should be clay, if it can be got, and in any event it should be slightly dampened and pounded down firmly and allowed to dry before being put to use. Then cover with two inches of garden soil or dust as dry as is convenient. As soon as there is any foul odor about the house this coat of loose soil should be removed and a new one put in. In the summer months this must be done about twice a month, but in the winter a longer time may elapse, provided the soil is raked over and the droppings mixed in it once a week. The soil that is taken out is one of the best fertilizers about the farm and may be used in garden crops with great benefit.

The objection to a board floor is that it becomes saturated with the droppings and not only offensive, but dangerous as a breeder of disease. A board floor is a good breeding place for vermin, while one of earth acts as a preventive in a great measure, the dust arising from the floor acting as an insecticide.

THE ENGLISH GOOSEBERRY.

The English gooseberry is unfortunately subject to mildew in this country, and Americans know little or nothing of this very excellent fruit. Martin Benson, in Vicks Magazine, tells how he raises it successfully without mildew and has large crops of the finest fruit.

He says: The soil should be rich and deep,, and if possible a slope facing the north should be chosen. It should also be sufficiently removed from any tree to prevent the roots robbing the plants. The soil should be plowed as deeply as possible, and it is also of great advantage to subsoil it. This will give a deep bed of loose soil,, which will retain moisture much better and keep cooler than when plowed as ordinarily.

The plants should be set six feet apart each way. After or before the plants are set I prepare posts each 8 or 10 feet long of some lasting timber; these are set in the ground two feet deep, and ten or twelve feet apart each way, among the gooseberry bushes; pieces of timber are nailed from post to post, and on these are nailed slats or laths enough to make a half shade. This will furnish all the protection needed from the hot sun, and at the same time permit of a free circulation of air.

After this is done I mulch the entire surface of the ground to the depth of a foot with straw or other litter, placing it up close around the plants. This mulch must be placed on thick enough to keep down all weed growth, and each fall an additional amount should be placed over the old.

If the soil is rich to begin with and the mulching is attended to properly, it will be years before the plants require fertilizing, but if needed it can easily be applied by using coarse, strawy manure for the mulching material. The soil if mulched as directed will always remain cool and moist, and fruit of the greatest excellence and in the greatest quantities will be produced.

VALUE OF BLOOD.

Repeated trials at the Wisconsin station in feeding sheep and lambs show that well-bred animals always make the most money, pay the best interest on their cost and the largest return for feed and care. One lot of twelve lambs was chosen from the station flock, which, though not actually pure bred, may be termed well bred. These were tested against a lot of lambs "bred in a northern part of the State, where little care is given to the selection of good rams and the culling of the flock." Each lot was fed for a period of eight weeks on similar food. The average weight per head at the beginning of the trial was 75.5 pounds in the case of the "northern" lambs, and 115.9 pounds in the case of the "station" lambs. The average weekly gain per head was 2.27 pounds for the former and 3.60 pounds for the latter, the cost per 100 pounds gain being $4.58 and $4.08 respectively. The chief difference noticeable was the much greater capacity of the well-bred "station" lambs. They would eat much more than the others. and the gain was cheaper.

The same principle applies with even greater force in the case of cattle, because with cattle "quality makes a greater difference in the price. Take a lot of steers, the same age, fed under the same conditions, and equally fat; one lot will outsell the other a cent to a cent and a half a pound on account of quality. This difference alone, if there were no other, is an enormous premium on good blood, representing as it does, a difference of $12 to $20 a head in the value of the produce under otherwise similar conditions.

It is painful to see the indifference manifested by many breeders in this important matter of blood. A few dollars more laid out in the foundation of the herd or in buying individual animals for feeding makes the difference between a pleasant and profitable business and one in which there is only dissatisfaction, annoyance and loss.—Mirror and Farmer.

THUMB-NAIL BIOGRAPHY OF BISMARCK.

Full name, Prince Karl Otto von Bismarck-Schoenhausen.

Born at Schoenhausen, Prussia, April 1, 1815.

Studied at Goettingen, Berlin and Griefswald.

Fought twenty duels; wounded but once.

Became a member of the Diet, province of Saxony, 1846.

Entered the diplomatic service as Chief of the Legation at Frankfort, 1851.

Sent to Vienna, 1852.

Advocated a triple alliance between France, Russia, and Prussia in a pamphlet, 1858.

Sent as Ambassador to St. Petersburg, 1859.

Appointed Ambassador to Paris, May, 1862.

In Paris he received the Grand Cross of the Legion of Honor from the Emperor Napoleon.

Became Minister of the King's House and of Foreign Affairs in Prussia, September 22, 1862.

Created a Count September 16, 1865, and received from the King of Prussia a valuable estate in Luxembourg.

Escaped assassination by a stepson of Karl Blind, May 7, 1866.

Organized the North German Confederation of twenty-two states and 29,000,000 people, 1867.

Retired from public life for a few months because of ill health, 1868.

Became Foreign Minister of the North German Confederation, January 1, 1869.

Accompanied the King in the war with France, 1870.

Dictated the terms of peace after the capitulation of Paris, February, 1871.

Appointed Chancellor of the newly organized German Empire, 1871.

Raised to the rank of Prince, March, 1872.

Resigned the Presidency of the State Ministry, December, 1872.

Reappointed Prussian Premier, October, 1873.

Fired at by a man named Kullman and slightly wounded, July 13, 1874.

Presided over the Berlin Congress of the Representatives of the great Powers to discuss treaty of St. Stefano, 1878.

Retired to private life, March, 1890, receiving title of Duke of Lauenburg.

Elected to the Reichstag, 1891.

Attended wedding of his son, Prince Herbert Bismarck, in Vienna, 1892.

Severely criticised the German Army bills, 1892, 1893.

Princess Bismarck died, December, 1894.

Very ill at Kissingen, 1893.

Made a member of the New York German Veterans' Association, 1895.

Received German-Americans, August 30, 1895.

Entertained Li Hung Chang, June, 1896.

Wrote letter to Governor Culberson, of Texas, on financial question, August 24, 1896.—New York World.

GLASS EYES.

THEIR MANUFACTURE IS A CURIOUS AND PROFITABLE BUSINESS.

Thousands Turned Out Every Year. Ready Made Ones Are Cheap, But the Made to Order Sort Come High.

There are many curious industries in this big city, says the New York Herald, and one that ranks pre-eminent in the peculiar line is a glass eye factory. It may seem strange that there should be a sufficient demand for glass eyes to support such a factory, especially as it employs a number of skilled workmen all the year round. But when one learns some of the secrets of the trade all cause for wonder vanishes.

The prime reason for its existence is that a glass eye does not last more than a year and very often not more than six months. Of course, this necessitates the purchase of new eyes every little while by afflicted people, and the number of people who use these eyes is surprisingly large, judged by the yearly production of the factory.

Five hundred eyes are turned out weekly, or about twenty-six thousand in a year. Not all of these are sold, but this percentage is very small. The unsold ones are stock eyes—that is, they are used in the sale department of the factory, or are sent to dealers throughout the country as samples.

The prices of glass eyes vary considerably. An ordinary ready made eye costs $5, while a made to order eye with the pupil and cornea carefully colored, costs anywhere from $10 to $30, and occasionally as much as $50, but this latter price is a rare one. Poor people can only afford the ready made eye, and a large number of these are always kept in stock in different shades of blue, gray and brown.

Gray eyes are the most common; then come blue, and then brown. Black eyes are a myth, and the factory has never had a call to make one. Ophthalmic hospitals are the largest consumers of the false eye. These buy in quantities, and naturally get the product at reduced rates.

They buy the ordinary ready made eye, as they are used, for the most part, on poor people who are financially unable to be fastidious in the manner of exact color.

The most startling feature of the factory is the cabinet in which the stock eyes are kept. They are placed in large trays, sectioned off into tiny squares, each square containing an eye. Blue eyes of many shapes and shades are in one tray; brown eyes of all kinds in another, and gray eyes of many varieties in a third.

When a purchaser comes in he or she is fitted with an eye from one of these trays, and if the buyer is content with the ready made article a duplicate is furnished from the stock. If the made to order article is wanted, the sample is sent up to the workrooms with instructions covering the minor changes or improvements that can be made.

All of the regular customers have sample eyes in the factory. This enables them to send from a distance for a duplicate, and a new eye, perfectly fitting and of the correct color, is shipped to them. The reason that the eye wears out is that the action of the tear—which is acid—affects the enamel, roughing the edges and surface and causing an irritation of the eyelids.

There has never been a time in the history of the world that artificial eyes did not exist. The ancient Egyptians, four and five thousand years ago, wore false eyes of gold and silver, and later of copper and ivory. It is on record that two patriotic Lutetians, when their country was in financial distress, generously presented their golden eyes to the public treasury.

During the Middle Ages porcelain superseded metal in the making of artificial eyes, and a century ago the glass eye arrived. Now enamel is considered to be the best material for the work, and it is used to the exclusion of all others.

The process of making the eye is easily described, but the work calls for much delicate and painstaking labor on the part of the seven or eight skilled workmen. Formerly one man made the artificial eye from the crude to the finished state, but now the work is divided into a number of specialties, each man performing only a fraction of the whole task.

In its initial stage the eye is a long, slender stick of enamel, made of perfectly transparent and fusible flint glass. This is placed in a crucible and exposed to great heat. The globemaker places the enamel over a blowpipe supplied with wind which is pumped by engine power into a large cylinder and stored under water pressure.

Under the careful manipulation of the workman the enamel tube is formed into an oblong globe, just the size and shape of a human eye.

Next it passes into the coloring room. A piece of colored enamel is placed on the summit of the globe, and this is gently heated in a small flame and continuously rotated. Gradually this takes the form of the iris, and then a spot of darker enamel is added to represent the pupil. Then this is covered by a thick layer of crystal to form the cornea.

At this stage the eye is detached from the blowpipe and cooled and then sent to the cutting room, from which it emerges shaped into a small hollow oval with irregular edges. The cutting is a difficult process, as a hair's breadth deviation in size will make a material difference in the fitting.

The edges are fired and the eye allowed to cool slowly, this being the annealing or tempering process, which toughens the enamel and renders it less liable to break. The final work is the polishing, and then it is ready for the owner.

The coloring work is the most delicate of all, as sometimes eight and nine colors are worked in to give the correct shade. Brown eyes of the hazel variety require a very delicate streaking of yellow and gray, and some kinds of blue eyes are equally difficult to fashion. There is also a great variety in the sclerotic or white. In children's eyes it is a pale china blue, in old people a gray, while with men who are heavy drinkers or smokers it has a yellowish tinge.

Of course the great art lies in making the artificial eye an exact duplicate in expression, size and color of the living eye, and so cleverly is the work now done that few people can detect the genuine from the false.

BURNT OFF HIS OWN HAND.

It Had Struck a Friend and Chapman Obeyed the Biblical Text.

That a wealthy and cultivated American should deliberately burn off one of his hands as self punishment for a blow struck in a moment of careless anger seems incredible. Yet one of the most promising young literary critics in New York is now minus his left hand as a result of such an extraordinary self mutilation.

John Jay Chapman struck a friend with his left hand, and found out afterward that his anger had been groundless, the result of an unjust suspicion. At once he determined that he would carry with himself as long as he lived a memorial of his disloyalty and a warning not to give way to unreasoning anger again. The familiar text, "If thy hand offend thee, cut it off," occurred to him; he would comply with it. And so one day he appeared with his arm in a sling. He had held his hand in the fire until it had been consumed. To have cut it off would not have been painful enough.

It was at Harvard that this remarkable act was committed. Chapman was reticent when questioned about the vanished member. All he would say was, "The hand that struck a friend in anger shall not remain." Such an action on the part of any one else would probably have occasioned a good deal of derision and chaff. But Chapman is not the kind of a man whom others treat with ridicule. It must be evident to any one from the foregoing that he is a remarkable man, but he is also a person who commands general respect, and even at college was recognized by his acquaintances as a man whom it was advisable to let alone. He was one of the most promising students of his class, and won many of the prizes offered at the university during his term.

He is the grandson of John Jay, the Minister of the United States at the court of Napoleon, and his family is a prominent one in New York society. His wife, who was a Miss Simmons of Boston, died a few weeks ago. Chapman's literary criticisms have recently been occasioning some notice. He writes for most of the best monthlies, and a clever article on Browning, which appeared in the Bachelor of Arts last November and December, is one of the most satisfactory critiques ever written about the cryptic English poet.—New York Press.

Pastime of Shooting Eagles.

The exciting pastime of shooting eagles has not been much in vogue lately in Connecticut, owing, perhaps, to the general scarcity of that well-known game bird. A member of the Connecticut Legislature, however, Mr. Main, of North Stonington, desirous of promoting wholesome sport, to say nothing of the lives of imperiled turkeys and geese, so the report goes, has made a severe arraignment of "Freedom's pet," by declaring in open session of the House his positive opinion that "eagles get their teeth into everything they can lay their hands on," and under no circumstances should a hunter be subject to the unjust fine of twenty-five dollars for killing one Moreover, he had the support of a certain association who made the startling observation that the proposed law "was drafted by an able lawyer for the purpose of preventing New York sportsmen from coming into Litchfield county and killing eagles for the sake of the $100 apiece they can get for the dead birds from the metropolitan taxidermists." Despite this two-fold eloquence and wisdom which was supported by a few other Legislators who disgraced themselves by advocating death to eagles, the bill was carried by a comfortable majority, and quiet and peace now reign in the eyries.—New York Independent.

Hat wear is light, bright and pretty. The ostrich tip is much more in favor while the osprey and impeyan are on the decline.

Boston's Library a Bad Job.

The great new Boston public library has already been found to have been ill-planned and inadequate. It cost $2,500,000, and now $25,000 is about to be expended to construct a "suitable reading-room."

A gray, unsized blotting paper was sold in England, according to Rogers in his history of prices, as far back as 1465.

Pausias, of Sicyon, was the inventor of caustic painting, a method of burning colors into wood or ivory.

Impure Blood **Air**

Eating rich and hearty food, sweets and fats in winter, close confinement and breathing vitiated air in office, store, shop, house, factory or school-room, necessarily makes the blood impure, and eruptions, boils, pimples, humors are the result. Dizziness, indigestion and many other troubles are also caused by impure blood. **Take**

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills cure nausea, indigestion, biliousness. 25 cents.

On a red hot day Hires Rootbeer stands between you and the distressing effects of the heat.

HIRES Rootbeer

cools the blood, tones the stomach, invigorates the body, fully satisfies the thirst. A delicious, sparkling, temperance drink of the highest medicinal value.

Made only by The Charles E. Hires Co., Phila. A package makes 5 gallons. Sold everywhere.

THE SUSPENDER FAD.

RASTUS—" Here you, Liza, wot yer dun doin' wid my best Sunday suspenders, hey ?"

LIZA—" Why, pop, I dun see in der papers dat it's de stile fo' young ladies to wear suspenders now, and I dun borrowed yo's fo' de ball dis evening, and I wants to take along your Pick Leaf Smoking Tobacco."

emerges shaped into a small hollow oval with irregular edges. The cutting is a difficult process, as a hair's breadth deviation in size will make a material difference in the fitting.

The edges are fired and the eye allowed to cool slowly, this being the annealing or tempering process, which toughens the enamel and renders it less liable to break. The final work is the polishing, and then it is ready for the owner.

The coloring work is the most delicate of all, as sometimes eight and nine colors are worked in to give the correct shade. Brown eyes of the hazel variety require a very delicate streaking of yellow and gray, and some kinds of blue eyes are equally difficult to fashion. There is also a great variety in the sclerotic or white. In children's eyes it is a pale china blue, in old people a gray, while with men who are heavy drinkers or smokers it has a yellowish tinge.

Of course the great art lies in making the artificial eye an exact duplicate in expression, size and color of the living eye, and so cleverly is the work now done that few people can detect the genuine from the false.

BURNT OFF HIS OWN HAND.

It Had Struck a Friend and Chapman Obeyed the Biblical Text.

That a wealthy and cultivated American should deliberately burn off one of his hands as self punishment for a blow struck in a moment of careless anger seems incredible. Yet one of the most promising young literary critics in New York is now minus his left hand as a result of such an extraordinary self mutilation.

John Jay Chapman struck a friend with his left hand, and found out afterward that his anger had been groundless, the result of an unjust suspicion. At once he determined that he would carry with himself as long as he lived a memorial of his disloyalty and a warning not to give way to unreasoning anger again. The familiar text, "If thy hand offend thee, cut it off," occurred to him; he would comply with it. And so one day he appeared with his arm in a sling. He had held his hand in the fire until it had been consumed. To have cut it off would not have been painful enough.

It was at Harvard that this remarkable act was committed. Chapman was reticent when questioned about the vanished member. All he would say was, "The hand that struck a friend in anger shall not remain." Such an action on the part of any one else would probably have occasioned a good deal of derision and chaff. But Chapman is not the kind of a man whom others treat with ridicule. It must be evident to any one from the foregoing that he is a remarkable man, but he is also a person who commands general respect, and even at college was recognized by his acquaintances as a man whom it was advisable to let alone. He was one of the most promising students of his class, and won many of the prizes offered at the university during his term.

He is the grandson of John Jay, the Minister of the United States at the court of Napoleon, and his family is a prominent one in New York society. His wife, who was a Miss Simmons of Boston, died a few weeks ago. Chapman's literary criticisms have recently been occasioning some notice. He writes for most of the best monthlies, and a clever article on Browning, which appeared in the Bachelor of Arts last November and December, is one of the most satisfactory critiques ever written about the cryptic English poet.—New York Press.

Pastime of Shooting Eagles.

The exciting pastime of shooting eagles has not been much in vogue lately in Connecticut, owing, perhaps, to the general scarcity of that well-known game bird. A member of the Connecticut Legislature, however, Mr. Main, of North Stonington, desirous of promoting wholesome sport, to say nothing of the lives of imperiled turkeys and geese, so the report goes, has made a severe arraignment of "Freedom's pet," by declaring in open session of the House his positive opinion that "eagles get their teeth into everything they can lay their hands on," and under no circumstances should a hunter be subject to the unjust fine of twenty-five dollars for killing one. Moreover, he had the support of a certain association who made the startling observation that the proposed law "was drafted by an able lawyer for the purpose of preventing New York sportsmen from coming into Litchfield county and killing eagles for the sake of the $100 apiece they can get for the dead birds from the metropolitan taxidermists." Despite this two-fold eloquence and wisdom which was supported by a few other Legislators who disgraced themselves by advocating death to eagles, the bill was carried by a comfortable majority, and quiet and peace now reign in the eyries.—New York Independent.

Hat wear is light, bright and pretty. The ostrich tip is much more in favor, while the osprey and impeyan are on the decline.

Boston's Library a Bad Job.

The great new Boston public library has already been found to have been ill-planned and inadequate. It cost $2,500,000, and now $25,000 is about to be expended to construct a "suitable reading-room."

A gray, unsized blotting paper was sold in England, according to Rogers in his history of prices, as far back as 1465.

Pausias, of Sicyon, was the inventor of caustic painting, a method of burning colors into wood or ivory.

Impure Blood **Air**

Eating rich and hearty food, sweets and fats in winter, close confinement and breathing vitiated air in office, store, shop, house, factory or school-room, necessarily makes the blood impure, and eruptions, boils, pimples, humors are the result. Dizziness, indigestion and many other troubles are also caused by impure blood. **Take**

Hood's Sarsaparilla

It Meant Everything.

The man in the bicycle suit laughed heartily.

"Very funny," he said.

"What?" asked the man with a large section of skin gone from his nose.

"Why, these 'Don'ts' for bicyclists," replied the man in the bicycle suit.

"Let's see them," said the man who was short of skin.

The man in the bicycle suit handed him the paper.

"The best one isn't there," said the man with the fantastic nose, shortly. "If it was the rest wouldn't be necessary."

"What do you consider the best one?" asked the man with the bicycle suit.

"Don't ride," answered the man whose nose stood in need of grafting, and then he carefully put a large piece of court plaster where it would do the most good.—Chicago Post.

Improving.

A celebrated German physician was once called upon to treat an aristocratic lady the sole cause of whose complaint was high living and lack of exercise. But it would have never done to tell her so; so his medical advice ran thus:

"Arise at 5 o'clock, take a walk in the park for one hour, then drink a cup of tea, then walk another hour, and take a cup of chocolate. Take breakfast at 8 o'clock."

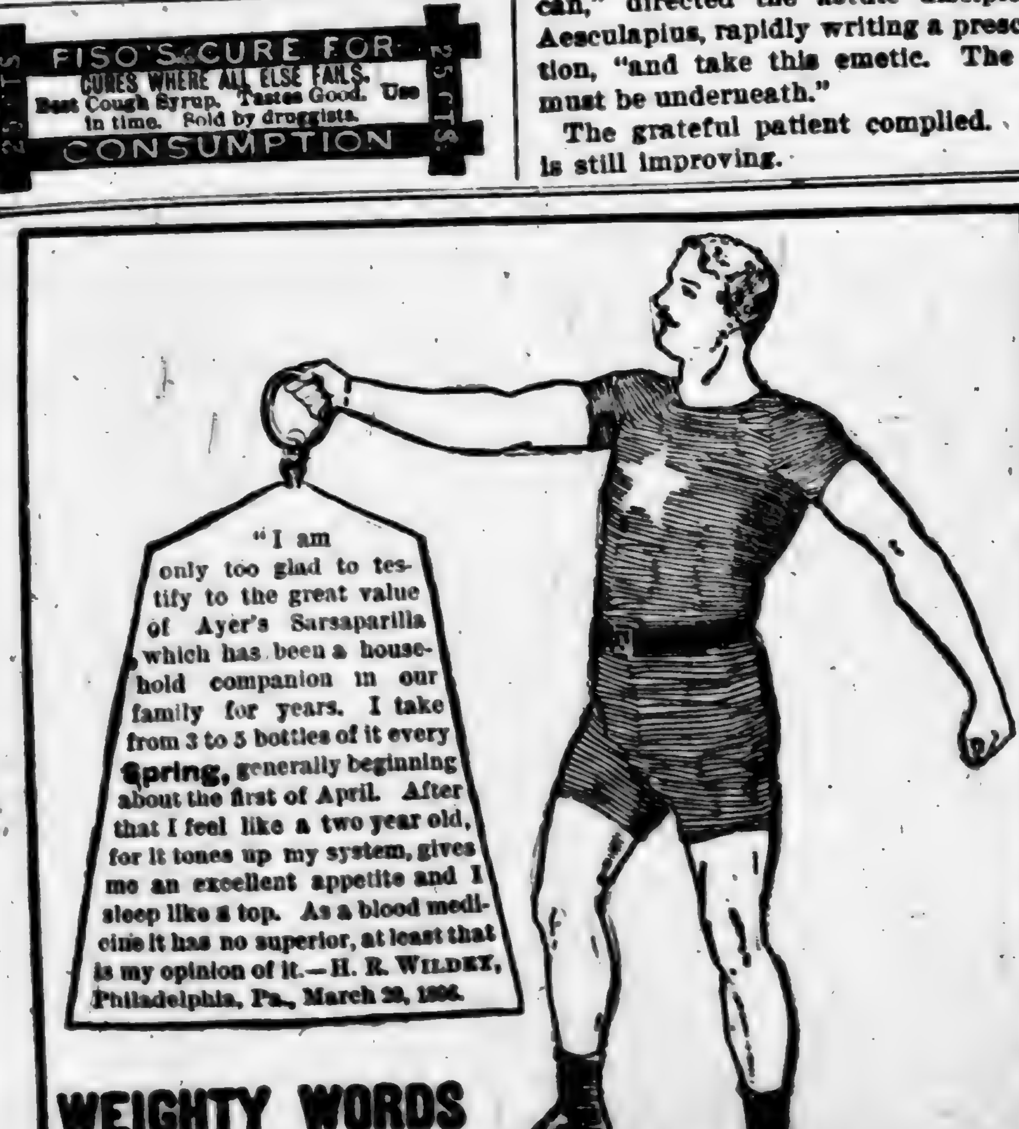
Her condition improved visibly, until one fine morning the carriage of the Baroness was seen to approach the physician's residence at lightning speed.

The patient dashed up to the Doctor's house, and, on his appearing on the scene, she gasped out:

"Oh, Doctor, I took the chocolate first."

"Then drive home as fast as you can," directed the astute disciple of Aesculapius, rapidly writing a prescription, "and take this emetic. The tea must be underneath."

The grateful patient complied. She is still improving.



WEIGHTY WORDS FOR Ayer's Sarsaparilla.

FACTS ABOUT THE CAPITOL.

The dome alone of the Capitol at Washington cost $1,250,000.

Turnbull painted the four best historical pictures in the Capitol rotunda.

The state, war and navy building was begun in 1871 and cost $10,000,000 to complete.

The Congress of the United States has met annually in Washington since Nov. 17, 1800.

General Winfield Scott fathered the soldiers' home, which was established by Congress in 1857.

The new naval observatory at Washington is one of the finest scientific plants in the world.

The Crawford bronze door of the Senate wing weighs 14,000 pounds and cost nearly $57,000.

Ainsworth R. Spoord has been librarian of Congress since 1864. His salary is $4,000 per year.

The hall of the House of Representatives is the largest legislative assembly room in the world.

A marble column surmounted by a statute of Lincoln stands in front of of the district court house.

The columns of the eastern portico of the Capitol are each solid blocks of sandstone thirty feet high.

It costs about $100,000 a year to run the White House exclusive of the President's salary of $50,000.

The postoffice department building was erected in 1839 and extended in 1855, at a cost of over $2,000,000.

The bronze propeller of the famous flagship, the Hartford, was cast into the statues of Admiral Farragut.

Seventeenth, Ninth, Fourteenth, F and G streets are rivaling Pennsylvania avenue as business locations.

The terraces of the Capitol were only completed in 1891, the total cost of the building footing up $14,455,000.

The treasury building was completed in 1869 at a cost of $8,000,000. It is the largest government department.

The Rogers bronze doors at the main entrance of the Capitol tell the history of Columbus and cost $28,000.

John Quincy Adams designed the allegorical group, "The Genius of America," on the eastern portico of the Capitol.

The Capitol rotunda is ninety-five feet six inches in diameter, and from floor to canopy measures 183 feet 3 inches.

Pennsylvania avenue, paved with asphalt and 160 feet wide, is considered the finest parade street in the world.

The Society of the Army of the Tennessee erected the $50,000 statue to General James B. McPherson in McPherson square.

The reclaimed Potomac flats will add about 1,000 acres to the mall, extending down the river in the form of a promontory.

The Original Uncle Sam.

When we talk of the United States government in a familiar sort of way we call it "Uncle Sam;" and you have often seen pictures of Uncle Sam—a long, lean, old-fashioned Yankee, with a high hat and a swallow-tail coat and breeches marked with the stars and stripes of the flag. The way in which the United States came to be called Uncle Sam is this:

During the war of 1812 the United States government entered into a contract with a man by the name of Elbert Anderson to furnish supplies to the army. When the United States buys anything from a contractor, an inspector is always appointed to see that the goods are what the contract calls for, and that the government gets full value. In this case the government appointed a man by the name of Samuel Wilson, who was always called "Uncle Sam" by those who knew him. He inspected every package and cask that came from Elbert Anderson, the contractor, and if he found that the contents were all right, the package or cask was marked with the letters "E. A.—U. S." the initials of the contractor and of the United States. The man whose duty it was to do this marking was a jovial sort of a fellow, and when somebody asked him what these letters meant, he said they stood for Elbert Anderson and Uncle Sam. Everybody, including "Uncle Sam" Wilson himself, thought this was a very good joke; and by and by it got into print, and before the end of the war it was known all over the country; and that is the way the United States received its name of "Uncle Sam."

Mr. Wilson, the original "Uncle Sam," died at Troy, N. Y., in 1854, at the age of eighty-four.—St. Nicholas.

An Eye for an Eye.

In Abyssinia it is the law that the murderer be turned over to the relatives of the dead person, they, if they please, to put him to death in the same manner in which the murdered person was removed. A traveler, recently returned from that country, tells of a case, wherein a boy, playing with his companions, fell from a tree upon one of them, killing him instantly. The occurrence was brought to the notice of the district chief, whose council, after deliberation, decided that the dead boy's relatives might take the offender, stand him under the tree, and then, if they could, put him to death by falling on him from the same tree.

WOUNDED IN THE WAR.

SHOT IN THE ABDOMEN AT CUMBERLAND GAP.

Blind, Rheumatic and Dropsical—A Union Colonel is Given Over to Die—How the Old Soldier Gave Azrael the Slip.

From the News, Barboursville, Ky.

In the year 1862, while in command of a Union regiment at Cumberland Gap, Colonel Messer, now of Flat Licks, Kentucky, received a severe gunshot wound in his abdomen. In a few months he was again in the saddle, but soon was obliged to undergo further medical treatment, and his condition became so serious that in the winter of 1863 he returned to his home, and was never again fit for active service. During the years that have since passed, Colonel Messer has been a confirmed invalid from the effect of his wound, and has been under the constant care of the local physicans, not improving, but growing worse as the years rolled on. His condition eventually became deplorable. Almost blind, legs swollen, so that he was unable to walk, the doctors who could do nothing to arrest the progress of the disease, diagnosed it as dropsy, and said recovery was impossible.

The old soldier did not half believe his physicians, but said that since they could do nothing for him, he would, upon an old friend's strong recommendation, try Dr. Williams' Pink Pills for Pale People. The first box was taken by Col. Messer according to directions, and by the time that was gone, he felt so much easier and more comfortable, that several other boxes were procured, and he continued to take them faithfully. Soon the swelling in his legs disappeared, and with it the fierce rheumatic pains with which he had long suffered. Strangest of all, his eyesight, which for so many years had been useless, was restored.

In all, Colonel Messer took Dr. Williams' Pink Pills six months, and then was thoroughly cured. He now is a healthy looking man, rides on horseback, and stands as much fatigue as any man of his age.

The Colonel, since his recovery, is never tired of descanting on the virtues of these pills, and every advertisement that he finds he carefully clips, and sends to some sick friend or neighbor, with the assurance that they will cure him.

The high standing of Colonel Messer, and his remarkable recovery, makes this report more than usually interesting, and when it was received at the office of the Dr. Williams' Medicine Co., it was referred to Messrs. Phipps & Herndon, the well-known druggists, of Barboursville, Ky., for verification. We append the reply:

BARBOURSVILLE, Ky., Aug. 18, 1896.

DR. WILLIAMS' Med. Co.,
Schenectady, N. Y.

Gentlemen:—Yours of August 14th to hand, enquiring about testimonial written by Mr. Sampson concerning Colonel Messer, of Flat Lick, Ky., will say that the cure of Colonel Messer was considered almost miraculous, and he claims Pink Pills did it.

Yours truly,
PHIPPS & HERNDON.

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are also a specific for troubles peculiar to females, such as suppressions, irregularities and all forms of weakness. They build up the blood, and restore the glow of health to pale and sallow cheeks. In men they effect a radical cure in all cases arising from mental worry, overwork or excesses of whatever nature. Pink Pills are sold in boxes (never in loose bulk) at 50 cents a box or six boxes for $2.50, and may be had of all druggists, or direct by mail by addressing Dr. Williams' Medicine Company, Schenectady, N. Y.

AGENTS. We want one agent in this County to sell to families. Best paying article on earth. We pay all expense. Address GLYZA CHEM. CO., Washington, D. C.

Who built the Pyramids, and when? That sound travels 1125 feet per second? What is the longest river in the world? That Marco Polo invented the compass in 1260, and who Marco Polo was? What the Gordian Knot was? The book contains thousands of explanations of just such matters as you wonder about. Buy it at the very low price of half a dollar and IMPROVE YOURSELF. **50c.** **50c.**

What Matters It?

What matters it if on the morn
  Dull mists obscure and darken,
And nature's charms droop low, forlorn,
  As if to grief they'd hearken?
If later on the glorious sun
  Bursts forth in all its glory,
'Tis as if day had just begun
  And clouds were but a story.

What matters it if life's young dream
  Be sometimes rudely shattered,
And often hopes that brightest seem
  Be darkened torn and shattered,
If after all our guiding star
  Full bright and clear emerges,
And fairer still, no more afar,
  Our grief to sunshine verges?

What matters it if on the sea
  The ship may fight and trumble,
Tossed here and yon as winds decree
  Where furies wild assemble,
If, when the tempest voice is stilled
  And storm gods have retreated,
She still sails on, with glory filled,
  Full tried and not defeated?

What matters it when life is done,
  If, when we look behind us,
We see no glorious victories won
  Or earthly ties that bind us,
If, looking forward to the day,
  We see a hopeful gleaming,
With angels smiling on the way
  And radiant sunlight streaming

God will forgive our many sins,
  Will heal hearts that are broken,
Bind up the wounds when life begins,
  Blot out words we have spoken.
What matters it, then, after all,
  If hearts with grief are beating?
We are but waiting for the call
  And God's eternal greeting.

Al Dunlap in Chicago Inter-Ocean.

A Peculiar Condition.

It had been raining all day. The first sharp shower came pattering down on the short grass and broken board sidewalk just as Nicholas Bodman opened his window and thrust out his head to make prognostications of the weather for the coming 12 hours.

It was then just 6.13 o'clock. Nicholas was quite sure of the time, for he had looked at his watch the first thing after getting up, and had made a rapid calculation as to the exact number of hours, minutes and seconds that hour hand should point to 3 o'clock again.

It was the 20th day of May, and a day that was fraught with matters of the gravest import for Nicholas Bodman. He had long contemplated making a hazard of strange and untried fortunes, and one evening away back in the winter, when he had sat before his grate fire cogitating the most felicitous manner of bringing the venture to a successful issue, it had suddenly been borne in upon his mind that 3 o'clock on the 20th of May would be the most propitious time for him to make the trial.

It was a momentous question that Nicholas had determined upon having decided, being nothing more or less than a problem of matrimony. Nicholas was unlike most men in a good many respects. Up to the time when he met Mrs. Rosewater he had never had an affair of the heart that was worth mentioning.

He had no idea how to proceed in cultivating the widow's acquaintance, and as his passion grew the quandary in which he found himself increased in a corresponding ratio. At last, however, he decided to trust himself blindly to Providence on the 20th of May and do offhand whatever circumstances might suggest.

All things considered, it was very aggravating that it should rain that day. By 3 o'clock the heavy downpour of the morning had subsided into a dreary monotonous drizzle, and Nicholas sheltered his new hat under his best silk umbrella and went to call on Mrs. Rosewater.

May 20th fell on Wednesday that year, which did not happen to be his hostess' regular day at home, but she was too bright a woman to let him know that his call had been ill-timed.

"What do you think of the preacher we are to have as a substitute for our regular pastor this summer?" she asked at length, after a slight pause, during which he wondered if she would ever say anything that would serve as a key for unlocking his own burdened mind.

"I don't know," he answered, with a snap of determination. "I have not thought anything about him. I've had other things to think about."

"Oh, have you?" she said softly.

"Yes," said he, bluntly. "I've been thinking about you," he had found the key and the words came easily enough then. "I have loved you for months, Mrs. Rosewater; indeed, even for years, I think—in fact, I have lost track of the time. And I want you to marry me. I've got about as much to offer you in the way of the world's goods as the average man. I'm the owner of a good business down town, I have an interest in three railroads, and the corner lot over there is mine. Do you think you can care enough for me to marry me?"

"Really, Mr. Bodman," she answered, going over to the window and looking down the street at the board walk in front of the Bodman house, "I have not thought of marrying—not just now. You have been frank with me and I will speak plainly to you. I have quite a little money of my own; so much that it will not be necessary for me to marry a rich man in order to insure myself a home. I have always known you were strongly drawn toward me, Mr. Bodman, and I candidly confess that the attraction has been mutual. Yes, Mr. Bodman, I am willing to marry you—"

Nicholas had arisen from his chair and had started toward her, but she waved him back.

"Provided," she continued, "you will comply with one request. Come here."

Nicholas went and stood beside her, and she pointed to the broken sidewalk surrounding his premises.

"Provided," she repeated, "you will take up that sidewalk and replace it with one that will be a credit to the neighborhood. I love and honor you, Mr. Bodman, but I can never marry a man who will take me to a place where I will be continually tormented by such an eyesore as that. When I see a good pavement laid there I will come and tell you that I am ready to keep my part of the bargain."

In his dismay Nicholas gasped out many an incoherent argument, but the widow gave him to understand that the interview was ended, and he took his hat and umbrella from the tree in the hall and went home, with feelings strangely at variance with the unspeakable torture that had unnerved him upon going out an hour before.

The business interests of the family had been so wisely invested by his father that Nicholas grew rich in spite of himself, but the real estate, which was under his direct supervision, remained as it was when it descended to him.

The only repairing that was ever done to the sidewalk was to lay down a new board now and then when the old ones became so badly damaged as to endanger the safety of the lives and limbs of pedestrians.

Its disgraceful appearance finally became just cause for a common scandal, and one night the indignation of patriotic citizens reached such a pitch that a committee of the most influential men called on Nicholas and threatened to enforce the law then extant to the effect that any property-owner who maliciously refused to make the improvements required for public safety and the public good should forfeit his possessions to the state.

But that was the most unpolitic step they could have taken, for what had hitherto been mere carelessness on Nicholas' part, then developed into willful, unalterable stubbornness, and he vowed that he would see half the people in the Twenty-sixth Ward break their necks while walking over his pavement before he would expend one penny in improvements.

And that was the way the matter stood when he proposed to Mrs. Rosewater. The condition imposed upon him put him in an unenviable predicament. He debated it all that night, and all the next day. Then he came to a conclusion. He would keep the board sidewalk.

The three months of summer passed away, and Mr. Bodman's courtship was again limited to casual glances interchanged between him and Mrs. Rosewater at the church door or round the altar rail on communion Sundays.

One morning in the latter part of September Nicholas was awakened by the rat-a-tat-tat of many hammers on the boards beneath his window, and upon looking out he found that a force of workmen had come down on him unawares and attacked him in his lair. After breakfast he sauntered leisurely out into the street and accosted one of the laborers.

"Can you tell me," he asked, "the name of the contractor who has charge of this work?"

"Daws & Daws, Hanover building," said the man as he tore up another large section of crumbling sidewalk.

In the afternoon Nicholas went down to the Hanover building and sought an interview with the firm of Daws & Daws.

"You are laying a sidewalk around my corner lot at Pine and Worthington streets," he said stiffly. "I never authorized the work to be done. Will you kindly tell me to whom the bill will be sent?"

Daws, Sr., whistled.

"It was a lady who came to see us about it," he replied. "I was not to say anything about it, but I guess it will be all right. Here's her card."

It took them four days to complete the sidewalk. On the morning of the fifth day after the beginning of the work Nicholas sat beside his window and surveyed with keen satisfaction the smooth white walk, and wondered what would come next.

He was looking in the direction of Mrs. Rosewater's home, and pretty soon he saw her come swiftly down the steps and cross the street. His breath came in hard, short gasps when she was ushered into the library and hurried up to him.

"My dear Mr. Bodman," she chirped out gayly. "I am glad to see that you have laid a sidewalk at last. You do not know what gratification it gives me. But I knew you were too liberal minded to be a drawback to the public when you once realized the gravity of your mistake. You have done your part, and now I am willing to do mine."

Did she know that he knew? He looked at her furtively from the corner of his eye, but there was not a tremor or flush of deceit to be detected on her comely face.

"It was for your sake I did it, Mrs. Rosewater, not the community's. Had it cost ten times as much I should have done it just the same."

She flashed him a swift, sharp glance then, but that was all either of them ever said about it.—Chicago News.

And the Cat Came Back.

Mr. Downs, an engineer on a local railroad, has a cat that he can't lose, says a Rutland (Vt.) correspondent of the New York Press. The animal came into his possession some time ago. Her traits were not such as to endear her to Downs, and so he determined to get rid of her. He put the cat into a bag and took her to Salem, 45 miles away.

"Now," said Downs, as he turned the cat loose in the roundhouse at Salem, "I guess that I've got rid of you."

But Downs didn't know the cat. When he returned home that night he found the cat sleeping peacefully on the hearth in his home. Downs was amazed.

"How did that cat get here?" he asked.

"She came back this afternoon," replied his wife.

"Well, I declare!" ejaculated Downs, as he moved toward the feline.

But the cat, suspecting some fell design on the part of Downs, leaped nimbly to her feet and sped to the upper part of the house. Downs has taken the cat on several trips and each time tried to lose her. But she returned every time. Downs says that he believes that if he kills her her ghost will come back.

A Guessing Match.

"What do they mean by a 'conference of the powers'?"

"That's a meeting which each attends in the hope of being able to guess what the other is driving at."—Chicago Journal.

Last year 17,500,000 pounds of hops were imported from the United States by the British.

A GREAT LIBRARY.

Most Magnificent Building of Its Kind in the World.

Covers a Block, Cost $6,000,000, and Contains 800,000 Books.

Ten years after the United States of America came into existence the library of congress had its beginning. Congress was about to move from Philadelphia. The seat of government was to be transferred on two sloops to the District of Columbia. There was a fine collection of town lots, but not much else, in Washington. So long as they remained in Philadelphia the senators and representatives made use of the Loganian library. When they came to consider the needs of the new location they appropriated $5000 to buy books, and ordered a room set apart for them in the capitol. The grandfather of Ambassador Bayard was one of the committee which carried out the provision. Two years later congress employed a librarian at $2 a day to take care of the books, but stipulated that the pay was for only such time as he was actually at work. The early appropriations for the library were $450 a year. It took fourteen years to get together 3000 books. Then came the British under General Ross, entering Washington in 1814. They burned the capitol and the library went up in flames. The next year congress made another start by purchasing the 6700 books of Thomas Jefferson for $23,950. In 1851 the library of congress, as it is officially known, had grown to about 60,000 volumes. A fire on Christmas day destroyed 35,000 books and a part of the capitol. From 20,000 volumes in 1852 the library has reached its present collection of 800,000, and now takes possession of the finest library building in the world, which cost $6,000,000, and was nine years in course of construction.

A public building covering a block of ground and without a dark corner is something novel in architecture. Yet that is what the new library is. Such a result is made possible by 1800 windows and by an arrangement of courts within the exterior rim of of halls. The reading room is in the very centre, but a flood of light pours in on the cloudiest day. It is under the golden dome. It is an eight-sided room, with the elevated desk of the librarian in the centre, and all of the apparatus for communicating with assistants around and beneath. The desks for readers are in circles facing the librarian. The distance across this octagonal room is 100 feet. Rotunda is a better description than room, for the ceiling is the vaulted interior of the dome. The walls of this rotunda for forty feet from the floor are of amber-tinted marble, rich enough in polish and color to be mistaken at first glance for onyx.

Opening into the rotunda on the eight sides are alcoves, where encyclopedias, books of reference, dictionaries and works for which there is almost continuous use will be kept. These alcoves are on the level of the floor. Readers will be allowed to go into them and consult such books as they may need. Sitting on his high perch in the centre of the rotunda, the librarian or his immediate representative occupies a position much like the lookout's in a modern penitentiary. He not only has every occupant of the reading room under his eyes, but he can see into every one of the alcoves which are open to the public. These reference alcoves will be the only parts of the library containing books to which readers will have direct access. The book racks are completely isolated.—Globe-Democrat.

Tallest Steel Chimney in the World.

Just south of the low brick structures that mark the presence of the pumping station at Ridgewood, which supplies the city of Brooklyn with the greater part of its water, stands the tallest steel chimney that was ever built. It is only quite recently that experiment has proved it a thorough success, but the smoke that lazily drifts from the top, 217 feet from the ground, is constant proof that the day of the old familiar structure of brick, that has so long dotted the landscape in manufacturing districts, is nearing its end.

The steel giant stands a trifle more than 217 feet high, because the foundation adds several to the number of feet given. At the base its diameter is 25 feet, while the minimum diameter is eight feet. It is composed of sections of steel, of the open-hearth variety, with a tensile strength of 65,000 pounds and an elongation of about 20 to 25 per cent. in eight inches. From its top—and there is a way of getting there by means of an iron ladder that runs from base to crown—one can see a large portion of New York state, New Jersey, Connecticut, Long Island from end to end, and as far out into the ocean as it is possible for the eye to reach. Just how far one's view might extend with the aid of a telescope has not been demonstrated.

The chimney is made up of 137 steel plates. These masses of steel weigh from 800 to 1400 pounds each and vary in thickness from a quarter to a half inch. Such a thing as a break in the chimney is well nigh impossible, and that it should burn out at all the brick lining which extends one-half the distance from the ground to the top is improbable.—New York Journal.

A Big Engineering Work.

The triumphs of modern engineers over natural obstacles know no limit. The latest achievement which has been brought into public notice is the diversion of the river Periyar from its natural outlet in the Indian ocean to the bed of the Vaigai, which flows eastward into the Bay of Bengal.

The district round Madura, in the Madras presidency, had long suffered from want of water for irrigation, and it was decided some years ago to relieve it in the manner described. The work involved the construction of an enormous dam, 178 feet in height, impounding the waters of the Periyar, and forming a lake which, when at its highest level, will have an area of 7454 acres, or nearly twelve square miles. An open cutting over a mile in length and twenty-one feet wide, followed by a tunnel of about the same length and with a sectional area of ninety square feet, conveys the stream across the watershed to the Vaigai. Eighty miles lower down it is distributed by artificial canals in the Madura district.

To provide for floods, which at times are very severe, an overflow "saddle" has been provided in the watershed separating the two districts, so that when the level rises thirty-one feet above the cutting it shall escape by this means. The difficulty of the work may be imagined when it is stated that it was carried on in an uninhabited jungle, twenty miles from the nearest cultivated land and eighty miles from a railway station, and that, owing to the unhealthiness of the climate at certain seasons and the prevalence of floods, the engineers could only work for three months of the year.

An Owl Captures a Lamb.

The owl is noted for wisdom, as everyone knows, but as a fowl of prey for big game he is certainly enacting a new role. The engineer of a Big Four train—by Big Four is meant Cleveland, Cincinnati, Chicago and St. Louis railroad—says that while near Greensburg, Indiana, he saw what appeared to be a cow or a horse about to cross the rails almost directly in front of the locomotive.

Anticipating an accident, he put on all breaks just as the engine struck the object. As the jar was slight and no damage done, he walked out on the running or footboard and discovered what then looked like an eagle lying on the cowcatcher. He picked up the object, carried it to the cab of his engine, but could not make out what it was, although he was certain that it was not an eagle.

Afterwards the passengers of the train pronounced the bird to be an owl, which measured nearly five feet from tip to tip. Investigation proved that the owl, at the time he was struck, was dragging along the ground a lamb that weighed many pounds.

In Confidence.

Uncle Bob—So you were at the head of your class for a week?

Johnny—Yes. I wish I hadn't done that.

Uncle Bob—Why?

Johnny—Because mama didn't know I could, and now she'll expect me to do it again.—Puck.

OUR TOWN PHILOSOPHER.

FATE OF DUNKARD COLONISTS IN SOUTH DAKOTA.

THE PROPER PLACE FOR A HOME SEEKER TO SEEK A HOME.

Our Town Philosopher came up smiling as usual one morning this week, and as usual he had something to say:

"I was reading in a recent paper," he began, "that a colony of Dunkards went from Madison county, Indiana, and located in North Dakota, and now the last one of them is hankering to return home. They can't however, for they've spent all their money in trying to raise crops. Many of 'em are on the point of starvation, and I presume a relief fund will be subscribed for their benefit.

"How different would have been their fate if they had come to Thorsby! They could have raised two crops a year here, while they were vainly struggling to raise one in that desolate region. They wouldn't have had blizzards, droughts, prairie-fires or long, bitter and remorseless winters to contend with;; their harvests wouldn't have failed and they'd be happy, contented and financially O. K. today.

"Now, mind, I don't want you to understand me as saying that the South furnishes a splendid field for a farmer in any and every part of it, for it doesn't. There are good, bad and indifferent strips of country here—places where the finest, most varied and prolific harvests on the earth are grown; other places where the soil is barren, and still others where the farmer can make a living, and that's about all. Some lands, like those in the Mississippi delta, are the most fertile under the sun, but they are overflowed so often that I wouldn't advise a homeseeker to locate there. Of all things, however, he should give a boom-town the go-by. It is bound to collapse in time; values are certain to shrink in consequence, and the farmers living in its vicinity will suffer as much as any one else, as a logical sequence. Neither should the homeseeker be hoodwinked into taking up land a long distance from a railroad, or investing in property near a town that has only a spur road. In either case his land will be very slow to rise in value, if, fortunately, it ever rises at all.

"Now, Thorsby, is situated in the very garden of the Cotton-Belt, and what is more, it is situated on the L. & N., the principal North and South line of travel and traffic on our continent—not on a spur of the road, but on the main road itself. And this means very much to a farmer or a horticulturist when wanting to ship his products to market.

"Thorsby is an accomplished fact. It is no 'iridescent dream,' but a bright and brave—a sturdy and substantial reality, and therefore, intending immigrants had better locate here than try to found a new colony for themselves.

"It is the policy of the people who are already established here to help the new-comer in the way of giving him work, whereas in many, if not a majority of places, if a man secures employment, he secures it by his own unaided efforts.

"The right kind of a man will always meet a royal welcome in Thorsby, for ours are a hearty and hospitable people; but if he is the wrong kind of a man he had better pass on without pausing, for we don't want any drones in our busy hive of industry.

"By-the-bye, I spoke of Thorsby as

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 7. THORSBY, A MISSING ISSUE $1.00 PER YEAR.

OUR TOWN PHILOSOPHER.

FATE OF DUNKARD COLONISTS IN SOUTH DAKOTA.

THE PROPER PLACE FOR A HOME SEEKER TO SEEK A HOME.

Our Town Philosopher came up smiling as usual one morning this week, and as usual he had something to say:

"I was reading in a recent paper," he began, "that a colony of Dunkards went from Madison county, Indiana, and located in North Dakota, and now the last one of them is hankering to return home. They can't however, for they've spent all their money in trying to raise crops. Many of 'em are on the point of starvation, and I presume a relief fund will be subscribed for their benefit.

"How different would have been their fate if they had come to Thorsby! They could have raised two crops a year here, while they were vainly struggling to raise one in that desolate region. They wouldn't have had blizzards, droughts, prairie-fires or long, bitter and remorseless winters to contend with;; their harvests wouldn't have failed and they'd be happy, contented and financially O. K. today.

"Now, mind, I don't want you to understand me as saying that the South furnishes a splendid field for a farmer in any and every part of it, for it doesn't. There are good, bad and indifferent strips of country here—places where the finest, most varied and prolific harvests on the earth are grown; other places where the soil is barren, and still others where the farmer can make a living, and that's about all. Some lands, like those in the Mississippi delta, are the most fertile under the sun, but they are overflowed so often that I wouldn't advise a homeseeker to locate there. Of all things, however, he should give a boom-town the go-by. It is bound to collapse in time; values are certain to shrink in consequence, and the farmers living in its vicinity will suffer as much as any one else, as a logical sequence. Neither should the homeseeker be hoodwinked into taking up land a long distance from a railroad, or investing in property near a town that has only a spur road. In either case his land will be very slow to rise in value, if, fortunately, it ever rises at all.

"Now, Thorsby, is situated in the very garden of the Cotton-Belt, and what is more, it is situated on the L. & N., the principal North and South line of travel and traffic on our continent—not on a spur of the road, but on the main road itself. And this means very much to a farmer or a horticulturist when wanting to ship his products to market.

"Thorsby is an accomplished fact. It is no 'iridescent dream,' but a bright and brave—a sturdy and substantial reality, and therefore, intending immigrants had better locate here than try to found a new colony for themselves.

"It is the policy of the people who are already established here to help the new-comer in the way of giving him work, whereas in many, if not a majority of places, if a man secures employment, he secures it by his own unaided efforts.

"The right kind of a man will always meet a royal welcome in Thorsby, for ours are a hearty and hospitable people; but if he is the wrong kind of a man he had better pass on without pausing, for we don't want any drones in our busy hive of industry.

"By-the-bye, I spoke of Thorsby as being on the main line of the L. & N., and I wish further to emphasize the fact. While our would-be-if-they-could-be rivals on spur, or side-line lines see their fruit delayed in shipment till it is rotten, we, of Thorsby, have a fruit-train that leaves here about 9 a. m., arrives in Chicago in less than 27 hours, and is on the market of the Windy City at noon of the day after it leaves here."

The genial old gentleman closed the seance with a smile and walked out.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

One of Chilton county's most progressive farmers is J. A. Logan. Eight years ago Mr. Logan came to this county and took up a piece of timbered land, about one mile north of Clanton, and began improving it. He now has over 50 acres in one field cleared, without a stump in it, besides other smaller fields that are nearly cleared of stumps. This farm is an example of what an industrious and progressive farmer can accomplish in a few short years. The crops are varied and are all doing exceedingly well.

Dr. Young, of Waseca, Minn., who was spoken of a few weeks ago in the Call as a prospective buyer, has bought two ten acre vineyard tracts and 80 acres of farm land, near Thorsby. He left here Tuesday for his home in the North with the intention of returning here in a few weeks to make this his home permanently. The doctor will bring several carloads of blooded stock with him, amongst which there will be some short-horn Durham cattle, full-blooded Jerseys and some fine specimens of horseflesh.

On the Lowe homestead, a few miles south of Thorsby, there are eighteen vines of the scuppernong grape which cover one acre of ground. The vines have not been taken care of in any way for several years, but in the face of all the disadvantages, last year several hundred pounds of grapes were sold off of these vines, and there were still enough left to make 380 gallons of wine.

Mrs. Lee Hayes, aged about 70 years, died at her home, one mile south of Thorsby, Wednesday morning. She was an old and respected resident of Chilton county. Her remains were placed at rest in Cedar Grove cemetery, Thursday.

Sam Thorson has the frame up for a neat new cottage and will soon have it completed. Sam is at the head of the Bachelor's Club, and it must mean that something has been accomplished by the club.

Chas. A. Peterson, of LeCrosse, Wis., arrived here Wednesday morning. He has purchased a ten acre vineyard tract in Thorsby, and will make this his home in the future.

Chas. Anderson, who returned to his home in St. Paul, last week, after buying a vineyard tract in Thorsby, has written back here and purchased four tracts for his friends.

Rev. E. Glad, of Fruithurst, is staying in Thorsby for a few weeks for his health.

The Call will be sent to any address in the United States or Canada for one dollar per year.

FIFTY-EIGHT WERE KILLED.

First Report of Disaster Was Greatly Exaggerated.

Official reports of the disaster which befell a military railway train on the Valki Juriev line show that fifty-eight persons were killed, instead of one hundred, as first published.

Twenty-four bodies have been recovered and the remains of other victims are beneath the debris. The train which was carrying a regiment of infantry was derailed in crossing an embankment which had been undermined

CIRCUIT COURT.

The Criminal Court docket for the spring term of Circuit Court was taken up by Judge Denson Monday morning and the following cases were disposed of up to Thursday noon:

The people vs. Wm. Jones, grand larceny; plead guilty.

The people vs. Lewis Love, carrying concealed weapons; found guilty and fined $50.

The people vs. James Gibbons, for forgery; continued.

The people vs. German Crosby, assault to murder; continued.

The people vs. Cil Whatley and Lula Garner, miscegination; continued.

The people vs. Jim Ellison, grand larceny; not guilty.

The people vs. Dutch Mims, selling liquor without license; continued.

The people vs. Annie Young, grand larceny; continued.

The people vs. German Crosby et al., default ofbail; continued.

The people vs. James Thacker, found guilty; fined $25.

The people vs. Wiley Garner, for rape, plead guilty; sentenced to penitentiary for three years.

The people vs. Ben Dobbs, assault to murder; fined $100.

The people vs. Louisa Mannell, defaulting witness; discharged.

The people vs. Oscar Temps, defaulting witness; discharged.

The people vs. J. S. Bearden, defaulting witness; discharged.

The people vs. J. W. Letcher, defaulting witness; discharged.

The people vs. Elizabeth Ellison, defaulting witness; discharged.

The people vs. Lee Hayes, bastardy, found guilty; fined $40 per year for ten years for support of child and costs of court.

The people vs. Wm. Martin, for murder; found guilty and sentenced to 14 years in penitentiary.

The people vs. Will Ellis, assault and battery; fined 1 cent and costs.

The people vs. Lewis Lans, for throwing missiles into a railroad car; plead guilty.

The people vs. Dave Carter, for throwing missiles into a railroad car; plead guilty.

The people vs. Alex Smith, for using profane language in presence of ladies; fined $5.

The people vs. Wm. Taylor, for using profane language; fined $5.

The people vs. Geo. Perry, selling mortgaged property; continued.

The people vs. Will Johnson, for using profane language; fined $10.

The people vs. Samuel Johnson, for using profane language; fined $5.

The people vs. Norman Pilgren, for disturbing religious worship; fined $20.

The people vs. Will Jones, for disturbing religious servce; not guilty.

The people vs. Mary Ann Brantley, violating liquor law; fined $50. Fine afterwards reduced by court to 1 cent and costs.

The people vs. David Williams, for disturbing religious worship; fined $20.

The people vs. Pomp Smith, for using profane language; fined $5.

Sheriff Cooley went up to South Calera, last Friday, and arrested Chas. Busby, Norman Pilgren and Wm. Jones, on a charge of disturbing the peace.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

SPEEDY IS THE "NASHVILLE."

New Gunboat Proves Highly Satisfactory On Trial.

The fastest vessel of her class in the world was the verdict accorded by the officers of the trial board at the conclusion of the speed trial of the new gunboat Nashville, on Long island sound. The speed required by the government was 13.07 knots. The average speed made by the vessel was 16.706 knots, making an excess of speed very near three knots. With a bonus of $20,000 for each excessive knot this means a total of $60,000 for the builders.

The steel giant stands a trifle more than 217 feet high, because the foundation adds several to the number of feet given. At the base its diameter is 25 feet, while the minimum diameter is eight feet. It is composed of sections of steel, of the open-hearth variety, with a tensile strength of 65,000 pounds and an elongation of about 20 to 25 per cent. in eight inches. From its top—and there is a way of getting there by means of an iron ladder that runs from base to crown—one can see a large portion of New York state, New Jersey, Connecticut, Long Island from end to end, and as far out into the ocean as it is possible for the eye to reach. Just how far one's view might extend with the aid of a telescope has not been demonstrated.

The chimney is made up of 137 steel plates. These masses of steel weigh from 800 to 1400 pounds each and vary in thickness from a quarter to a half inch. Such a thing as a break in the chimney is well nigh impossible, and that it should burn out at all the brick lining which extends one-half the distance from the ground to the top is improbable.—New York Journal.

A Big Engineering Work.

The triumphs of modern engineers over natural obstacles know no limit. The latest achievement which has been brought into public notice is the diversion of the river Periyar from its natural outlet in the Indian ocean to the bed of the Vaigai, which flows eastward into the Bay of Bengal.

The district round Madura, in the Madras presidency, had long suffered from want of water for irrigation, and it was decided some years ago to relieve it in the manner described. The work involved the construction of an enormous dam, 178 feet in height, impounding the waters of the Periyar, and forming a lake which, when at its highest level, will have an area of 7454 acres, or nearly twelve square miles. An open cutting over a mile in length and twenty-one feet wide, followed by a tunnel of about the same length and with a sectional area of ninety square feet, conveys the stream across the watershed to the Vaigai. Eighty miles lower down it is distributed by artificial canals in the Madura district.

To provide for floods, which at times are very severe, an overflow "saddle" has been provided in the watershed separating the two districts, so that when the level rises thirty-one feet above the cutting it shall escape by this means. The difficulty of the work may be imagined when it is stated that it was carried on in an uninhabited jungle, twenty miles from the nearest cultivated land and eighty miles from a railway station, and that, owing to the unhealthiness of the climate at certain seasons and the prevalence of floods, the engineers could only work for three months of the year.

An Owl Captures a Lamb.

The owl is noted for wisdom, as everyone knows, but as a fowl of prey for big game he is certainly enacting a new role. The engineer of a Big Four train—by Big Four is meant Cleveland, Cincinnati, Chicago and St. Louis railroad—says that while near Greensburg, Indiana, he saw what appeared to be a cow or a horse about to cross the rails almost directly in front of the locomotive.

Anticipating an accident, he put on all breaks just as the engine struck the object. As the jar was slight and no damage done, he walked out on the running or footboard and discovered what then looked like an eagle lying on the cowcatcher. He picked up the object, carried it to the cab of his engine, but could not make out what it was, although he was certain that it was not an eagle.

Afterwards the passengers of the train pronounced the bird to be an owl, which measured nearly five feet from tip to tip. Investigation proved that the owl, at the time he struck, was dragging along the ground a lamb that weighed many pounds.

In Confidence.

Uncle Bob—So you were at the head of your class for a week?

Johnny—Yes. I wish I hadn't done that.

Uncle Bob—Why?

Johnny—Because mama didn't know I could, and now she'll expect me to do it again.—Puck.

Circuit Clerk

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 7. THORSBY, ALA., FRIDAY, MAY 21, 1897. $1.00 PER YEAR.

OUR TOWN PHILOSOPHER.

FATE OF DUNKARD COLONISTS IN SOUTH DAKOTA.

THE PROPER PLACE FOR A HOME SEEKER TO SEEK A HOME.

Our Town Philosopher came up smiling as usual one morning this week, and as usual he had something to say:

"I was reading in a recentpaper," he began, "that a colony of Dunkards went from Madison county, Indiana, and located in North Dakota, and now the last one of them is hankering to return home. They can't however, for they've spent all their money in trying to raise crops. Many of 'em are on the point of starvation, and I presume a relief fund will be subscribed for their benefit.

"How different would have been their fate if they had come to Thorsby! They could have raised two crops a year here, while they were vainly struggling to raise one in that desolate region. They wouldn't have had blizzards, droughts, prairie-fires or long, bitter and remorseless winters to contend with;; their harvests wouldn't have failed and they'd be happy, contented and financially O. K. today.

"Now, mind, I don't want you to understand me as saying that the South furnishes a splendid field for a farmer in any and every part of it, for it doesn't. There are good, bad and indifferent strips of country here—places where the finest, most varied and prolific harvests on the earth are grown; other places where the soil is barren, and still others where the farmer can make a living, and that's about all. Some lands, like those in the Mississippi delta, are the most fertile under the sun, but they are overflowed so often that I wouldn't advise a homeseeker to locate there. Of all things, however, he should give a boom-town the go-by. It is bound to collapse in time; values are certain to shrink in consequence, and the farmers living in its vicinity will suffer as much as any one else, as a logical sequence. Neither should the homeseeker be hoodwinked into taking up land a long distance from a railroad, or investing in property near a town that has only a spur road. In either case his land will be very slow to rise in value, if, fortunately, it ever rises at all.

"Now, Thorsby, is situated in the very garden of the Cotton-Belt, and what is more, it is situated on the L. & N., the principal North and South line of travel and traffic on our continent—not on a spur of the road, but on the main road itself. And this means very much to a farmer or a horticulturist when wanting to ship his products to market.

"Thorsby is an accomplished fact. It is no 'iridescent dream,' but a bright and brave—a sturdy and substantial reality, and therefore, intending immigrants had better locate here than try to found a new colony for themselves.

"It is the policy of the people who are already established here to help the new-comer in the way of giving him work, whereas in many, if not a majority of places, if a man secures employment, he secures it by his own unaided efforts.

"The right kind of a man will always meet a royal welcome in Thorsby, for ours are a hearty and hospitable people; but if he is the wrong kind of a man he had better pass on without pausing, for we don't want any drones in our busy hive of industry.

"By-the-bye, I spoke of Thorsby as being on the main line of the L. & N., and I wish further to emphasize the fact. While our would-be-if-they-could-be rivals on spur, or side-line lines see their fruit delayed in shipment till it is rotten, we, of Thorsby, have a fruit-train that leaves here about 9 a. m., arrives in Chicago in less than 27 hours, and is on the market of the Windy City at noon of the day after it leaves here."

The genial old gentleman closed the seance with a smile and walked out.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

One of Chilton county's most progressive farmers is J. A. Logan. Eight years ago Mr. Logan came to this county and took up a piece of timbered land, about one mile north of Clanton, and began improving it. He now has over 50 acres in one field cleared, without a stump in it, besides other smaller fields that are nearly cleared of stumps. This farm is an example of what an industrious and progressive farmer can accomplish in a few short years. The crops are varied and are all doing exceedingly well.

Dr. Young, of Waseca, Minn., who was spoken of a few weeks ago in the Call as a prospective buyer, has bought two ten acre vineyard tracts and 80 acres of farm land, near Thorsby. He left here Tuesday for his home in the North with the intention of returning here in a few weeks to make this his home permanently. The doctor will bring several carloads of blooded stock with him, amongst which there will be some short-horn Durham cattle, full-blooded Jerseys and some fine specimens of horseflesh.

On the Lowe homestead, a few miles south of Thorsby, there are eighteen vines of the scuppernong grape which cover one acre of ground. The vines have not been taken care of in any way for several years, but in the face of all the disadvantages, last year several hundred pounds of grapes were sold off of these vines, and there were still enough left to make 380 gallons of wine.

Mrs. Lee Hayes, aged about 70 years, died at her home, one mile south of Thorsby, Wednesday morning. She was an old and respected resident of Chilton county. Her remains were placed at rest in Cedar Grove cemetery, Thursday.

Sam Thorson has the frame up for a neat new cottage and will soon have it completed. Sam is at the head of the Bachelor's Club, and it must mean that something has been accomplished by the club.

Chas. A. Peterson, of LeCrosse, Wis., arrived here Wednesday morning. He has purchased a ten acre vineyard tract in Thorsby, and will make this his home in the future.

Chas. Anderson, who returned to his home in St. Paul, last week, after buying a vineyard tract in Thorsby, has written back here and purchased four tracts for his friends.

Rev. E. Glad, of Fruithurst, is staying in Thorsby for a few weeks for his health.

The Call will be sent to any address in the United States or Canada for one dollar per year.

FIFTY-EIGHT WERE KILLED.

First Report of Disaster Was Greatly Exaggerated.

Official reports of the disaster which befell a military railway train on the Valki Juriev line show that fifty-eight persons were killed, instead of one hundred, as first published.

Twenty-four bodies have been recovered and the remains of other victims are beneath the debris. The train which was carrying a regiment of infantry was derailed in crossing an embankment which had been undermined

CIRCUIT COURT.

The Criminal Court docket for the spring term of Circuit Court was taken up by Judge Denson Monday morning and the following cases were disposed of up to Thursday noon:

The people vs. Wm. Jones, grand larceny; plead guilty.

The people vs. Lewis Love, carrying concealed weapons; found guilty and fined $50.

The people vs. James Gibbons, for forgery; continued.

The people vs. German Crosby, assault to murder; continued.

The people vs. Cil Whatley and Lula Garner, miscegination; continued.

The people vs. Jim Ellison, grand larceny; not guilty.

The people vs. Dutch Mims, selling liquor without license; continued.

The people vs. Annie Young, grand larceny; continued.

The people vs. German Crosby et al., default ofbail; continued.

The people vs. James Thacker, found guilty; fined $25.

The people vs. Wiley Garner, for rape, plead guilty; sentenced to penitentiary for three years.

The people vs. Ben Dobbs, assault to murder; fined $100.

The people vs. Louisa Mannell, defaulting witness; discharged.

The people vs. Oscar Temps, defaulting witness; discharged.

The people vs. J. S. Bearden, defaulting witness; discharged.

The people vs. J. W. Letcher, defaulting witness; discharged.

The people vs. Elizabeth Ellison, defaulting witness; discharged.

The people vs. Lee Hayes, bastardy, found guilty; fined $40 per year for ten years for support of child and costs of court.

The people vs. Wm. Martin, for murder; found guilty and sentenced to 14 years in penitentiary.

The people vs. Will Ellis, assault and battery; fined 1 cent and costs.

The people vs. Lewis Lans, for throwing missiles into a railroad car; plead guilty.

The people vs. Dave Carter, for throwing missiles into a railroad car; plead guilty.

The people vs. Alex Smith, for using profane language in presence of ladies; fined $5.

The people vs. Wm. Taylor, for using profane language; fined $5.

The people vs. Geo. Perry, selling mortgaged property; continued.

The people vs. Will Johnson, for using profane language; fined $10.

The people vs. Samuel Johnson, for using profane language; fined $5.

The people vs. Norman Pilgren, for disturbing religious worship; fined $20.

The people vs. Will Jones, for disturbing religious servce; not guilty.

The people vs. Mary Ann Brantley, violating liquor law; fined $50. Fine afterwards reduced by court to 1 cent and costs.

The people vs. David Williams, for disturbing religious worship; fined $20.

The people vs. Pomp Smith, for using profane language; fined $5.

Sheriff Cooley went up to South Calera, last Friday, and arrested Chas. Busby, Norman Pilgren and Wm. Jones, on a charge of disturbing the peace.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

SPEEDY IS THE "NASHVILLE."

New Gunboat Proves Highly Satisfactory On Trial.

The fastest vessel of her class in the world was the verdict accorded by the officers of the trial board at the conclusion of the speed trial of the new gunboat Nashville, on Long island sound.

The speed required by the government was 13.07 knots. The average speed made by the vessel was 16.706 knots, making an excess of speed very near three knots. With a bonus of $20,000 for each excessive knot this means a total of $60,000 for the builders.

HAVE YOU HEARD

About those extraordinary all wool suits we are selling for

$7.95

WELL, ITS A FACT, THEY ARE ALL THIS SEASONS,

Some silk and satin lined ones among them and can be had in CHEVIOTS CASHIMERES and WORSTEDS, plaids Checks, neat and fancy effects. All fashioned in the

UP-TO-DATE STYLES

And worth more money but as a starter for the season we give you the choice of this vast collection at the

STARTLING PRICE OF

SEVEN NINETY-FIVE

J. BLACH & SONS,

ONE PRICE CASH CLOTHIERS,

1912-1914 First Ave.,

Birmingham, - Alabama.

A DREAMER.

He is a dreamer, let him pass,
He reads the writing in the grass.
His seeing soul in rapture goes
Beyond the beauty of the rose.
He is a dreamer, and doth know
To sound the furthest depth of woe;
His days are calm, majestic, free;
He is a dreamer, let him be.

He is a dreamer, all the day
Blest visions find him on his way,
Past the far sunset and the light.
Beyond the darkness and the night.
He is a dreamer; God! to be
Apostle of Infinity.
And mirror truth's translucent gleam;
He is a dreamer, let him dream.

He is a dreamer, for all time
His mind is married unto rhyme,
Light that ne'er was on land or sea
Hath blushed to him in poetry.
He is a dreamer, and hath caught
Close to his heart a hope, a thought,
A hope of immortality;
He is a dreamer, let him be.

He is a dreamer lo! with thee
His soul does weep in sympathy;
He is a dreamer, and doth long
To glad the world with happy song.
He is a dreamer; in a breath
He dreams of love, and life, and death,
Oh, man! Oh, woman, lad and lass,
He is a dreamer, let him pass.
—London Sun.

THE MAN-EATER

Some years ago I was riding with a friend though a street in Lucknow, when, in the middle of the road, we came upon a bloody mass, apparently the remains of a woman, but bruised and lacerated, and crushed almost out of semblance to humanity.

Stopping the buggy, we looked around for some explanation of the tragedy, and then perceived that the streets were utterly deserted of man, woman, child and beast, although a few scared and cautious faces were to be seen peeping from the doors and windows, or over the parapets of the houses.

"There must have been an attempt at a riot, and the soldiers have made an example or two for the benefit of the remainder," said my friend, as we drove hurriedly on.

A few rods further we came upon the corpse of a young man similarly disfigured, and also lying in the middle of the road.

"This is really awful. They must have made the elephants kill him," muttered my friend again, stopping the horse and gazing at the frightful spectacle.

At this moment a man appeared upon the top of an adjoining house, and looked anxiously down the street. To him my friend shouted and he cried:

"Pardon, sahibs, but the boy was my boy, and the house is desolated. By the teeth of Kali, but he has turned this way again. Take care of yourselves, sahibs, he is coming. The man-eater is upon you!"

"The adme-kanawallah! the man-eater! I have seen him. He is a horse with the temper of a tiger and the courage of a man. He belongs to the king, who sometimes sends a slave who displeases him into the stable. They drag the body out with hooks."

As he spoke my friend was hastily turning his horse, while the terrified syce, who had hitherto run beside the buggy, scampered off to the side of the road and disappeared, I know not where.

At the foot of the hill we had just ascended both my friend and I had noticed a sort of park or pleasure ground, surrounded with a high iron fence, its gates standing hospitably open. Towards these gates we now drove at the top speed of our horse, while behind us, on the road, thundered the iron hoofs of our pursuer. Once the sound ceased, and standing up, I looked over the top of the buggy to see if he had left us. But he had only encountered a child, too young to know its danger or to escape it, and when I caught sight of them, the savage beast was shaking the poor little object in its mouth, precisely as a dog does a rat. Another moment and he had dropped it, and was again in pursuit of us. That moment's pause, however, had lost him his prey, for just as he was about to overtake us, we turned into the inclosure, my friend leaped from the buggy, slammed the gates, and shot the heavy bolt securing them.

As he did so the man-eater arrived and hurled himself against the gates with a shock that must have shattered them had they been of wood.

At the sound of his ferocious whinnying and snorting the horse we had been driving trembled and cowered as if at the roar of a lion.

For a few moments the man-eater persisted in his determination to assault us, galloping up and down the front of the inclosure, glancing at the height of the fence, and raining a perfect battery of blows from his iron heels upon the gates. At last, however, convinced of the uselessness of his efforts, he turned with an indignant neigh and galloped off down the road. A little below us an archway had been thrown across from one house to another, and upon this arch a number of troopers stood awaiting the opportunity now presented for, as the horse, with head and tail erect, and wildly glaring eyes, searching beneath the arch, a rope skillfully thrown settled upon his neck, choked and threw him.

The next day the king ordered the man-eater to be turned into the arena with Burrhea, his finest Bengal tiger.

The arena was a courtyard about 80 yards square, surrounded by buildings, with a veranda below and a gallery above.

The front of this veranda was closed by a heavy bamboo railing, and behind it, in a space just below the royal balcony, the ladies of the harem, or as they are called in Hindoostanee, the purdah-beebes, meaning litreally curtain ladies, as distinguished from the poorer classes of females were allowed to peep as they could at the combat.

The man-eater had been enticed into the inclosure by means of a country horse of small value, to whom he manifested no animosity, but seemed to regard with contemptous indulgence, as a creature not, indeed, of his own kind, but sufficiently near it to secure him from the ferocious attacks he reserved for the inferior race called man.

While the horses sported toegther Burrhea's cage was brought into the veranda, just opposite the point where the king and his court were now seated, a door in the bamboo railing was thrown open, and the front of the cage raised.

Burrhea, who had been kept without food or drink for the last twenty-four hours, waited for no second bidding, but leaped at one bound from the cage down to the middle of the court yard, lashing his sides with his long tail, and glaring furiously at the horses, while his glossy and beautifully-striped coat shone like satin, contrasting strongly with the frowzy hair of the tattoo, or native horse, and making even the man-eater's well-kept hide look dull and rough in comparison.

Glancing steadily about him for a moment, the tiger commenced stealing slowly toward the horses.

Adme-kanawallah fixed his eyes steadily upon the eyes of his opponent, and not for an instant did he take them off. Standing in an easy attitude, with one foot slightly advanced, his head lowered, his ears flat upon his neck, he awaited the attack, but Burrhea, daunted, perhaps, by that steady gaze, swerved from the direct line of his approach and sidled toward the tattoo, who, paralyzed, with fear, seemed incapable of making the least effort for escape or resistance.

Arrived at the proper distance, Burrhea sprang, knocked his victim flat, alighted upon his side, and, with his teeth inserted in the poor creature's neck, greedily drank its blood.

"It will only make Burrhea the more savage," said the king, gleefully rubbing his hands, and the courtiers dutifully assented, exchanging glances of approbation and pleasure before turning to enjoy the further expected sport.

At length Burrhea was satisfied, or else no more blood was to be had, and taking his claws out of the dead animal, and shaking himself as he did so, he began to creep stealthily around the court yard like a cat stealing a march upon a mouse. He made no noise whatever, raising and placing his huge paws as silently as a rose leaf flutters to the ground.

It was not a scene to be forgotten. The king, with his courtiers, both European and Indian, about him in the gaily decorated gallery above, the eyes and figures of the servants dimly seen peeping through the railing of the veranda below, Burrhea making his stealthy rounds, while in the center of the court yard stood the man-eater, slowly turning, as the tiger moved, so as always to keep his eyes fixed upon the glaring eyes of his opponent, his foreleg still advanced and slightly bent, his mane bristling, and his ears now erect and defiant.

The profound silence was interrupted only by the grating sound of the iron-shod hoofs of the horse as he slowly turned in exact concert with the movements of the tiger.

At last, and without the slightest visible preparation, the tiger sprang, cutting the air like a flash of lightning, but the horse was prepared

It had evidently been Burrhea's intention to seize the head and forequarters, but the man-eater was too quick for him, and by a sudden diving motion of his head and shoulders, received his antagonist upon his muscular haunches instead. The claws of the tiger sank deep in the flesh, while his hind feet made a desperate to secure a holding upon the horse's shoulders, but before this could be effected, the man-eater lashed out with his iron heels with a resistless vigor that sent Burrhea sprawling upon the ground with a broken jaw.

The king seeing this, frowned, and gave orders to let the tiger out and turn in another. Another came, but he seemed unwilling to fight. All the efforts of the keepers failed to rouse him. The king was furious.

"Take away this fool of a tiger and bring in a lion!" screamed he, bending over the railing and menacing the tiger with his fist.

The trembling attendants hastened to raise the doors of the railing and cage, and the tiger bounded in with infinitely more alacrity than he had shown in coming out.

There was a brief pause, and then the attendant at the door announced the keeper of the lions, who begged an audience of the king.

"Bring him in!" ordered his majesty.

The lion-master trembling advanced, and prostrating himself, announced that not one of the royal beasts under his charge was in fighting trim, one of them being sick, and the rest just finishing an unusually large repast.

"By the beard of my father, but you shall replace them yourself, wallah!" growled the king, whose ill-humor had reached its height. "Arm yourself with a tulwar and go in and fight the man-eater. Kill him, or he shall kill you."

A profound silence followed this command, which all who heard it understood as a sentence of death against the unfortunate man whose only defense consisted in having been too indulgent to the animals under his charge.

But in Oude to hear was to obey, even more blindly than in the East generally, and the lion keeper, with his face blanched and his eyes rolling wildly, salaamed to the ground and withdrew.

At the same instant a slight noise heard in the woman's gallery below, and as some of us bent over to ascertain the cause, we saw one of the bamboo railings torn from its fastenings and a light figure fill the opening and leap lightly to the ground. It was Numah, a nautch girl, whom the king has just bought from the dishonest nautch wallah, with whom she had agreed to dance for a certain time. Her home, her lover were now lost to her forever, and she sought to save the poor man's life at the cost of her own.

The king saw her as soon as any of us, and an expression of terror crossed his face, but immediately gave way to ferocious satisfaction.

"It is well done, Numah," shouted he, "Go and tell the admee-kanawallah your sorrows and your wrongs. He will console you."

The nautch girl turned and raised her eyes to the royal gallery.

"Death will comfort me, O king," said she, salaaming low, with the supple grace inseparable from her every movement. Then she walked firmly and fearlessly toward the man-eater, who watched intently her approach, and with outstretched neck and tremendous nostrils seemed to question her intentions.

Arrived within arm's length of him, Numah paused and sank upon her knees, crossing her arms and bowing her head as in submission to her fate.

A silence like that of death reigned throughout the place, broken at last by the grating sound of the horse's hoofs, as, cautiously moving them, he approached the girl step by step, and finally stood directly over her, his head grazing her shoulder, eye and ear were evidently alert to satisfy the mind of their master.

"Ma halla! he will not hurt her," exclaimed the king; and indeed the man-eater seemed to have no intention of so doing, for he was now resting his chin upon the girl's shoulder, and whinnying with satisfaction.

Numah, more surprised than any one, raised her head, looked in the eye of the animal, rose cautiously to her feet, and laid her hand upon his mane. The man-eater whinnied again and rubbed his head against her shoulder.

An irrepressible burst of applause filled the royal gallery, raised by the European spectators. After an instant's hesitation it was joined by the king.

"Savash, Numah! Bravo, girl!" shouted he, clapping his hands. "You have conquered the conqueror of Burrhea, and shall be rewarded. Nawah, see that Numah receives five thousand rupees and is sent back safe to her home with the horse."

Gene and Johnnie.

"When I was a pupil at Hebron Academy over 40 years ago," said Judge Hilborn of California, there were two boys in the Academy to whom I was especially attracted. One came from Turner. He was a bright, spirited little fellow, the best scholar in his classes, very quick to learn and the sort of a boy that everybody said would 'amount to something by and by.' His name was Gene Hale. The other came from Buckfield and was a year or two younger, a little chubby chap, whom everybody liked. We all called him Johnnie Long. He was the marvel of the school in Latin. He had read Virgil through, and knew a great deal of it by heart. He was a wonder, too, in Latin grammar. After we left school I went West and lost sight of them. Now I am here, a member of the naval committee in the house, Gene Hale is at the head of the naval committee in the senate and Johnnie Long is secretary of the navy."

May Burn His Own House.

It would seem absurd to state that a man who burns down his own house is not guilty of arson, yet such is the case in South Carolina common law, and a recent Supreme Court decision has disclosed that according to law a man can wilfully destroy his own property by fire.

There are now 152 newspapers in Greece with an aggregate circulation of 175,000. The political journals number 52; literary, 12; commercial, 6; scientific, 28; satirical, 6; legal, 6, and medical, 2.

George I. of England never learned the English language.

ARIZONA REPTILES.

VENEMOUS CREATURES AS SEEN AT VERY CLOSE RANGE.

The Tarantula Is a Dangerous Fighter—A Killing Brought About by the Big Spider—An Enemy Feared By Him—The Centipede's Hot Feet.

"He's an independent sort of fellow, the tarantula," said a mining engineer who resided for several years in Arizona, in the New York Sun. "He's an awkward walker, sometimes sprawling like a crab, and again lifting himself stiffly upright on his long, hairy legs, so that he suggests the idea that he is walking on stilts. He can run fast on occasion; but, whatever style of getting along he may adopt at any time, there is always a devil-may-care swagger to his gait, which says as plainly as words could: 'I'm a fighter, and dangerous, and I know it; and you know it. Don't pick me up; and give me room.' The best looking feature about the tarantula is his furry back, varying from light brown to dark brown in hue, and sleek and glossy. His eye is bad, very bad, underscored as it is by the two curved, black poison fangs as sharp as cambric needles. The tarantula's temper is as bad as his eye and it needs little provocation to set him fighting mad. At such a time he develops an activity which makes him the most dangerous of all the Arizona reptiles. I have seen a tarantula in a rage leap from the ground to the height of a man's breast, which is a longer striking reach than the largest Western rattlesnake has.

"As a rule the tarantula, if left alone, will, like other reptiles in general, retreat from the presence of man. Most of the cases where persons have been bitten by tarantulas have occurred through their unwarily coming upon one where he thought he had no chance to run; and a frequent cause for such a mishap is the rolling over of a sleeper upon a tarantula, or the throwing out of a hand in sleep in the direction where one may be, when instantly the reptile fastens to its victim with a fury that is terrifying. His bite is as dangerous as the rattlesnake's and the approved treatment for it is by the standard remedies, ammonia and whiskey. If treatment is immediate the bite of any reptile rarely proves fatal to a healthy man, though often recovery is slow and attended with pain, and sometimes disfigurement. Once in camp in Colfax County, N. M., our party were driven from the tent one night by tarantulas, which for some reason unknown to us swarmed in and took possession. None of them offered to attack any of us, but there they were on the ground, and bedding and tent walls, and they were coming faster all the time. To try and clear them out was hopeless, and no man cared to take the [illegible]ying to sleep in such c[illegible]we maneuvred to get ou[illegible]nd then went out of do[illegible]der the stars while the tarantulas kept the tent. In the morning when we went to the tent, expecting to have round-up of tarantulas, not one of the big spiders was to be seen.

"One of the quickest and completest [illegible]most justifiable killings that ever I saw came about through a tarantula. It was at a mine camp, and the camp bully had a tarantula impaled on a stick. A man newly arrived from the East stood gazing, fascinated with horror at the squirming reptile, working its black fangs in the effort to reach something that it could fasten them into. Suddenly, without warning, the bully thrust the tarantula straight into the tenderfoot's face. His whiskers saved him from the fangs, but he let out a yell as if he had actually been bitten, and jumped back, I fully believe, ten feet. Then, as the fellow came poking the tarantula toward him again, the tenderfoot drew his revolver and turned loose on his tormentor. His first shot would have been enough, as it went straight through the fellow's body, but the tenderfoot had his excitement to work off, and he never stopped shooting until his revolver had been emptied and the man with the tarantula was a sieve. 'Served him right,' was the verdict of the Coroner's jury, and the case never went to court for trial.

"The tarantula's nest is a curiosity. Its interior is of mud, dried by the sun to the hardness of adobe brick. Its interior, of cylindrical shape, is lined with a fleecy white substance like cotton wool, and this queer house is furnished with a circular door of hardened mud, also lined with the cotton like material and opening outward upon a hinge of the same material. Bold as the taranaula is, he has one enemy from whom he will seek refuge anywhere that he can—the tarantula hawk, a huge black, hairy wasp, which in appearance conveys the idea of a flying tarantula. When the big spider opens its door of an afternoon preparatory to a promenade, on business or pleasure bent, if he spy a tarantula hawk hovering around he draws back into the house in a hurry and closes the door; and not a step will he venture beyond his threshold until the air is free from signs of danger. He knows he is no match for the hawk, which will tackle him too quick if he once gets the chance.

"[illegible]"

rantula is the crawling centipede, built somewhat on the model of a train of cars, the resemblance being enhanced by the reptile's habit of running straight backward when suddenly confronted. Every joint of its long body has two legs, each jointed and tipped with a sharp point like a bee's sting. Its head is furnished with two pincer-like poison fangs, which work horizontally toward each other, and instead of legs its rearmost joint is furnished with two long hooked claws, which drag behind as the centipede walks, and by which it can hang head downward from any place to which it can fix them. If a chance is given the centipede it will run from the presence of man, and most of the cases where men have been bitten by one of these reptiles have come about through the man's rolling upon them or in some other way crowding them while asleep. The sensation produced by a centipede's crawling upon the bare skin, with its numerous and keenly pointed feet, is usually described as similar to that of being touched with a red hot poker. If the person thus invaded remain perfectly still, the reptile will crawl off as soon as it can; if an attempt be made to shake it off, it sets every claw into the flesh in the effort to hold on, with an effect like the simultaneous stinging by a score of bees, and if in any way it be crowded or jammed it bites, injecting a poison which, though less virulent than that of the tarantula or rattlesnake, causes a serious sloughing from the wound during the progress of recovery."

BICYCLING IN THE TYROL.

Even the Mountaineers Have Caught the Fever.

Pete Bailey and his merry men and Colonel George E. Waring, Jr., commissioner of street cleaning in New York City, made a bicycle tour through the Tyrol last summer. Colonel Waring has written for The Century two stories descriptive of his experiences. In the second one, "Bicycling Through the Dolomites," Colonel Waring says:

We found that the bicycle fever had reached even to our landlord who was experimenting with an iron-rimmed wheel over which the saddle was supported by a pair of elliptic springs. L—— tried it, and said it went very well, though not so soft as the "pneu." I lifted it, and did not care to go further. I told him it was too heavy. He said, "Mawknix; muss starker sein" (That's nothing; you must be stronger). Probably the extra weight of this wheel would not be considered in fixing the load that a Tyrolese peasant would carry over the hills from the fields, and need not be regarded as an obstruction to sport. The wheels here are all much heavier than ours, and much stronger. They can be sent up hill by the tougher thews that grow in this land, and for safety in going down hill they have very effective brakes. The best brake has two pieces of rubber, and about two and a half inches long and three-quarters of an inch square, which are held flat against the two quarters of the tire. It holds very firmly, and its friction does not come on the part that is subject to the greatest wear. It is used, not with a steady pressure, but with successive light squeezes. When one becomes accustomed to it, it gives excellent control to any degree desired—even to holding the machine stock-still under any load and on any grade. Even the usual flat brake has a rubber face which holds better and lasts longer than metal. My American brakes were "not in it" on these hills, as compared with those local wheels which I rode.

The use of the brake is exacted by law in all towns, and it is almost universal on country roads; so is the furnishing of the wheel with a bell, but the better riders in Innsbruck do not use it in the city streets. They say they can make their way safely at a moderate speed, if the people keep on their way, while if they are disturbed and made nervous by a bicycle bell, they are liable to make some unexpected movement that may lead to a collision. I remember a case of mutual dodging at a street crossing in New York, between myself and a lady whom my bell had startled, which came near being annoying. Perhaps the custom in Paris of hanging a little sleigh bell loosely from the handle bar is safer. It jingles all the time, somewhat to the annoyance of the rider; but it has a faint horse car suggestion which keeps the public on the lookout. Nowhere in Europe did I see the brutal quadrupedal "scorching" that is such a nuisance and such a danger with us.

Another device I found to be in very general use in Tyrol. This is a snap-clip for holding the front wheel in line with the machine, so that it may be stood against a tree or any other support without falling. It is useful in pushing up hill with the hand on the saddle. The direction is changed by lifting the hind wheel to right or left. The clip is set or released in a moment.

As we left our lunching place we found the young townlads of the farm standing in mute and respectful wonderment about our wheels. We gave them a bit of a ride, two at a time, and left them enriched with the memory of a sensation they had never before known, and will never repeat—[illegible]at all [illegible]

FARM AND GARDEN NOTES.

Notes of Interest on Agricultural Topics.

Shortnorn Carrots—Want Trying—Varieties of Turkeys—Getting Rid of Cut Worms, Etc., Etc.

WORTH TRYING.

I will say to those wanting a remedy to remove warts from cattle try hog's lard, writes N. F. Lisles, a North Carolina farmer, in Home and Farm. Apply the lard to the warts freely at intervals of three or four days until you have made several applications, or the wa[illegible] disappear.

To those wanting a remedy to prevent peaches being wormy, will say rake away some of the top soil for a short distance around each tree, in the spring, and take good wood ashes and sprinkle over the roots near the body of the trees, about two or three quarts to each tree, according to size, then rake back the soil on the ashes.

VARIETIES OF TURKEYS.

There are no less than six varieties of turkeys, of which the Bronze is preferred by most breeders, though the Narragansett, as grown in Long Island, is nearly as good. They are both grown from crosses with wild turkys, and by growing only for breeding from two-year-old birds, these breeds attain very large size. Farmers of Connecticut and Rhode Island raise a large proportion of the turkeys sold in New York City, and some of them each year present to the President the turkey that furnishes his Thanksgiving dinner. Bronze turkeys have been grown in less than a year to weigh 38 pounds. But there are few families that want so large a turkey as this, even when satisfied it is young and tender. Birds that weigh 15 to 18 pounds find more ready sale, and generally bring more per pound than the heavy weights. The only trouble in turkey growing is to tide the young chicks over the first few weeks of their life. Then they are tender. After getting in full feather turkeys are as little likely to loss as the same number of chickens. The four other varieties besides those we have named are black, white, buff and slate, each of which has its favorites.

GETTING RID OF CUTWORMS.

The worm most commonly called "cutworm" is the white grub, a larvae of the common May or June bug. But the [illegible]m is also sometimes applied to the wire worm, which works wholly underground, living on the roots of most crops, but being most injurious on Indian corn. Both of these are common in land that has long been seeded. The remedy for both is the same. Starve them out by plowing. Then sow to buckwheat two successive years, and the land will be free from this pest for a number of years. If it is the white grub, and the timothy sod is much eaten, it is a sign that most of the grubs have matured, and will leave of their own accord within a few weeks. By plowing early and frequently cultivating before time to plant, such a piece of land might be planted with corn this year. If there were many grubs visible, however, we should not care to risk a corn crop this season. The white grub rarely does much injury two years in succession. If you were troubled with them last year there will probably be few this. But if they have been in timothy sod the land will need plowing, if it is only to reseed it. This can be done by sowing timothy seed on the surface after the buckwheat is sown. The buckwheat will keep the grass from growing much until it is off, but the timothy will make some growth before winter, and will produce a hay crop next year.—Boston Cultivator.

CARE OF DAIRY UTENSILS.

There would be less poor butter on the market if more attention were given to the care of the dairy utensils. They should be washed as soon as possible after being used, as the longer the milk remains in them the harder they are to clean. First rinse in cool water to remove the milk, never use hot, as this cooks the milk and causes it to adhere to the vessels. After rinsing wash thoroughly, or what is better still, with steam, if it is available. This scalding is very essential and should be thoroughly done. After scalding turn upside down in a clean exposed place where they will get the full benefit of the sun, as this helps greatly to keep them sweet.

Strainers should be given a good deal of attention, as they come in contact with all the milk. If cloth strainers are used they are difficult to keep clean. A cheap grade of cotton flannel used nap side up makes a good strainer, and if only a small piece is used it is best to throw it away after each straining.

All tin utensils should be as free from seams as possible, hence, of course, dressed tin is best. If there are seams or corners they should be filled with solder so as to leave no lodging places for dirt. A few minutes' work with the soldering iron will [illegible]

rantula is the crawling centipede, built somewhat on the model of a train of cars, the resemblance being enhanced by the reptile's habit of running straight backward when suddenly confronted. Every joint of its long body has two legs, each jointed and tipped with a sharp point like a bee's sting. After getting in full feather turkeys are as little likely to loss as the same number of chickens. The four other varieties besides those we have named are black, white, buff and slate, each of which has its favorites.

GETTING RID OF CUTWORMS.

The worm most commonly called "cutworm" is the white grub, a larvae of the common May or June bug. But the [illegible]m is also sometimes applied to the wire worm, which works wholly underground, living on the roots of most crops, but being most injurious on Indian corn. Both of these are common in land that has long been seeded. The remedy for both is the same. Starve them out by plowing. Then sow to buckwheat two successive years, and the land will be free from this pest for a number of years. If it is the white grub, and the timothy sod is much eaten, it is a sign that most of the grubs have matured, and will leave of their own accord within a few weeks. By plowing early and frequently cultivating before time to plant, such a piece of land might be planted with corn this year. If there were many grubs visible, however, we should not care to risk a corn crop this season. The white grub rarely does much injury two years in succession. If you were troubled with them last year there will probably be few this. But if they have been in timothy sod the land will need plowing, if it is only to reseed it. This can be done by sowing timothy seed on the surface after the buckwheat is sown. The buckwheat will keep the grass from growing much until it is off, but the timothy will make some growth before winter, and will produce a hay crop next year.—Boston Cultivator.

CARE OF DAIRY UTENSILS.

There would be less poor butter on the market if more attention were given to the care of the dairy utensils. They should be washed as soon as possible after being used, as the longer the milk remains in them the harder they are to clean. First rinse in cool water to remove the milk, never use hot, as this cooks the milk and causes it to adhere to the vessels. After rinsing wash thoroughly, or what is better still, with steam, if it is available. This scalding is very essential and should be thoroughly done. After scalding turn upside down in a clean exposed place where they will get the full benefit of the sun, as this helps greatly to keep them sweet.

Strainers should be given a good deal of attention, as they come in contact with all the milk. If cloth strainers are used they are difficult to keep clean. A cheap grade of cotton flannel used nap side up makes a good strainer, and if only a small piece is used it is best to throw it away after each straining.

All tin utensils should be as free from seams as possible, hence, of course, drawed tin is best. If there are seams or corners they should be filled with solder so as to leave no lodging places for dirt. A few minutes' work with the soldering iron will save much time in washing. Wooden pails should never be used for milk, as it is practically impossible to keep them clean.

Where milk is taken to a factory the cans should be washed before they are returned. It is bad practice to take back skim milk, which is usually sour, in the cans used for whole milk, but this often done, and can hardly be obviated where the milk is hired hauled. Of course, the skim milk should be returned, but it is much better to have a barrel for the purpose. If the cans are used for skim milk they should be emptied on reaching the farm and thoroughly cleansed.

All wooden utensils, such as churn, butter worker, etc., should be washed and scalded after being used, and if placed in the sun care must be taken that they do not become so dry as to crack. From one churning to another the churn should not be kept tightly closed, as it will soon become tainted. In preparing wooden utensils for use they should be scalded and then cooled with cold water. If treated in this way the butter will not stick.—W. J. Fraser, University of Illinois, in Farmer's Voice.

GRAIN FOR MILCH COWS.

It is possible in the laud [illegible]on of the silo, and especially of corn ensilage, as the cheapest food for cows, [illegible]at the subject has been discussed on too narrow a basis. It is true that more weight of corn fodder can be grown per acre than of anything else. It is also true that this fodder is so largely carbonaceous that in itself it is not a complete ration, and needs to be supplemented with food that contains a larger proportion of the kinds of nutrition required to build up muscle and bodily strength. This is especially true of cows, whose product, milk, always contains even when richest, nearly four times as much of caseine as of butter fats. Rich corn ensilage which is made from corn when it is in the earing stage supplies the carbohydrates in succulent form. But if a due proportion of nitrogenous food is not supplied to furnish material for the caseine, the yield of milk is lessened and the carbohydrates that cannot be used for milk only fatten the animal and unfit her for milk production.

[illegible]lkmen und[illegible]tand that to get the m[illegible] from corn fodder fed any way, something else must go with it. Wherever clover can be given it makes the best and cheapest accompaniment with corn fodder. But with the milking breeds that have little tendency to fatten, some more concentrated nutrition may be often fed with advantage. This is especially true of some of the deepest milkers, whose product is naturally not so rich in butter fats. Such cows are always thin in flesh after milking a few months, no matter how sleek they have been at calving time. They give all to the milk, even including the fat of their own bodies. If they are fed more concentrated food they can eat more and give more and we believe richer milk.

The great majority of milkmen buy more or less oats, wheat bran, brewers' grains and gluten meal as feed for their cows. They buy because they mostly live where land is too high priced to grow anything except fodder corn, which is too bulky to be brought to the farm, and must, therefore, be grown on it if it is to be had at all. But there are millions of farmers who keep cows for making milk, butter and cheese, and who also grow grain, which, instead of feeding on the farm, they sell. In our opinion, this is nearly always a mistake. It may be that a farmer can better afford to buy grain than to raise it. That will depend on his nearness to a railroad station where he need not carry it far to put it in his barns. But in every case if he has grown the grain in any Eastern state he can better afford to feed it to his cows on the farm where it was grown than to sell it. It is probable that not even the Western farmer can grow oats or corn to sell at present prices. Corn is so cheap in many parts of the West that it is nearly or quite as economical as coal for fuel. Oats are about as cheap, but they are more nitrogenous, and worth much less as fuel than is corn.

Corn as grain and oats mixed together and ground make an excellent grain ration for cows whose main feed is silaged corn. But wherever corn is advanced to the earing stage, there will probably be enough carbonaceous nutrition in the silage. Ground oats with some wheat bran will make a better ration with such silage than will more corn. On farms too far from the station to make it easy to buy Western corn, oats ought to be grown more than they are, not, of course, to be sold in the market, but to be fed to milch cows and thus increase every product of the dairy.—American Cultivator.

In the Sun.

Scarlet seems the color most conspicuous in bright sunshine, and scarlet flowers are commonest in dry and sunny climates, where their color gives them an advantage in their struggle with other flowers for the attendance of butterflies and other pollen beasts.

NOTES AND COMMENTS.

Michigan people claim that their state contains within its borders 4,845 lakes and nearly or quite 50,000 streams. The amateur fishermen take great delight in these statistics.

A dispatch from New York says that "gold has become a drug on the local market." Here seems to be a fine chance for some enterprising young man to enter the drug business.

Mrs. Fred C. Harris advertises in a Chicago paper that she "will not be responsible for any debts which her husband ma[illegible] contract." The new woman is beginning to strike back.

The Atlanta Journal announces that "a splinter which had remained in the foot of Miss Babe Martin for forty-four years has worked itself out." This, we believe, is one of the longest intantile inflictions on record.

A man in Beaver Falls, Pa., ran over a dog the other day and received a severe fall from his bicycle. Ever since then he has seen everything double. [illegible]hat is much cheaper than the usual way of producing such effects.

Dr. Wiley, the chemist of the Agricultural Department in Washington, says that, in his opinion, the coming salad oil will be made of sunflower seed. [illegible]t is a perfect substitute for olive oil, and will be so cheap that it may be used on [illegible]e poor man's table.

In his recent researches in regard to rinderpest the destructive cattle disease which has wrought great havoc in South America, Dr. Koch has discovered that by using the bile of an animal which has died of rinderpest to inoculate a healthy animal, the latter is rendered immune to the pestilence for some months at least.

Statistics from various sources report that there are 1,118,000 women stenographers in this country, earning annually about 60,000,000 dollars. That in France there are 2,150 women authors and journalists and 700 women artists. Among the writers, 1,000 are novelists, 200 poets, 150 educational writers, the others writers of various departments.

"This is life in the East," says Mr. Heitfield, the new Senator from Idaho, "It's all new to me. I am getting so dissipated now that I don't go to bed until 10 o'clock and get up with the sun. I am used, too, to an active, busy life, so that the sitting around all day makes me lazy. Just as soon as the extra session is over I am going back to harvest my crops.

Commenting on the statement that Kipling's salary of $5,000 a month for reporting the Cretan war "would be a pretty fair salary for a beginner in reportoral work," the Knoxville Tribune gravely calls attention to the fact that Kipling is not a beginner, but has done local, edited telegraph and written editorials. All right, then; he is entitled to receive as much as the rest of us do.

It is said that experiments in Florida and Louisiana show that bamboo will grow in those states almost as well as in the hotter countries. Around Fort Myers there are bamboos that have attained to a height of fifty or sixty feet. They are of a variety which usually grows to about seventy feet in India. In Frange County (Florida) there is one clump of bamboos, said to be only ten years old, in which the stalks have attained to the height of sixty-five feet, the stalks averaging thirteen inches in circumference. There are eighty stalks in the clump. This particular clump is a variety from Bengal, where the wood is used for building purposes and for light spars for vessels.

In a call for a National Fish Congress to be held at Tampa, Fla., next January, Governor Bloxam of Florida says: "We respectfully request the Governors of the various states of the Union and the fishery commissioners of the same to appoint delegates to this congress, which should command the earnest attention of all good citizens of the United States. In this interest we commend the words of the Hon. T. T. Wright, who says the water farms of the United States, oceans, lakes and rivers, are neglected and but half developed. Let us turn on them the searchlight of science to reveal their treasures and possibilities, and thereby increase openings for new fields of labor and a larger supply of food for mankind."

"The Augusta (Ga.) Chronicle" says: "James M. Smith, of Oglethorpe, Georgia's greatest farmer, has just broken all records of cotton sales from a single plantation by selling to Macon cotton-buyers in one lot over two thousand bales of cotton of his own raising. The cotton was sold on a basis of seven cents for middling, and when it is all weighed and shipped Mr. Smith will receive a check for about $70,000. This would be a tremendous crop, even if Mr. Smith raised nothing but cotton, but when it is remembered that he grows similarly large crops of grain and hay, and that cotton is his surplus money crop after producing all the provision crops he needs, then one can grasp some idea of the scale on which Colonel Smith farms, and see the justice of calling him Georgia's cotton king."

There are 200,000 post offices in all the countries of the world enjoying organized facilities of correspondence, and of this number 70,000 are in the United States. In respect of the number of letters and postal cards written and received the revenue and disbursements of the department, the extent, promptness, and accuracy of letter delivery, as well as in the number of post offices, the United States stand at the head of all other nations, Germany following second, Great Britain third, and Austria, among European nations, fourth. The United States sell in a year 2,000,000,000 two-cent stamps, which is equivalent to 1,000,000,000 letters sent through the mails in a year. In addition to this the United States sell in a year 600,000 one-cent stamps, some of which are used for letter, though a larger number for newspaper and circular postage, 12,000,000 three-cent stamps, 20,000,000 four-cent stamps, and 50,000,000 five-cent stamps, mostly used for letters sent from this country for foreign delivery. More than 1,000,000,000 letters a year, therefore, paying full postage, and exclusive of postal cards, are written in the United States.

President Hoffman of the Seaboard Air Line reports that much success has followed the introduction of experimental farms along the line of the railroad. The work is proving to be one of great value to the farmers. The right of way along the road is used for the experiments, and there is a regular force of men to go over the line and look after their development. Station agents supervise the farms contiguous to their stations. Grasses and food products of all kinds are tested, and under the direction of experts it is shown what articles can be grown to the greatest advantage. A number of new crops have been introduced, and the diversification of products is noticeable. Farmers are taking special interest in the plan, and a large number of clubs have been formed to promote the work. The beautiful is included with the practical, attention being given to the cultivation of flowers, shrubbery, and trees. Just as the farmers have become interested in the production of food products, their wives and children have taken up this department. They have also formed clubs, and there is a generous rivalry among these organizations to excel their neighbors. As a result of such influences President Hoffman said that there was a notable improvement in the appearance of property in the agricultural sections. Flower gardens were rapidly multiplying, and with them have come well-built fences, thus showing that the lesson of thrift was also being learned.

It is somewhat remarkable, says the New York Times, that the Penobscot Indians, after living in uninterrupted peace with the white man for 230 years, have at this late day decided that the time has come for complete separation from the stronger race, and have enforced the removal of all its representatives from their lands. Still more remarkable is it that in the history of the tribe there is no record of wrongs, ancient or modern, suffered at the hands of the palefaces. With this particular band of Indians the whites have always kept faith, chiefly, no doubt, because they have never had even a poor excuse for breaking it. As far back as 1667 the Penobscots admitted to full tribal membership a French nobleman, Vincent de St. Castine, who, having tired of civilized life in general and especially with military discipline as it existed in the Canadian Army, came over into what was then Massachusetts, married a chief's daughter, and settled where the town bearing his name now stands. Since then there has rarely been a time when the tribe did not include a considerable number of white members, and there is no evidence that any harm came to the Indians from these associates. Some time before Maine came into existence, a tract of land extending six miles on each side of the Penobscot above tidewater was set apart as property of the tribe and the new state recognized the grant as binding. As the numbers of the Indians decreased, a large part of this land was sold, and they now own only three islands near Oldtown, but the state acts as their banker for $74,000, the product of the sales, and pays them 6 per cent interest on it. This income is divided annually among the members of the tribe, and it is only to prevent an undue diminution of each share that the Penobscots have decided henceforth to allow no white people to live in their domain.

A Devoted Bicycle Cat.

There is a cat in Danville, Pa., that is a victim of the bicycle craze. Being unable to pedal himself, this feline takes his rides perched on the shoulders of bicycle riders and never misses his hold after being placed in a secure position. When a boy starts for a ride the cat follows and meows pitifully until assured that he is to take part in the sport.

Something called astrakhan lace seems quite a novelty, and it is made of silk, very airy and light like old-fashioned Honiton, with a pattern prettily defined by close loops of silk.

PEABODY SUMMER SCHOOL OF PEDAGOGY.

To Teachers of Alabama:

The Peabody management, per Dr. J. L. M. Curry, Agent, in connection with Dr. J. O. Turner, State Superintendent of Education, Montgomery, Ala., and the State Normal College authorities, at Troy, Ala., will hold the Ninth Annual Session of the Peabody Summer School of Pedagogy at Troy, Ala., beginning June 1st, and holding four weeks.

The State Normal College is then in session; top, and all the advantages of the college classes will be open to the Summer School Teachers, and the College Model School work may be observed and studied by them, too. This will indeed be a great help to teachers attending and taking advantage.

And the work of the P. S. S. of Pedagogy students having a full credit on the college records, all college advantages of every kind are theirs and these advantages inure to their benefit by receiving from the college a certificate of attendance and work, which will be a strong testimonial in receiving better positions.

The instruction provided is of a high order, and pains are taken in every way to make this a most profitable thing for all teachers attending and working diligently.

The expenses will be but about $8 or $9 for the four weeks board, and all other incidentals are moderate. Write for arrangements and be on hand June 1st, 1897.

E. R. ELDRIDGE,
Conductor, P. S. S. of Ped.
Troy, Ala.

INVISIBLE POWER.

There is a charm in the story of every childhood. It is the beginning of a large and long story that may reach into the great places of the world, and may grow into a romance, a poem or a history. As a little rivulet in the highlands is beautiful in its playfulness, so is the life of every child. And then beyond its present interest there is a promise of so much more of a life full of the deep concerns that absorb and make us all.

You cannot tell by merely looking at a person what they will be or do. Every boy or girl has an ore mine within himself or herself, but no one can tell what kind of ore it is till it is opened and assayed and put to use. Every person is a power, but of what use his manhood or her womanhood must determine. Many never ripen and rise to their best, because of unfavorable circumstances, mistaken in their choice of pursuits, in their places to live, or in their associates or habits. In many ways they blacken their own ways and entangle themselves in evil-webs, which prevent their development so that much power lies latent in persons who ought to have been far greater and better than they are.

When a child has a great heart, a great energy and a great power for play and work, if it has an average intellect it has the qualities that ought to make it a strong man or a noble woman. Such men as Abraham Lincoln, President of the United States, were of this type. If any of the boys he used to play or work with had said, "Abraham will make a great President of the United States, put down a great rebellion and free all the slaves," what a laugh it would have raised among the boys, and Abraham himself would have laughed at it as a great joke.

It is clear that the mind is the source of greatness, that only as the mind is developed and active do men do great things and become honorably distinguished among their fellows. Perhaps we all possess some power of greatness, although it may be invisible to us. Then let us work and wait.

A GLEAM OF SPRING.

—:o:—

There stole into my room to-day
A tiny breath of spring—
A premonition of the May
And the sweets that May will bring,
'Twas a burst of woman's song,
In tender, blithesome bars—
A hymn that speeds the earth along
Its pathway in the stars.
It bade my heart be brave and gay,
It made my path serene;
It helped me onward 'long the way—
This song of hers—my queen!

J. RALPH RENY.

To set out a nice orchard and then let the trees take care of themselves is to ignore the thousand and one dangers which are ever ready to beset orchard trees. Let us not forget that the primary object is to grow healthy, strong, fruit bearing trees.

Spain is not going to recall 30,000 troops from Cuba. When the rainy, sickly season comes these 30,000 may go to join their brethren in the sweet by and by.

CHILTON COUNTY CALL

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

AN OLD CONFEDERATE.

Once in a while The Call meets up with an old man whose hair is grayer than the gray jacket that he one time wore. He cannot reconcile himself to the conditions that resulted from the civil combat between the sections. He cannot accept the inevitable, as Lee and a mighty majority of Southern soldiers accepted it long ago. He puts us in mind of a story told of Sambo.

"Beautiful moon, tonight, Sambo," said the Yankee newcomer.

"Yaas, boss; hit's a fa'r to middlin' sorter moon; but yourns jes' oughter done saw hom much beautifuler hit wuz befo' de wah!"

Ah, nothing seems as good to one of the older generation—nothing as it was before the war; for then the blood of youth leaped bravely in his veins; hope ruled his heart, and life spread like a radiant vision before his enraptured eyes.

So, the old soldiers of the South who cling to the past, while they condemn the present are worthy of all honor at our hands, though their ways are not the ways of their more progressive, and, therefore, more prosperous brethren.

The State Sabbath Observation Association held its annual session in Montgomery recently and adopted some radical resolutions with regard to Sabbath observance. One section goes so far as to condemn all travel and traffic, passenger or freight, on railroads or street cars in cities; bicycle riding, recreation by visiting or strolling in parks or other public places, or in one's home; purchasing or perusing newspapers. It is clear that such extreme exactions injure the cause they are intended to aid.—Birmingham News.

The Call fears that the members of the Association in question are entirely too good for this earthly ball. They should forthwith sprout wings and fly to glory.

Alexander Hamilton, an ex-member of the Kansas Legislature from Woodson county, says the air-ship visited him one night last week and carried away a fine heifer from his cattle-yard, and that the hide of the animal was found next day ten miles away. The Hon. Mr. Hamilton further declares that he, his son and his hired man all got within 300 feet of the thieving craft and saw two men, one woman and two children aboard the same.—News Item.

Of course, the foregoing is a fake; but what better could be expected from an Alexander Hamilton? The original bearer of that nauseous name was the biggest fake that ever popped up in American politics.

Take the news features from the New York World and it wouldn't have a corporal's guard—no. not a jail-guard—of readers outside of the fool-houses. —Sheffield (Ala.) Reaper.

Fudge! The news features of the World are duplicated by every big daily on the continent, and if it depended on that department alone, it wouldn't have a tithe of the circulation it has today. Nine-tenths of its patrons support it because it is constantly springing new, bright and intensely interesting subjects for their perusal—because it is up-to-date, and because there is no taint or trace of mean, narrow, purblind Puritanism on any of its many pages.

A farewell banquet was tendered Ambassador Tommyrot Bayard by the American Colony of London, the other day; and a cablegram says:

"There was a noticeable absence of the majority of best American residents in London."

Good! Shows that a majority of the best Americans on the other side have as great a contempt for Tommyrot as our people at home. Tommyrot, by-the-bye, is the most detestable flunky that was ever set on end. He beats the Jeems Yellowplush of Thackery by a round majority.

Why should these United States have a special arbitration treaty with England? Why not have a similar understanding with Germany, France and the Scandinavian countries first? There are more Teutons, Gauls, Celts, Norwegians, Swedes and Danes in this land of our than ever landed on our shores from "the tight little island." But these people have forever been our friends, while the English are our hereditary enemies.

Notice is given in the Prattville Progress that application will be made for the pardon of James Ramsay, who was convicted at the spring term of Circuit Court, 1897, of Autauga county for assault with a pistol.

When a woman makes up her mind she does it so hurriedly that it will not stay made up for any length of mind.

Judicious advertising pays.

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

And now Centreville is going to outdo the whole South. The Press says that parties with capital and experience have been looking over that place with a view of purchasing land and establishing there a horse and mule market, which will be the largest one in the South, and that stock will be shipped in by the train load, but, of course, they are going to wait until their new railroad is built.

Ores from the various veins in West Tallapoosa's gold fields are being exhibited here every day, and it is a common sight to see men with the mortar and pestle beating up the rock in order to wash out the yellow dust.—Alexander City Outlook.

The trains do not stop here for meals now.—Eutaw Mirror.

It is a common occurrence to give an engine a drink, but to feed a train—well, perhaps we are not thoroughly acclimated yet.

Jim Thomas, one of the men who held up the L. & N. train near Calera on March 9th, and for whom a reward of $300 was offered, has been captured near Fayettville, N. C.

The fifty-seventh annual session of the Grand Lodge of Alabama, Independent Order of Odd Fellows was held in Bessemer last week.

The Grand Jury for Bibb county investigated 67 cases, examined 200 witnesses and returned 36 true bills at a total cost of $126.37.

There are two white males, five white females, two colored males and one colored female in the Bibb county poor-house.

The cost of the jury for the first term of the new Tallapoosa county court was between $136 and $140.

The Sylacauga Enterprise claims that the peach and berry crop will be very good in that section.

PASSENGER TRAIN WRECKED.

Tumbled Through a Trestle—Fifteen People Badly Hurt.

A southbound passenger train on the Santa Fe road, known as the Chicago and Galveston express, went through a trestle at 5 o'clock Sunday morning.

Fifteen persons, passengers and trainmen, were injured. Several of these are seriously hurt and two will die.

The accident occurred near the town of Marietta, Texas. A heavy rainstorm, amounting almost to a water spout, caused a sudden rise of all the small streams in that vicinity. The accident occurred at a point where a deep, narrow gulch was spanned by a wooden trestle. The foundation works supporting this trestle was undermined by the sudden rise of the stream, which flows through the gulch, and the trestle went down under the heavy weight of the train.

So great was the speed of the train, however, that the engine and tender, the express, mail and baggage cars and one passenger coach passed over the narrow chasm, though the trucks of several of these cars went to the bottom, twenty feet below.

The coach next to the last, the one immediately in front of the Pullman, was left standing directly over the chasm, the end resting on each bank of the gulch. The Pullman remained on the track. The four coaches which were dragged by the locomotive across the broken trestle were badly wrecked. The baggage car telescoped with the passenger coach, which was the smoker, and the latter was all but demolished. The most of the injured were riding in these coaches.

FOUR LIVES FOR A BRIDE.

A Bloodthirsty Mexican Slays His Sweetheart's Brothers.

Henry Briggerman, an American stockman living near Moncloy, Mexico, arrived at San Antonio Saturday with news of a desperate quadruple tragedy just enacted on the Hacienda del Cedral, near his ranch.

Macedonia Frausk, a seventeen-year-old boy of that neighborhood, was in love with Anita Moyas, the daughter of a ranchman.

The family opposed the marriage, and Frausk determined to get possession of her. He armed himself with a rifle and started for her home.

On the road he met Manuel Solis, manager of the hacienda, accompanied by one of the girl's brothers.

The boy and the two men had words, and Frausk shot and killed them both. Another brother of the girl arrived on the scene and was also shot and killed.

Before the boy got away from the scene of the crime, Manuel Herrera came up and attempted his capture.

Herrera was also killed. The murderer then proceeded to the girl's home and the two eloped.

WASHINGTON IS BRONZE.

Statue of Nation's First Ruler Unveiled At Philadelphia.

George Washington was honored at Philadelphia Friday in monumental bronze. All possible pomp marked the ceremonies.

The cord which released the swaddling flags from the figure of the first ruler of the republic was drawn by its latest ruler.

Surrounding him were men in whose veins runs the blood of those first patriots who battled with Washington and with him made possible the scene enacted under the auspices of the Society of Cincinnati.

President McKinley's address was the feature of the ceremonies.

The oration was then delivered by Mr. Porter, a great-grand-son of General Andrew Porter, who was on Washington's staff in the revolution. He began with a recital of the formation of the Society of the Cincinnati by officers of the American army, together with origin of the plan which culminated in the day's event.

STEAM LAUNCH CAPSIZED.

Three Drowned and Thirteen Others Are Rescued.

A steam launch, in which were sixteen persons seeking a view of the dedication ceremonies at Philadelphia became unmanageable and was swept over the dam at Fairmount at Schuylkill river. The boat capsized and all the occupants were thrown into the river. A woman named Ewen and two young sisters named Matthias were drowned. The others were rescued.

AGAINST TOBACCO COMPANY.

A Decision Which Says the Corporation Is an Illegal One.

Judge Gibbons, at Chicago, has rendered a decision declaring the American Tobacco company an illegal corporation and prohibiting its agents from carrying on its business within the confines of Illinois.

The decision sustains the information filed last December by Attorney General Maloney asking that the American Tobacco company be enjoined from selling paper cigarettes on the premises, that it was a trust monopoly and conspiracy in the business.

The court said that the power of self-preservation is inherent in statehood.

LANGVILLE & SON,

General Blacksmiths and Wagon Makers.

Prices reasonable and first-class workmanship.

DR. O. T. DOZIER,

(The Renowned Southern Specialist)

Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice, Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)

We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at the head of his profession.

(Dozier's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his engagements.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

Dr. O. T. Dozier's professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Long Ago.

There's a fair, enchanted valley that my homesick fancy fills,
I can see each waving grass blade growing there between the hills,
Hear the stream go chafing, fretting through the rapids of the glen,
While the mountain brook laughs loudly, flinging echoes back again.
'Tis a song that, gathering sweetness, through the vistas of the years,
Still repeats its far-off cadence in my ever listening ears.
I can see the foam bells floating on the current of the stream,
And the cares of life grow dimmer than the shadow of a dream.
See the river pale in silver, redden in reflected glow
From the skies that bend above it, as I saw them long ago.

Does the weight of throw the
When again I was from that
Let me lie there, story of
Unto you, O listen at my feet.
Rest my heart and idly
When the willow ders of the
Answer with thy with thy
In assurance He failures
Whisper unto me with the
In the land all the long

I am weary with mistaking piercing thorns for price
Weary, worn, one moment grant me vision of the
Let the splender pierce the godlight of the dreamy
Till I see a boat that crossing anchored safely lon
With that vision clear before me, what shall matter
Since I know that in that country every heart is
I have tried to learn my lesson in the good that I
And my doubts have faded, melted in the warmth
'Tis the deathless, changeless lesson that wherever
With the Spirit of the Father, there is blessedness
Answer, O my listening river, bend, oh, evening sk
Speak the faith that rests doubting cradled on
Swing, O years, your perfumed censer o'er the river
Till my senses taste the sweetness of the rapture
—Nelly Hart Wood

Love and Ar

I took an early opportunity of congratulating them both when I heard that Maud Jeffries was engaged to Jack Meadows, for they were both old friends of mine and charming people—especially Maud. She was an artist and painted very zealously in oil colors. She was working at an unfinished painting, and so absorbed in it that at first she did not hear me enter. When she did she turned quickly:

"No, it is not Meadows; I am so sorry," I said sympathetically.

"O, but I'm very glad to see you," she answered. "And you are just in time to help me. Do tell me what is wrong with this thing," and she pointed to the canvas.

"That is Meadows' privilege," I said. I offered her my good wishes, and told her I was sure she would be happy.

She blushed prettily and said: "We are very happy now."

"But how have you satisfied your conscience?" I asked. "I understood you had vowed yourself to the service of your art."

"O, but I shall never give up my work," she protested earnestly. "Jack knows that. He wouldn't want me to. I think it is so wrong not to use one's gifts, don't you?"

"He is really awfully good about it," she went on. "He is going to let me paint his portrait, and then we shall hang it in our dining room. Look, here are a few sketches for it. Don't you think they are like him?"

I recognized Meadows in spite of the varying expressions Maud had given him, and I said so at once. She was pleased, and just then Meadows came in.

"I am just admiring the studies for the great portrait," I said genially.

"Ah, yes, they are only rough sketches. The thing itself will be quite different, won't it, darling?" he said, with, I imagined, a shade of anxiety.

A fortnight or so passed before I saw anything of Meadows or Maud; then I met Meadows. He looked worried, and when I asked him after Miss Jeffries he said shortly: "I believe she is quite well, thanks."

"And how is the portrait going on?"

"Look here, Raller," he said, with a burst of confidence, "that wretched portrait is undermining my happiness. It's no more like me than that poster," and he pointed to a flaming placard. "I'm not a vain chap, you know, but I do bar being handed down to posterity looking like a criminal lunatic."

"But it can't be as bad as that. Maud would never do you injustice," I said.

"Not intentionally, but she swears it is a good likeness, though I can't see how she can. When I suggested it was a bit unflattering she said she must paint what she saw and that she could not tamper with the truth of art."

"I should like to see it," I said.

And the cares of life grow dimmer than the shadow of a dream.
See the river pale in silver, redden in reflected glow
From the skies that bend above it, as I saw them long ago.

Does the weight of years oppress me?—I can throw the burden by
When again I watch the color slowly fading from that sky;
Let me lie there, tired and dusty, tell my story of defeat
Unto you, O listening river, as you murmur at my feet.
Rest my heart upon thy promise, let me lie and lily dream
When the willows are reflected on the borders of the stream.
Answer with thy soothing shadows, comfort with thy liquid chimes,
In assurance Heaven's successes are earth's failures oftentimes,
Whisper unto me, oh, mountains, aureoled with the golden glow,
In the land all dream-enchanted, valley of the long ago!

I am weary with mistaking piercing thorns for priceless flowers,
Weary, worn, one moment grant me vision of the Salem towers.
Let the splendor pierce the godlight of the dreamy river's flow
Till I see a boat that crossing anchored safely long ago.
With that vision clear before me, what shall matter storm or tide
Since I know that in that country every heart is satisfied?
I have tried to learn my lesson in the good that I might do,
And my doubts have faded, melted in the warmth of effort true.
'Tis the deathless, changeless lesson that wherever I may be,
With the Spirit of the Father, there is blessedness for me.
Answer, O my listening river, bend, oh, evening skies, above,
Speak the faith that rests undoubting cradled on the Unseen Love.
Swing, O years, your perfumed censer o'er the river's dreamy flow,
Till my senses taste the sweetness of the raptured long ago!

A fortnight or so passed before I saw anything of Meadows or Maud; then I met Meadows. He looked worried, and when I asked him after Miss Jeffries he said shortly: "I believe she is quite well, thanks."

"And how is the portrait going on?"

"Look here, Raller," he said, with a burst of confidence, "that wretched portrait is undermining my happiness. It's no more like me than that poster," and he pointed to a flaming placard. "I'm not a vain chap, you know, but I do bar being handed down to posterity looking like a criminal lunatic."

"But it can't be as bad as that. Maud would never do you injustice," I said.

"Not intentionally, but she swears it is a good likeness, though I can't see how she can. When I suggested it was a bit unflattering she said she must paint what she saw and that she could not tamper with the truth of art."

"I should like to see it," I said.

"Come along, then; Maud is out this afternoon; her sister said she would go to her studio, and you can give me your unbiased opinion."

The portrait, still wet, was on the easel. Meadows pointed to it in eloquent silence. I was silent, too. It was so painfully realistic that it verged on caricature.

"Well?" said Meadows. "Could you live in the same house with it if it was your portrait?"

"Yet, she is fond of you," I said. "Surely, if you ask her to suppress it as a personal favor—"

"She would only say it was my vanity," he answered, gloomily. "There is nothing to be done; she must choose between me and my portrait, unless—"

"Unless what?" I asked, as he paused.

"You could persuade her. Tell her it doesn't do her justice, either of us justice. Do, there's a good fellow! She has no end of respect for you."

I could not resist his appeal and promised to do my best. "And surely that is she coming up the stairs now," said I, as we heard footsteps.

He left me alone in the studio as Maud entered. She greeted me with a weary smile and glanced directly at the portrait.

"You have been looking at it?" she asked mechanically, taking up her palette and brushes.

"Yes," I said, and she seemed to expect me to say more.

"It's a good likeness, isn't it?" she remarked, presently.

"It is too flattering," I answered, sitting down opposite it.

"Jack doesn't think so," she said.

"But he is so absurdly vain," said I.

"Not more than other men, I suppose," she retorted.

"Yet you say he is not satisfied with that painting," I said. "What fault can he find?"

"Nothing definite, but he wants me to alter it."

"However painful it may be you must keep your art pure. It is true that in the noble cause of realism you have accentuated his worst points—"

"No, I haven't," she said with some heat.

"I honor you for it. Very few girls would have had the courage to treat the portrait of a lover in so bold a way, even to the suggestion of a caricature."

"But you said I had flattered him!" she cried.

"Truth is the highest flattery," I answered, sententiously. "And if Meadows is not high-minded enough to see it, you will regret his loss."

"His loss! What do you mean?" she exclaimed.

"I saw him just now; he does not appreciate your noble self-sacrifice; he said if you had really loved him you would not have pointed out his homeliness to the world. He seemed to feel it a good deal."

"Homeliness! He is beautiful!" she cried indignantly.

"Really, my dear young lady, you can't say that with that almost speaking likeness in front of us," and I pointed to the portrait.

With a sudden movement she smudged a brushful of paint over the face on the canvas.

I saw Meadows looking round the door and beckoned him in.

"Your portrait is done for," I said.

She threw down her palette. "Jack! Look at it!" she cried with a laugh that seemed to catch her throat.

There is now hanging in the Meadows' dining room a portrait of the master of the house. It is not at all a good painting, but Jack gazes at it with satisfaction. It is by his wife, and when her friends suggest that she has flattered her husband she smiles.

Once I saw her looking at it rather sadly and I asked her if she was regretting the one she had destroyed. She shook her head.

"No; sometimes I think I acted hastily, for it really was good," she said.

"But surely this one is, on the whole, better?" said I.

"Jack thinks so," she answered, and she sighed.—Westminster Budget.

Grant and the Dying Soldier.

In the Century General Horace Porter relates the following story in his "Campaigning with Grant." The incident occurred during the attack on what is now called "Hell's Half-Acre," near Massaponax Church: General Grant had ridden over to the right to watch the progress of this attack. While he was passing a spot near the roadside where there were a number of wounded, one of them, who was lying close to the roadside, seemed to attract his special notice. The young man's face was beardless; he was evidently young; his countenance was strikingly handsome, and there was something in his appealing look which could not fail to engage attention, even in the full tide of battle. The blood was flowing from a wound in his breast, the froth about his mouth was tinged with red, and his wandering staring, eyes gave unmistakable evidence of approaching death. Just then a young staff-officer dashed by at a full gallop, and as his horse's hoofs struck a puddle in the road a mass of black mud was splashed in the wounded man's face. He gave a piteous look, as much as to say, "Couldn't you let me die in peace and not add to my sufferings?" The general, whose eyes were at that moment turned upon the youth, was visibly affected. He reined in his horse, and seeing from a motion he made that he was intending to dismount to bestow some care upon the young man, I sprang from my horse, ran to the side of the soldier, wiped his face with my handkerchief, spoke to him, and examined his wound; but in a few minutes the unmistakable death-rattle was heard, and I found that he had breathed his last. I said to the general, who was watching the scene intently, "The poor fellow is dead," remounted my horse, and rode on. The chief had turned round twice to look after the officer who had splashed the mud and who had passed rapidly on, as if he wished to take him to task for his carelessness. There was a painfully sad look upon the general's face, and he did not speak for some time. While always keenly sensitive to the sufferings of the wounded, this pitiful sight seemed to affect him more than usual.

Chapter of the Garter.

It is in contemplation for the Queen to hold a Chapter of the Garter at Windsor Castle on June 26 or 28, the function be followed by a banquet to the knights of the order in St. George's Hall. The last Chapter of the Garter was held at Windsor in 1855, when the late Louis Napoleon was invested by the Queen with the ribbon and insignia of the order. On those occasions all knights have a right to take part in the proceedings, but only those personages are expected who have been summoned. In 1855 the then Duke of Buckingham, who was out of favor at court, was not summoned, but nevertheless, appeared at the chapter. The Queen showed her displeasure by omitting to invite him to the dinner which was given after the chapter to all the other knights who had been present.

His Request.

He—Can you play "The Maiden's Prayer," Miss Waybuck?

She (with alacrity)—Oh, yes!

He—Well, please don't.—Somerville Journal.

EIDERDOWN.

Ducks of the Far North Supply This Costly Commodity.

But 1000 Pounds Used Yearly in This Country.

"There are only about 1000 pounds of eiderdown used in this country in a year," said a veteran down importer of this city, when asked about the quality of eiderdown used in quilts sold for $5 or $6. "There are three grades, and the range in price is $10, $12, and $15 a pound.

"The down is imported chiefly from Greenland and Iceland, where it is gathered by the natives. When the ducks build their nests they line them with down plucked from their own breasts. The first lining is the finest quality of down. After a nest is robbed the ducks line it the second and third times, each time the grade of down becoming poorer, as there are a greater number of small feathers mixed in. After the third robbing the ducks quit the nest, and do not build again until the next season.

"Eiderdown is about twice as bulky as the finest goose down; that is, one pound of eiderdown will serve as a filling where two of the best goose down would be necessary. Owing to its scarcity and costliness it is used only in filling the most expensive cushions and quilts. It can be used to a greater advantage, and is really the only satisfactory filling for elegant smoking jackets, muff beds, women's skirts, and babies' clothing.

"The next quality of down is goose down, which is produced in the United States, the larger part coming from the Western and Southern states. The first grade is the pure down, plucked from the breast of the live goose. The other two grades are extracted by machinery from the feathers of poultry plucked for the market. The feathers are sold in bulk, unsorted, and have to be separated by special machines. The only goose down imported comes from China. It is white, but not so fluffy as the American, and consequently used only for cheaper filling.

"Duck down is imported almost exclusively from China in feathers. There are about three grades. The best or pure down sells for $1.25, and is used in making a fair quality of quilts, linings, pillows, etc. The other two grades, bringing $1 and 75 cents a pound, are made by leaving a certain per cent. of feathers in the down. These feathers, as imported from China, are exceedingly dirty, and the cleaning and separating, which is done by machinery, are very expensive. The yield of down is about 10 or 12 per cent.; of dirt, 30 to 40 per cent.; the rest is feathers. These feathers are a little better, when thoroughly steamed and cleaned, than our native chicken feathers, which, as all housekeepers should know, are the cheapest feathers.

"This Chinese down is from the ducks which the Chinese consume in great quantities. As rice is their chief breadstuff, ducks are their chief meat. One duck will furnish a meal for twenty Chinamen. The fowl is boiled until the flesh drops from the bones. It is then hashed very fine, and with its gravy used to season boiled rice enough for about twenty men. Of course a vast number of these ducks are reared and consumed in China, and as the Chinaman makes no particular use of the feathers, these are shipped to this country and Europe. There are about 1,000,000 pounds of feathers imported to the United States each year from China, while from Austria and Germany some several hundred thousand pounds of down, extracted from Chinese feathers.

"Chicken feathers, which have no life in them, are chiefly used in cheapening down. And cheaper grades are used by mixing in 'cat tails,' light cotton or rabbit hair. These last three may always be detected by beating the article, as the 'cat tails' and rabbit hair will invariably sift through, and the cotton will lump. Good down may always be judged by its feeling and its power to rebound. A cushion well filled with eider or the next best thing, American goose down, when pressed will resume itself almost as quickly as an India-rubber ball."—New York Sun.

Designs in Weather Vanes.

The horse and the arrow are the designs most commonly sold in weather vanes, and these are each made in many different styles or combinations. There are made, for instance, in various forms, vanes resembling simply the horse, of one class and another; then there are vanes that represent individual famous horses, great runners and great trotters. And there are horse vanes with the horse to sulky with driver and trotting horses to wagon with driver, and horses, trotters and runners both, with jockeys.

The arrow is made in various sizes and in a variety of designs. The arrow is also used in combination with many other emblems.

While the horse and the arrow are the vanes most commonly used, there are hundreds of others. There are various kinds of cows represented in weather vanes, and there are hogs and sheep. There are deer, running and leaping, and moose. There are dogs, a tobacco leaf, an Indian chief. There are vanes that represent lions, and fish vanes. There are pigeons, and there are numerous styles of rooster vanes. There are vanes made in the form of a quill pen, and there are many vanes of which an eagle forms a part.

Of emblematic vanes there are many. There is a weather vane made in the form of a gun, with fixed bayonet, placed horizontally, with a soldier's cap above it. There is a vane in the form of a flag, and one in the semblance of a liberty cap. There is a goddess of liberty vane, and there is a vane in the shape of a cannon, a field piece on wheels. There are vanes resembling yachts and ships and steamers. And there are vanes emblematic of fire departments, a hose carriage vane, a hook and ladder vane, a steam fire engine vane and a vane representing a fireman's hat and trumpet. There is a plow; there is a horsecar, a locomotive and tender. Sign vanes are made in which a name is carried. There is a vane with a malt shovel and a barrel.

Scroll vanes and bannerets are made in a very great variety of designs. The bannerets may be emblematic, or they may show initials or monograms, or they may be made simply with a view to grace and beauty of design.—New York Sun.

Language No Bar to Marriage.

An international marriage of an unusual character took place recently—that of two emigrants, neither of whom spoke the other's language. But that hadn't interferred with their falling in love with each other and deciding to get married. They stood on the street in Jersey City, N. J., the woman with the black braids, languishing eyes, scarlet headdress and shawl that distinguish the daughters of Italy; the man with the gray clothing trimmed with enormous buttons and the peaked cap of a Pole.

They were chattering volubly in two tongues, gesticulating earnestly and peering anxiously at the windows along the way, on which they were many strange signs. They tried to tell their troubles to a German policeman, but he couldn't understand either of them. A sailor who knew both tongues came along and volunteered as an interpreter.

He talked first with the young man and then with the girl. Presently the sailor turned to the policeman:

"His linga ain't her'n an' her'n ain't his'n, an' how they came to lay the same course ain't apparent, but they came over in the steerage of the same vessel, an' somehow they got together an' they want to get spliced. Whereaway does the gospel shark tie up?"

The policeman led the way to a justice of the peace, who married the couple in both languages. Then the bride and bridegroom, hand in hand, started for the station, to take the train for far-away Wisconsin, where their friends live.—Chicago Tribune.

Pig Does Some Banking.

A peasant named Galibert, living in the neighborhood of Milan, in Germany, recently bought a pig. A few days ago he killed the animal, and found in its stomach a small metal matchbox containing two banknotes of the value of $250 each. The honest bumpkin at once took them to the mayor in order that they might be returned to their owner if he could be found.—Boston Globe.

GOSSIP FOR THE FAIR SEX.

Notes of Interest to Feminine Topics.

Hats With Lofty Knot—Fancy Waists Won't Be Snubbed—Making a Saddle Skirt, Etc., Etc.

HATS WITH LOFTY KNOT.

Perhaps the most impressive point about the new hats is the lofty knot, mushroom-like, which perches upon so many new chapeaux. You see it in ribbon and lace and sekuinned net, and it interests you to wonder in what fabric next it will greet you.

These nodding decorations possess the charm of plumes and long-stemmed roses; they yield with every inclination of the head. Some of them are only rosettes; others, ambitious loopings. In any case, they are serious phases of spring millinery.

FANCY WAISTS WON'T BE SNUBBED.

In spite of authentic accounts from the most official sources and of endless snubs from the tailors and dressmakers, the ubiquitous fancy waist makes its elegant and fascinating appearance among the lovely things in spring and summer gowning. It will not down; this seems positive, and for the very good reason that it is one of the most attractive and graceful forms of dress ever devised for general uses as well as for the most ornate and charming finishing touch to an elaborate toilet; and the tempting, novel, and beautiful creations in these bodices now exhibited by noted importers are potent evidences that they are still at the height of favor both here and abroad.—New York Post.

MAKING A SADDLE SKIRT.

A saddle skirt, which is the kind everybody makes nowadays, takes six yards of goods, a little over a yard wide and twelve years of twenty-seven inch goods. The material cuts to waste, and must be patched, and you will find yourself in a queer boat with your pattern and your goods.

A saddle skirt is one that is divided in the back, so as to fall over the saddle, but not in the front. That necessitates a middle section, making a sort of divided skirt in the back. Nearly all bicycle dresses are made this way, and so are gowns for every sport. The back division does not show.

Your waist you can get out of five yards of narrow width goods if you do not allow too long a bodice. Many riders prefer to use up the old jackets on the wheel and content themselves with a new skirt to fit the saddle. Very little trimming is needed. Many wheelwomen bind their skirts with a broad band of oilcloth that can be washed freely and always looks clean. —St. Louis Star.

PARASOLS TRIMMED WITH FLOWERS.

The new parasols follow the hat vogue in being very fully trimmed with flowers. One for example, is caught with great bunches of daisies, with their clusters of silvered leaves. This parasol cannot be entirely closed. Another, not a flowered one, has puffs of chiffon running around it, the puffs being separated by tiny bands of black velvet ribbon. A big chiffon ruffle falls over the edge.

A very new way of using flowers is to make floral handles. A bunch of violets made of some paste material, and carefully covered, formed the handle of a gold and white parasol, and there are many carved sticks, painted like flowers. Some of these are small and fine; others make a single big red rose or an Easter lily. Gold tinsel over white satin is very much used. Old white satin parasols may be brought out and treated to a dress of gold at small expense. Dresden ribbons are much used. An immense bow to match the heart of the daisies was placed upon a parasol trimmed with bunches of these flowers.

THE NEW MILLINERY.

The sailor hat is too becoming to be allowed to go out of fashion, but this season it is so loaded down with trimming that it bears little resemblance to its original self.

Of course during midsummer the plain untrimmed hats of this shape will be worn by young girls, and even by some of the older women, although the latter do not patronize them so much as a year or two ago.

There seems to be no fixed law as to what kind of straw is the smartest in sailor hats; the fine straws and the Panamas seem rather more popular, but there are a great many of the rough braid. The under brim is now covered with a cream net, or bound with velvet, or made of a contrasting color, and the top or crown is fairly loaded down with flowers. Roses, primroses, lilacs(purple and white), gardenias, and cowslips, all and many more are used, and the stiff bows of ribbon or velvet which are interspersed give the needed effect of height. All the hats have the brim turned up at the back, and flowers galore are put in so as to rest against the hair.

A smart sailor hat of fine black straw has a brim faced with white, and bound with a roll of black velvet just at the edge. Quantities of pink roses cover the crown and are put under the brim at the back, while stiff narrow bows of white ribbon and black velvet are put in among the roses. Another hat, the same shape, is of blue straw trimmed with red carnations and black and white ribbon bows, while at the back are knots of bright red gauze instead of the flowers.

In Panama a charming model has a narrow brim bound with black velvet; the crown is encircled with roses of different colors, looking as natural as though just picked. At the left side are narrow ends of black velvet, and at the back the brim is entirely covered with bunches of pink, yellow and red roses, closely massed together.

Quite in contrast to these flower-gardens is a hat of the sailor shape with black brim and the crown of black and white—a different straw. This is trimmed with black ribbon velvet, and at the left side a bunch of stiff black quills. The effect is odd, smart, but yet not becoming to every face, as the lines are decidedly severe.—Harper's Bazar.

DONT'S FOR WHEELWOMEN.

Don't wear a skirt that shows more than eight inches of your boot.

Don't wear black boots.

Don't try to raise your hat to an acquaintance because you happen to be wearing a derby or an alpine.

Don't allow your escort to ride inside, nearest the sidewalk. That is your place.

Don't keep on ringing your bell when you see that the driver of a horse is turning out to make room for you. The jangle of the bell may frighten the horse, and is sure to annoy the driver.

Don't stand in the middle of the road to fix your lantern or pump your tire, so that every rider will have to make a wide detour to pass you.

Don't borrow a pump of a man you do not know and forget to return it.

Don't hesitate to accept assistance from a man in case you are in trouble with your wheel. That is an occasion when a woman may take well-meant help from a stranger of the opposite sex.

Don't wear club pins outside your coat and never wear two large crossed flags on your lapel.

Don't ride down elderly or unexperienced cyclists just because you have more control of your machine than they.

Don't boast of the superiority of your wheel. In the slang of the day, "there are others."

Don't coast in the city. You may fall, and there may be a "bike" cop watching you.

Don't argue with a policeman if he tells you to go slow. Remember that policemen are all good riders, and that they have the law on their side.

Don't ride without gloves.

Don't start till you are certain that, not only your wheel, but your costume, is in perfect condition, so that nothing will break loose under the strain of riding.

Don't wear flaming colors in your hat.

Don't rest with one foot on the ground and the other on the outside pedal. It will make you look ungraceful, if not worse.

Don't try to keep up a steady conversation while riding. You need your breath for pedaling.

Don't wear white underskirts on a wheel. They will not be white for long.

Don't trim any part of your visible wheeling costume with lace or frills of any kind. Remember that the best-dressed wheelwoman is she who is most severely plain in every detail.

Don't walk your bicycle more than absolutely necessary. It attracts unpleasant attention.

Don't try to ride on a busy cycle path on the strength of one lesson in an academy.

Don't mount by the aid of a telegraph pole. That is not the way your instructor taught you.

Don't wear more than one color in your whole costume, including hat and boots.

Don't make short turns at corners. A bicycle will slip easily, particularly if the ground is not dry.

Don't hesitate to offer assistance in case of a spill, whether the unfortunate is of your sex or not.

Don't insist upon your right of way if you are going up hill and a cyclist is comin down so fast that he cannot control his wheel. Because he is a fool you must not be a crank.—New York Press.

FASHION NOTES.

Some Parisian authority is responsible for the announcement that gloves embroidered with black are considered out of date.

Mauve and green velvet, with black trimmings,, make very effective garments, and the combination of grass linen with black glace silk is one of the novelties.

The sleeve of the moment certainly has length to recommend it almost in proportion to the size it has lost, and the pretty fall of lace at the wrist is very becoming.

It seems that ears are decidedly out of fashion for women in Paris except for hearing purposes, as the hair is drawn to cover them so completely that there is no trace of their existence left.

What everyone must have is a crush belt of velvet-edged taffeta ribbon and a collar to match. All sorts of similar accessories are in style, but these two are essential if the wardrobe is to be kept up to date.

A very uncommon and showy wrap is made of shot peau de soie covered with cream guipure which is traced with tiny brilliants. Frills of white chiffon finish the epaulette sleeves, and black velvet ribbon forms the belt and bow at the neck.

Pouched bodices have vigorously renewed their popularity, and some of the latest models are pouched at the back as well as the front. A wide folded belt is the usual accompaniment, and it should be made of black satin if you would look slender.

Boleros of lace or combinations of lace embroidery and beads are a good investment for summer gowns, and a very attractive bolero can be made out of a piece of wide edging with a box-plait in the middle of the back and one on either side of the front, beginning on the shoulder.

Light cloth capes in gray and tan are still worn, and they are plain, trimmed with stitched bands or decorated with velvet and ecru lace, as you fancy. The linings of these little garments make them very attractive, even though they are perfectly plain, for bright colors in satin, brocades and taffeta are the rule.

The ribbons, in plain colors, floral designs and stripes,, are chiefly in taffeta weaves, and will be worn in large shoulder bows, belts, sashes having long ends, collars and bows across the bust. An entire piece of ribbon lavished upon a dimity gown or organdie is usual, a style fo which ribbon manufacturers should be thankful.

A garment of black satin shows a Watteau plait at the back, with jet ornaments falling on either side, and black accordion-plaited chiffon makes the frills over the sleeves and the trimming at the neck. A very smart little cape of black poult de soie has alternate frills of embroidered grass lawn and black glace silk, and the jabot is of black lisse with creme lace applique.

Animals and Music.

A violinist was playing various airs before the cages of the animals. The bow, which had been passing backward and forward half drowsily, took up a gait that would have distanced one of the deer in the pen by the buffaloes' yard. Then there was a transformation scene in the home of the lioness as rapidly and as complete as that of the tune. The cubs went into ecstacies. They rolled about, jumped, fell over one another, raced over their mother's recumbent body, and danced unrebuked on her head. They ceased their tantrums only with the ceasing of the music.

Then they gathered at the front bars of the cage again and silently and pathetically pleaded for more. Their plea was successful, and in response to the delicate flattery conveyed by their manner the player gave them the lullaby once more. They simply sat and listened to it as silently as they had at first. The transition to the jig music was once more made speedily. The first note of the lively air had barely left the violin before its riotous contagion had once more caught the cubs. They rollicked and rolled about, and stopped only when the professor, fearing to tire their little limbs, took his bow from his fiddle and told them they had danced enough for debutantes.

The hyena is an uncanny brute. His very appearance goes a great way toward bearing out charges of graveyard robbery brought against him. He has no music in his soul nor room for any. Sweet sounds are to him so antipodal to everything in his nature that they inspire him with nothing but fear, and the most abject fear at that. When Professor Baker tried to interest the two skulking hyenas in his performance on the violin they began trembling visibly at the first note's utterance, and then as the music swelled they sought the furthermost side of their prison, and tried their best to squeeze their ungainly bodies through the bars to escape the melody.—Philadelphia Inquirer.

Balloon Lifeboats.

The big ocean greyhounds will soon, it is thought, be equipped with lifeboats harnessed to balloons, so as to be practically unsinkable. Cylinders filled with compressed gas will be placed in compartments of the lifeboats, and from these the balloons, which will be harnessed with cords to a hollow mast connected with the cylinders are inflated. The mast, which is iron tubing, is adjustable, and, when turned forward, the big balloon acts as a sail, oars proving quite unnecessary. The combination boat will doubtless prove of the greatest service in saving people far out at sea. In a recent test it was shown that, even with the boat filled with water to the gunwales, the lifting power prevented the craft from either sinking or upsetting.

California now has a law against adulterated honey.

FOR THE YOUNG FOLKS.

NANNY AND JACK.

Her uncle gave little Nanny
A Jack-in-the-box with a squeak;
But the squeak of the Jack was nothing
To Nanny's terrified shriek.

But soon she conquered her terrors,
And spoke, like a brave little
"You think you are real," said Nanny;
"But, truly, you know you're not!"

—H. C. Bunner.

THEODORE A LUCKY NUMBER.

After all, there isn't much in signs and superstitions. Dr. Nansen, the famous arctic explorer, has disproved the old adage that 13 is an "unlucky number." There were just thirteen men in Nansen's crew. The thirteenth man, it seems, joined the crew at the last moment, and has always been averse to having his photograph taken. When a group of the entire crew was desired he consented to appear, but did his best to prevent the photographer from taking his features. In speaking of the popular superstitution in regard to that number Dr. Nansen said: "Thirteen was a lucky number for us. None of my men was ill at any stage of the voyage, none of them gave me the slightest anxiety; besides, I arrived home on August 13, 1896, and it was upon the 13th day of the month that my ship escaped from the clutches of the ice. So, you see, thirteen has no perils for me."

FUN AT POTATO PICNICS.

Our South Chicago boys occasionally have potato picnics.

You see, they live near the Illinois steel works, and every day great loads of hot cinders are brought out from the foundries in funny little cars, drawn by a "dinky" engine. They are carried out along the streets and alleys and dumped into some vacant lot, where the ground is low and marshy, and needs to be filled up to grade. Of course they are very hot, even after they reach the dumping ground, and the boys take advantage of this fact. They secure a number of big potatoes and bury them in the cinders, and then they have a war-dance or two while the picnic is roasting. After the potatoes have been in the cinders the necessary length of time they are raked out with old sticks, and the boys find that they taste lots better than potatoes cooked at home.

FRIENDLY DOGS AND CATS.

Dogs are usually regarded as the bitterest enemies of cats, but a famous German animal trainer has recently introduced some clever tricks in which both cats and dogs play a part.

In one of the acts Miss Mimisse, the cat, goes to a ball and takes her place in a chair, as becomes a modest young lady kitten. In comes Mr. Follette, the dog, and with many bows and smiles invites her to dance a polka. Miss Mimisse bows bashfully and takes Mr. Follette's arm, and they dance off together across the stage on their hind legs. Of course every one cheers.

Another scene is a triumph in animal training. A big English dog named Cerberus is chained on the left side of the stage, while Pippina, the cat, takes her place on a chair to the right. The trainer is seated at a well-covered table at the center, ready to eat his supper. He has nothing to drink, and, as there is no one to wait on him, he is obliged to go for it himself. After he has gone Cerberus slips his collar off, climbs up on the table and eats the entire meal. As he is swallowing the last mouthful a thought comes to him of the punishment that must follow, and he looks to his friend to help him out of his difficulty. Pippina is then taken by the collar and set on the table, where she remains looking sad, while Cerberus resumes his collar. The trainer returns, is suspicious of the unhappy victim sitting among the empty dishes, and is about to punish her, when she climbs up on her master's shoulder and whispers in his ear that Cerberus is the real thief. Pippina's innocence is established, and the amusing little play is over.

CAT WALLOWS IN INK.

"Bullion," the big Maltese cat of the American express company, created an unusual stir in the general agent's office in Chicago the other morning. When "Bullion" leaves off nabbing rats and mice in the basement he curls up on a carpet mat on top of the agent's desk and goes to sleep. The clerks operate a mimeograph machine on a table drawn close to the desk, and when they are moving the big roller the cat shows a disposition to jump on the machine with all four feet. The clerks often tease the cat to the point of jumping, when he is headed off.

The other morning in an unguarded moment, just after the apparatus had been freshly smeared with ink, "Bullion" made a leap for the ink bed and landed squarely on the machine. Then, catlike, he lay down and began to hug the roller. Before the operator could interfere his paws and hairy coat had absorbed all the ink on the roller and its bed. Then "Bullion" started on a mad caper all over the office desks, jumping from one to another, leaving the prints of his paws in purple ink on all kinds of papers, some of which stuck and were dragged over the floor.

Not content with this measure of mischief, "Bullion" leaped over into the lobby, and, picking out a man whose trousers were lighter than the weather warranted, he rubbed his ink-smeared side back and forth on the stranger's legs.

Finally the porter caught the animal, and after being "treated" with benzine, soap and water "Bullion" purred himself back to his accustomed quarters.

Now a wire screen has been built around the mimeograph.

YOUTHFUL EXTRAVAGANCE.

Jimmie Brown, aged ten, sat busily poring over the advertising sheets of the New York dailies. He was wildly anxious for a good position as office boy, for not only did he sadly need wages, but he had an ambitious little brain in his head, and he wanted, above all things, to master the technicalities of some good business. Finally his eye lighted upon an advertisement that seemed to appeal to him more than any of the others, and he determined to make a desperate effort to secure the position; only the "Address lock box 441" was so very discouraging in the beginning, for Jimmie had already cudgeled his poor little brain and cramped his stiff little fingers over many an answer to advertisements—to say nothing of the precious stamps he had risked—and all to no purpose. No! Plainly in his case, some other method must be thought out.

The next morning Mr. Adams, a wealthy contractor, took a very, very fat mail from lock box 441, most of which, however, he was destined never to read, for close at his heels followed a sturdy little boy who managed somehow to slip into the office with him.

"Please, sir," said Jimmie, for it was none other, "will you give me a chance to try to suit you as office boy?"

"Why, how do you know that I want an office boy?" asked Mr. Adams.

"I read your advertisement in the paper, and ever since I have been watching box 441 to find out who you were and where you did business, so that I might get in my work before you had a chance to read about the other fellows. Will you give me a try, sir?"

"Well," replied Mr. Adams, looking amused, "if you are smart enough to do that I guess you are about the boy we want. Yes, you may stay and go at it to work. First, sort out these letters and dump all the answers to that advertisement into the waste basket."

This all happened many years ago, and to-day Mr. James Brown is one of the leading partners in that very firm which he first served intelligently and conscientiously as office boy.

THE CEDARS OF LEBANON.

In St. Nicholas there is an article entitled, "Silk and Cedars," by Harry Fenn, the artist, describing a visit to the mountains of Lebanon. Mr. Fenn says:

Every girl and boy of the Christian world has heard and read, over and over again, of the "Cedars of Lebanon"; but very few have any idea of the locality and surroundings of the famous grove. It is a popular error, by the way, to suppose that there are no other cedars remaining besides this group at the head of the "Wady" (valley or canon) Kadisha. There are, to my knowledge, ten other groves, some numbering thousands of trees. This particular group that we are about to visit is called by the Arabs by a name which means, "Cedars of the Lord." They number about four hundred trees, among them a circle of gigantic fellows that are called by the natives "The Twelve Apostles," upon the strength of an old tradition that Jesus and his disciples having come to this spot and left their staves standing in the ground, these staves sprouted into cedar-trees.

There is every reason to suppose that in the time of King Solomon these scattered groves were part of an enormous unbroken forest, extending the entire length of the Lebanon range of mountains, about one hundred miles, running nearly parallel with the Mediterranean shore from a little below Beirut. The summits of the range are from fifteen to twenty miles from the coast.

The Lebanon—that is, the "White"—does not derive its name from glittering snow-peaks, but from the white limestone cliffs of its summits. The first historical mention of the trees is in the Bible (2 Sam. v. 11): "And Hiram, King of Tyre, sent messengers to David, and cedar trees, and carpenters, and masons; and they built David an house."

From that day to this the people have been almost as reckless and wasteful of these noble giants of the mountains as our own people are of these cedars' first cousins, the redwood trees of the California coast-range. As we approach the grove, which stands upon the top of a small hill, the foliage is almost black against the snow-covered crags of Dahrel-Kadib which rears its highest peak over ten thousand feet above the sea.

There is a Maronite chapel in the grove, its patriarch claiming the sole right to the sacred trees; and, luckily, the superstition with which the trees have been surrounded has been their salvation. All the cedars of Lebanon would have been demolished for redwood years ago were not the people threatened with dire calamity should they take a single stick.

Ancient Wisdom.

A handful of good life is better than a bushel of learning.

lous for a good position as office boy, for not only did he sadly need wages, but he had an ambitious little brain in his head, and he wanted, above all things, to master the technicalities of some good business. Finally his eye lighted upon an advertisement that seemed to appeal to him more than any of the others, and he determined to make a desperate effort to secure the position; only the "Address lock box 441" was so very discouraging in the beginning, for Jimmie had already cudgeled his poor little brain and cramped his stiff little fingers over many an answer to advertisements—to say nothing of the precious stamps he had risked—and all to no purpose. No! Plainly in his case, some other method must be thought out.

The next morning Mr. Adams, a wealthy contractor, took a very, very fat mail from lock box 441, most of which, however, he was destined never to read, for close at his heels followed a sturdy little boy who managed somehow to slip into the office with him.

"Please, sir," said Jimmie, for it was none other, "will you give me a chance to try to suit you as office boy?"

"Why, how do you know that I want an office boy?" asked Mr. Adams.

"I read your advertisement in the paper, and ever since I have been watching box 441 to find out who you were and where you did business, so that I might get in my work before you had a chance to read about the other fellows. Will you give me a try, sir?"

"Well," replied Mr. Adams, looking amused, "if you are smart enough to do that I guess you are about the boy we want. Yes, you may stay and go at to work. First, sort out these letters and dump all the answers to that advertisement into the waste basket."

This all happened many years ago, and to-day Mr. James Brown is one of the leading partners in that very firm which he first served intelligently and conscientiously as office boy.

"Do you pray for your dear teacher often, Tommy?" asked the visitor to the school. "Yeth, thir," replied Tommy the truthful, "whenever thee whipth me I pray for the devil to git her!"—Cincinnati Tribune.

Some further experiments are being made in Germany by Herr Stentzel of Altona with a flying machine similar in principle to poor Otto Lilienthal's machine. Imitation of the flight of a bird is aimed at, and the wings have a spread of about seven yards, and move through an angle of seventy degrees. The machine weighs seventy-five pounds and is driven by an engine worked with compressed carbonic acid gas, invented by Herr Stentzel. It is stated that from one to three horse-power can be obtained from the engine by the use of carbonic acid gas at different pressures up to nine atmospheres, and that it can be so controlled that the machine can be made to fly at varying velocities.

Judge and Jury.

An exchange tells a story of a well-known judge who is noted for his fondness for conveying in his charges to jurors, his own opinions in regard to the merits of the case in hand. Recently, in giving such a charge, he expressed his views very plainly, but to his amazement the jury remained out for some hours.

The judge inquired of the officer what was the matter, and learned from him that one juror was holding out against the other eleven. He sent for the jury, at once, and stating to the jurors that he had plainly intimated how the case ought to be decided, said he understood that one juror was standing out against the other eleven. He proceeded to rebuke the juror sharply.

The obstinate juror, as it happened, was a nervous little man, and as soon as the judge was done, he arose and said:

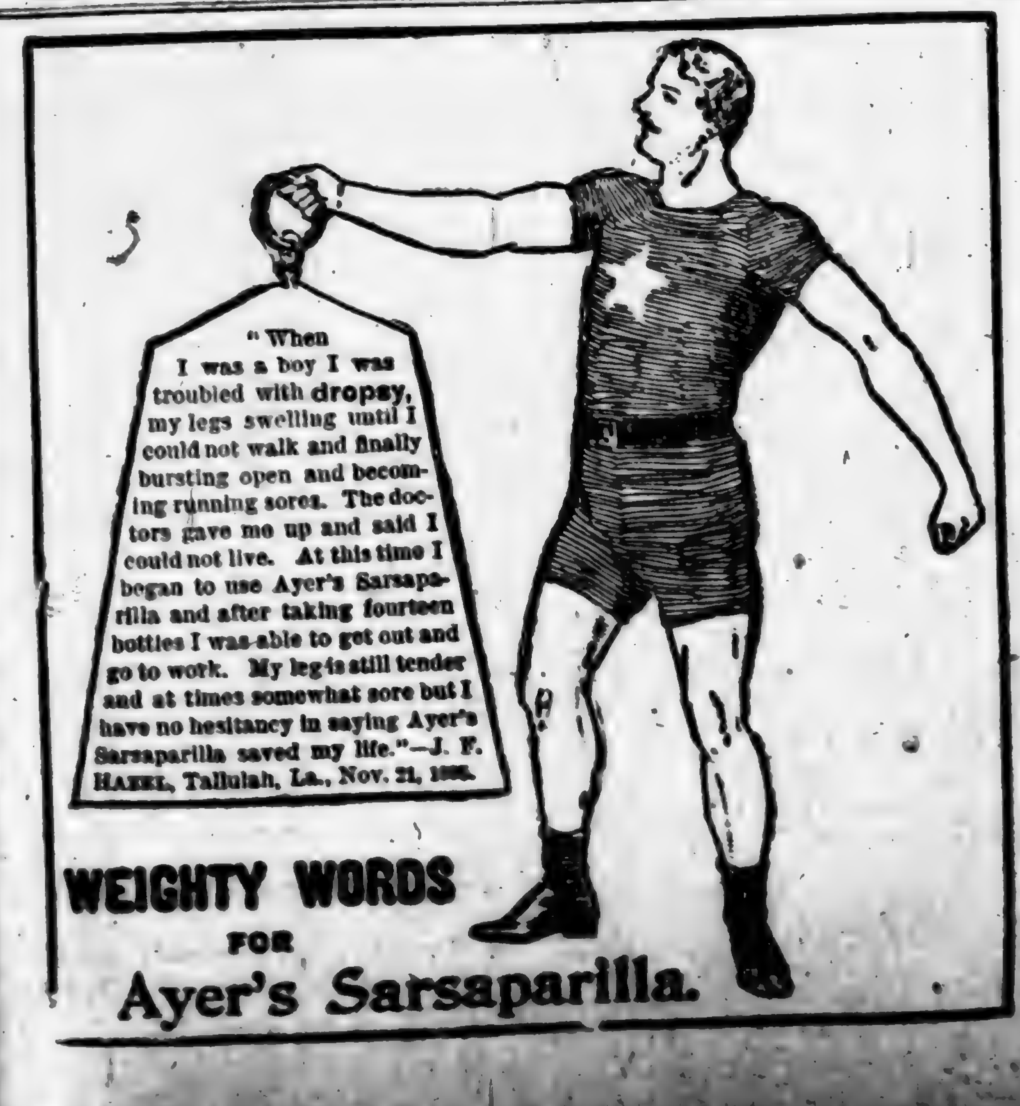
"Your honor, may I say a word?"

"Yes, sir," said the indignant judge; "what have you to say?"

"Well, what I wanted to say is, I am the only fellow that's on your side."

A peculiar and somewhat pathetic case is that presented by the widow of the late young Alexander Salvini, the actor, who died last December at Florence, Italy. Mrs. Salvini says that the original cause of her husband's illness which ended in death was unfavorable and cruel newspaper criticism in Chicago. Mr. Salvini left the United States about a year ago at the close of his Chicago engagement and went to London, from where he proceeded to Paris. The first symptoms of the illness from which he died appeared at Paris. From there he went to his father's home in Florence, where he remained until his death. He died of tuberculosis of the stomach. Mrs. Salvini says that her husband was very much depressed when he left this country, as the result of Chicago newspaper articles on the subject of his performance in the play of "Othello." She says that his disease would not have proved fatal except for his exhaustion by overwork and his loss of spirits caused by the "roasts" which his Othello received in the Chicago press. The story of Mrs. Salvini to the effect that her husband died of newspaper attacks is somewhat impaired in its credibility by her other statements that his disease was hereditary, having caused the death of his mother. He was not seriously ill until after leaving Paris, the first symptoms occurring there. After that time he failed rapidly until he reached his distinguished father's home in Italy. It is a little curious that an actor in his youth of great accomplishments and greater promise should have it said of him that his death was caused by disease of this origin. It is reported of the poet Keats that he fell into decline and consumption as the result of a physical shock and mental agitation caused by a vituperative critique in one of the reviews. In his case Lord Byron said:

"'Tis strange the mind, that very fiery particle,
Should let itself be snuffed out by an article."



WEIGHTY WORDS FOR Ayer's Sarsaparilla.

JOKER'S BUDGET.

Jests and Yarns by Funny Men of the Press.

HOW WE TALK.

"Did the committee sit to-day?"
"Yes, Sir."
"Do you know how it stood?"

THE FLIPPANT GIRL.

"Woman!" said he bitterly, "you have a heart of ice."

"I think it very bad taste," said the flippant girl, poutingly, "to compare one's thorax to a refrigerator."

TRANSPARENT.

Teacher—We call a thing transparent when we can see through it. Who can name such a thing?

Peter—A ladder.

HE MUSTN'T TELL.

She (after giving him a kiss)—You mustn't tell anyone.

He—Why?

"Oh, I don't know. I'd rather give you another than have you tell."

HAD CAUSE.

Irene—What's the matter with you and George? I haven't seen him in the act of worshiping you for nearly a week.

Maud—He's jealous of my new 1897 bicycle.

A BRAVE BOWMAN.

She—It must have taken a great deal of persistence on your part to learn to play the violin so well.

He—It did. I had to go constantly armed for five years.

ALL RIGHT, THERE.

"Don't you hate to run across a man's signature that you can't read?"

"Sometimes."

"Eh?"

"Doesn't matter if it's on the end of a check."

A CLOSE RACE.

Papa: So Emily stands at the head of her class in French.

Mamma: Yes. She and another girl were exactly even in the written examinations, but it was decided that Emily shrugged her shoulders more correctly.

KEENLY REALIZED.

"How time flies as one gets older!"

"Yes; when I was a clerk on salary the time did not pass half so rapidly as it does now that I am in business with notes to meet."

THE COMPLETE ANGLER.

"What's a fishing rod?"

"It's a handsome-jointed arrangement your father holds out over the water."

"What's a fishing pole?"

"It's a long wooden stick your Uncle Bill catches fish with."

A RESTLESS BOY'S REASON.

"I'm going to be a minister," said Tommie, forcibly.

"Why, Tommie dear?" asked his father.

"So's I can talk in church," said Tommie.

CHILD IMPULSES.

"It is the nature of a child to be wanting to do something," said the enthusiastic kindergartner.

"As far as I have noticed," said the mother of six, "it is the nature of a child to be wanting to do something else."

ANY OLD THING.

Practical Father—I want to buy a watch for my boy—the cheapest you have.

Honest Dealer—I'm afraid I can't warrant the cheap ones to keep very good time.

Practical Father—Oh, that doesn't matter. Just make it so that he can open the back of the case.

THRIFT HERE AND THERE.

"There's one thing to be said of us,' remarked the native of England; "we certainly do not worship the 'almighty dollar' as some Americans do."

"No"; replied the young man whose family is going to the jubilee; "not until it has been changed into shillings and pence."

FATHERLY PRIDE.

"Young Joycy seems to think that new baby of his about the most important creature now in the flesh."

"I guess so. He insisted on paying full fare for it when they came on here from New York."

MONEY ENOUGH.

Agent—"Here is a book, sir, every gentleman ought to have—'Hints on Architecture.'"

Mr. Smallpurse—"I have no use for it."

"But, sir, it teaches you how to build a beautiful villa, a regular little palace, for only five thousand dollars.

"I haven't five thousand dollars. I haven't over five dollars to my name."

"Well, the book is only one dollar."

REMAINED TO BE SEEN.

"Hey!" shouted the policeman, as the scorcher whizzed by and failed to slow up at the corner, "ain't you riding rather more than eight miles an hour, young man?"

"Don't know," howled the scorcher over his shoulder, "I haven't ridden an hour yet."

Flower Farms.

The delightful labor of flower farming is steadily on the increase among the people of the Scilly isles, the astonishing quantity of forty-one tons of cut blossoms, chiefly narcissus, being sent over to England weekly during the winter season. The farms, which employ many hands and much capital, are excessively interesting, and the sight of them in February or March is worth even the risk of a rough voyage. Literally millions of white and yellow blossoms, richly fragrant, nestle between tall hedges of euonymus and veronica, and form a fragrant picture—exquisite as it is unique.

A SCIENTIST SAVED.

President Barnaby, of Hartsville College, Survives a Serious Illness Through the Aid of Dr. Williams' Pink Pills for Pale People.

From the Republican, Columbus, Ind.

The Hartsville College, situated at Hartsville, Indiana, was founded years ago in the interest of the United Brethren Church, when the State was mostly a wilderness, and colleges were scarce. The college is well known throughout the country, former students having gone into all parts of the world.

PROF. ALVIN P. BARNABY.

A reporter recently called at this famous seat of learning and was shown into the room of the President, Prof. Alvin P. Barnaby. When last seen by the reporter Prof. Barnaby was in delicate health. To-day he was apparently in the best of health. In response to an inquiry the professor said:

"Oh, yes, I am much better than for some time. I am now in perfect health; but my recovery was brought about in rather a peculiar way."

"Tell me about it," said the reporter.

"Well, to begin at the beginning," said the professor, "I studied too hard when at school, endeavoring to educate myself for the professions. After completing the common course I came here, and graduated from the theological course. I entered the ministry, and accepted the charge of a United Brethren Church at a small place in Kent County, Mich. Being of an ambitious nature, I applied myself diligently to my work and studies. In time I noticed that my health was failing. My trouble was indigestion, and this with other troubles brought on nervousness.

"My physician prescribed for me for some time, and advised me to take a change of climate. I did as he requested and was some improved. Soon after, I came here as professor in physics and chemistry, and later was financial agent of this college. The change agreed with me, and for awhile my health was better, but my duties were heavy, and again I found my trouble returning. This time it was more severe, and in the winter I became completely prostrated. I tried various medicines and different physicians. Finally, I was able to return to my duties. Last spring I was elected President of the college. Again I had considerable work, and the trouble, which had not been entirely cured, began to affect me, and last fall I collapsed. I had different doctors, but none did me any good. Professor Bowman who is professor of natural science, told me of his experience with Dr. Williams Pink Pills for Pale People and urged me to give them a trial, because they had benefited him in a similar case, and I concluded to try them.

"The first box helped me, and the second gave great relief, such as I never had experienced from the treatment of any physician. After using six boxes of the medicine I was entirely cured. To-day I am perfectly well. I feel better and stronger than for years. I certainly recommend this medicine."

To allay all doubt Professor Barnaby cheerfully made an affidavit before

Lyman J. Scudder, *Notary Public.*

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box or six boxes for $2.50 (they are never sold in bulk, or by the 100), by addressing Dr. Williams' Medicine Co., Schenectady, N. Y.

How Large Profits Are Made.

If first-class bicycles can be manufactured in large quantities for twenty-five dollars each, how much less does it cost to build type-writing machines? Is there any reason why such machines should sell for $100 each? Is there any reason why purchasers should pay even fifty dollars for such? What makes it possible for the manufacturers to secure five or six times the original cost? Persistent and judicious advertising.

Who opened that bottle of HIRES Rootbeer?

The popping of a cork from a bottle of Hires is a signal of good health and pleasure. A sound the old folks like to hear—the children can't resist it.

HIRES Rootbeer is composed of the very ingredients the system requires. Aiding the digestion, soothing the nerves, purifying the blood. A temperance drink for temperance people.

Made only by The Charles E. Hires Co., Phila. A package makes 5 gallons. Sold everywhere.

GROVES

TASTELESS CHILL TONIC

IS JUST AS GOOD FOR ADULTS. WARRANTED. PRICE 50 cts.

GALATIA, ILLS., Nov. 16, 1893.
Paris Medicine Co., St. Louis, Mo.
Gentlemen:—We sold last year, 600 bottles of GROVE'S TASTELESS CHILL TONIC and have bought three gross already this year. In all our experience of 14 years, in the drug business, have never sold an article that gave such universal satisfaction as your Tonic. Yours truly,
ABNEY, CARR & CO.

Chickens EARN Money

IF YOU GIVE THEM HELP.

You cannot do this unless you understand them and know how to cater to their requirements; and you cannot spend years and dollars learning by experience, so you must buy the knowledge acquired by others. We offer this to you for only 25 cents.

YOU WANT THEM TO PAY THEIR OWN WAY

even if you merely keep them as a diversion. In order to handle Fowls judiciously, you must know something about them. To meet this want we are selling a book giving the experience (Only 25c.) of a *practical* poultry raiser for twenty-five years. It was written by a man who put all his mind, and time, and money to making a success of Chicken raising—not as a pastime, but as a business—and if you will profit by his twenty-five years' work, you can save many Chicks annually, and make your Fowls earn dollars for you. The point is, that you must be able to detect trouble in the Poultry Yard as soon as it appears, and know how to remedy it. This book will teach you.

It tells how to detect and cure disease; to feed for eggs and also for fattening; which fowls to save for breeding purposes; and everything, indeed, you should know on this subject to make it profitable. Sent postpaid for twenty-five cents in stamps.

THE SULTAN IS ARROGANT.

THE PORTE NAMES PREPOSTEROUS TERMS OF ARMISICE.

VERY INDEPENDENT IN ATTITUDE

Annexation of Thessaly Demanded Besides An Indemnity of Ten Million Pounds. Situation Looks Serious.

Sunday advices from Constantinople state that the porte has replied officially to the note of the powers and declines to agree to an armistice until the following conditions are accepted

The annexation of Thessaly, an indemnity of £10,000,000 (Turkish) and the abolition of the capitulations.

The porte proposes that plenipotentiaries of the powers meet at Pharsalos to discuss the terms of peace and declares if these conditions are declined the Turkish army will continue to advance.

The demand for the annexation of Thessaly is based upon the fact that the province was originally ceded to Greece on the advice of the powers with the object of ending brigandage and Greek incursions into Ottoman territory, the porte believing at the time that the cession would obtain these objects, but the recent incursions of Greek bands and the events immediately preceding the war have proved to the contrary. This is the substance of the reply.

The ambassadors met Sunday to consider the porte's answer, which is regarded as raising an extremely grave issue. It is believed that representations will be made to the sultan personally to induce a modification of these terms, but it is foreseen this will be very difficult, owing to the attitude of the powerful old Turk war party.

If the porte proves obdurate European interference is not improbable, although at the present Russia is opposed to this.

It is regarded as quite certain that the powers will not consent to a retrocession of Thessaly. Even Germany is believed to be resolute on this point because it would involve a violation of the Berlin treaty and imperil the peace of the Balkans.

Altogether the reply of the porte has caused the greatest surprise. It appears that during the discussion of the note from the powers by the council of the sultan's ministers, news reached the council that 3,000 Greeks had landed at Palona and would march into Janina with the intention of co-operation with other forces from Arta. This created a bad impression among the ministers.

Terms Preposterous.

A cable dispatch from London says: The preposterous terms proposed by the porte must be regarded as the natural and usual method of bargaining. They would not be serious and force a continuance of the fighting. With the failure of the Greek dash in Epirus there is no chance to make a further stand unless at Thermopylae.

At Domokos the Greek troops must be suffering severely from the heavy rains, as they have no tents. The capture and evacuation of the town is only a question of a few days. The Turks have been seen at the passes east and west of Domokos, and General Smolenski has warned the crowp prince to expect an attack.

The weakness of the Greek position is in the great entent of the line. The news of the retreat in Epirus serves to still further demoralize the troops in Thessaly. The terms on which peace will finally be declared, the general said, will be settled by European conference

FINANCIAL TROUBLE IN HAVANA.

Refusal to Exchange Bank Bills Causes a Panic In Cuban Capital.

The decision of the government against the exchanging of bank bills for silver coin has caused a panic in Havana.

Prices of bread, milk and other necessities of life have doubled within the past few days. The working classes as well as all government employees, both civil and military, openly express their dissatisfaction with the action of the government in paying them in script which is 90 per cent below par.

IN BEHALF OF CUBAN CAUSE.

A Monster Massmeeting Held at the National Capital.

An enthusiastic audience of men and women, many of them well known in Washington, packed the Columbia theater, in that city, to its doors Sunday afternoon at a monster mass meeting held in behalf of the cause of the Cuban insurgents.

Seated on the platform and participating in the exercises were Senators Gallinger and Allen, ex-Senator Butler, of South Carolina; Rev. Hugh Johnson, pastor of the Metropolitan Methodist church; Rev. Howard Wilbur Ennis and a number of others identified with the interests of the insurgents.

HUMOR OF THE DAY.

A woman's reason may not convince, but it often puts an end to the discussion.—Puck.

Fortune's ladder has no top. No man ever stopped climbing for want of another rung.—Puck.

"Don't you think, Grumpy, that Miss Harshly is a beautiful singer?" "Very, but she can't sing."—Detroit Free Press.

Teacher—"What did Christian do when he got to Hill Difficulty?" Chorus of Pupils—"Got off his bike."—Boston Transcript.

Of all the many gathered here
That band's by far the proudest.
It didn't play the best—that's clear,
But then it played the loudest.
—Washington Star.

Leola—"Don't you think they are two souls with but a single thought?" Hazel—"Well, I shouldn't wonder. They are both making fools of themselves."—Truth.

At midnight, in his guarded tent, the Turk lay dreaming of the hours when he could hide to some extent behind the coat tails of the Powers.—Cleveland Plain-Dealer.

"Dawkins wears the best clothes of any man in the club." Yaas; he deserves great credit for his taste in dress." "Well, he gets it—from his tailor."—Boston Globe.

Dobson—"An unsigned poem is to me a symbol of modesty." Hobson—"That's funny; it always strikes me as an indication of cowardice."—New York Commercial Advertiser.

Prompter—"Ring the curtain down, quick." Stage Manager—"What's the matter?" Prompter—"One of the star's diamonds is disarranged."—Philadelphia North American.

"Harold," said Harold's rich uncle, "if you will only stop smoking cigarettes, I'll begin smoking them myself and shorten my life by at least ten years."—Indianapolis Journal.

"It's a shame," cried the young wife; "not a thing in the house fit to eat. I'm going right home to papa!" "If you don't mind, dear," said the husband, reaching for his hat, "I'll go with you."

Ryder—"Well, it's a mournful fact that a good bicycle will wear out the same as everything else." Wheeler (a beginner)—"Yes; I suppose so. But, between you and me, I think I'll go first."—Brooklyn Life.

Author—"You have no idea how many stamps I use posting my manuscripts to various editors." Critic—"Very likely. I think there ought to be excursion tickets for manuscripts at reduced rates."—Tit-Bits.

"Have you seen Redding's new book?" "Gracious! Has he also turned author?" "Oh, no. Better than that. He has designed the cover for somebody else's book."—Philadelphia North American.

"That fellow—" The dark-browed man's voice shook with emotion and things—"would sink to any depths for the sake of wealth." It was true; the chap he cursed was a diver by trade.—Cincinnati Tribune.

Kersmith—"You don't take any interest in the question of bloomers, perhaps, because the question has never come home to you. What would you do if your wife wanted to wear bloomers?" Kajones—"What would I do? I'd let her wear them! I guess you don't know Mrs. Kajones!"—Chicago Tribune.

The Height of Trees.

It has, perhaps, occurred to few of us that the boughs of trees occupy a very different position in summer and winter, respectively, but Miss Agnes Fry has made careful measurements of the height from the ground of branches of both walnut and mulberry trees in August and December, and she finds that in some cases there is a difference of as much as thirty-one inches in the height of the same branch from the ground in these two months. This particular figure was obtained with a branch of a mulberry tree, and it was found that in December a weight of thirty-five pounds was not sufficient to lower it to its summer position.

In other cases there were differences of from thirteen to nineteen inches in the distances in summer and winter respectively of branches from the ground. No wonder, then, that the diagnosis of a tree in winter from its general outline is so difficult a task.—Public Opinion.

Origin of the Word "snob"

"While turning over the leaves of the eighth volume of the Sporting Magazine, published in 1796," says a writer in Notes and Queries, "I have come upon what I think is a very early instance of the word 'snob.' The context does not indicate its meaning, but I apprehend there is no doubt that we must interpret it by Shoemaker. The writer is discoursing of races at Whitebuch. He says that 'there was a very respectable field; and although neither the Duke of Queensberry, Lord Egremont nor His Royal Highness, the Prince of Wales, were present, it being holiday time, a number of royal snobs were.'"

It is said that in twenty years Emile Richebourg has amassed a fortune of $400,000 by writing sensational stories for Le Petit Journal of Paris.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY.

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmimgham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks:

"In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 12,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

STRASBURG SAYINGS.

(Too late for last week.)

Our school is progressing nicely. Also the class in music. A few of the young folks enjoyed an impromptu social, last night, at the residence of Mr. Bice. All being good singers, we, of course, had splendid music interspersed with sweet converse.

The farms around us are in excellent condition, clean and growing. Small grain is heading out, and the delightful showers of Wednesday were just in time for oats and other crops. Strawberries are plentiful, and Irish potatoes are an old dish with us.

Without the ringing of bells a good congregation gathered at the church on the hill, last Sunday, and listened to Mr. Riggins' discourse on the Providence of God. Wish we could have service every Sabbath.

Some of our neighbors contemplate moving to Ochmulgee, near the Midland Railroad. Sorry to lose them, but give them our good wishes for future success.

Improved farm machinery is common among us, but nothing has been introduced to substitute the all-potent hoe in the cotton-patch.

Monday morning many of our citizens visited Clanton, ostensibly to aid with court proceedings, but really to see and be seen.

Mother earth has donned her best gown for our special pleasure and the birds give us cheerful song.

The farmers' hoes glisten like polished steel since cotton has been in condition to use them.

Mrs. Swinford, we hear, is very ill again.

"TEMPLE."

The action of Martha Reid chapter of the Daughter of the Confederacy, in declaring for Richmond as the site of the proposed Battle Abbey, we are sure, is in accord with the feeling of the whole South. But for the aspirations of one or two cities, whose sense of what is appropriate is overcome by their ambition for distinction, there could hardly be a vote against Richmond among old Confederates.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

ONE OE THE

BIGGEST AND BEST DEPARTMENT STORES

IN THE SUNNY SOUTH

Is that of

Drennen & Co.,

BIRMINGHAM, ALA.

They have knocked the Rosy Daylights out of the Old Prices and Placed the Luxuries as well as the necessaries of life within reach of all!

They have the finest line of goods that was ever seen in the Magic City, and they are selling at lower prices than were ever before known in this section.

Call whether you buy or not; but it is certain that you will want to buy if you call!

We have some special inducements to offer for the Thorsby trade.

CHILT

VOL. I. NO. 8.

OUR TOWN PHILOSOPHER.

HE RECEIVES A STRANGE LETTER FROM NORTH DAKOTA.

AND RETURNS A SCATHING REPLY

FIVE FEET WHEAT STALKS IN ALABAMA AND FIVE INCHES OF SNOW IN OHIO.

Our Town Philosopher crossed the Call threshold, yesterday, and told us that he had just received a strange sort of a letter from a farmer living in North Dakota.

"I call the letter a strange one," went on our Town Philospher, because I know the writer of it very well, and I always had an idea that he was at least as intelligent as the usual run of mankind. But just let me read you a paragraph from his epistle."

The old gentlemen put on his eyeglasses, took a leter from his pocket, and read as follows:

"'I suppose you're pretty well cured of the Southern fever by this time. I was talking with a very well-posted Western land-agent at Fargo, a few days ago, and he assured me that he wouldn't live in the South if he were given a 1,000-acre plantation to make it his home. He said that the climate in Summer was insufferably hot, and in Winter it was nothing but rain, rain and a little more rain every 24 hours. Then he dwelt upon the gnats, mosquitoes and other aggressive pests with which you have to contend down there, and he declared that malaria was so prevalent that 99 out of every 100 people looked like they had incipient jaundice. If his statements are true, and I have no reason to doubt them, I most heartily sympathize with you and your family, and hope you will return to North Dakota, where, even if the climate is a little too cold at times, it is at least healthy, and where half the population isn't made up of cotton-field coons.'

"This brilliantly asinine effusion came to hand yesterday morning, and I went home with it for the purpose of reading it to my wife. Well, sir, she listened and laughed, and listened and laughed so hard I thought she'd have a fit of hysterics.

"'The idea,' she said, 'of giving up our beautiful home in the sunny South, and going back to North Dakota, of all places in the world! The idea of swapping our good health and comfortable income, and blue skies, and magnificent flowers, and open Winters for continual bad colds, and a bare living, and scowling horizons, and blizzards, and droughts, and the abomination of desolation pertaining to a 9-months Winter! No, thanks! No more of that in ours! We had three years of it, and they were just three years too many for us and the children!' She had become indignant, and her eyes snapped fire as she spoke. 'You just write your correspondent and tell him bluntly that he wouldn't be living if the Fool-killer hadn't been remiss in his duty, so there?' and she sailed out of the room in high dudgeon.

"To pacify her I set down at my desk and answered that letter right then and there. I told him that if he would give me the address of his Fargo informant, I'd send that gentleman a lot of facts and figures concerning the South, and notify him that if he didn't quit misrepresenting this section, I'd rand him as a falsifier and all 'round fraud through the public press.

"I went on, and told my correspondent that an Alabama Summer was never as hot as a North Dakota Summer; that it didn't rain half as much here in Winter as it snowed up in his frozen and frowning latitude; that as far as Chilton county was concerned gnats, mosquitoes and similar plagues were looked upon as curios; that malaria was a thing unknown down here, except in the marshy strips of territory; that my family and I have enjoyed better health since coming here than we had ever known in his land of pneumonia, where sore throats, la grippe, consumption and the like claimed an army of victims every year, and that as far as 'cotton-field coons' were concerned, we had precious few of 'em in our colony. CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 8. THORSBY, ALA., FRIDAY, MAY 28, 1897. $1.00 PER YEAR.

OUR TOWN PHILOSOPHER.

HE RECEIVES A STRANGE LETTER FROM NORTH DAKOTA.

AND RETURNS A SCATHING REPLY

FIVE FEET WHEAT STALKS IN ALABAMA AND FIVE INCHES OF SNOW IN OHIO.

Our Town Philosopher crossed the Call threshold, yesterday, and told us that he had just received a strange sort of a letter from a farmer living in North Dakota.

"I call the letter a strange one," went on our Town Philospher, because I know the writer of it very well, and I always had an idea that he was at least as intelligent as the usual run of mankind. But just let me read you a paragraph from his epistle."

The old gentlemen put on his eyeglasses, took a leter from his pocket, and read as follows:

"'I suppose you're pretty well cured of the Southern fever by this time. I was talking with a very well-posted Western land-agent at Fargo, a few days ago, and he assured me that he wouldn't live in the South if he were given a 1,000-acre plantation to make it his home. He said that the climate in Summer was insufferably hot, and in Winter it was nothing but rain, rain and a little more rain every 24 hours. Then he dwelt upon the gnats, mosquitoes and other aggressive pests with which you have to contend down there, and he declared that malaria was so prevalent that 99 out of every 100 people looked like they had incipient jaundice. If his statements are true, and I have no reason to doubt them, I most heartily sympathize with you and your family, and hope you will return to North Dakota, where, even if the climate is a little too cold at times, it is at least healthy, and where half the population isn't made up of cotton-field coons.'

"This brilliantly asinine effusion came to hand yesterday morning, and I went home with it for the purpose of reading it to my wife. Well, sir, she listened and laughed, and listened and laughed so hard I thought she'd have a fit of hysterics.

"'The idea,' she said, 'of giving up our beautiful home in the sunny South, and going back to North Dakota, of all places in the world! The idea of swapping our good health and comfortable income, and blue skies, and magnificent flowers, and open Winters for continual bad colds, and a bare living, and scowling horizons, and blizzards, and droughts, and the abomination of desolation pertaining to a 9-months Winter! No, thanks! No more of that in ours! We had three years of it, and they were just three years too many for us and the children!' She had become indignant, and her eyes snapped fire as she spoke. 'You just write your correspondent and tell him bluntly that he wouldn't be living if the Fool-killer hadn't been remiss in his duty, so there?' and she sailed out of the room in high dudgeon.

"To pacify her I set down at my desk and answered that letter right then and there. I told him that if he would give me the address of his Fargo informant, I'd send that gentleman a lot of facts and figures concerning the South, and notify him that if he didn't quit misrepresenting this section, I'd rund him as a falsifier and all 'round fraud through the public press.

"I went on, and told my correspondent that an Alabama Summer was never as hot as a North Dakota Summer; that it didn't rain half as much here in Winter as it snowed up in his frozen and frowning latitude; that as far as Chilton county was concerned gnats, mosquitoes and similar plagues were looked upon as curios; that malaria was a thing unknown down here, except in the marshy stripe of territory; that my family and I have enjoyed better health since coming here than we had ever known in his land of pneumonia, where sore throats, la grippe, consumption and the like claimed an army of victims every year, and that as far as 'cotton-field coons' were concerned, we had precious few of 'em in our colony. The Alabama negro knows his place, as a general thing, and that is more than can be said of the North Dakota African, who is generally as useless as he is impudent, and is permitted to have a seat in a palace-car or at a hotel-table, alongside of white ladies and gentlemen, a thing that is not permitted at all in this part of the moral heritage.

"I said that I wished him well, but told him my wishes would be in vain as long as he remained in a country that was notorious for its cyclones, polar-waves, droughts, mortgages, crop-failures, and the Lord knows what, not forgetting the fact that the people up there had been bound, gagged and delivered to bands of robbers, known as corporations, monopolies and trusts. As a parting shot I told him that I was making money right along down here; and had earned enough to buy a splendid vineyard-tract, build a pretty villa, beside having a handsome sum in the bank; whereas I was as poor as he was, and as he still is, while I made my home in his vicinity. I know that last shaft will sting him to the quick, particularly as I added that I didn't work half as hard here as I did up there, thanks to the equability of our climate, the fertility of our soil and the unvarying certainty of our harvests.

"Speaking of harvests, I'd like to have a Yankee farmer see a field of wheat that lies in the vicinity of my vineyard. Why, sir, on the 15th of this month the stalks of that wheat measured from 5 to 6 feet in height! And close by is a rye-field where the stalks of rye measure from 7 to 8 feet tall! A day or two later I read in an Ohio paper that on this same 15th instant a heavy snow-storm was raging in the Buckeye Sstate, and the crops up there were in danger of being ruined in consequence!

"There is a big cry being raised in Yankeedom in behalf of good roads, and I think it high noon time, too. The average highways of the South, outside of the cities and big towns, are nothing to brag of, as a rule, but they're veritable turnpikes when contrasted with a round majority of the country roads that traverse the North.

"But Chilton county bears off the banner for good country roads. They are nearly dry in less than ten minutes after the hardest of rainstorms. The water soaks through to sub-soil from 6 to 10 inches below, and there it stays, making the farms on either side of the highways just that much easier to till.

"But I must be going," and after leaving an order for some letter-heads and envelopes, to be printed by the Call in the latest style of the art typographic, our shrewd and sunny Town Philosopher bade us a kindly "ta-ta," for the time being.

STATUE TO STEPHEN GIRARD.

Founder of the Famous College Honored at Philadelphia.

The statue of Stephen Girard, the great philanthropist, and founder of the famous Girard college, was unveiled at Philadelphia Thursday afternoon with imposing ceremonies.

The statue stands on the west plaza of the city hall and was erected by contributions of the college alumni.

The day commemorated the 147th anniversary of the birth of the philanthropist, and also marked the semi-centennial of the successful working of the college which bears his name.

TO ATTEND FUNERAL.

Vice-President Names a Senate Committee and Speaker Will Do Likewise.

A Washington special says: Upon receipt of the news of Senator Earle's death, Senator Tillman called on the vice-president in regard to the appointment of a committee to represen. the senate at the funeral.

Mr. Hobart named the following as a committee:

Messrs. Tillman, Clay of Georgia, Candler of North Carolina, McEnery of Louisiana, and Harris of Kansas.

Speaker Reed will also appoint a committee to represent the house.

DOCKS NEED REPAIRS.

Congress Will Be Asked to Furnish the Wherewith.

The navy department is making arrangements looking to the passage by congress of a resolution appropriating $100,000 for repairs to the dry docks in the New York navy yard.

Commodore Matthews, chief of the bureau of yards and docks, saw Speaker Reed with reference to the matter. The speaker referred him to Mr. Hilborn as the senior member in the city of the naval committee of the last congress. That gentleman advised Commodore Matthews to prepare a report and submit it to the house, in which event it would be considered at once.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

The reports to the Commissioner of Agriculture show that the acreage in cotton will be a slight increase in the State over that of last year, and a decrease in that of corn. The report is made up from replies from all the counties.

Fall and Spring oats are looking well; the fall planting will be ready to harvest in a few days. A full crop of wheat has been planted and doing well, with very few complaints of rust. The Irish potato crop is the best in several years and the prospects are good for a large crop of sweet potatoes. Apples, plums, peaches and other small fruits are doing well and there will be a full crop.

The condition of stock is on the whole good. There has been no disease reported among the work stock, but there has been a great falling off in the number of colts foaled, both horse and mule colts. Milk cows are reported in fair condition, but scarce; good milkers are in demand. Sheep are reported in good order, with an increase, the clip of wool being good. The number of hogs is reported 10 per cent off from last year; some effort is being made to improve the breed, which is very much needed; the organization of the Swine Breeders' Association of the State is a move in the right direction.

The man who claims that he takes more papers than he reads, and renders it as an excuse for not taking his county paper, does not speak much for the interest he takes in life and the culture of his own heart. Besides, he proves himself to be a drone in the busy hive, caring nothing for an interest in the upbuilding of his county and people, but simply lives off the efforts of others.—Ex.

The machinery in the Thorsby brick yard was put in motion this week and a regular force put to work, but, on account of an insufficient amount of water power, business has been suspended until the dam can be raised.

A new saw mill has been purchased this week and will be set up and run in connection with the lath and shingle mill. This will make two good saw mills, a planing mill and a lath mill for Thorsby.

Miss Irene Tench, of Chicago, who has been staying in Thorsby for some time, left here, Wednesday morning, en route for her home and will stop at Nashville and Cincinnati on the way.

Henry Raney, colored, was arrested Tuesday by Constable Collins on an indictment found by the grand jury for cutting another colored gentleman last winter with a knife.

For the first time in many years the county jail was vacant this week. A deputy came up from the State farm and took six prisoners back with him, Wednesday.

Mr. and Mrs. Daniels, of Mankato, Minn., are visiting in Thorsby a few days this week. Mrs. Daniels is a sister of Mrs. E. F. Mead.

Clanton business men report business as being very good so far this year in all branches of the trade.

Grapes and fruit trees are growing very rapidly, and good results are looked for this season.

Ripe blackberries are now being brought into town. There will be a large crop this year.

A carload of lath was shipped by the Thorsby lath mill this week.

Plums are now ripe and very plentiful.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

Birmingham, - Alabama.

THE PILGRIMS.

"Whither, pilgrims, whither bound
Passing slowly with no sound?"
One by one they journey by,
Gliding, gliding silently;
Slowly, slowly, dim and gray,
Hold they on their ghostly way.

"Hither, children, making May
Of the solemn autumn day,
Who were they but now went by
While the dead weeds gave a sigh?
Who the pilgrims, dim and gray,
Stopped and looked upon your play?"

"We have wandered many hours
Here where some one hides the flowers;
We heard laughter in the grass,
But we saw no pilgrim pass."
Whispers one,—pale-cheeked is she,—
"Shapes went by; they beckoned me."
—John Vance Cheney in Century.

MISS LATIMER'S ASSASSIN.

There was a man hanged under mob law in Southern Ohio several years ago. It was the first incident of the kind that had ever occurred in that part of the State, and the people thereabouts were naturally greatly excited over it. The man's crime had been a heinous one. He had shot down in cold blood, and without the slightest provocation, two women and wounded a third. The rest of the women and children were wrought up to a high degree of frenzy, and even after the desperado was hanged the sight of a strange man was enough to send them into spasms of terror.

Perhaps the person who suffered most acutely at the time was Miss Ellen Latimer. Miss Ellen was well-to-do. In her younger days she had spent two seasons in "society," in the nearest city, and in the top drawer of her bureau was a satin-lined rosewood box filled with costly jewels and other mementoes of that happy period. Then there was her silver; her knives and forks were the best in the country and her spoons couldn't be matched anywhere. In addition to that she always kept a little ready money on hand. All things considered, a villain who had plunder for his object could not find a more profitable victim than Miss Latimer.

Besides, Miss Ellen's mode of living was a regular standing invitation to ill-disposed persons to come and do their worst. Her sole companion was Harvey Hempstead, a half-witted boy of 12, whom Miss Latimer, in the goodness of her heart, had taken from the poorhouse when he was a little fellow and brought up as a sort of social experiment. Miss Ellen and Harvey lived in the red brick house that had sheltered the last three generations of the Latimers. It was a very lonesome place, being situated on the edge of a large field at the end of a lane that extended fully a quarter of a mile back from the main highway. Miss Latimer had often been urged to take some one into the great house for her protection, but even after the shock attendant upon the shooting and subsequent hanging she stolidly refused to do so on the ground that she couldn't afford to be bothered.

"I dont deny that I'm afraid," said Miss Ellen one day to her married brother, who had earnestly implored her to do something to insure herself against danger from possible robbers, "but I really think that Harvey and I are better off as we are. You can't trust anybody nowadays. I wouldn't dare to have even a hired girl around, and if I undertook to allow one of the farm hands to sleep on the place I'm sure we would be murdered before morning. There's Pat Henning, for instance. He's been doing chores around the house and barn for more than two years, yet I'm as afraid as death of him. The only really easy moment I have is when I see him lock the stable door at night and strike out across the field toward his own home. Harvey is 12 years old and strong, and nobody would touch a hair of our heads without our giving him a lively tussle. No, thank you, brother, I dont want anybody here but Harvey."

As the months passed and nothing further transpired to break the monotony of existence in that neighborhood Miss Latimer's fears gradually subsided, and she remarked that "she guessed it would be a cold day when another woman killer set his foot on that soil." But that hopeful view of the case was not shared by Harvey. Harvey Hempstead was a boy who said little, but who, when his weak mind was once set on any particular subject, never ceased thinking of it. He had never expressed himself very freely on the question of the hanging, but for all that not a day passed that he did not expect to receive some caller on evil bent before the night came, and he made preparations accordingly. That was the first thing he thought of when one Wednesday morning in May, Miss Latimer announced her intention of going to the neighborhood village to spend the day.

"S'posin' he comes to-day—to-day—to-day, while I'm alone—alone—alone," lamented Harvey, in his drawing, disjointed way.

"Who?" demanded Miss Ellen, sharply

"Somebody like him that was hanged—hanged—hanged," faltered Harvey.

"Nonsense," returned Miss Latimer. "That's a thing of the past. You mustn't think of such stuff. If you get lonesome you can get one of Pat Henning's boys to come over and stay with you."

Patty Henning had brought the horse and buggy around to the door and Miss Latimer climbed into the vehicle and drove away, leaving Harvey looking after her through a swirl of apple blossoms. The brown horse jogged leisurely down the lane and out into the highway. The air was redolent with the perfume of billows of apple blossoms in the orchards that lined the road and the scent of newly upturned earth. Miss Latimer had passed up and down that same thoroughfare a good many times in the last twenty years, and often under similar conditions, but somehow the flowers had never seemed so fragrant, the air so balmy, nor the sky so blue. She could remember but one other morning when all the elements of nature had conspired to produce so fair a scene and that was many years before when she had ridden over the same road—but not alone.

It all came back to her that bright May day with startling vividness. She could see him as plainly as if he were then at her side. She met him the first season she was in "society." She was young and pretty then, and he made no effort to conceal his admiration for her. Throughout those happy months she spent in the city he was her devoted admirer and when she came home in response to a call from her sick mother, he soon followed. He stayed a week, and it was arranged that he should come again in autumn for their marriage. She drove him over the smooth yellow road to the railroad station one radiant morning in May.

That was the last time she saw him. She never even heard from him directly, but three months later the news came through a natural friend that he had married a girl in a Canadian town whither he had gone on business

Many times throughout the ensuing months Miss Ellen assured herself that her love for the man was dead, but as she drove slowly toward the village that spring day twenty years after their last meeting the flood of recollection that surged over her heart brought home the truth that affection such as she had given cannot die and that in her loveliness and loneliness she had lost the very essence of life.

In the meantime Harvey, being installed housekeeper at Latimer place for the day, set about his duties. He busied himself in the kitchen and cellar for an hour or more, then went into the woodyard and began to bring order out of the chaos of stovewood, which Pat Henning had split the day before. That done he went around to the porch, and, sitting down in the shade, rocked his long, lanky body slowly to and fro until the shifting shadows warned him of the approach of noontime. Then he started into the house to prepare luncheon. Just as he stepped over the threshold he heard the clicking of the latch of the front gate, and, turning quickly round, he saw a man coming down the path. The man was a stranger, with a black beard, black clothes and a black straw hat.

"Good morning," he said politely.

Harvey's tongue was benumbed and he could not answer.

'Is Miss Latimer in?" asked the stranger.

Harvey's voice was returning by degrees and he said, "No," very faintly.

"Will she be here soon?"

"No, not till night—night—night," quavered Harvey.

To the boy's dismay the man sat down on the edge of the porch and began to fan himself with his slouch hat.

"That's too bad," he said in a tone of genuine regret, "but I'll wait till she comes if I have to stay a week. I must see her. My boy, I'm hungry. Do you think you could get me something to eat?"

Like a flash Harvey's ordinarily dull mind conceived the situation over which he had secretly pondered for many months and with equal agility the few rays of his concentrated intelligence planned a way out of the difficulty.

"I guess I can," said Harvey, forgetting in his enthusiasm to repeat the final word of his sentence

In less than an hour after the black-whiskered man had eaten his luncheon he had fallen asleep on the sofa in the sitting room. As soon as his deep, regular brething announced that he had fallen into a stupor from which he could not be easily aroused Harvey quickly pushed the narrow couch into the long dark closet that ran far back under the stairway; then locking the closet door, he took up his station beside it and impatiently awaited the arrival of Miss Latimer. It was 5 o'clock when that lady came home. Harvey heard the wheels when she turned into the gate and went out to meet her.

"Miss Ellen," he said in an awed whisper, "he ca-ame."

"What are you talking about?" queried Miss Ellen.

"That man come to steal your silver. He wanted you, too—too—too. He said he'd have you if he had to stay a week—week—week," and his voice arose in a shrill treble indicative of the excitement under which he was laboring.

Miss Latimer let the reins slip from her nerveless fingers and regarded the boy through a film, which sudden fear had quickly brought before her eyes.

"My goodness, Harvey," said. "And not an officer in the neighborhood. Which way did he go? He'll come back to-night and kill us, sure."

Harvey shook his hand. "He didn't go," he said with unusally rapidity. "He's in the clo-o-oset. I put him to sleep with a dose of laudanum—"

Miss Latimer did not wait to hear the termination of the series of "laudanums" but drove around to the barn and unhitched and stabled the horse.

"Now, Harvey," she said, "hurry right over to Pat Henning's house and tell him to fetch the Sheriff as quickly as possible. "I'll stay here and watch the closet door till you get back."

Harvey needed no second bidding. Pat Henning had just started over to the Latimer place when he neared the little cottage.

"There's a man up there come to shoot Miss Ellen" he shouted, as soon as he turned the corner of the house. "Go for the Sheriff—Sheriff—"

Neither did Pat Henning wait to hear the end of the command. He caught the gist of Harvey's communication, and in an incredibly short time he had saddled his own sorrel mare and was off for the county seat, only stopping on the way to tell friends, or, perchance, strangers, whom he happened to meet that there was another desperado in the community and that he had assaulted Miss Ellen Latimer. Pat Henning was barely on the way when Harvey started across the fields at a steady lope. He reached the house none too soon, for, the effects of the sleeping potion having worked off, the man who was imprisoned in the closet was emphatically demanding his release, and Miss Latimer was beside herself with fear. She had taken refuge in the back yard, but even there the threats and entreaties shouted out by the prisoner were distinctly audible, and it was plain, not only to her and Harvey, but to the neighbors who soon began to drop in, that her situation was critical. They held a consultation, and it was decided that it was best for no one to venture into the house until after the arrival of the Sheriff.

It was almost 10 o'clock when that worthy accompanied by his deputy, Pat Henning and three other men whom he had picked up on the way rode pell mell up to the front gate, and, hastily dismounting, stalked bravely toward the house. At the Sheriff's urgent request Miss Latimer continued to rusticate in the back yard until the trying ordeal should be over and the would-be assassin carried away in chains. She was surprised by the shouts of the men within, when the prisoner was dragged forth from the closet and the handcuffs clapped on his wrists. Then she watched for them to ride away, but for some reason they still lingered. She could hear the stentorian voice of the Sheriff raised in the noisy altercation with another person, whose voice was too low for her to distinguish either the tones or the words. Presently the officer appeared in the doorway. She could see by the light of the lantern he carried that he was flushed and vexed about something.

"Miss Latimer," he said, advancing toward her, "this man insists upon seeing you a moment. He says there has been a grievous mistake and that if he can ony speak a few words to you everything will be all right. You needn't be afraid. His hands are bound Will you come?"

"Certainly," said Miss Latimer.

She took Harvey's cold hand in hers and the two followed the Sheriff into the house. The prisoner was sitting dejectedly on a low chair near the closet door. His head was bent, and only his profile was visible as she approached him. But there was something in the very air of the man that made her start and clutch Harvey's hand more and more tightly. She stood before him and he looked up. A smile passed over his bearded face. She leaned on Harvey for support then, but quickly mastering her emotion she signified her desire to speak with her assassin alone. Harvey discreetly looked out of the farthest window.

"Ellen,' he said, meekly, "I wasn't expecting such a reception at this after the lapse of all these years. I wasn't counting on being locked up as an assassin."

"No," she returned calmly. "Neither was I counting on your running away as you did twenty-one years ago You are worse than an assassin. You murdered my heart. You—"

She was on the point of breaking out a torrent of reproach and scorn, but in an instant she seemed to be riding over the yellow road again with him by her side and the fragrance of the rich, dark earth rising round them like an incense. The sudden transition of thought brought with it a corresponding change of heart, and the love thrills of the morning pulsed through her veins suffusing her comely face with becoming blushes. She drew a step nearer and laid her hands on his shoulders.

"Why did you come back, John?" she asked, softly.

He attempted to take her hand in his, but those useful members being for the time incapacitated for duty he only looked the eloquence his tongue could not utter alone.

"Why?" he repeated. "Because I love you."

"And was that the reason you left me?"

"Ellen, Ellen, be just—"

"As you have been?" she remarked.

"As you alone know how to be," he went on. "I've been an idiot and a rascal. All men are if you'll give them half a chance. It's their nature. I didnt know my own mind. A man never does. Ellen, I haven't a word to say in my self-defence except that I love you. Neither have I a word to utter against the woman I married. She was a dear, good wife. But I love you and always have. Ellen, you'll have to be good to me. Haven't you tried to keep me by taking me prisoner?" he added facetiously.

"Do you know your own mind now?" She meant her voice to be very severe, but it sounded like strains of sweet music instead.

"Take these handcuffs off," he thundered, "and I'll show you, I'll kill that rascally boy of yours."

"I know it," wailed Harvey, whose ear had caght the final threat. "I knew he was an assassin—assassin—"

"Hush, Harvey," said Miss Latimer.

She stopped down and kissed the man's dark, wrinkled face—and, oh, what a tender kiss it was! Then she went to the door and called the Sheriff.

"I find there has indeed been a mistake," she said. "This gentleman is an old friend who called in my absence. Harvey drugged him and locked him up. I'm sorry to have troubled you. You may free his hands These bonds are needed no longer."

"It was a mistake—mistake—mistake," echoed Harvey, who stood by her side.

There was much disappointment at the Lattimer plate that night over being cheated out of a possible lynching, and even after the prisoner was freed the people still lingered, hoping that something would turn up, after all. Miss Latimer and her lover did not heed them. Long after midnight the two sat by the window, through which the apple blossoms were drifting on the night wind ever and anon and talked over the past and future. Harvey did not take the persistence of the neighbors so affably, however.

"It's all a mista-a-ake," he shouted from the kitchen door. "You'd better go home—home—home."

And at length they went. Pittsburg Press.

A Careful Little Financier.

It was a bank near the suburbs of Brooklyn in which a little girl not more then eight years old, made her appearance the other day, asking if she might see its workings. A polite little girl was not to be refused, and she was taken inside and shown the various departments of the institution. But that was not where the money was kept; could she see where the money was kept? Certainly, and she was taken to see the vaults. Still there was no money to be seen, and she was not satisfied. Could she see the money? Certainly, if that was what she wished, and the vault doors were thrown open, and, with a sigh of satisfaction, the little girl saw some of the money in which she was interested. "Do you think burglars could get in here?" she asked, finally. "Certainly not," replied the bank official who had been acting as conductor. "It would be very difficult for burglars to get into the bank, and they could not get into the vaults. But now," he continued, "you have asked me a great many questions, little girl, and I should like to know why you are so much interested in this bank." "Well," said the little girl, confidentially, "my papa put $5 in this bank for me the other day, and I wanted to be sure that no burglar could get in and get it."—New York Times.

A Rudder Indicator.

G. E. Painter, a young electrician of Baltimore, has obtained a patent upon an invention of a helm indicator which will show upon a dial in front of the man at the helm every move the rudder makes, and exactly how it has gone one way or the other out of the desired course. It works by electricity, the transmitter being placed at the rudder, and connected by wires with the dial in the pilot house. That is also arranged so as to be illuminated. The appliances are placed in watertight cases, the works being inside to prevent salt air from rusting the delicate machinery. Mr. Painter has also devised an improved electrical signaling instrument between the pilot house and engine room. Both inventions will be sent to Newport News, and given a thorough trial on board the gunboat Nashville, now being constructed there.

A Salem, Mass., man has invented a collapsable umbrella, which one may carry in his pocket when folded.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

EXPENSIVE, TOO.

Bess—Tom tells all he knows.
Maud—The silence must be oppressive.

NOT SURPRISING.

He—I love you better than my life.
She—Considering the life you lead, I cannot say that I am surprised.

POOR LO CATCHES THE CRAZE.

Official—Well, what do you want now?
Indian—Want to change my pony for a bike.

HIS APPEARANCE AGAINST HIM.

Brown—My son has very extravagant ideas.
Stone—He doesn't look as if he had many of them.

A SOCIETY VIEW.

"Well, after all, what did Nansen accomplish by his Arctic expedition?"
"Accomplish? Why, he didn't have to wear a dress suit for fifteen months."

SHE WEPT.

"Don't cry," he entreated. Then he perceived that her handkerchief was edged with the most exquisite lace.
"Don't weep," he said, correcting himself.

COSTLY ANCESTORS.

Parvenu—What will you charge to paint a grandfather for my gallery of ancestors?
Artist—Five hundred dollars.
Parvenu—Five hundred dollars! Why, Mr. Dauber painted me a great-grandfather the other day for $100.

AN ETYMOLOGIST.

Teacher—When a woman's husband dies, Patsy, what's she called?
Patsy—A widder.
Teacher—And when a man's wife dies, what do we call him?
Patsie (after some thought)—A widout her, mum.

THE SMUGGLERS.

Mildmay—Ah, speaking of smugglers? Dark-browed villains, with unkempt locks, eh?
Juniper—Oh, no; these were ladies of the highest respectability, handsome in face and form and beautifully dressed.

ACTIVITY IN HIS AFFAIRS.

"Have you made any advances in your business?" asked the young lawyer's friend.
"Yes," was the reply. "Two of them."
"Clients?"
"No, my clerks. They said they needed money, so I advanced them $10 each."

CONCEITED.

Mrs. Jones (to tramp)—No; I gave you a piece of pie the day before yesterday.
The Tramp—Yes, mum; but I couldn't get anything for it. There's no demand at present, mum, for petrified curiosities.

UNAPPRECIATED EFFORTS.

Officer—I found the man yelling and breaking dishes with an axe.
Magistrate—What have you to say for yourself?
Prisoner (humbly)—Your Honor, I was only trying to keep the baby quiet.

HAD ITS ADVANTAGES.

Mr. Booce—I saw a man get run over by the trolley this afternoon, and I heard later that his leg had to be taken off at the knee. Isn't it awful?
Mrs. Booce—Yes, I am sorry for the poor man, but if he happens to have a wife she can keep him at home nights now by hiding his wooden leg.

CIVILITY TO BURN.

Ambitious Mamma—Edith, I noticed last night that Mr. De Rich paid you considerable attention. I hope you showed him a proper amount of civility.
Ingenuous Debutante—Oh yes, mamma, I did! I'm sure he knows he can have me for the asking.

TOO MUCH FOR HER.

Biker—Talking about cattle, we came across a mighty wicked-looking cow when I was out with Miss Blumer the other day.
Wheeler—What did she do?
Biker—Made a bee line for the next county.
Wheeler—What! Deserted you and the tandem?
Biker—No, no, I was referring to the cow.

RESTING EASIER.

Spats—How did the wedding come off at which you were best man?
Socratoots—All right, but poor old Bumpus at the critical moment was in a fever of excitement.
Spats—How is he now?
Socratoots—Oh! convalescent—the honeymoon is over.

NO ROOM FOR DOUBT.

"I used to think," said the man with the melancholy mien, "that many of these gibes at messenger boys were unjust. But I'm afraid that isn't the case."
"What has caused you to change your mind?"
"I've seen one of them practising for hours every day this month to learn to stand still without getting off his bicycle."

A Modern Appian Way.

Before long there is to be a magnificent driveway or boulevard stretching along the shore of Lake Michigan from Chicago to Milwaukee. Most of the towns along the route to be followed have done something within their own limits to make easier the accomplishment of the great undertaking. Milwaukee has built two miles of roadway like that at Chicago, and has given it the same name, Sheridan drive. Waukegan has done as much. When all the gaps in this road are filled it will rival the finest in Europe, both in construction and scenic beauty.

Collecting mail boxes are to be put on the street cars ...

NOTES AND COMMENTS.

According to the London Court Journal, Li Hung Chang has a most arduous task before him. The story is that the Chinese emperor, being anxious to learn French, appointed the erstwhile possessor of the yellow jacket as his tutor. But when he discovered that his teacher had but a smattering of the tongue, he ordained that Li be incarcerated until he learns the language.

Two high class German art journals—Vom Fels Zum Meer and Moderne Kunst—of Berlin have recently printed beautifully illustrated sketches of President McKinley and his family by C. Frank Dewey, an American writer, now living in Berlin. This is only one of many indications that intelligent people in Europe are coming to take more interest in American affairs.

An interesting evidence tending to show that the middle name has grown in favor during this century is found in the fact that while there were fifty-six signers of the Declaration of Independence, only three had or used a middle name: Robert Treat Paine, of Massachusetts, and Richard Henry Lee and Francis Lightfoot Lee, of Virginia.

George Peabody's gift of $2,500,000 for London workingmen's houses has increased to $6,000,000 in the twenty-four years since his death. Last year the trustees of the fund provided 11,367 rooms, besides bathrooms, lavatories and laundries; 19,854 persons occupied them. The death-rate of infants in the buildings is four per cent. below the average for London.

Commenting on Secretary Wilson's suggestion that Western farmers would do well to raise more cattle and hogs, The Chicago Times-Herald says: "The situation has already begun to right itself. The profits in cattle and sheep feeding have been so large to the fortunate few this season that every corn raiser is determined to have stock to eat his grain, and within a year or two the effect of setting apart more ground to pastures, and of feeding more corn on the farm, will be apparent in reduced stocks of this grain and better prices. The advance in wheat last year came too late to help most of the growers, but with present prices for wheat, corn and oats restored, and cattle, hogs and sheep as they are, the farmers of the country will be liberal buyers again."

The Agricultural Department is being importuned from all parts of the country for sugar-beet seed. In view of the unsatisfactory prices received for staple products during the past few years and the prospective increase in the duty on sugar, farmers in all sections of the Union evidently intend to experiment with sugar-beet culture. Heretofore sugar-beet growing has been confined almost exclusively to Nebraska, Kansas and California. The Agricultural Department has sent beet seeds this spring to about thirty states and territories.

Professor Henry P. Armsby, dean of the School of Agriculture of the Pennsylvania State College, says that the agricultural products of Pennsylvania exceed the total iron ore, coal and oil products of the State by $3,000,000. He also makes a strong plea for agricultural education. "Whether we like it or not," he says, "we are face to face with new problems and new conditions. In this process of evolution, by which agriculture is adjusting itself to its environment, as in every other process of evolution, the fittest will survive. The community or the individual farmer that can successfully readjust its agriculture to these new conditions will continue to prosper, while the farmer or the community which fails to do this will be borne down by forces as pitiless and as irresistible as gravitation."

"Some time ago," says a man who always tries to heed good advice, "I stopped eating hearty dinners on the advice of an eminent physician, who said that a hearty dinner tended to shorten life. Not long afterwards I saw that another physician, equally eminent, said it was simply suicidal to eat a heavy luncheon, and so I made an apple or a cracker serve me for luncheon. It was pretty tough to get up from luncheon and dinner in a famished condition, but I consoled myself with the thought that I was lengthening my life. And, besides I could eat a hearty breakfast. But the other day I saw that still another eminent physician says that no one who wants to live long should eat any breakfast, and I am puzzled to know what to do. These men are experts, and presumably know what they are talking about. But if I adopt their directions for the attainment of a long life it looks as if I might die of starvation in less than a month."

The United States Supreme Court has decided a case involving a claim for damages for killing a dog. The case had made its way from the lower courts of New Orleans through various phases of litigation, to be finally decided here in opposition to the claim. The suit was instituted by George W. Sentell, Jr., vs. the New Orleans and Carrollton Railroad Company. The dog, a Newfoundland, valued at $200, was killed by a car owned by the railroad company. The case turned upon the validity of an act of the Louisiana Legislature recognizing dogs as personal property only when placed upon the assessment rolls. In this case the

HAD ITS ADVANTAGES.

Mr. Booce—I saw a man get run over by the trolley this afternoon, and I heard later that his leg had to be taken off at the knee. Isn't it awful?
Mrs Booce—Yes, I am sorry for the poor man, but if he happens to have a wife she can keep him at home nights now by hiding his wooden leg.

CIVILITY TO BURN.

Ambitious Mamma—Edith, I noticed last night that Mr. De Rich paid you considerable attention. I hope you showed him a proper amount of civility.
Ingenuous Debutante—Oh yes, mamma, I did! I'm sure he knows he can have me for the asking.

TOO MUCH FOR HER.

Biker—Talking about cattle, we came across a mighty wicked-looking cow when I was out with Miss Blumer the other day.
Wheeler—What did she do?
Biker—Made a bee line for the next county.
Wheeler—What! Deserted you and the tandem?
Biker—No, no, I was referring to the cow.

RESTING EASIER.

Spats—How did the wedding come off at which you were best man?
Socratoots—All right, but poor old Bumpus at the critical moment was in a fever of excitement.
Spats—How is he now?
Socratoots—Oh! convalescent—the honeymoon is over.

NO ROOM FOR DOUBT.

"I used to think," said the man with the melancholy mien, "that many of these gibes at messenger boys were unjust. But I'm afraid that isn't the case."
"What has caused you to change your mind?"
"I've seen one of them practising for hours every day this month to learn to stand still without getting off his bicycle."

A Modern Appian Way.

Before long there is to be a magnificent driveway or boulevard stretching along the shore of Lake Michigan from Chicago to Milwaukee. Most of the towns along the route to be followed have done something within their own limits to make easier the accomplishment of the great undertaking. Milwaukee has built two miles of roadway like that at Chicago, and has given it the same name, Sheridan drive. Waukegan has done as much. When all the gaps in this road are filled it will rival the finest in Europe, both in construction and scenic beauty.

Collecting mail boxes are to be put on the street cars in Berlin next year.

NOTES AND COMMENTS.

According to the London Court Journal, Li Hung Chang has a most arduous task before him. The story is that the Chinese emperor, being anxious to learn French, appointed the erstwhile possessor of the yellow jacket as his tutor. But when he discovered that his teacher had but a smattering of the tongue, he ordained that Li be incarcerated until he learns the language.

Two high class German art journals—Vom Fels Zum Meer and Moderne Kunst—of Berlin have recently printed beautifully illustrated sketches of President McKinley and his family by C. Frank Dewey, an American writer, now living in Berlin. This is only one of many indications that intelligent people in Europe are coming to take more interest in American affairs.

An interesting evidence tending to show that the middle name has grown in favor during this century is found in the fact that while there were fifty-six signers of the Declaration of Independence, only three had or used a middle name: Robert Treat Paine, of Massachusetts, and Richard Henry Lee and Francis Lightfoot Lee, of Virginia.

George Peabody's gift of $2,500,000 for London workingmen's houses has increased to $6,000,000 in the twenty-four years since his death. Last year the trustees of the fund provided 11,367 rooms, besides bathrooms, lavatories and laundries; 19,854 persons occupied them. The death-rate of infants in the buildings is four per cent. below the average for London.

Commenting on Secretary Wilson's suggestion that Western farmers would do well to raise more cattle and hogs, The Chicago Times-Herald says: "The situation has already begun to right itself. The profits in cattle and sheep feeding have been so large to the fortunate few this season that every corn raiser is determined to have stock to eat his grain, and within a year or two the effect of setting apart more ground to pastures, and of feeding more corn on the farm, will be apparent in reduced stocks of this grain and better prices. The advance in wheat last year came too late to help most of the growers, but with present prices for wheat, corn and oats restored, and cattle, hogs and sheep as they are, the farmers of the country will be liberal buyers again."

The Agricultural Department is being importuned from all parts of the country for sugar-beet seed. In view of the unsatisfactory prices received for staple products during the past few years and the prospective increase in the duty on sugar, farmers in all sections of the Union evidently intend to experiment with sugar-beet culture. Heretofore sugar-beet growing has been confined almost exclusively to Nebraska, Kansas and California. The Agricultural Department has sent beet seeds this spring to about thirty states and territories.

Professor Henry P. Armsby, dean of the School of Agriculture of the Pennsylvania State College, says that the agricultural products of Pennsylvania exceed the total iron ore, coal and oil products of the State by $3,000,000. He also makes a strong plea for agricultural education. "Whether we like it or not," he says, "we are face to face with new problems and new conditions. In this process of evolution, by which agriculture is adjusting itself to its environment, as in every other process of evolution, the fittest will survive. The community or the individual farmer that can successfully readjust its agriculture to these new conditions will continue to prosper, while the farmer or the community which fails to do this will be borne down by forces as pitiless and as irresistible as gravitation."

"Some time ago," says a man who always tries to heed good advice, "I stopped eating hearty dinners on the advice of an eminent physician, who said that a hearty dinner tended to shorten life. Not long afterwards I saw that another physician, equally eminent, said it was simply suicidal to eat a heavy luncheon, and so I made an apple or a cracker serve me for luncheon. It was pretty tough to get up from luncheon and dinner in a famished condition, but I consoled myself with the thought that I was lengthening my life. And, besides I could eat a hearty breakfast. But the other day I saw that still another eminent physician says that no one who wants to live long should eat any breakfast, and I am puzzled to know what to do. These men are experts, and presumably know what they are talking about. But if I adopt their directions for the attainment of a long life it looks as if I might die of starvation in less than a month."

The United States Supreme Court has decided a case involving a claim for damages for killing a dog. The case had made its way from the lower courts of New Orleans through various phases of litigation, to be finally decided here in opposition to the claim. The suit was instituted by George W. Sentell, Jr., vs. the New Orleans and Carrollton Railroad Company. The dog, a Newfoundland, valued at $200, was killed by a car owned by the railroad company. The case turned upon the validity of an act of the Louisiana Legislature recognizing dogs as personal property only when placed upon the assessment rolls. In this case the dog was not assessed. Judge Brown delivered the opinion of the court sustaining the constitutionality of the law, and refusing damages. He laid down the law in regard to dogs in general in the following terms: "The very fact that they are without protection of the criminal laws shows that property in dogs is of an imperfect or qualified nature, and that they stand as it were between animals ferae naturae, in which until subdued there is no property, and domestic animals in which the right of property is complete. They are not considered as being upon the same plane with horses, cattle, sheep, and other domesticated animals, but rather in the category of cats, monkeys, parrots, singing birds and similar animals kept for pleasure, curiosity or caprice. Unlike other domestic animals, they are useful neither as beasts of burden for draught nor for food.

During the year 1896 Great Britain imported 1,589,387,000 eggs. Russia and Northern Italy are now the greatest egg-producing countries in Europe.

A member of the Woman's Press Club, of New York City, gives the following original recipe for ending a war before it is begun: Let the other fellow know you can lick him. Then there will be no necessity of doing it.

This country is capturing all the good things this year. The King of Siam is about to visit us, and he will be followed later in the summer by the Rajah of Razamataz. There's a name to conjure with.

Robert Bonner mentions the striking fact that, when he bought his first trotting horse in 1856, only nineteen horses, living and dead, had trotted a mile in 2:30. Now there are more than 13,000 in the list.

Boston is to have what is called a "Mutual Statistical Bureau," the official existence of which will commence on May 1. This is the first board of its kind to be created in an American city, and its purpose will be to analyze and tabulate all expenditures in the same manner as are those of a great railroad or manufacturing corporation.

In the decline of the New England mackerel catch from 478,000 barrels in 1884 to 77,000 barrels in 1896 there is a deplorable story of decay in a great and profitable industry. The explanation of this enormous shrinkage lies in the fact that the mackerel are gradually disappearing from American waters. The causes of this disappearance are as yet unknown, but they are constant and powerful, and if not speedily discovered and removed the American demand for salt mackerel will presently have to be supplied from foreign sources. Norway and Sweden now send about $1,000,000 worth of salt fish, mostly mackerel, to this country per year, and in return they buy about $9,000,000 worth of American agricultural products.

An Immense Farm.

The largest farm in this country, and probably in the world, is situated in the southwestern part of Louisiana. It extends a hundred miles north and west. It was purchased in 1883 by a syndicate of Northern capitalists, by whom it is still operated. At the time of its purchase its 1,500,000 acres was a vast pasture for cattle belonging to a few dealers in that country. Now it is divided into pasture stations for ranches, existing every six miles. The fencing is said to have cost about $50,000. The land is best adapted for rice, sugar, corn and cotton. A tract, say a half a mile wide, is taken, and an engine is placed on each side. The engines are portable, and operate a cable attached to four plows. By this arrangement 30 acres are gone over in a day with the labor of only three men.

There is not a single draught horse on the entire place, if we except those used by the herders of cattle, of which there are 16,000 head on the place. The Southern Pacific Railway runs for 36 miles through the farm. The company have three steamboats operating on the estate, of which 300 miles are navigable. It has also an ice house, bank, shipyard and rice mills.

The Bicycle and Tuberculosis in Women.

At the last quarterly meeting of the American Statistical Association, Dr. S. W. Abbott, secretary of the Massachusetts Board of Health, presented some interesting figures regarding the proportion of pulmonary tuberculosis in females to that in males in Massachusetts. The rate in 1851 was 1,451 females to 1,000 males; in 1890, 1,055 females to 1,000 males; and last year only 974 females to 1,000 males. Last year was the first in the history of the state in which the number of deaths from phthisis in females was smaller than that in males. The fact that a uniform reduction in the rate of female deaths began some five years ago about the time when women were beginning to ride the bicycle extensively, Dr. Abbott considers significant, and he is inclined to attribute the decrease in the death rate to the great increase in open air exercise among women which has been inaugurated by the use of the bicycle.—British Medical and Surgical Journal.

Bottle Message in a Codfish.

In a large codfish recently caught on the Scottish coast was found a corked lemonade bottle, made in Elgin, containing a piece of paper, on which was written, "Schooner Lucia foundered 30 miles off Dunnet Head. God help us."

CUSTOMS OF THE MIKADO.

The Japanese Ruler's Methods of Dealing With Ministers and People.

His Majesty's daily customs are very regular. He always goes to his study at 9 a. m. and remains at work there until 4 p. m. He reads and signs all parliamentary laws and decrees.

When a Cabinet Minister addresses his Majesty about any public matter he inquires about the subject, the purpose and condition, and decides it. He is firm and not changeable. When he decides a matter once he cannot after that be moved.

At the beginning of Matsukata's Cabinet Parliament decided to reduce the salaries of the Cabinet Ministers and other Government officers. The Prime Minister, Count Matsukata, addressed his Majesty about it. His Majesty did not consent and he said: "Many officers cannot live upon a fixed salary. Some Cabinet Ministers have been obliged to borrow money, and I advanced money from my treasury to support them. If the present Cabinet Ministers retain their positions by borrowing money all Cabinet Ministers, therefore, cannot do so. Therefore I cannot consent to the reduction of salaries."

Count Matsukata retired from His Majesty. However, the Cabinet once more debated the question with the Count, and Matsukata went again to consult the Emperor

His Majesty was not inclined to see him again, and sent an attendant to say to him: "I have already commanded about the reduction of salaries. I cannot see you any more."

The salaries were, therefore, not reduced.

His Majesty understands the condition of the lower classes, and familiarizes himself with the private conduct of the Cabinet Ministers. When he reads newspaper articles relating to the private misconduct of any Cabinet Ministers and attacking him, his Majesty sometimes smiles.

His Majesty is fond of reading books and newspapers. He is especially fond of German books He likes to compose Japanese poems, which he can do very readily. His ability in that respect is much admired by his attendants.

His Majesty dislikes all pretense and hypocrisy.

When it has been reported to his Majesty that some of his subjects have given their lives in time of flood or earthquake to preserve his Majesty's picture, he has been much touched; but he is anxious to discourage his subjects from such quixotism, and to preserve them from any but necessary danger.

Withal the Emperors life is a very happy and peaceful one, blessed by the love and respect of grateful subjects; and when his Majesty makes a tour anywhere in Japan without his guards he is in no danger, but is received everywhere with reverence and joy.

—Japanese American Voice.

Grant's Equanimity.

General Horace Porter, in his "Campaigning with Grant," in the Century, says: Throughout this memorable year, the most important as well as the most harassing of his entire military career, General Grant never in any instance failed to manifest those traits which were the true elements of his greatness. He was always calm amidst excitement, and patient under trials. He looked neither to the past with regret, nor to the future with apprehension. When he could not control he endured, and in every great crisis he could "convince when others could not advise." His calmness of demeanor and unruffled temper were often a marvel even to those most familiar with him. In the midst of the most exciting scenes he rarely raised his voice above its ordinary pitch, or manifested the least irritability. Whether encountered at noonday or awakened from sleep at midnight, his manner was always the same; whether receiving the report of an army commander or of a private soldier serving as a courier or a scout, he listened with equal deference and gave it the same strict attention. He could not only discipline others, but he could discipline himself. If he had lived in ancient days he might, in his wrath, have broken the twelve tables of stone; he never would have broken the laws which were written on them.

Iron Hunger.

Professor Schmiedeberg lately made a very interesting experiment, which demonstrates the existence of an iron-hunger in animals, and also indicates disastrous results in the event of the craving remaining unsatisfied.

A strong, frolicsome dog, that had suffered the loss of a small quantity of blood only, was fed for a period on pure milk, and little by little became so weak that all evidence of spirit vanished, and, refusing further nourishment, became so thin and weak that his limbs refused to support his body.

Just as he seemed on the point of death, a gram of ferrantine was added to his daily allowance of milk; when, instead of refusing as heretofore he devoured it ravenously, and in the space of two weeks recovered his normal health and strength.

Turkey has thirteen times as many inhabitants as Greece.

The Red Lake.

Lake Morat, in Switzerland, has a queer habit of turning red about two or three times every ten years. It is a pretty lake, like most of the sheets of water in that picturesque country, and its peculiar freak is attributed to a disposition to celebrate the slaughter of Burgundians under Charles the Bold, on June 21, 1476. But the French say that it blushes for the conduct of the Swiss, who in that battle gave the Burgundians no quarter. The old fishermen of the lake, who catch enormous fish called silures, that weigh between twenty-five and forty kilograms, say when they see the waters of the lake reddening, that it is the blood of the Burgundians. As a matter of fact, some of the bodies of the Burgundians killed in the battle were thrown into the lake, while others were tossed into a grave filled with quicklime. This historical recollection angered the Burgundian soldiers of the victorious armies of the republic of 1702 so much that they destroyed the monument raised in honor of their compatriots who fell heroically in that battle, and Henri Martin very justly reproached them for that piece of vandalism. It would hardly do to attribute the reddening of the waters of the lake to the blood of the soldiers of Charles the Bold. The color is due simply to the presence in large quantities of little aquatic plants called by naturalists Oscillatoria rubescens. The curious thing about it is that Lake Morat is the only lake in which this curious growth is developed, and the peculiarity is beginning to interest scientific men.

Florida Abandoning Oranges.

"Though Florida did considerable business during the past winter season," said Captain Frank W. Crosby, who has just returned from there, "in the way of entertaining guests from the north, it fell short of what was expected. The people of middle and northern Florida are satisfied that oranges will not pay, and they are steadily removing their orange groves and going into the business of truck farming for the northern markets. There is more ground devoted to garden truck now than to oranges, and with the increase of facilities in the way of and methods of transportation there is less risk about it and even more profit. People can hardly realize the loss caused by the freeze in Florida four years ago. Orange growers who were worth $25,000 when they went to bed awoke the next morning to find that a freezing snap had occurred, and they were as poor as beggars. One night wiped out of existence orange groves that took ten years of time and thousands of dollars in money to get in shape. In the extreme southern part of the state the orange groves are still profitable, but in other portions they are risky."—Washington Star.

Refused Without Proposing.

Few women, outside of royalties, ever "popped the question" to a man, and perhaps only one has had the experience of being rejected by a man without having proposed to him. There was one, and the Hon. L. A. Tollemache tells the story in his "Personal Memoir of Benjamin Jowett," master of Balliol, Oxford.

The master's personality was potent and penetrating, and good women felt its fascination. An undergraduate was ill at Balliol College, and his sister, coming to Oxford to nurse him, was invited by Dr. Jowett to stay at his house. She received from him the utmost kindness and attention, and when leaving said, with much hesitation, that she would venture to ask a very great favor. She again hesitated; the master grew uneasy and looked interrogative.

"Will you marry me?" at last she asked.

He paced up and down, blushed deeply, and replied, "That would not be good either for you or for me."

"Oh, oh," exclaimed the young lady, blushing even more deeply. "I meant to say I am going to be married, and would you perform the service?" She had been refused, poor girl, without having proposed.—Detroit Free Press.

Sowing Seed With Artillery.

Alexander Nasmyth, the landscape painter, was a man fruitful in expedients. The Duke of Athol consulted him as to some improvements which he desired to make in his woodland scenery near Dunkeld. Among other things, a certain rocky crag needed to be planted with trees, to relieve the grim barrenness of its appearance. The question was how to do it, as it was impossible for any man to climb the crag, in order to set seed or plants in the clefts of the rock. A happy idea occurred to Nasmyth. Having observed in front of the castle a pair of small cannon, it occurred to him to turn them to account. A number of tin canisters were filled with all sorts of suitable tree seeds. The cannon were loaded and the canisters were fired against the high face of the rock. They burst and scattered the seed in all directions. Some years after Nasmyth was delighted to find that his scheme of planting by artillery had proved successful; the trees were flourishing in all the recesses of the cliff.

The jubilee of modern spiritualism is to be held in Rochester, N. Y., in May, 1898.

MAKING BIG GUNS.

Turning a Piece of Steel Weighing Sixty Tons into a Missile of Death.

Think what one of these guns is! It is a piece of solid steel weighing about sixty tons. It has a chamber running nearly its entire length thirteen inches in diameter. At the breech of the gun that chamber is enlarged to a diameter of fifteen and a half inches for six and three-quarter feet. The long tube of the gun is strengthened by an enormous band, reaching almost half its length, and called a "jacket," and in addition it has what is called a hoop or band with the appliances whereby the gun is fastened or locked to its carriage. Inside the tube of the gun there are about fifty spiral grooves, which give the projectile or long bullet a twist as it leaves the gun. That twist causes the projectile to turn nearly seventy-five times a second as it plunges through the air. This projectile weighs 1100 pounds and it requires no less than 500 pounds of powder to give it its full force. Every discharge of the gun costs in powder and projectile fully $600. The cost of one of these guns is not far from $100,000.

To make one of these implements of war requires not only great skill, but the use of very costly machinery. Not only must the steel be cooked in enormous furnaces, but it must be seasoned as delicately as the most expensive dish for the banquet. Chemistry is called upon to say just when the metal of which the gun is made is of the proper degree of purity.

Then the steel is cast into a long casting. When it is cooled it is forged or elongated under pressure while hot. Then it is "turned" outside and inside on enormous lathes. Then it is tempered, so to harden the metal and to distribute the molecules evenly through the mass, to prevent dangerous strains and bursting when the gun is fired. Then it is "turned" again outside and inside with absolute accuracy as to size. Then the powder-chamber is finished, and the mechanism for the fastening of the breech-block is made. Then the gun is ready for its carriage, without ,which of course, it could do no work.—Harper's Round Table.

One or Two-Eye Shooting.

Some hunters who use shotguns shoot with both eyes open, but most of them shut the left eye. It is contended by the one-eye class that one-eye shooting is more accurate than two-eye shooting, but the two-eye shooters say that there is only a little difference, and that is in favor of the two-eye method.

A man who has both eyes open, the two-eye men say, has a greater range of vision, and in the woods he can keep the game in sight far better than the one-eye marksman. Besides, he can keep several birds in sight at once, without hiding them behind the barrel of his gun. A bird rising after a man has aimed, or while he is aiming at a raised bird, is out of sight when only one eye is open, since the gun is between the eye and the second bird. When both eyes are open the left eye sees clear of the gun, and, therefore, a bird rising after the one aimed at may be seen vaguely and kept in sight until after the first shot.

Most riflemen who shoot at a target aim with one eye closed, but in the woods, where brush may hide the game and often quick shots must be made, the hunters more frequently shoot with both eyes open. At small game at rest, such as squirrels and birds, one-eye shooting is believed to be the better, but with game like a deer running or walking a two-eye shot has better chance, because the shooter can see brush, trees or anything else likely to impede or turn the bullet's flight.

How Grant Broke a Runaway Horse.

Colonel Peyton, whose death was chronicled yesterday, wrote a book, "Reminiscences of the Past." In this he refers to his first meeting with Grant as follows:

"In the year 1838 I was working as a boy in a country store at Flat Rock, Bourbon County, Ky. Ulysses S. Grant was then a boy, living at Georgetown, O., not many miles distant. One day Grant drove over to Flat Rock with the niece of my employer. Grant was then 16 years of age, awkward, ungainly, determined, industrious, and very poorly dressed. He drove a vicious horse. The night after his arrival at Flat Rock he slept with me in the store. It was a cold night, and we boys kept close to the lee of the counter. In the morning Grant asked me if he could assist me. I said yes. He helped me take down the shutters and sweep out the store and put the stock in place. After breakfast he drove off. I heard from him afterward of his drive home. Before he had gone far from Flat Rock his horse ran away and finally brought up with a crash in a fence corner. Nothing broke. Grant jumped out seized the trembling horse by the bridle, and tied his handkerchief over the beast's eyes. He drove the horse blindfolded all the way to Georgetown, O."—Philadelphia Ledger.

Berlin spent last year $725,000 on street cleaning, lighting and sprinkling; for the police $1,500,000, and for the maintenance of the poor over $1,000,000.

CHILTON COUNTY CALL

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

PROSPERITY.

The Chicago Times-Herald says: "Don't expect Prosperity to come back with a jump," to which the Kansas City Times replies: "We won't. If she enters with a glide; if she moseys in on one leg; nay, if she even sashays forward on her surcingle, or waltzes gently in on her ear, we'll welcome her and brush the dust off the best seat in the house for her to sit in. It don't make one bit of difference how she comes, but the whenness of her coming is a matter of much interest."

Prosperity has come to the conclusion that she will remain in the South—a region that she has never deserted since the days when this section began to blossom again after the blight of the Reconstruction period.

If our Northern friends desire to renew their acquaintance with Prosperity they must pull up stakes and locate in this land of peace and plenty, for she is so busy in upbuilding this half of our States-Republic that she hasn't any time to waste in the higher latitudes, where, owing to trusts, corporations and monopolies she couldn't better the condition of the masses, no matter how zealously she might bestir herself in their behalf.

All honor and all hail to the United States Senate for passing the Morgan resolutions in behalf of Cuba! It isn't often that the Upper House of the Federal Legislature gives the press and the people a cause for speaking a good word in its behalf, but in the case of the Cuban contention to relieve itself of the discredit that has been brought upon it by the sugar Senators and their infamous ilk. Hurrah for the stand that the Senate has taken in favor of the ill-starred island, say we, and so say all Americans, barring the Mugwumps, of course; but as Mugwumps are the meanest things that crawl, their likes and dislikes are matters of supreme indifference to the balance of mankind.

The Paris papers say that "King George of Greece used the crisis in the affairs of his country to speculate in Greek and Turkish bonds, with the result that His Majesty has cleared 30,000,000 to 35,000,000 franks."

Good for George! Any peoplehood that will submit to a sovereign ought to be fleeced out of every ducat they can rake and scrape together.

Thirty thousand Christian Greeks are fighting 300,000 Mahommetan Turks. In the meantime, England and other alleged followers of the Cross, are upholding the Crescent for all that's out, and there you are!

SENIOR COUNSEL.

Venezuela Invites the Ex-President to Act as Her Counsel.

A telegram from Washington says: Ex-President Cleveland has been invited by President Crespo to act as senior counsel for Venezuela before the arbitration tribunal which will determine the true divisional line between that country and British Guiana. Mr. Cleveland has taken the offer under advisement, but has not yet given his decision.

The tender was made at Princeton last week by William L. Scruggs, ex-minister to Venezuela, and the principal legal adviser of the Venezuelan government in the boundary dispute. The request was accompanied by a letter from President Presto to Mr. Cleveland in which the latter's eminent services were feelingly and appropriately acknowledged.

Mr. Cleveland hesitates to accept the position. He feels that it might be considered abroad as indelicacy on his part to take the attitude of an advocate in a cause in which he as President assumed a friendly and impartial role toward both parties to the dispute.

Small Boys Drowned.

A telegram from Chicago says: Five small boys were drowned in that portion of the south branch of the Chicago river known as Mudlake Saturday afternoon while trying to cross the stream on an improvised craft. There were six on board, but the lad who was the cause of the disaster from his having started a panic among his companions, saved himself by jumping into the water before the raft had drifted into deeper water.

SENATE IS FOR RECOGNITION.

STRUGGLING CUBANS GAIN A VICTORY ON UNITED STATES SOIL.

STORMY SPEECHES PRECEDED VOTE

Mr. Hale Fought Desperately the Consideration of the Morgan Resolution on Recognition of Belligerency.

The joint resolution recognizing the existence of a state of war in Cuba, and declaring that strict neutrality shall be maintained by the United States, passed the senate Thursday afternoon by a vote of 41 to 14. The resolution as passed is as follows:

"Resolved, etc., That a condition of public war exists between the government of Spain and the government proclaimed and for some time maintained by force of arms by the people of Cuba, and that the United States of America shall maintain a strict neutrality between the contending parties, according to each all the rights of belligerents in the ports and territory of the United States."

The vote on the final passage of the resolution was as follows: Yeas—Bacon, Baker, Bate, Berry, Butler, Carter, Chandler, Chilton, Clark, Clay, Cockrell, Cullom, Davis, Deboe, Foraker, Gallinger, Gorman, Hansbrough, Harris of Kansas, Heitfeldt, Jones of Arkansas, Jones of Nevada, Lindsay, McBride, Mantle, Mason, Mills, Morgan, Nelson, Pasco, Pettigrew, Pettus, Pritchard, Rawlings, Shroup, Stewart, Thurston, Tillman, Turner, Turpie, Walthall—41.

Nays—Allison, Burrows, Caffery, Fairbanks, Gear, Hale, Hanna, Hawley, Spooner, Wellington, Wetmore, White and Wilson—14.

An analysis of the vote shows that the affirmative was cast by 18 republicans and 19 democrats and 4 populists, and the negative by 12 republicans and 2 democrats.

Prior to the final vote, the motion of Senator Hale to refer the resolution to the committee on foreign relations was tabled—yeas, 34; nays, 19.

Mr. Fairbanks, of Indiana, then proposed a substitute providing that the president extend the good offices of the United States to Spain toward securing an end to the conflict and the ultimate independence of the island.

This, too, was tabled. Yeas 36, nays 16. Then followed the adoption of the original resolution.

The voting occurred after an exciting debate, participated in by Senators Thurston, Nebraska; Elkins, West Virginia; White, California; Fairbanks, Indiana; Hale, Maine; Spooner, Winconsin, and Gorman, Maryland.

Mr. Thurston, who presided over the republican national convention at St. Louis, recalled the stirring scene when that convention enthusiastically inserted a Cuban plank in the platform, and declared that this resolution was in partial fulfillment of that pledge.

Messrs. Elkins and White urged a conservative course and an inquiry by a committee. Then came the first vote—that on the Hale motion to refer.

It was a test of strength, and the defeat of the motion assured the passage of the resolution.

Mr. Fairbanks tried to stem the tide by offering a compromise proposition, somewhat on the lines of the Cuban plank adopted at St. Louis, but it met the same fate as the other motion.

This brought Mr. Hale forward for a final protest. He spoke with intense earnestness and feeling and with a trace of bitterness in his words. He declared that the elements opposed to the administration, democrats and populists, had furnished the bulk of the vote in favor of the resolution, and that the foreign policy of the administration was thus to be dictated by its opponents.

He expressed the fear also that the resolution would lead to war with Spain. Mr. Spooner added his protest against tying the hands of the administration.

Mr. Morgan closed the debate, resenting the suggestion that party lines were drawn on the resolution and asserting that the administration should have dispatched a war vessel to Cuba to protect our officials on the island.

The final vote was then taken and the senate adjourned until next Monday.

MORE POSTOFFICES.

New Ones Will Be Established Wherever Needed.

Fourth Assistant Postmaster-General Bristow has inaugurated a new policy as to the establishment of postoffices.

The last administration exercised a very conservative policy in dealing with this question, holding that there were already too many offices in operation, and that it would be better, as a general proposition, not to have the offices too close together.

The present regime has determined to establish offices wherever any reasonable amount of business can be secured, with the idea of accommodating as many people as possible.

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

Dr. M. C. Schoolar is now the proud possessor of a bicycle and can be seen any evening spinning around the square with the other enthusiastic cyclists of Centreville. The doctor, however, is considerably handicapped in the race, having to stop quite frequently to untangle his whiskers from among the branches of the trees on the north side of the square, but he hopes to remedy this soon by having either his whiskers or the branches chopped off.—Centreville Press.

The Call would advise the doctor to go down to the Capital City and be shorn with the Advertiser's editorial shears. He will then be able to set a-straddle of a bicycle, or anything in the political arena.

The Prattville Progress has awakened from its slumbers with a mighty howl for Prattville. In its last issue it takes new life, and seems to have just found out that Autauga county is one of the garden-spots of the South. Like several other towns, Prattville expects a railroad building boom. Autauga county forms the southern boundary of Chilton county, and is, likewise, one of the most healthy and fertile places in Alabama.

It took two hundred pounds of turnips at one meal to satisfy the appetites of the Tuskegee Normal School students. If these Normal attendants have the same facility for devouring beef, we think that there is little need of the Reporter worrying itself about how five beef markets are going to do business in that city.

It has not been given out that Judge N. D. Denson will stand for re-election to the office of Circuit Judge of this Judicial Circuit, but we suppose he will. No doubt he will have some opposition, but the man that locks horns with Judge Denson will have his hands full.—Alexander City Outlook.

The Coosa Advocate claims that there are already three candidates in the field for Judge of Probate in that county. Well, Chilton county can beat three of a kind, with a full house—three Populists and a pair of Democrats. With another draw, it could be made four of a kind.

Centreville is now to have a livery stable. With a livery stable, the greatest horse-market in the South, and Lord knows how many new prospective railroads, Centreville ought to be able to ride on to success at a fast and furious rate.

Somebody shot into a running train, Saturday night, about a mile below town. Two negroes have been arrested and put in jail. The ball passed between the engineer and fireman.—Livingston Home.

The Wilcox New Era comes to our desk this week as one more exchange to the many on our list. The New Era is a bright specimen of the Fourth Estate.

Wetumpka is to have an ice factory, which expects to begin operations in July.

Prattville is to have a local telegraph line.

General Blacksmiths
and
Wagon Makers.
Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.
THORSBY, ALA.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

Don't Blame the World.

Don't blame the world because the thorns are found among the roses;
The day that breaks in storm may be all sunshine when it closes.
We cannot hope to always meet with fortune's fond caressing,
And that which seems most hard to bear may bring with it a blessing.

That buried seed must rot in earth ere it produce the flower,
And the weak plant to fructify must have both sun and shower;
So man, to gain development, must struggle with life's crosses,
And view with calm philosophy his trials and his losses.

—Hawke's B...

I'll Wait For Yo...

"And so you want to marry my daughter, young man?" said Farmer Blifkins, removing the pipe from his mouth and looking at the young man sharply from head to foot.

"Yes, sir. I spoke to Miss Mary last evening, and she—she referred me to you."

The old man's face softened.

"Mary is a good girl, a very good girl," he said, stroking his chin with a thoughtful air, "and she deserves a good husband. What can you do?"

The young man looked rather blank at this abrupt inquiry.

"If you refer to my ability to support a wife, I can assure you—"

"I know you are a rich man, Luke Jordan. But I take it for granted that you ask my girl to marry you, not your property. What guarantee can you give me in case it should be swept away—as in thousands of instances—that you could provide for her a comfortable home? You have hands and brains. Do you know how to use them? Again I ask you, what can you do?"

This was a style of catechism for which Luke was quite unprepared, and he stared blankly at the questioner without speaking.

"I believed you managed to get through college. Have you any profession?"

"No, sir. I thought—"

"Have you any trade?"

"No, sir! My father thought that, with the wealth I should inherit, I should not need any."

"What are you fit for? Here you are, a strong, ablebodied young man, 24 years old, and never earned a pound in your life! You ought to be ashamed of yourself! And you want to marry my daughter!" resumed the old man, after a few vigorous puffs at his pipe. "Now, I've given Mary as good advantages for learning as any girl in town, and she hasn't thrown them away, but if she didn't know how to work she'd be no daughter of mine. If I chose I could keep more than one servant, but I don't, no more than I choose that my daughter should be a pale, spiritless creature, full of dyspepsia and all manner of fine lady ailments, instead of the smiling, bright-eyed rosy-cheeked lass she is. I did say that she should marry no lad that had been cursed with a rich father, but she's taken a foolish liking to you, and I'll tell you what I'll do—go to work and prove yourself to be a man; perfect yourself in some occupation—I don't care what, so it be honest; then come to me, and, if the girl be willing, she is yours."

As the old man said this he deliberately knocked the ashes out of his pipe against one of the pillars of the porch where he was sitting, put it into his pocket and went into the house.

Pretty Mary Blifkins was waiting to see her lover down at the garden gate, their usual trysting place. The smiling light faded from her eyes as she noticed his sober, discomfited look.

"Father means well," she said, as Luke told her the result of his application. "And I'm not sure but what he's about right," she resumed, after a thoughtful pause, "for it seems to me that every man, be he rich or poor, ought to have some occupation."

Then, as she noticed her lover's grave look, she added softly: "Never mind, I'll wait for you Luke."

Luke Jordan suddenly disappeared from his accustomed haunts much to the surprise of his gay associates. But, wherever he went, he carried with him in his exile these words, which were like a tower of strength to his soul, "I'll wait for you, Luke."

I'll Wait For You.

"And so you want to marry my daughter, young man?" said Farmer Blifkins, removing the pipe from his mouth and looking at the young man sharply from head to foot.

"Yes, sir. I spoke to Miss Mary last evening, and she—she referred me to you."

The old man's face softened.

"Mary is a good girl, a very good girl," he said, stroking his chin with a thoughtful air, "and she deserves a good husband. What can you do?"

The young man looked rather blank at this abrupt inquiry.

"If you refer to my ability to support a wife, I can assure you—"

"I know you are a rich man, Luke Jordan. But I take it for granted that you ask my girl to marry you, not your property. What guarantee can you give me in case it should be swept away—as in thousands of instances—that you could provide for her a comfortable home? You have hands and brains. Do you know how to use them? Again I ask you, what can you do?"

This was a style of catechism for which Luke was quite unprepared, and he stared blankly at the questioner without speaking.

"I believed you managed to get through college. Have you any profession?"

"No, sir. I thought—"

"Have you any trade?"

"No, sir! My father thought that, with the wealth I should inherit, I should not need any."

"What are you fit for? Here you are, a strong, ablebodied young man, 24 years old, and never earned a pound in your life! You ought to be ashamed of yourself! And you want to marry my daughter!" resumed the old man, after a few vigorous puffs at his pipe. "Now, I've given Mary as good advantages for learning as any girl in town, and she hasn't thrown them away, but if she didn't know how to work she'd be no daughter of mine. If I chose I could keep more than one servant, but I don't, no more than I choose that my daughter should be a pale, spiritless creature, full of dyspepsia and all manner of fine lady ailments, instead of the smiling, bright-eyed rosy-cheeked lass she is. I did say that she should marry no lad that had been cursed with a rich father, but she's taken a foolish liking to you, and I'll tell you what I'll do—go to work and prove yourself to be a man; perfect yourself in some occupation—I don't care what, so it be honest; then come to me, and, if the girl be willing, she is yours."

As the old man said this he deliberately knocked the ashes out of his pipe against one of the pillars of the porch where he was sitting, put it into his pocket and went into the house.

Pretty Mary Blifkins was waiting to see her lover down at the garden gate, their usual trysting place. The smiling light faded from her eyes as she noticed his sober, discomfited look.

"Father means well," she said, as Luke told her the result of his application. "And I'm not sure but what he's about right," she resumed, after a thoughtful pause, "for it seems to me that every man, be he rich or poor, ought to have some occupation."

Then, as she noticed her lover's gra(?)look, she added softly: "Never mind, I'll wait for you Luke."

Luke Jordan suddenly disappeared from his accustomed haunts much to the surprise of his gay associates. But, wherever he went, he carried with him in his exile these words, which were like a tower of strength to his soul, "I'll wait for you, Luke."

One pleasant, sunshiny morning, late in October, as Farmer Blifkins was propping up the grapevine in his front garden that threatened to break down with the weight of its luxurious branches, a neat looking cart drove up, from which Luke Jordan alighted with a quick, elastic spring, quite in contrast to his formerly easy, leisurely movements.

"Good morning, Mr. Blifkins. I understood that you wanted to buy some cider barrels. I think I have some here that will suit you."

"Whose make are they?" inquired the old man, as, opening the gate, he paused by the wagon.

"Mine," replied Luke, with an air of pardonable pride, "and I challenge any cooper to beat them."

Mr. Blifkins examined them critically one by one.

"They'll do," he said coolly as he set down the last of the lot. "What will you take for them?"

"What I asked you for six months ago today—your daughter, sir."

The roguish twinkle in the old man's eyes broadened into a smile.

"You've the right mettle in you, after all," he cried. "Come in lad—come in. I shouldn't wonder if we made a trade, after all."

Nothing loath, Luke obeyed.

Mary tripped out into the entry. Her round, little arms were bared above the elbows and bore traces of the flour she had been sifting.

Her dress was a neat gingham, over which was tied a blue checkered apron. But she looked as winning and lovely as she always did wherever she was found.

She blushed and smiled as she saw Luke and then, turning her eye upon her father, waited dutifully to hear what he had to say.

The old man regarded his daughter for a moment with a peculiar look.

"Mary, this young man—mayhap you have seen him before—has brought me a lot of tubs and barrels, all of his own make—a right good article, too. He asks a good heavy price for 'em. But if you are willing to give it, well and good, and hark ye, my girl, whatever bargain you make your old father will ratify."

As Mr. Blifkins said this he considerately stepped out of the room, and we will follow his example. But the kind of bargain the young people made can readily be conjectured by the speedy wedding that followed.

Luke Jordan every year, on the anniversary of his marriage, delights his father-in-law by some specimen of the handicraft by which he won what he declares to be "the best and dearest wife in the world."—Boston Post.

Deceiving a Goat.

A flagman of a German railway was recently told that he would be fined if his wife was again seen flagging a train. The man said she had never done so, and explained as follows: Being ill, she asked her husband to milk the goat. This animal was however, unused to any one but the woman herself, and the flagman, to save trouble, dressed in his wife's clothes to deceive the goat. A shrill whistle reminded him of his duties, and he saluted the passing express in skirts.

War in 1900.

Son—Papa, what is that?

Father—That is a torpedo boat.

Son—What is that larger one?

Father—That is a torpedo boat destroyer.

Son—And what is the great big one?

Father—That is a torpedo boat destroyer annihilator.—New York Press.

Sleep.

The composure of mind which it is desirable to secure as a harbinger of sleep, is promoted by allowing time, before retiring to rest, for the subsidence of all enforced mental activity. There should be at least an hour's interval between work, no matter what it may be, and sleep, for if the work be pushed up to the last moment, sleep will be driven away, or will be, in its first and most precious stages, broken and unrefreshing. To turn resolutely from work at a fixed hour and plunge for a little time into a novel or a newspaper, a game or music, will often make all the difference between a bad and good night's rest. Position when in bed is a very important factor in the production of sleep. Englishmen traveling on the Continent are sometimes puzzled and distressed by insomnia, until they discover that their bodies, propped by enormous, square pillows, are at a much greater angle to the plane of the bed than that in which they are accustomed to repose at home. The substitution of a small pillow for the large one soon disposes of their wakefulness. And so with children. The position in which they are placed when put to bed should be carefully attended to, as nightly variations in this may at least postpone the advent of sleep, which is so essential to the welfare of the growing brains. Very little things serve sometimes to induce sleep. Thus, the mere turning of a pillow and the application of its cold surface to the head and face will, on occasion, prove the turning point in a struggle with sleeplessness.—New York Ledger.

A Bloodhound's Keen Scent.

A remarkable exhibition of the keenness of scent of the bloodhound was given at the little town of Bronson, in Allen county, the other day. The town recently appropriated $100 out of the city treasury for the purchase of one of these animals, the purpose being the detection and capture of thieves who were operating in the neighborhood, and a test of the hound was considered desirable. At noon three men started out on foot and walked four miles into the country. Then they mounted horses, and by a circuitous route returned to the town. Six hours later the hound was permitted to smell a glove which had been worn by one of the men, and the next instant, with a deep howl, he caught up the trail and followed it on the run. At one point the men had walked for 30 yards on a fence, and when the hound came to this point he carried his nose along the rail with hardly any reduction of speed. Coming to the place where the men had mounted, he took up the trail of the horses and followed it into the town, where, in a crowd of more than 100 men, he picked out the one whose glove had been given him to smell.—Kansas City Journal.

A Short Charge.

The little personal mention of Judge Roy Bean of Langtry, Texas, provoked a kind subscriber to send us this: "The picture in your publication of Judge Roy Bean is all right, except the collar and cravat. He was once trying a Mexican for stealing a horse and his charge to the jury was one of the shortest on record: 'Gentlemen of the jury, thar's a Greaser in the box and a hoss missing; you know your duty!' And they did."—Leslie's Weekly.

Wire Glass a Fire Barrier.

A product called "wire glass," which, it is asserted, presents an effective barrier against fire, consists simply of a meshwork of wire imbedded in a glass plate. Even when licked by flames and raised to a red heat it does not fall to pieces, and it not only resists the heat of fire, but also the shattering effects of cold water poured over it while it is yet glowing hot.

A Diplomatic Tutor.

Tutor—We now come to the Emperor Caligula. What do you know about him, Prince?

(Pause, occasioned by the silence of the august pupil.)

"Your highness is right—perfectly right; the less said about this emperor the better!"—Tit-bits.

Seven miles an hour is the camel's limit of speed, but its usual pace is five miles.

CARE OF THE BLIND.

Curious Facts About the World's Sightless People.

Russia and Egypt Contain Largest Proportionate Numbers.

A paragraph is traveling about to the effect that the world's blind are computed to number 1,000,000—about one sightless person to every 1500 inhabitants. If the proportion of sightless persons were the same in every country, or substantially so, it would be easier to conclude that blindness is due to causes which neither skill nor foresight can prevent. But the truth of the matter, as has been pointed out by a distinguished German oculist, is that the great majority of cases of blindness are due to fever, and the same authorities declare that 75 per cent. of the afflicted persons could have retained their sight had they been properly treated. Some figures in corroboration of this are supplied by the official statistics of both England and France. By the last reports there were 23,000 sightless persons in England, the average being 870 for each million inhabitants. The percentage of blind persons among infants of less than five years was 166 for each million; between five and fifteen it rose to 288; between twenty and twenty-five to 422; between forty-five and sixty to 1625, and above sixty-five years of age 7000 for each million inhabitants. Similarly in France the official figures show that only one-sixth of the sightless were born blind, and five-sixths became blind through illness or accident. The French official figures further show that of those born blind 65 per cent. were male, and only 35 per cent. female children. Another curious result shown by the figures is found in the fact, that while the number of blind male and blind female adults was substantially the same, the number of sightless married men in France is double the number of sightless married women. Less than 10 per cent. of the total number of sightless persons in France by the last report were under the age of twenty-one.

Russia and Egypt are the two countries in which blind persons constitute the largest proportionate number of the total population; in Russia on account of the lack of experienced medical attention, and in Egypt on account of ophthalmia due to the movement of the sand by the wind, or, more properly, to the irritation caused by this unusual local condition, which has made opthalmia general. There were at last accounts nearly 200,000 blind persons in European Russia, the proportion being highest in the northern provinces, and conspicuously so in Finland, where the prevalence of blindness, four times greater than the general average in Europe, is ascribed to the flatness of the country, and the imperfect ventilation of the huts used by the peasantry. Many of these huts are either without chimneys, or are supplied with primitive chimneys, which do not draw, and the escape of the smoke into the living apartments has a marked tendency to aggravate all eye troubles. Though more than half the blind population of Europe is to be found in Russia, there are only twenty-five asylums for the blind in that empire, one-tenth of the total number in Europe. Though the number of blind persons in the United States is less than one-third as large as the number in Russia, the number of inmates of blind asylums in the United States is larger than in any other country of the world. By the last reports the total number of pupils in institutions for the blind in the United States was 3489 and the grounds and buildings devoted to their use were valued at $6,000,000.—New York Sun.

The Fur Seal as an Animal.

The male fur seal, or "beachmaster," reaches full maturity at the age of seven years. At that time his weight is about four hundred to five hundred pounds, being considerably heavier when first in from the sea in the spring, or after feeding in the fall, than in the intervening period, when he fasts on land and grows gradually lean and weak. The males vary considerably in color, the general shade being black or dark brown, with longer hair or bristles of yellowish white. These are especially long and numerous on the thickened back of the neck, forming the so-called "wig." The vigged males have a rough, coarse coat, and their skins are without market value. The animal makes its home on the rocky shores of the islands, in large, closely massed bands, forming what are called "rookeries." It is extremely gregarious; individuals seldom venturing far from the main body while on land, though wandering about singly in the sea. The female fur seal is much smaller than the male, and has soft, smooth hair of varying shades of brown, under which is the dense, short brown fur. The female bears her first offspring at the age of three years, but her full growth is not attained till two or three years later. The average weight of the grown female is about eighty pounds. The young of the fur seal, called a "pup," is born soon after the arrival of the female. Its weight at birth is about ten pounds. The fur seal is polygamous, each male capable of holding a place on the breeding grounds having from one to one hundred females in his charge, constituting what is known as a "harem," the average number being about thirty. But the size of each family is subject to variation, depending not chiefly on the strength of the male, but on the preference of the female for a location, and on the topography of the ground. The young male is very similar to the female in color and appearance. He is not permitted to enter the rookeries in the breeding season. The old males are very particular in this regard, and the "bachelors," as they are called, are forced to herd by themselves on what are known as the "hauling grounds," located near the breeding grounds, but distinct from them.—The Forum.

Mrs. Bruin Goes Fishing.

Old Ned Shumaker, who prospects for ore, was up along Otter Run, in the Pine Creek Valley, the other day, when he ran across a novel fishing party. In sauntering down stream through the black alders his attention was attracted by a sound almost identical with that made by a half-grown shoat quarrelling over a bucket of slops. He tiptoed along the bank of the stream until he came to a sudden sharp turn from which the opposite bank was visible for probably 40 feet. Sitting in midstream, where the water formed an eddy, was a big she bear intently watching the surface of the stream. On the bank, not more than 15 feet away, were two half-grown cubs wrestling about like schoolboys. Suddenly the old bear's forepaw went into the water quick as a flash, and the next instant it reappeared with a trout probably eight inches in length. This the old bear chucked out upon the bank to the cubs, and then a wrestling match for the prize began. Over and over the cubs rolled, squealing and grunting. One of the cubs finally succeeded in gulping down the fish, much to the discomfiture of the other. The old bear was a quite successful fisher, for without moving around very much she managed to pull out half a dozen trout within a half hour.—New York Sun.

Catch Fish With Wheels.

A curious plan for catching fish is used on the Columbia river out West. A number of wheels are set up in the middle of the stream, which, as they turn round, catch up the fish and cast them into troughs by the river banks. The salmon are then tinned and sent all over the world. As much as five tons' weight of fish a day has thus been taken.—Kansas City Star.

Too Late.

Editor—You remember that poem you left the other day on my desk? While I was out to luncheon the office cat came around and chewed it up.

Castle (the poet)—Great heavens! where is that cat?

"He has gone into a trance, and all our efforts to bring him to have failed."—Life.

The Greater Misfortune.

Interested Acquaintance—I hear your house was entered by burglars last night. Did they get anything?

Mr. Newlyblessed (sleepily)—No, but they woke the baby!—New York Journal.

FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Mineral Manures for Spring Crops. Working Three-Horse Teams. Worms in Seed Corn, Etc., Etc.

MINERAL MANURES FOR SPRING CROPS.

To be effective mineral manures for spring and summer crops must be applied early. They need some of the spring rains to dissolve the fertilizer so that the plant roots can make use of it. Besides, as weather and soil become warm and dry there is less need of the fertilizer, as the soil itself releases more of its own fertility under such conditions.

WORKING THREE-HORSE TEAMS.

The true economy of team work is better understood by Western farmers than by the average of farmers in the East. It is to the Western farmer that we owe the idea of cultivating hoed crops with two horses, requiring no stoppages, while the man may, if he chooses, ride behind and manage the hoes, so that none of the grain is destroyed. It is rather more difficult to turn two horses on a cultivator at the end of the row. Therefore, this plan is best adapted to large fields where the rows are long. But three horses will on heavy plowing do nearly twice as much as will two horses. Now that horses are cheap, it is the farmer's interest more than ever before to make horse labor accomplish all it will, with as little as possible of the much more expensive human labor.—Boston Cultivator.

WORMS IN SEED CORN.

Mr. J. D. Griffin wants to know if rolling seed corn in coal tar will prevent worms from cutting corn. I say to Mr. Griffin, I have tried this remedy two or three times since I have been forming, and find it does no good. They will cut the corn just as bad when rolled as if not rolled. The best thing you can do to prevent them from cutting corn is not to plant your corn till about the 1st of June.

Then when you get ready to plant, soak your corn the night before in water, and run your rows off the day before you plant, so the hot sun will shine on the rows and drive the worms into the ground. Plant in the heat of the day, if possible. Your corn being soaked, will come up in three or four days. As soon as it is up well, bar it off well with a short-turn plow, as close as possible. This will let the sun shine into the roots, driving the worms into the ground. Bud worms can't stand the hot sun. This is the best preventive I have ever tried. M. W. Sherrill in Home and Farm.

THE HEAD OF THE FLOCK.

Upon the kind of a ram employed will depend the future crop of lambs to a very great extent. As he is half the flock, it will be wise to get a good one—not good individually, but good in the matter of breeding, says the Live Stock Indicator. A grade ram costing $6 to $8 may be quite good individually, but connected with his use there is a great deal of uncertainty. He may serve forty ewes, and the lambs from this service have all degrees of make-up, from the sixth generation down to the present. Twenty-five per cent., or perhaps more, may be pretty fair lambs, while the remaining ones will be undersized and culls. Lambs sired by a pure-bred sire will be more uniform in size and quality, and will be enough better to bring fifty cents per head more than those from a grade sire. This difference will leave the pure-bred ram free of cost. This is our view when the ewes are grades, and it is only intensified when the ewes are pure-bred.

The breeder who has pure-bred or high-grade ewes of a certain breed can ill afford to breed to a pure-bred ram of some other breed, no matter how great the inducement offered. The present writer handles some of the mutton breeds of sheep, but he has never advised his readers to buy a ram from him when they have ewes of any other breed which are pure-bred; he would not do it himself, and he would not want anyone else to do it.

If we had a flock of grades we would select the type of sheep wanted, and we would keep in this line of breeding, getting new blood of the same breed from year to year until we had them practically pure-bred.

SPRAYING FRUIT TREES.

Agriculturists have for some time past been discussing among themselves the advisability of taking strong measures to protect their faithful servants, the bees, against the fruit growers, who spray trees when they are in blossom, and this poisons not only the bees themselves but their luscious product.

It seems difficult for fruit-growers to understand that they gain little or nothing by spraying the trees when they are in full bloom. It is rarely that any harm is done at that stage. The numerous enemies of the orchard work earlier and later, but for some reason, a sentimental one, perhaps, for even insects may be possessed of sentiment, the full bloom stage is much more free from their injurious attacks than people generally suppose. Some apiculturists claim that the blossoms are at such times wholly given over to the bees and such claim is quite consistent with the usual benevolent methods of our ever watchful mother nature, who makes provision for all of her dependents. There have been many instances where most injurious effects have followed the use of honey made from nectar sipped from flowers that had been sprayed with poisonous compounds.

The Agricultural Experiment Station in sending out their bulletins take special care to caution fruit-growers against spraying trees that are in full bloom, but, notwithstanding their warning, there are hosts of men who sprinkle the exquisite blossoms with poison regardless of consequences.—New York Ledger.

THE USE OR THE HARROW.

In dry sections of the country the harrow is second in importance only to the plow and in connection with the disk harrow in a few cases the plow is dispensed with.

I try always to have in mind those under different conditions, for I know that in very wet sections the harrow is not needed nearly so much, for after plowing rains will compact and level the ground, and in cultivation weeds grow so fast that the harrow will not destroy them. In rocky ground the harrow would often drag the rocks upon the plants and in very sandy ground in a dry windy section the soil needs to be left rough, so the harrow is not needed so much there.

But I think in most sections it should be used much more than it is. On our soil, which is almost without sand and inclined to crust over after rains and dry weather being rather the normal condition we are coming to use the harrow more each year, almost dispensing with the cultivator in some things.

To be effective it must be used at the right time. This, in a wet country, is sometimes simply impossible while with us it is generally our own fault if not used there.

There is but little of the time at any season of the year but what the harrow follows the plow the same day. Then if the plowing is much before seeding or planting time the ground is harrowed at intervals to destroy any weeds starting and to keep the surface loose to prevent rapid evaporation or moisture.

Plowing for wheat commences in June immediately after harvest if ground is not too dry, and seeding seldom commences until October, so more than one harrowing may be needed.

If favorable weather most of the plowing for spring crops is done during the winter and the same use of the harrow is had.

For corn and sorghum known as Kaffir corn, Milo maize, etc., the ground is harrowed just before planting and as many times afterward as needed, and can be done before corn gets too large and where the ground is smooth and free from trash this can be done much later than the inexperienced would suppose.

For millet and sorghum for hay we do not plow the ground but cut with the disk and then using the common harrow, the sorghum seed being sown before disking, the millet before or after, owing to how deep we wish to disk. —J. M. Rice, in Farm, Field and Fireside.

RAISING LAMBS.

Regular feeding and a stady growth make good wool and good lambs. Experts claim that they can tell at about what period of growth the sheep had been kept upon a poor range or short rations by noting with a microscope the thin places in the wool staple.

While sheep will get more sustenance from poor land, and at the same time do the land more good than any other stock we may possess, it must not be forgotten that they will also repay liberal feeding. Food wisely fed will always come back to us doubled, if fed to a good animal.

If lambs three or four weeks old are fed lightly at first on bran and ground oats, gradually increasing their rations as they become accustomed to eating, they can be materially helped in their growth. Better err in having them a little hungry than to give too much and have them off their feed for a week.

Separate the pregnant ewes from all the others at least a month before weaning time, and give some bone making food and plenty of exercise. Corn and confinement will make large lambs, perhaps, but with little strength or vitality. The larger the portion of oats, wheat bran and clover hay which can be got into the rations, the better.

It pays to feed lambs before they are weaned all the grain they will eat when on good blue grass or clover pastures with their dams, and it pays especially well if they are on dry feed. Any certain amount of grain will put more weight upon sucking lambs than upon any other animal.—The Silver Knight.

VINES FROM GRAPE CUTTINGS.

Though the grape vine roots more freely from cuttings than any other wood, we cannot advise any one who wishes but few vines, and those for home use, to depend on this slow way of getting them. All the best varieties can be bought by the single vine for from five to ten cents each. Most dealers will let you have a dozen assorted varieties at the dozen rate, which is still low. If you root and cut this spring, you are likely not to get as well rooted a vine a year hence as you can buy now at less price than your own vines will have then cost. It takes several years for a grape vine from cutting to get into bearing. Each of these years your cutting vine started this spring will be a year behind in bearing, as compared with the one bought now. But if you want to start the vines, the best way is to prepare the cutting several weeks in advance of the time to plant. Cut each piece three buds long, leaving the bottom cut just at the base of the bud, which should be removed. Then heel in the whole cutting so as to keep the bud back at the top. If a clean cut is made opposite the middle bud, merely showing the bark, it will callous, and roots will issue from the cut place more readily. Plant in dry, warm soil, but without manure, so soon as the soil is well warmed. Set the cutting slanting lengthwise in the row, and leave the upper bud just at the surface. This will leave the lower bud not more than three or four inches deep where the soil is warm. The roots will then put forth in time to supply the leaf with moisture when the bud starts. Ninety to ninety-five per cent. of such cuttings will grow and be good plants next year. Do not be disappointed if the bud does not start until June. Usually both the middle and upper bud will grow. Two plants can thus be made from one cutting. If a cutting can be got with a small piece of two-year-old wood on it, cut smooth on the lower, it will be more sure to grow and will make a stronger vine the first year. But any kind of plant, after being set and well cared for two or three years, will be vigorous enough if not allowed to bear the first year it sets fruit nor to overbear afterwards.—Boston Cultivator.

A Valuable Estate.

Prince Bismarck has several estates, but that of Friedrichsruh is the largest and most valuable of his landed possessions. It is a memorial of the greatest achievement in the ex-chancellor's life, and was given to him by old Kaiser Wilhelm in 1871 in token of his services in re-establishing the German empire.

The property, whose chief value lies in the magnificent forests with which it is almost entirely covered, is situated in Lauenburg, one of the Elbe duchies of historic memory, on the railway between Berlin and Hamburg. The estate is about 30,000 acres in extent, and over two-thirds of it is forest of pine, oak and beech. From these forests Prince Bismarck draws a large part of his revenue. Almost the entire supply of telegraphic poles used throughout the whole German empire is grown in the woods of Friedrichsruh. The cutting of the one hundred thousandth pole some years ago was celebrated by the tenantry, and the pole was planted on the lawn in front of the house.

It is amid these scenes that the most powerful figure in German history is passing the last of his days.—New Orleans Picayune.

Drum Majors Are Passing.

"The drum major as he used to exist, the pride of the band and the glory of the procession, is a thing of the past," remarked a band master. "In his place, freaks of all kinds are now popular, from small boys with their twirling baton to fellows who carry a musket and go through all kinds of fancy evolutions while the band plays on. The drum major plays but little part in a band except for show. Though the small boys thought he led the band in its music as well as otherwise, he had no more to do with the music than has the letter P as far as sound goes in the word pneumatic. The brass band is led by its leader, and the only thing that was expected of the drum major was to look as important as he could. The fellow who led the Pittsburg band in the inaugural parade drew a larger salary for his ability and skill at handling the musket he carried than did any of the players in the band outside of the leader, who is always the financial, as well as the musical manager of the band."—Washington Star.

See Without Eyes.

Many of the lower animals are known to see without eyes, the skin having a high degree of sensitiveness to light. Thus earthworms, the maggots of flies, and eyeless centipedes find their way about nearly as readily as similar creatures which have eyes. In a recent German work on the sensitiveness to light of eyeless animals, Dr. Nagel, who made his observations chiefly on mollusks, found that the eyeless bivalves and snails he experimented with showed a high degree of sensitiveness to light. He found that some species reacted especially to diminution, others to increase of light, and that this difference was correlated with other characters.

A redwood tree was cut down in the state of Washington the other day which was 465 feet high, and sawed into lumber would make enough to build eight two-story cottages of seven rooms each. It is estimated that the age of the tree is 864 years.

FOR THE YOUNG FOLKS.

THE SAND MAN.

The Sand Man drops in every night,
The Sand Man with his sand;
To sprinkle grains in little eyes
With unseen, unfelt hand.

He comes about the hour when all
The baby work is done;
When toys lie scattered round the room,
Abandoned one by one.

A hobby horse once rocked with vim
Stands quiet in his stall—
A consecrated space between
The trundle bed and wall.

A jumping-jack, an iron bank,
A painted rubber ball,
A rattle with a whistle on,
A bruised and battered doll.

A dozen little glittering things
So dear to babyland:
But now the Sand Man comes around,
The Sand Man with his sand.

Two chubby little fists are forced
In two small sleepy eyes,
To rub away the sand which sifts
Across some tired sighs.

And now the Sand Man yields his place
To a fairy with a rod,
Who beckons toward that mystic shrine,
The babyland of Nod.

The Sand Man drops in every night,
The Sand Man with his sand;
To sprinkle grains in little eyes,
With unseen, unfelt hand.
—[Charles Nelson Johnson.

A BEAR THAT LIVES IN THE WATER.

Next time you have a chance put some water from the edge of a standing pond under a high-power microscope, and perhaps you will see that most interesting little organism known as the water bear. It is a diminutive animal, often found in drinking water, and looks very much like a bear. The extraordinary thing, however, about this tiny creature is that he is found in the gutters of houses, where he is at one time dry as dust and scorched by the blazing sun, at another active and full of life under a refreshing shower of rain. The water bear has the scientific name of tardigrada, because he takes life so easy. He is always fat and plump, and spends his waking periods in constantly grubbing with his four pairs of legs among whatever rubbish comes in his way. Having eyes, brain and a nervous system, he is much ahead of most of his tribe, and he is altogether one of the most interesting and amusing little animals known to science.

A TRUE STORY OF A HORSE.

My great grandfather always attended church. It was a serious thing, indeed, that could keep him at home. As he lived a long distance from the meeting-house he used to take his family in a big wagon drawn by a certain pair of horses named Jap and Gyp. Why he sold Jap I do not know, but he did sell him to a neighbor, a farmer who lived not far away. This man never attended divine service.

One Sunday, shortly after the sale, my great grandfather started for church, driving Gyp alone. As he passed his neighbor's house he saw Jap feeding in a pasture adjoining the road. Jap was not behind his old master in the use of his eyes. He caught sight of Gyp, and galloping across the field he leaped the fence, and with a glad whinny he took his place beside his old mate, trotting along in the most demure fashion. Into the church shed with Gyp went Jap, and there he remained during the long service. Of course, this little incident did not go untalked of, and it was not strange that it soon reached the ears of Jap's owner. "If my horse goes to church I guess it is time I went!" was his comment on the affair. And he did go.

WHO STOLE THE EGGS?

Sometimes a monkey is quite as smart at mischief-making as a boy. A French writer who has studied monkeys for many years tells this little story:

At the Saintes, an island dependent upon Guadaloupe, a small detachment of infantry was quartered in a house in which it messed, and in which there was consequently a supply of provisions distributed all about. The supply of eggs was placed upon a shelf over a door, so as to put it out of reach of rats and other marauders.

One day the cook, upon going to get some eggs, came near falling to the floor with the entire stock upon observing that five or six eggs, placed at the top of the basket, consisted of nothing but empty shells. Upon examining them he saw that the thief, after making a very small hole at the point, had sucked out the contents and had then carefully placed the egg in the same spot whence he had taken it.

There was an African in the employ of the post, and as Africans are gourmands there was no one else to suspect. So he was accused and threatened with a flogging. He protested his innocence and swore that, if he were spared, he would do his best to discover the guilty person.

In addition to the African there was a monkey at the post, and the former, knowing better than the Europeans the malice of the monkey, said to himself at once: "It was that monkey that sucked those eggs."

He therefore set himself to watch, and after two or three days that the thief had allowed to elapse, doubtless in order that his crime might be forgotten, he saw the monkey climb up the door frame, put his hand up to the shelf and seat himself thereon. Thus master of the place, the animal delicately picked up an egg, made a hole in it with the nail of his fore finger, and then sucked out the contents.

Then, with all sorts of precautions, he replaced the egg, when the African, allowing himself to be seen, closed the door and seized the thief as he was about to jump to the floor.

The monkey was dragged before the captain, acting very much ashamed, and the African thus proved his innocence.

"HAIL OVER."

Notwithstanding the many games taught in the kindergarten, none of them can rival or rarely even compete with any that parents can remember to have played in their younger days. For instance, any father who can teach his boys and girls "Hail Over," when out-door games are in season once more, is advised not to forego the renewal of youth that the children's wild delight will bring to him. Our cities now include so many suburban homes within their limits that such games are among the possibilities of a great many families.

For "Hail Over" a barn or outhouse is usually a necessity, to be sure it may be tried with one of the picturesque low-roofed houses as the center, but the wild racing that is a great part of the fun is hardly consistent with the flower beds or well-kept lawn of a "front yard." A party of six is the very least number to make this game properly exciting; twelve is better still. They must range themselves in parties of equal number, on either side of the building, each with a captain. A good-sized rubber ball is thrown over the center by the leader with the cry "Hail Over." It is caught on the other side and then there is a moment of breathless excitement for the party who have thrown the ball do not know from which side of the building the enemy will rush upon them, for immediately the ball is caught by this same enemy he and his have the right to rush around the building and whoever is not fleet enough to scud round to the other side and is hit by the well aimed ball is captive and is taken on the other side. A game lasts from twenty minutes to half an hour, and when "time" is called the side which has the larger number is, of course, the winner.

The young, older men—yes, and women who have played this apparently simple game will remember the element which enters into it just verging on terror, but not near enough to it to do anything but sharpen the fun, even for a rather timid child. Then the scream from the girls and the shout from the boys when the enemy is fairly upon them and the wild scamper to escape the ball! Only try it on the next mild day.

Another bit of fun which mothers will remember to have whiled away many an otherwise dull hour will serve for a stormy day indoors. The fashion papers and fascinating advertisements of to-day give material for this amusement called "Fairy Dancers," for which the little girl of twenty years ago would have given a great deal; here they are, though, for her wee daughter, and clipping and cutting should go on as papers and magazine come to hand until there is an ample box-ful from which to choose.

A BARON'S TAME LEOPARD.

Of all the cat tribe leopards are the easiest to tame and teach if they are captured while young. When these creatures are old their savage habits have become fixed, and it is almost impossible then to tame them.

Thirty years ago a curious and well-known sight on the streets of Berlin was Von der Madliern with his tame leopard, says Our Animal Friends. Baron Von der Madliern, when a young man, was for several years German consul in Egypt. While there an Arab friend presented him with a young leopard. It was only a few days old, its eyes not open yet. The young baron determined to make a pet of the leopard and train and treat it like a dog.

The leopard was never confined in a cage, but was always allowed full liberty, and was well fed and petted. He slept on a comfortable rug in his master's room, and if the night was cold crept upon his master's bed and shared it with him. Through the day, in doors and out, he followed Von der Madliern about like a faithful dog and displayed a dog's affection for his master.

He grew by and by into a handsome creature, one of the largest of his species, and finely marked. When he had been in Von der Madliern's possession about two years the baron was recalled to Berlin, and took the animal back with him. In Berlin the leopard occupied the same place in his master's house that he had done before, and followed the baron about the streets in the same way.

At first the sight of the savage creature stalking solemnly along beside the man created quite a sensation in the city, and people crowded to see him pass. But it grew to be an every-day matter, which only attracted occasional notice from strangers or children.

"There go the baron and his leopard," they would say, and that was all. Old Berlin residents still remember the leopard, and speak of it even now.

The animal lived to be about fifteen years old, and died much lamented by all who knew him.

Bathing.

Weak constitutions that cannot stand a great amount of vigorous bathing will find an excellent use for the flesh brush in taking what might be called a dry bath. There are seasons when, from having a cold or some other ailment, one becomes particularly sensitive; and at such times a brisk brushing will do much toward keeping the skin clean and smooth and the flesh firm, and may with advantage take the place, say every other morning, of the regular daily bath. But the dry bath is only for unusual occasions, the proper use of the flesh brush being as an adjunct to the bath, not as a substitute for it.—New York Ledger.

The municipal authorities of Rouen, France, have passed a resolution to name one of the streets of that city after Nansen, the Arctic explorer.

A demy folio volume is 18 by 11 inches.

No-To-Bac for Fifty Cents.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00 at all druggists.

If a sick man will perform unnecessary work, he should not complain if told it is not well done.

We will give $100 reward for any case of catarrh that cannot be cured with Hall's Catarrh Cure. Taken internally.
F. J. CHENEY & Co., Props., Toledo, O.

Piso's Cure for Consumption has saved me many a doctor's bill.—S. F. HARDY, Hopkins Place, Baltimore, Md., Dec. 2, 1895.

There is not always a high boundary fence between fun and disgust.

Just try a 10c. box of Cascarets, the finest liver and bowel regulator ever made.

We are all apt to discriminate between what we believe and what we hope for.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures wind colic. 25c. a bottle.

A toboggan slide in St. Moritz, Switzerland, is three-quarters of a mile long. The descent is made in seventy-one seconds.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free DR. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

It is a self-evident proposition that those who pay the fidler are entitled to the kind of tunes they desire.

CASCARETS stimulate, liver, kidneys and bowels. Never sicken, weaken or gripe; 10c.

When it comes to making mistakes, nearly all men are found to be artists.

St. Vitus' Dance. One bottle Dr. Fenner's Specific cures. Circular, Fredonia, N. Y.

That man who can afford to make enemies is certainly rich in expedients.

When bilious or costive, eat a Cascaret, candy cathartic; cure guaranteed; 10c., 25c.

Sarcasm is a rhetorical flower containing a bee.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

That Tired Feeling

Is a positive proof of thin, weak, impure blood, for if the blood is rich, pure, vitalized and vigorous it imparts life and energy. The necessity of taking Hood's Sarsaparilla for that tired feeling is, therefore, apparent to every one, and the good it will do you is equally beyond question. Take it now.

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills are prompt, efficient and easy in effect. 25 cents.

LYON & CO'S PICK LEAF EXTRA SMOKING TOBACCO

Made from the Purest, Ripest and Sweetest leaf grown in the Golden Belt of North Carolina. Cigarette Book goes with each 2-oz. pouch.

ALL FOR 10 CENTS.

A Pleasant, Cool and Delightful Smoke.

BORING FOR NATURAL STEAM.

It Is Said That It Can Be Found Two Miles Down.

The deepest well in the world will soon be completed near Pittsburg, Pa. It is now more than one mile deep, and, when finished, it may reach down two miles into the earth. It is being bored in the interest of science. The object in penetrating so deeply is to determine just what the interior of the human footstool is like. From a commercial point of view, the well was a success long ago. A comparatively few feet below the surface both gas and oil were struck in paying quantities, but the company owning the plant determined to dedicate it to science, and invited Professor William Hallock, of Columbia College, to carry on a series of temperature investigations as the hole is carried deeper and deeper into the earth. The results of these investigations are very interesting, and it is the opinion of several well-known scientists that the ultimate result of the boring will prove to be of widespread economic as well as of scientific value. Most significant of all the facts so far ascertained is that the well grows steadily hotter as its depth increases.

It is the intention of the company to continue the boring process until something entirely new and original is developed. This may seem a crude way of putting the statement, but it has long been a theory among well-men that if it is possible to go deep enough some new geologic condition or economic feature would be found to exist. At the very least they claim natural steam would be encountered, or the well walls would finally become so hot that water could be pumped down cold and pumped up in the form of steam, and thus the natural power of the future be obtained. At any rate there is material for much speculation and the interest becomes greater in increased ratio as the drill descends, and a startling event is expected to happen almost any day. One remarkable feature of the well is that the gas found near the surface is now used to operate the powerful engines which do the drilling. Thus the natural power already issuing from the well is utilized for the purpose of deepening it.—Washington Star.

Snake For a Necktie.

Some men will fly from a snake as they would from a pestilence. Others, whose nerve centers are under better control, will handle the cold, crawling reptiles with as much indifference as they exercise in manipulating a ham sandwich. Gus Behmer, of Indianapolis, is one of the latter class. He is a machinist, and when he came to work he was observed to take unusual care with his shirt collar. Later on he was seen to have about his neck, under his shirt collar, a tie of peculiar form of color, but when that tie began to slowly move it was seen that Behmer's neck was encircled by a bright, vigorous and healthy garter snake. Later on Behmer stood behind the counter in the business office, with the head of his necktie protruding straight out from under his chin and a forked tongue running in and out from a wide mouth. When a hackman dropped in and asked for a city directory, Gus said "Certainly," and as he handed the man the book reached forward. The hackman saw the snake, turned pale and dashed out of the door. During the evening it is unnecessary to say that Behmer was not to any extent bothered by those who desired to discuss politics, religion or anything else.—Detroit Free Press.

A Curious Experience.

'One of the most curious experiences I have met with in a long time happened to me last Monday," said a young bank official to a Star reporter yesterday. "I was standing at my desk during business hours when a woman came up and asked me if I was a notary public. She was rather a nice-looking woman, in the neighborhood of forty, I should think, the sort of woman that one ordinarily describes as motherly. When she was told that I was qualified to administer oaths she informed me that she wanted to swear off drinking whiskey for a year. Her request nearly took my breath away, for she was not a woman one would pick out as a hard drinker, but she told me that she was altogether too fond of whiskey, and found she was drinking it to excess. Her relatives and friends were anxious that she should swear off, and she had finally agreed to do so. When I drew up the paper for her I included all other forms of intoxicating liquor. She objected to that at first, but I urged her to do the thing up right while she was about it, and she ended up by doing so. Then she paid me my legal fee and walked out, but when she opened her purse I noticed that it was just full of money, and the whole occurrence puzzled me not a little."—Washington Star.

One of the principal exports of the Phillipine Islands is hemp. In 1894 the hemp marketed was valued at $7,693,000 in gold.

The United States imported $17,945,455 worth of fruits and nuts during 1896. In 1895 the value was $22,510,211.

Sun's Rays Ignite Coal Dust.

Our German contemporary Glueckauf mentions an instance of the ignition of coal dust by the sun's rays. The surface works of the Maybach Colliery, near Friederichsthal, in the Saar District, are chiefly of iron. On certain girders, the floating dust, due to the tipping of coal on to the jigging-screens, became, in course of time, deposited in a layer more than an inch thick. On a mechanic burning his hand—while repairing a pipe running through the corrugated iron forming one of the south walls—the official inquiry showed that the layer of coal dust had been formed along the whole length of the wall. Although the dust contained a proportion of pulverized rock—the metal plates heated by the sun had ignited it, the layer of white ash on the top proving that it had burned for a considerable period. This circumstances affords, in addition fresh proof of the remarkable ease with which coal dust may be brought to ignition.—Engineering and Mining Journal.

A Champion Lightweight.

Remarkable in many ways, the "tule gnat" of the far west is most curious for its almost total lack of weight. The little insect has a nearly microscopic body but a relatively hugh spread of wing, which gives it the apparent size of a mosquito.

In some parts of California "tule gnats" swarm so densely about burning lamps that several times during an evening the dead must be cleared away to give the light a chance. In brightly illuminated stores the gnats are veritable pests, and it was in a Lake County, (Cal.) drugstore that a curious experiment was recently made. As many gnats were collected as could be heaped upon a pan of the apothecary's scales, the smallest weight in use to measure the most delicate drugs was then put upon the opposite pan and was found to over-balance the mountain of gnats. —From The New Orleans Times-Democrat.

The Sun and the Doctor.

A physician writing in The Hospital says: "Where the sun does not go, there goes the doctor. All sorts of disease, from consumption down, are mitigated or cured by sunlight and pure air. Watch for the sun, for life and health dwell in the sun beams; and when it is shining, open every window in the house until it goes down again. There is every reason to believe that the germs of such diseases as scarlet fever, diphtheria, typhoid fever, and other such deadly enemies, are entirely destroyed by strong sunlight. Not only, however, has the sun the power of making germs die, but it is equally endowed with the potency of making men live. Let every man and woman make sure that not only themselves, but also their children and their servants shall have the fullest opportunities of taking in unlimited quantities of the inexpensive but life-giving sunshine."

A Queen With Whiskers.

A captain in a regiment stationed in Natal, when paying his company one day, chanced to give a man a Transvaal crown, which, as one would naturally expect bears "the image and superscription" of President Kruger.

The man brought it back to the pay table and said to the captain: "Please, sir, you've given me a bad half-crown."

The officer took the coin, and, without looking at it, rung it on the table, and then remarked: "It sounds all right, Bagster. What's wrong with it?"

"You luke at it, sir," was the reply.

The captain glanced at the coin, saying: "It's all right, man; it will pass in the canteen."

This apparently satisfied Bagster, who walked off, making the remark: "If you say it's a' right, sir, it's a' right: but it's the first time I've seed the Queen wi' whiskers on."—London Answers.

Extermination of Grasshoppers.

Professor Lawrence Brumer, of the University of Michigan, for some time a special agent of the Agricultural Department, and a well-known ornithologist and entomologist, has sailed from New York for the Argentine Republic to investigate the best means for extermination of the grasshoppers, which have proven a great pest to the farmers there. He goes in the interest of a large syndicate.

Gained 250 Pounds in Three Years.

Mrs. Ruth Hollar, who weighed 400 pounds, died at her home at Allegheny City, Penn., a few days ago. Within three years she had increased from 120 pounds to a fifth of a ton. During the last six months she had lived in the second story of her home, being unable on account of her enormous size, to get either up or down stairs. She was only 4 feet 5 inches in height.—New York Press.

Norway's Storthing has voted a lump sum of 4,000 kroner ($1,080) each to Nansen's twelve companions and 3,000 kroner a year for five years to Captain Svendrup, who is to command the next expedition in the Fram, planned for 1898.

Champion Mean Man of Georgia.

A man in Lumpkin County, Ga., not only sued a person for 18 cents, but tendered a bill for $1 to his sister for a sack of flour and some lard used while she and neighbors were sitting up with the corpse of his father at his house, besides charging his daughter 25 cents for what she ate while visiting him on that occasion.

Contributor—What a surly sort of chap that fellow who writes your jokes is. Editor (sadly)—Yes, he is; and from what he sends me I'm afraid he's been out of humor for a long while.—Answers.

Fuddy—There's Fumble over opposite. He prides himself upon the good things he gets off in conversation. Duddy—Should think he would; they occur so seldom, you know.—Boston Transcript.

REGULATE THE LIVER

10¢ 25¢ 50¢ ALL DRUGGISTS

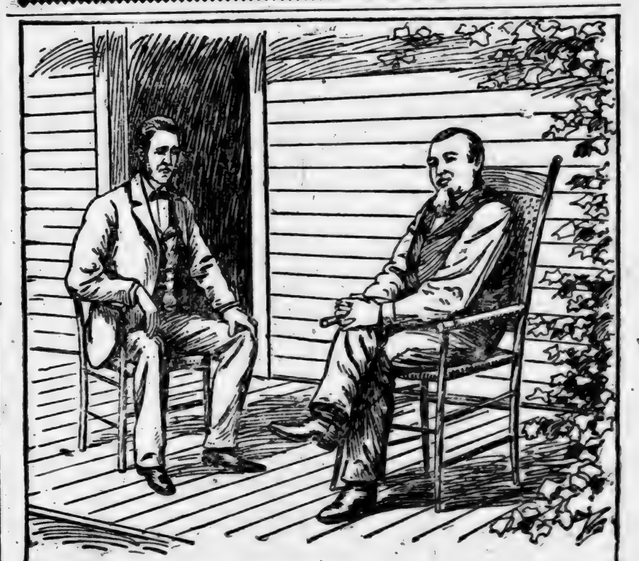
ABSOLUTELY GUARANTEED to cure any case of constipation. Cascarets are the Ideal Laxative, never grip or gripe, but cause easy natural results. Sample and booklet free. Ad. STERLING REMEDY CO., Chicago, Montreal, Can., or New York. 811.

REASONS FOR USING

Walter Baker & Co.'s Breakfast Cocoa.

1. Because it is absolutely pure.
2. Because it is not made by the so-called Dutch Process in which chemicals are used.
3. Because beans of the finest quality are used.
4. Because it is made by a method which preserves unimpaired the exquisite natural flavor and odor of the beans.
5. Because it is the most economical, costing less than one cent a cup.

Be sure that you get the genuine article made by WALTER BAKER & CO. Ltd., Dorchester, Mass. Established 1780.



A resident of Shawnee, Tennessee, says: "I want to tell of the benefit I received from taking

Ripans Tabules.

My stomach had got into such a fix I could not digest my victuals at all; everything I ate I threw up, with great pains in my chest and bowels. I tried several doctors, who did me no good. At last, after spending about $75, a friend advised me to try Ripans Tabules. I commenced taking them and soon I could eat almost anything, and I had the satisfaction of knowing that what I eat 'would stay with me.' I am grateful for such a medicine, and I hope before many years it will have place in the house of every family in these United States."

ATTACHED TO HIS REGIMENT.

Stories of a Regular Army Veteran Who Wouldn't Quit the Service.

The old soldier's attachment for regiment, company and officers is not without its compensation, or he presumes upon it and is indulged. A gray-haired veteran, though something of an incorrigible, would have his offending met with a leniency at which the younger soldier or war recruit would marvel. Indeed, it is the fact that not a few old soldiers of the past owned their regiments, or believed they did, and acted up to their belief. Jack Carpenter, "H" Company, Third Infantry, had that belief as strong as any man who ever wore the blue in the ranks for sixty-five consecutive years Superannuated for years, he would not take a discharge, but at the end of each enlistment he would get a dispensation from the war department, and take on again "just to stay with the old Third." A veteran of the Mexican war, he served faithfully during the civil war, and in 1863, with his regiment, was sent from the Army of the Potomac to help quell the draft riots in New York.

The regiment, having sucessfuly accomplished its mission, gave a ball on Governor's Island before departing for the front. Jack Carpenter, as neat a looking soldier as ever pipe-clayed a belt, along with a veteran comrade, Mullaney, was detailed to look after the gentlemen guests in their retiring-room. Carpenter met every batch of guests with elaborate courtesy and, conducting each to a side-board, effusively protested that each had better take a nip before "jining" the ladies. Jack the host, courteously drank with each group or squad of visitors, and finally he and Mullaney, who had been equally hospitable, got into a dispute. Forthwith Jack repaired to the ballroom to find his captain and have the controversy settled. The ball was at its height, with the band playing a languorous waltz, while the floor was filled with dancers impatient for the go-note of the music. Just at this interesting moment Private Carpenter, "H" company, Third United States Infantry, stalked in, unsteadily, face flushed, but determination stamped upon it. Captain Andy Sheridan, his company commander, espied him, and fearing some outbreak, sought to hide him from the crowd of gayly garbed ladies. Carpenter detected him and exclaimed:

"No you don't, sonny, you don't hide from old Jack Carpenter. I am after knowing who ranks in the cookhouse; do I rank Mullaney or does Mullaney rank me?"

After the war Carpenter accompanied his regiment west and took station at Fort Lyon, Colo. There, so well advanced in years, he was practically excused from all duty, only being required to show up at Sunday morning inspection, so he might be kept on the muster roll. This he always did, looking as soldierly and clean as if he were a toy soldier instead of a war-worn veteran of two wars and scores of indian expeditions and scouts. It so happened that Second Lieutenant Louis Hamilton, a grandson of Alexander Hamilton, was assigned to duty at Fort Lyon and to the command of Carpenter's company. A rosy-faced, beardless and confident youngster, Hamilton went out to his first Sunday morning inspection at Fort Lyon. He went down the company front, looking over each man with a scrutiny that he hoped would impress the men with the belief that he was an old hand at the business. In turn he took each gun and inspected it. He came to Carpenter, looked him over, took his gun, inspected it, and, returning it to him, said patronizingly:

"What is your name, my man?"

"Jack Car-pen-ter," was the answer, delivered with the faintest suspicion, to those who knew him, that old Jack had been early at the bar at the sutler's store.

"Well," continued Hamilton, all innocent of offense, you are the cleanest man in the company."

"Sonny," with a snort, ejaculated old Jack, "I was in the army before you were born."—Chicago Times-Herald.

Cultivating Artificial Sponges.

The bill to encourage the artificial growth of sponges within the waters of the state of Florida is viewed with approval in that state. The sponge industry is already one of some importance in Florida, its product amounting to nearly $300,000 per annum. At present any person, whether a citizen of Florida or not, or even if not a citizen of the United States, can engage in it. The bill, besides giving persons the right to cultivate sponges and protecting them in their ownership under the conditions prescribed, also requires of persons not citizens of the United States the payment of a license of $25 before engaging in the business of sponge fishing.—Jacksonville Times-Union.

A single firm in London received last year from India 400,000 dead humming birds, 6,000 birds of paradise, and 260,000 other birds.

SENATOR EARLE DEAD.

Prominent South Carolinian Laid Low By Bright's Disease.

United States Senator Earle, of South Carolina, who was elected last January, died at his residence in Greenville Thursday afternoon at 5:35. He had been ill for several weeks, but until last Wednesday hopes were entertained of his recovery. Bright's disease was the trouble.

His death has already caused a stir among the politicians. The selection of his successor may change the whole political checker board as it had been drawn for South Carolina to 1900.

Judge Earle was a native of South Carolina, being born in Greenville county on April 30, 1847. His father, Elias D. Earle, of Greenville, was a prominent lawyer and at one time held the office of superintendent of public works of the state.

Judge Earle's early education was received in the Academy of Sumter. Immediately upon leaving the academy he hastened to join the ranks of the confederate army. In July, 1864, at the age of seventeen, he enlisted as a private in Charles' battery of light artillery, at the close of the war a part of Kemper's artillery.

At the close of the war Judge Earle returned home and entered the Furman university, where he graduated in 1867. He chose law as his profession, but being too poor to study it independently, he taught school by day and studied law at night. In April, 1870, he was admitted to the bar and began the practice of his profession at Anderson, where he remained until 1875, when he removed to Sumter, S. C.

As a lawyer Judge Earle soon distinguished himself.

In 1878 he was elected to the legislature, and for four years he was a useful and able member of that body. He declined re-election to the house in 1880, but was elected senator from Sumter county in 1882.

In 1886 he was elected attorney general and for two terms filled that responsible position with signal ability. In 1880 he had the honor of representing his party in the national democratic convention at Cincinnati. Again in 1884 he went as a delegate to the national convention.

In 1888 Judge Earle declined the nomination of governor because he was committed to the support of Governor Richardson, who was a candidate for re-election. He ran against Tillman for governor in 1890, but was defeated. Judge Earle then returned to Greenville, the home of his boyhood, and opened his law office, determining to devote his entire attention to the practice of his profession. In 1892 he was elected judge of the sixth circuit.

The history of the campaign in which he triumphed over John Gary Evans and was chosen by the people as United States senator is familiar to all.

Judge Earle was married May 19, 1869, to his cousin, Miss Anna M. Earle, a most attractive and interesting woman. To them have been born nine children, of whom six survive.

HOUSE EVADES QUESTION.

Consideration of Cuban Matter to Be Delayed.

Cuban affairs furnished the house with a day of bitter partisan debate Thursday.

The resolution appropriating $50,000 for the relief of American citizens was adopted without a dissenting vote, but the democrats endeavored to force consideration also of the Morgan resolution for recognition of the belligerency of the insurgents.

They accused the republicans of endeavoring to evade this issue, but the dominant party through its spokesman, Mr. Hitt, made the important statement that the republicans desired not to embarrass negotiations which were being projected by President McKinley to secure the independence of Cuba.

M'KINLEY GOES TO NASHVILLE.

He Has Decided Upon June 12th as the Date of His Visit.

President McKinley has finally decided to go to the Nashville exposion next month. He has fixed upon the 12th as the date and will doubtless be accompanied by some members of the cabinet.

To Increase Spanish Army.

General de Azcarraga, Spanish minister of war, has introduced a bill into the cortes providing for an increase of the army in Spain to 100,000 men.

Milwaukee, Wis., is preparing to have hanging gardens for its exposition in 1898, rivaling those of Babylon. Indiana will probably celebrate its centennial by a day of fasting and prayer. Our enterprise runs largely in religious channels.

Two months ago an act was passed in the New Zealand House of Assembly which allows women to practice at the bar. Strange to say, there has been no rush on the part of would-be women barristers, and things seem much what they were.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks:

"In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story schoolhouse, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 30 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

DR. O. T. DOZIER,
(The Renowned Southern Specialist)
Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice, Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)
Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)
Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)
We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)
• • • Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His full record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)
As a specialist Dr. Dozier is unexcelled by any living physician. • • • He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)
Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)
His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

ROMEYN RECORDS

Now In the Hands of Secretary Alger For Review.

The judge advocate general of the army has completed his examination of the record of the court martial in the case of Captain Henry Romeyn, Fifth infantry, who was convicted of assaulting Lieutenant Michael O'Brien, of the same regiment, at Ft. McPherson, Ga.

The case is now in the hands of Secretary Alger for review.

USELESS PRELIMINARIES

And Elaborate Spanish Etiquette Obstruct Mr. Calhoun.

A special of Wednesday from Havana says: In spite of Mr. Calhoun's anxiety to get to work on the Ruiz investigation there has been considerable delay owing to the elaborate forms of Spanish etiquette and to the great number of useless preliminaries. The investigation, however, will probably begin on Monday.

ONE OF THE

BIGGEST AND BEST DEPARTMENT STORES

IN THE SUNNY SOUTH

Is that of

Drennen & Co.,

They have the finest line of goods that was ever seen in the Magic City, and they are selling at lower prices than were ever before known in this section.

Call whether you buy or not; but it is certain that you will want to buy if you call!

We have some special inducements to offer for the Thorsby trade.

Circuit Clerk

CHILTO

VOL. I. NO. .9

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

All that has been said in regard to the development of grapes in Thorsby is being plainly proven by facts. People who visit our busy and beautiful town should not fail to see the vigorous vineyards that are now being trellised by their thrifty owners. They will be surprised on looking at vines that were planted one little year ago, and that are already bearing bunches of the purple fruit. Another year and the yield will be most bountiful. This is the unanimous opinion of expert vitaculturists.

A sum of money in gold and a blue ribbon are offered as prizes by the Concordia Land & Improvement Co. to the person who has the best vineyard in Thorsby at the end of this season. Wonder who will be the lucky competitor? It will be a big advertisement for him, whoever he may be.

While John Little was curbing a well, near Jemison, on Thursday of last week, several planks were being let down to him on a rope, when one of them slipped loose and fell forty feet, hitting him on the back of his head and fracturing the skull. He will recover.

Rev. and Mrs. Youngdahl, who have been staying in Thorsby for some time, returned to their home in Chicago, last Monday. They expect to return here in the Fall, as Rev. Youngdahl's health will not permit his living in the North during the Winter.

Farmers can find sale for peaches, plums, berries, Irish potatoes, eggs, etc., in any quantity at F. Mobeck's cash store in Thorsby. He will also pay highest market price for chickens. No fruits or vegetables will be bought on Saturdays.

May 25th, Wm. Tatterfield left Flandreau, South Dakota, for Thorsby, on his bicycle. He will stop at Nashville, Birmingham and several other places on his way, and expects to reach here in about two weeks.

The Thorsby experimental garden is now in very good condition. The different varieties of vegetables, fruits, shrubbery, flowers, etc., give a very good illustration of what can be grown on Alabama soil.

Dr. Givhan, of Jemison, reports that there is comparatively little sickness in the county at present, and claims that the hot weather will not bring on any more sickness.

Two shipments of new potatoes have been made from Thorsby to the Birmingham market this season. They brought 90c. per bushel.

After five months of careful investigation on the grounds, Nels. Peterson has, this week, purchased a vineyard tract in Thorsby.

Adolph Carlson and John Anderson, both of St. Paul, Minn., have, during the past few days, purchased two vineyard tracts each.

Rev. Glad returned to Fruithurst, Monday. He has been spending a few weeks in Thorsby, visiting friends.

J. B. Grenley is building a new barn on his place near Thorsby.

Farmers have their oats nearly all harvested.

USELESS PRELIMINARIES

Alger Eot

l of the mination artial in Romeyn, victed of O'Brien, McPher-

ls of Sec-

and Elaborate Spanish Etiquette Obstruct Mr. Calhoun.

A special of Wednesday from Havana says: In spite of Mr. Calhoun's anxiety to get to work on the Ruiz investigation there has been considerable delay owing to the elaborate forms of Spanish etiquette and to the great number of useless preliminaries. The investigation, however, will probably begin on Monday.

Circuit Clerk

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. .9 THORSBY, ALA., FRIDAY, JUNE 4, 1897. $1.00 PER YEAR.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

All that has been said in regard to the development of grapes in Thorsby is being plainly proven by facts. People who visit our busy and beautiful town should not fail to see the vigorous vineyards that are now being trellised by their thrifty owners. They will be surprised on looking at vines that were planted one little year ago, and that are already bearing bunches of the purple fruit. Another year and the yield will be most bountiful. This is the unanimous opinion of expert vitaculturists.

A sum of money in gold and a blue ribbon are offered as prizes by the Concordia Land & Improvement Co. to the person who has the best vineyard in Thorsby at the end of this season. Wonder who will be the lucky competitor? It will be a big advertisement for him, whoever he may be.

While John Little was curbing a well, near Jemison, on Thursday of last week, several planks were being let down to him on a rope, when one of them slipped loose and fell forty feet, hitting him on the back of his head and fracturing the skull. He will recover.

Rev. and Mrs. Youngdahl, who have been staying in Thorsby for some time, returned to their home in Chicago, last Monday. They expect to return here in the Fall, as Rev. Youngdahl's health will not permit his living in the North during the Winter.

Farmers can find sale for peaches, plums, berries, Irish potatoes, eggs, etc., in any quantity at F. Mobeck's cash store in Thorsby. He will also pay highest market price for chickens. No fruits or vegetables will be bought on Saturdays.

May 25th, Wm. Tatterfield left Flandreau, South Dakota, for Thorsby, on his bicycle. He will stop at Nashville, Birmingham and several other places on his way, and expects to reach here in about two weeks.

The Thorsby experimental garden is now in very good condition. The different varieties of vegetables, fruits, shrubbery, flowers, etc., give a very good illustration of what can be grown on Alabama soil.

Dr. Givhan, of Jemison, reports that there is comparatively little sickness in the county at present, and claims that the hot weather will not bring on any more sickness.

AN ACKNOWLEDGMENT.

To our friends of Thorsby we wish to express our heartfelt thanks for all the kindness shown us since we, as strangers, came to this place. We wish especially to thank Dr. Young for his kindness and also Rev. and Mrs. Youngdahl and Mr. and Mrs. T. T. Thorson, for spending the long hours of night, watching at our bedside. There are other acts of kindness which we here cannot mention. We feel that we are among friends and have been treated even better than we would have expected amongst old friends and acquaintances.

Very sincerely,
MR. AND MRS. J. B. GRENLEY.

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

Last week, Monday night, Louis Wooley, colored, returned to his home near Calera, and found Shelby Harkins, another negro, there. Wooley objected to the other man taking his place. The two negroes came together, and in the melee, Harkins was stabbed with a knife and killed. Wooley's wife was also hurt in the scrimmage, but not seriously. Wooley gave himself up to the officials, and was acquitted on a verdict of justifiable homicide.

The cry for corn among the farmers of this county is becoming distressing; it is wholly beyond the power of the merchants to supply the demand. Let this be an object lesson in future.—Columbia Chronicle.

The Call would advise the revenue officers to visit the county in question instanter.

The platform of the freight depot at this place is being put in good repair.—Calera Sentinel.

There are several other platforms in the country that need repairing. It would be advisable to start work at once on that Democratic platform, which is badly split up at present.

Heflin, Calera, Columbiana, Sylacauga, Childersburg and Clanton are making a bid for the Industrial School for the Fourth District. Clanton is at a disadvantage in the fight, on account of not being centrally located. Calera is looked upon at present as the most favorable place.

Charlie Hall, colored, is in jail at Greensboro. Charlie's wife was killed last Sunday by having her throat cut, and he is charged with the crime.—Birmingham News.

Charlie's wife was very foolish for having had her throat cut, and to have her husband do it, too!

The Camden New-Era says that money is plentiful in that place, and suggests that bicycles be bought in order that the town may have a mounted police force. Camden must be one of the few places where the wave of prosperity has struck with great force.

The Alexander City Outlook and the Sheffield Reaper are playing a little game of you tickle me and I'll tickle you. The Reaper first says all kinds of nice things about the Outlook, and thereupon the Outlook says a lot of good things about the Reaper.

The Anniston Hot Blast and the Talkville Chrnicle are the latest additions to our exchange-list. The Hot Blast is one of Alabama's up-to-date dailies, and there is a noticeable absence of slush concerning Gov. Johnston in its columns.

A Uniontown correspondent of an exchange says: "The canebrake is looking its best now. The crops have been worked like a garden. Prospects are fine, and the people are happy."

W. P. Cramer, formerly a hotel clerk at Calera, committed suicide a few days ago at Gadsden. Despondency, caused by inability to find employment, was the cause.

The amount of taxes collected in Tallapoosa county so far is $13,893.57, and special county taxes, $3,461.66.

Dr. J. P. Jones brought to our office the champion stalk of cotton of the season. It measures 22 inches long and has two forms and four squares.—Camden New-Era.

The Alexander City Outlook now wants some one to furnish a snake story. Get a few of the Montgomery Advertiser's woeful tales about Gov. Johnston, and they will fill the bill.

Dadeville business men are so absent-minded that several of them forgot to close the front doors of their business houses one night last week.

There has been an average of 300 crates of strawberries per day shipped from Cullman so far during the season.

The Confederate Veterans composing the Forty-seventh Alabama will meet at Alexander City, July 21 to 23.

The Bessemer Journal will hereafter advocate the principles of the Republican party.

Birmingham expects to be represented in the Southern base-ball league this Summer.

The Wilcox county poor-house contains two white females and eight colored males.

There are now only six Republican papers published in the State of Alabama.

E. M. Barnes has been appointed Postmaster at Alexander City.

Maj. Wm. Hall has been appointed Postmaster at Wetumpka.

Prattville claims a population of 1,650.

A Smooth Swindler.

Several Birmingham business men have within the past few days been victimized by cashing worthless checks. Several days ago a well-dressed man calling himself J. S. Mayers, went there and put up at the Metropolitan Hotel. He claimed to be traveling for a Vicksburg novelty house, and said he had a good trade. He received a letter at the hotel which contained a draft for $65 alleged to have been issued by the First National Bank, of Vicksburg, on a New York bank. He said the draft represented his week's salary. He had it cashed by Emil Lesser, proprietor of the hotel. Mr. Lesser was advised that the draft was a forgery and that several similar forgeries have been worked on the Vicksburg bank. Mayers' whereabouts are not known.

A few days ago a First avenue merchant cashed a draft for $14 which was presented by a man calling himself William Lodtman, who claimed to be a traveling newspaper writer. It was signed by Charles A. Brush, assistant editor of the New York Sun, and was on the Sun Publishing Company. The bank in Birmingham was notified that it was worthless. Several more similar to these two are also reported to have occurred recently but the details are being kept dark, in hope of apprehending the guilty parties.

APPEALED IN VAIN.

Russell Sage Neglects to Aid a Dying Relative.

A telegram from Joliet, Ill., says: One night last week at the poor house in this county, George Sage, aged 21 years, son of Elisa Sage, of Shannahon township, died of consumption, hastened by worrying over the affairs of his parents. His father, after paying his uncle, Russell Sage, the $40 on the mortgaged house, could not afford to give George any of the delicacies needed. George also worried greatly over the attempt of his mother to commit suicide a couple of weeks ago. The supervisor of Shannahon wrote to Russell Sage two years ago asking him to make provision for the young man to keep him out of the poor house. The appeal was unanswered.

Since the year 1880 the Paris police authorities have arrested as many as 20,000 children who are being trained for begging and vice.

Says Bradstreet's: "It is pointed out, with probable accuracy, that not a little of the disfavor with which what is termed 'Wall street' is regarded throughout the country is the result of experiences with bucket shops and so-called syndicates, and the absence of actual knowledge as to what the legitimate stock market really is."

Promotions are coming rapidly these days in the upper official circles of the regular army. What few veterans of the Civil War are left find the age of retirement close at hand in the youngest cases. "The army will soon be in the hands of officers trained only in the walks of peace," observes the New Orleans Picayune.

For the first time in twenty-eight years the State of Ohio is without Democratic representation in the United States Senate. The long period of divided representation began in 1869, with the election of Allen G. Thurman as the colleague of John Sherman. Once only has the rule of divided representation been broken, and that was in the Forty-sixth Congress, when George H. Pendleton was the colleague of Senator Thurman.

One of the new dictionaries has in it a pretty big and yet perhaps a useable word, "politicalization," of which it seems to be itself somewhat in doubt, although it half-supports it with a quotation from the Brooklyn Eagle, which coined the phrase. The Eagle, it seems, once referred to "the steady politicalization of the public schools," by which it meant the subjection of these schools to political control. Whatever we may think of the word, comments the New York Observer, the danger indicated is certainly a real one.

Illinois women are making a strong effort to lift the compulsory education law of their State into activity. At present the law only remains that every child shall attend school for sixteen weeks each year. Children easily evade it by an irregular attendance during the last term of school. When the school has closed it becomes difficult to determine whether or not they have had the prescribed amount of tuition. Actually, although there is a penalty for infraction of the law, and although infraction is frequent, the penalty has never been imposed. It is believed that a simple amendment requiring the sixteen weeks of tuition to be consecutive and at the beginning of the term, and providing for the enforcement of the law, will be sufficient.

A newspaper artist has been telling some of the woes of the men who make pictures for the daily papers. He says: "It makes me tired sometimes when I hear some smart Aleck who couldn't tell the difference between art and a side of sole leather criticise newspaper illustrations. The public doesn't understand what handicaps are continually thrown about our work. A few days before election I was given instructions to make a portrait of one of the candidates. He gave me an old daguerreotype, made just after the war, and said he had had no photograph taken since then. Well, I made his picture all right, but in order to do it I first had to cut off a full beard and curl his moustache. Then I gave him a hair cut, parted his hair on the other side, gave him a stand-up collar and a modern cravat, and added thirty years' worth of wrinkles to his face. And yet they say such work isn't art."

A correspondent of Cycling Life writes from St. Louis: "Every house called on recently, not only in bicycle but in other lines as well, emphasizes the fact of an immense improvement the last few years in general conditions in the South. Nowhere else in the country have the years of business depression proved such a blessing in disguise. The iniquitous credit system which has been such a hindrance to buisness in that section has received its death blow. Bankers and brokers have been forced to discontinue loaning large amounts on growing or prospective crops. The planters have been forced to a cash basis or something near it. Merchants are better able to discount their bills and are doing it." This is true, says the Louisville Courier-Journal in corroboration. Except for the floods there is no reason why the South cannot expect to prosper.

SONG OF LIFE.

(From the New Unity.)

When Light unveiled her radiant face,
And wrapped the world in her embrace;
When into place the planets swung,—
This song the heavenly choir sung:
"O sacred pulse! O law divine!
All purpose and all power is thine.
Death, never!
Life ever and forever!"

And still that grand, triumphal song
Thrills through all nature, deep and strong;
And still vibrating, high and low,
It sets the continents aglow;
And in the ocean's sob and roar
It sounds and speaks forevermore:
"Death, never!
Life ever and forever!"

O human soul!—a spark of love,—
Around thee, earth-environed, move
Kaleidoscopic forms to-day;
To-morrow thou art on thy way
To fairer plains and sweeter skies!
And still the thrilling anthems rise:
"Death, never!
Life ever and forever!"

A MORNING CALL

"What's the matter, Viola?"

"I'm bothered to death!"

"Why?"

"With these horrid bills—it's quarter day or something—I believe every year has sixteen quarter days!" and she brought down her white hand angrily upon a packet of freshly opened bills lying before her on her writing table. A pretty looking woman sitting in a pretty room, perfectly dressed, with fair, well-arranged hair, and delicate white hands. Opposite to her was seated a man—young and good looking, stretched indolently in an easy chair.

"Tell George about them," he said.

George's wife looked troubled.

"He makes such a fuss now, and scolds, and is so disagreeable that I hate asking him for money."

"Borrow of me."

"You dear, kind Jack, certainly not. One beggar can't rob another! Besides, you've no idea of the awful sum I want. Oh, dear, I'm so miserable!" And big tears stood in the lovely eyes that had given her the name of Violet.

"Don't worry," he said, turning away so as not to see her tears, "tot up the amount you owe, and tell me what it comes to."

"I've done that already. I've been at it all the morning—it's a frightful amount—it comes to 2,000 pounds.

Jack gave a low whistle.

"Great Scott! I've nothing like that. How much does George allow you?"

"A thousand a year."

"And can't you manage on that? Why, once we should have thought it a fortune!"

"Of course, but, you see, I do spend a lot upon my clothes—no one can dress as I do upon much less, but that's not it, the the fact is I have an awful drain upon me. Oh, Jack, I'll have to tell you, for I must confide in somebody, and you are such an old friend. I wouldn't if you were rich, because then you would want to help me; but perhaps you can help me with advice."

"Tell me," he said quietly.

"Well, you remember, don't you, the dear old days at home, when you were so much with us?"

"I should rather think I did! That was a jolly little house your poor mother had on the river! We did have good times, didn't we?"

"Yes; but I'm afraid Molly and I both got the name of being rather imprudent."

"Beastly gossip!"

"Yes, but I'm afraid we gave cause for it. Look how you and I used to go for moonlight excursions on the river, to come back to find Molly and Captain Dacres walking in the wood!"

"There was always that horrible old woman, Madame Devonne, about!"

"Hateful creature!" Violet exclaimed, angrily.

"And after all, what harm did we do? Why, I never even kissed you except one!" and he sighed.

"Yes—only once," and she laughed and blushed; "but I must go on with my story. You remember the first time Captain Dacres brought George to see us?"

"Perfectly," he said drily.

"And how mamma called me up to her room and told me, with tears in her eyes, that she felt sure that she had not long to live—don't look at me, Jack, for I can't help crying when I talk of mamma—and how poor Molly and I would be when she died, because some pension stopped at her death, and then she said that she had heard that George was a good man and very rich, and that her one prayer was that he might take a liking to one of us."

"And he plainly showed the very first visit that he had taken a liking to Vi?"

"Yes, I think he did. Well, to go on—I'm awfully ashamed of what I have to tell you!" and a deep flush spread itself up to the roots of Violet's hair, that lovely, dark gold hair that was part of her charm.

"All right; don't mind me."

"You know," she went on, nervously, "just about that time, in spite of our heathenly and sisterly protestations, I had begun to be fond of you—of him!" (with an awkward laugh) "I fancied I was!"

"By Jove!" and he turned quickly in his chair and looked with a strange expression in his eyes at the lovely woman before him.

"I know it was very silly and very horrid of me, because, of course, I know all the time that you only thought of me as a nice sort of sister."

Jack gave a harsh laugh and rose to light a cigarette.

"Well, when George proposed to me I was dazzled by the idea of being his wife and living in a big house, and having lots of diamonds and carriages and things, and above all, dear mamma was so relieved and happy, and so I said 'Yes.'"

"You did quite right," he said quietly.

"But, you see, Jack, when I accepted George I did not love him. I found him cold and shy, and I felt half afraid of him, so just before the wedding day I did a dreadful thing. I—I wrote a letter to you and asked you to run away with me, and I told you I was much fonder of you than I was of George, and, in short, I wrote a very silly letter, full of nonsense I did not half mean, because just about then I had begun to feel that I might learn to love George in time."

Jack's face was flushed; his mouth was firmly set and his hands clenched.

"Madame Devonne came into my room as I was writing, and, afraid lest the letter should be seen, I thrust it into my blotting book. Then Molly called up that George was waiting for me downstairs; I ran down, and then he gave me that lovely pearl necklace, and he seemed to lose his shy manner and told me how he loved me, and he was so nice and—somehow what he said gave me a new, odd sort of feeling toward him, and I knew for the first time since our engagement that—well, that I cared for him"

Jack walked to the fireplace and knocked off his cigarette ash, and Violet went on:

"I forgot the letter till late, and then I thought what an idiot I had nearly made of myself, and knew that it was only a nervous sort of sentimentality that had prompted me to write, and I grew cold with fright lest someone should read it. I hunted through the blotting book to burn it, and could not find it, so I thrust the book into a drawer and locked it—everything was in such a hurry at the last, you know. Well, then we married and went to Paris and had a lovely time. He was wonderfully good to me, and I learned to love him so dearly that I could not imagine having ever thought I cared for anyone else."

Jack gave a curious sort of cough, half like a choke, and his hand went up to his collar, and he drew it aside from his neck.

"And then we came home here, and George had been so thoughtful and kind in all his arrangements for me that I was more than ever touched by his goodness, and I grew so fond of him that I was never happy when he was away from me. But now everything is changed. He does not seem to care for me any more," and a sob choked her utterance. "He never goes anywhere with me. He hardly ever speaks, and when I hinted that I had an awful lot of bills, and I didn't know how I should pay them, he said, in a stern voice, that I had ample allowance, and must make it do."

"But, surely, Vi," Jack said, in a husky voice, "a thousand a year is more than enough for you to dress upon."

"Of course it is."

"Then why that pile of bills?"

"Now we come to the point. That old wretch Madame Devonne had found my letter, and one morning when George was out she called and asked to see me. You know I never liked her, but I was so happy that I felt in charity with everybody. She began by being very pleasant, admiring everything, and saying how well I looked and all that sort of flattery, and then she produced the letter from her pocket. 'Oh, I'm so glad you have brought it to me!' I exclaimed, and held out my hand for it; 'but why did you take it?' I asked.

"'I am very poor, Violet,' she answered, 'and I am getting old—I work no more—I will repose myself.'

"I said something civil and asked again for my letter. Then she showed her hand and told me that unless I paid her well she would at once send that letter to my husband."

Jack started to his feet with a furious exclamation.

"In vain I pleaded, then I grew angry, but it was all of no use. I knew to read such a letter would break George's heart—he would never believe in me again for it would put me in such a wicked—though, thank God, such a false—light that I should lose his love forever. At last I gave in and promised her anything if she would only give me back the letter. This she refused to do, but said as long as I paid her well she would not send it to George. I have given her hundreds, and at last I had to write and tell her that I had no more to give."

"Could you not have told George the whole truth?"

"I often longed to tell him, but it is all so difficult to explain, and if he ever saw the letter, he would find me judged by my own handwriting."

"Poor little Vi! I'm so glad you told me. Now I must be off."

"Before luncheon? Oh, Jack, and I thought you would try and help me."

"I am going straight to Madame Devonne, and if I kill her, she will give up that letter."

"Oh, Jack! Can you really do this? Oh, how thankful I shall be."

"Give me the woman's address."

Violet eagerly wrote it down with trembling fingers, and then grasped his hand in hers. "You have always been so good to me, Jack, and I wish George liked you—somehow I fancy he doesn't; he will when he knows you better, but now—"

"Now I think he's a fool to be rough on the sweetest wife a man ever had! I say, Vi, did you ever get a letter from me a little before your—your marriage? You never answered it."

"No, I'm quite certain I didn't. Was it anything of importance?"

"Oh, no, it didn't matter. Well, I must be off."

"What's that? It sounded like George's step!" Violet said suddenly.

Jack walked to the door and opened it.

"No one is there—a footman gone to the post most likely. I heard the front door bang."

"Do just come into the dining room and have a little something to eat before you go," Violet entreated.

"I couldn't eat anything till I've tackled that fiend of a woman."

In a few minutes Jack was driving rapidly across London in the direction of Notting Hill. "I'm glad she never got that mad love letter of mine," he said to himself with a sigh. "I suppose that vile Frenchwoman got hold of it. Well, I shall go back to India, and stay there till I feel cured of my folly."

Lord George Maitland at the same time was driving far ahead of Jack in the same direction. Arrived at a certain door in a small street in Notting Hill, he asked for Madame Devonne, heard she was in, and was admitted. "Let no one else come in while I am here," he said to the servant, slipping a sovereign into her hand.

Madame Devonne was seated by the fire, knitting, with the remains of a dainty little dejeuner-a-la-fourchette on a table at her side. "Ah! milor, it delights me to see you!" she said, rising and holding out her hand.

Lord George bowed. "Sit down, Madame," he said, sternly. "I have but one thing to say—give me at once the two letters of which you sent me copies, one written by Lady George Maitland and the other by Captain Staunton.

"Ah, milor, but I have them not."

"It is useless to lie. Give them to me at once, or I will have you arrested on the charge of blackmailing, chantage you call it in your country."

"Ah, but Violet is clever! She has confessed to her good husband; she says she means nothing, and milor believes, and yet she loves the handsome Jack, and—"

"Silence!" thundered Lord George. "Not another word! You have been blackmailing my wife for many months; you have made her life miserable and mine a hell upon earth! You tried to make me believe that Captain Staunton was receiving from my wife the hundreds of pounds that you were compelling her to pay you as hush money. But all this villainy has come to an end. Your letter of this morning has led to a very different issue to what you anticipated. According to your advice I went home unexpectedly. I stood unseen in the conservatory behind the boudoir, and lowered myself, through your slanderous tongue, to spy—yes, to spy—upon my own wife! But I learned the truth—the whole truth. If you were a man, madame, I should horsewhip you. As it is, you will give me those two letters immediately. I advise you to give them up quietly."

Madame Devonne rose without a word, and, unlocking a drawer, took out two letters, which she handed to Lord George. He glanced over them quickly, and then put them into his pocket. "I think you will leave London shortly?" he inquired in a meaning tone as he rose to his feet.

"Probably," she answered coolly, "your vile climate gives me the migraine, the spleen. And, as you say in your ugly language, 'the game is up.'"

Lord George, without another word, left the room and went out into the street.

"That vile woman was right," he said to himself. "I have been a fool—a blackguard to have believed anything wrong against my darling little wife, and to have spied upon her. Brute that I was! But I will make it up to her—my Vi, my darling, never again shall you have an unhappy moment!" And he called a hansom and drove rapidly home.

The next morning Violet received a letter from Jack:

"Dear Vi—I went to Madame Devonne's house yesterday and found her out. I went again in the evening, when the servant told me that she had left for Paris in a hurry. Shall I follow her up? Yours ever,

"JOHN STAUNTON."

The answer came quickly:

"Come to luncheon at 2. George told me to ask you. He came home yesterday just like his old self, and was so sweet and nice to me. He asked me if I had any bills, and wrote a cheque for them, saying he liked doing it, and to this end I told him everything, and he was so happy and good. Your happy old friend, VIOLET."

"P. S.—I really believe George is quite fond of you, after all."—St. Paul's, London.

A MYSTERY OF NATURE.

Why She Provides Nectar and Fragrance in Flowers.

The great leading object in nature in providing nectar and fragrance in flowers is still a subject of discussion in scientific journals. That some flowers are unable to fertilize themselves and must have the aid of insects is certain; and it is also certain that in many cases this fertilization is accomplished by the insect while on foraging expeditions for the sweets which flowers furnish. But these well-ascertained facts cover but a small portion of the ground. The fertilization is often accomplished by insects in search of pollen as in search of honey; but it is not contended that pollen is given to flowers in order to make them attractive to insects, as is said of the sweet secretions. It is believed that nectar must be of some direct value to the plant, as well as the pollen; and the effort is to find out what is the chief office of nectar in the life history of the flower. Since thought has been turned in this direction a new class of facts is being recorded. In California grows a lupine which often takes exclusive possession of large tracts of land. It does not yield a particle of nectar. It has bright crimson-violet flowers, and these are produced in such abundance that the color of the mass may be noted at long distances. But it has fragrance. This is so powerful that the traveler notes it long before he meets with the growing plants. The pollen-collecting insects visit the flowers in great numbers. It is believed that cross-fertilization can be affected by these pollen-collecting intruders. At any rate, the fragrance would be thrown away if it were provided for the mere sake of advertising for insect aid—as the other numerous species of lupine which have no fragrance are as freely visited by bees for the sake of the pollen as is this species. The cross-fertilization is effected as freely without fragrance as with it. This point has been made before, though with no reference to the philosophical questions involved. Fragrant flowers are the exception not the rule. In some families of plants where there may be several scores of species, only one or two are fragrant. This has been especially noted among the wild species of violets. But no one has so so far been able to note the slightest advantage in life-economy which the sweet scented ones possess over the odorless ones.—New York Independent

Bees As Aids In War.

History records two instances, according to Mr. Whiteley Stokes in the London Athenaeum, in which bees have been used in warfare as weapons against besieging forces. The first is related by Appian, of the siege of Themiscyra in Pontus, by Lucullus in his war against Mithridates. Turrets were brought up, mounds were built and huge mines were made by the Romans. The people of Themiscyra dug open these mines from above and through the holes cast down upon the workmen bears and other wild animals and hives or swarms of bees.

The second instance is recorded in an Irish manuscript in the Bibliotheque Royale, at Brussels, and tells how the Danes and Norwegians attacked Chester, which was defended by the Saxons and some Gallic auxiliaries The Danes were worsted by a stratagem, but the Norwegians, sheltered by hurdles, tried to pierce the walls of the town—when, "what the Saxons and the Gaeidhil who were among them did, was to throw down large rocks, by which they broke down the hurdles over their heads. What the others did to check this was to place large posts under the hurdles.

What the Saxons did next was to put all the beer and water of the town into the caldrons of the town, to boil them and spill them down upon those who were under the hurdles, so that their skins were peeled off. The remedy which the Lochlans applied to this was to place hides outside on the hurdles. What the Saxons did next was to throw down all the beehives in the town upon the besiegers, which prevented them from moving their hands or legs, from the number of bees which stung them. They afterwards desisted and left the city.

New Coinage for Abyssinia.

Menelik, of Abyssinia, is to have a new coinage. The talari, or dollar, which is the unit of currency, will retain its value of about 4s, but will bear on the obverse the effigy of the negus wearing the triple tiara, surmounted by a Greek cross, while on the reverse will be stamped the lion of Judah, with the motto, "Ethiopia stretched forth her hands to none but God."

The longest known telegraph circuit made on this continent for actual business was the report from San Diego, Cal., to Boston recently. The line was cut out the full 3,400 miles.

WHERE SOLDIERS FELL.

THE GOVERNMENT'S THREE GREAT MILITARY PARKS.

How the Battlefields of Chickamauga, Gettysburg and Shiloh Will Look to the Coming Generations—Some of the Characteristic Monuments Erected.

The Government has created three elaborate National military parks on the three greatest battlefields of the Civil War—Chickamauga, Gettysburg and Shiloh. It is intended that they shall serve as permanent object lessons of American courage and valor, and each of them will be constructed on a scale of magnificence not to be seen elsewhere in the whole world.

None of these parks will be merely ornamental pleasure grounds. The prime idea is to restore those historic fields to substantially the condition they were in at the times of the battles, and, in harmony with that idea, the parks to be created on their sites will be devoted strictly to the illustration of the supreme struggles which rendered them famous for the benefit of future generations rather than of surviving participants. In these parks every incident of the battles will be treated from the impartial standpoint of history, without sectional animosity or bias, and in all the markings and monuments rigid justice will be shown alike to the vanquished and victors. Chickamauga and Shiloh were the most memorable contests of the war in the West, and Gettysburg was the most momentous conflict in the East, and in all three the most distinguished Generals, Union and Confederate, commanded, and troops from typical sections fought, so that by securing and preserving those fields intact as representative examples of the greatest battles of the Civil War the Government will be able to perpetuate their history in a concrete physical form for all time to come.

Each of those three battles, however, was in a measure representative of the whole country. Twenty-nine of the thirty-three States east of the Rocky Mountains, which comprised the Union at the outbreak of the war, had troops in the Chickamauga and Chattanooga campaigns, and five of those States—Kentucky, Tennessee, Missouri, West Virginia and Maryland—had troops on both sides. Nearly every Northern State, and likewise nearly every Southern, was engaged at Gettysburg, and at Shiloh were troops from twenty different States, North and South. The Battle of Chickamauga (September 19 and 20, 1863), is regarded by military experts as the best demonstration of the pluck, endurance, prowess and strategy of the American soldier ever given. Measured by percentages of losses and the duration of the fighting, it was the deadliest battle of modern times. Its sequel and companion piece, Chattanooga (November 24 and 25, 1863), is considered the grandest spectacular engagement. So Gettysburg (July 1, 2 and 3, 1863), corresponding with Chickamauga for Eastern operations, and surpassing it in world-wide renown, registered the highwater mark of American courage and achievements in arms, and stands to-day as the pre-eminent battlefield of the Western Continent. As to Shiloh, it furnished an admirable example of the peculiar characteristics of the American soldier and his adaptability in sudden and unexpected emergencies.

WHERE SOLDIERS FELL.

THE GOVERNMENT'S THREE GREAT MILITARY PARKS.

How the Battlefields of Chickamauga, Gettysburg and Shiloh Will Look to the Coming Generations—Some of the Characteristic Monuments Erected.

The Government has created three elaborate National military parks on the three greatest battlefields of the Civil War—Chickamauga, Gettysburg and Shiloh. It is intended that they shall serve as permanent object lessons of American courage and valor, and each of them will be constructed on a scale of magnificence not to be seen elsewhere in the whole world.

None of these parks will be merely ornamental pleasure grounds. The prime idea is to restore those historic fields to substantially the condition they were in at the times of the battles, and, in harmony with that idea, the parks to be created on their sites will be devoted strictly to the illustration of the supreme struggles which rendered them famous for the benefit of future generations rather than of surviving participants. In these parks every incident of the battles will be treated from the impartial standpoint of history, without sectional animosity or bias, and in all the markings and monuments rigid justice will be shown alike to the vanquished and victors. Chickamauga and Shiloh were the most memorable contests of the war in the West, and Gettysburg was the most momentous conflict in the East, and in all three the most distinguished Generals, Union and Confederate, commanded, and troops from typical sections fought, so that by securing and preserving those fields intact as representative examples of the greatest battles of the Civil War the Government will be able to perpetuate their history in a concrete physical form for all time to come.

Each of those three battles, however, was in a measure representative of the whole country. Twenty-nine of the thirty-three States east of the Rocky Mountains, which comprised the Union at the outbreak of the war, had troops in the Chickamauga and Chattanooga campaigns, and five of those States—Kentucky, Tennessee, Missouri, West Virginia and Maryland—had troops on both sides. Nearly every Northern State, and likewise nearly every Southern, was engaged at Gettysburg, and at Shiloh were troops from twenty different States, North and South. The Battle of Chickamauga (September 19 and 20, 1863), is regarded by military experts as the best demonstration of the pluck, endurance, prowess and strategy of the American soldier ever given. Measured by percentages of losses and the duration of the fighting, it was the deadliest battle of modern times. Its sequel and companion piece, Chattanooga (November 24 and 25, 1863), is considered the grandest spectacular engagement. So Gettysburg (July 1, 2 and 3, 1863), corresponding with Chickamauga for Eastern operations, and surpassing it in world-wide renown, registered the highwater mark of American courage and achievements in arms, and stands to-day as the pre-eminent battlefield of the Western Continent. As to Shiloh, it furnished an admirable example of the peculiar characteristics of the American soldier and his adaptability in sudden and unexpected emergencies, and constitutes a fitting third in the trio of our greatest battlefields.

When completed the park will be the most comprehensive and extended military object lesson in the world. It contains 7000 acres, and the central

ONE OF THE EIGHT SHELL MONUMENTS MARKING SPOTS WHERE BRIGADE COMMANDERS WERE KILLED, CHICKAMAUGA.

driveway, passing through and overlooking all the heavy fighting ground, is twenty miles long. The old roads of the battles have been reopened and new roads closed. Over forty miles of the main roads of the field have been rebuilt in a substantial manner. The details of the six battles—Chickamauga, Missionary Ridge, Lookout Mountain, Orchard Knob, Wauhatchie and Brown's Ferry—are set forth upon historical tablets within the park.

These tablets, numbering about 2000 in all, are cast iron plates, four feet by three feet, with embossed letters. After casting, the plates were glazed black and the embossed letters whitened, making the inscriptions distinct at a distance. Each plate contains from 200 to 400 words of historical text, and is fastened to an iron post, set in concrete. They mark the positions of army headquarters, corps, divisions and brigades, both Union and Confederate, and the parts taken by each organization are concisely stated.

It is left to the States having troops in the battles to erect monuments to regiments and batteries, and to the military societies and the larger organizations, such as corps, divisions and brigades, to erect their own monuments. Nine handsome granite monuments, all different, to the United States regulars, have been set up by the Government, at a cost of $1500 each. Eight pyramidal monuments, each ten feet high, constructed of eight-inch shells, have been erected to mark the spots where brigade commanders on each side were killed. Each battery engaged is to be marked in its most important fighting position by guns and carriages of the patterns used in the battle. There are thirty-five of these positions for each army on the Chickamauga field alone. Five observation towers of iron and steel, seventy feet high, have been built, two on Missionary Ridge and three on Chickamauga field, from which the whole landscape below appears clear and recognizable with its markings.

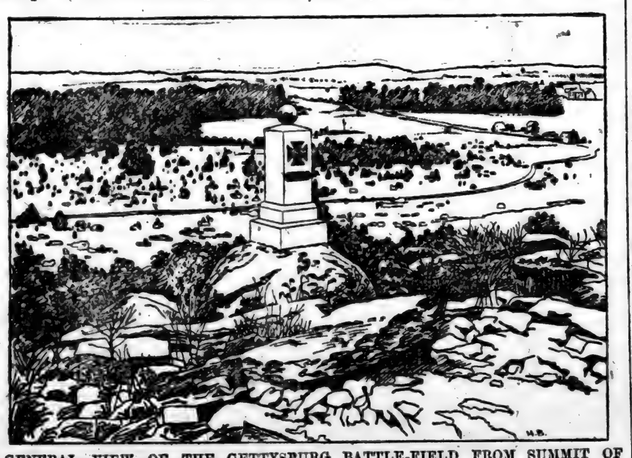
All designs and inscriptions for monuments and tablets have to be submitted first to the Chickamauga National Park Commission and receive approval by the Secretary of War in order to insure reasonable uniformity and harmony, as well as artistic propriety and historical accuracy. All monuments must be either of durable stone or bronze, and all inscriptions must conform to the official reports and be purely historical.

Under the law establishing a National park at Gettysburg, introduced by General Daniel E. Sickles, the Government at once proceeded to acquire the 800 acres and rights of way over avenues owned by the Gettysburg Battle Field Memorial Association, and also to acquire other lands on the battle field by purchase or condemnation. Additional roads will be opened and tablets will be set up definitely marking the lines of the troops on both sides. The rights, however, of States and military organizations to plats of ground on which markers and monuments have already been placed, will in no wise be prejudiced. The Gettysburg National Park Commission, like that of the Chickamauga Park, will cooperate with State commissions in fixing positions that are not yet determined.

A special and noteworthy feature of the Gettysburg Park, authorized in the Sickles law, is a huge bronze tablet on a pedestal bearing a medallion likeness of President Lincoln and the whole of his immortal address on the occasion of the National Cemetery dedication at Gettysburg on November 19, 1863.

There are now nearly $2,000,000 worth of monuments on the Gettysburg field erected by States and regimental organizations and military societies. But until a few years ago there were no lines of battle marked, and a visitor to the field, noticing the absence of monuments on the Confederate side, would be prompted to ask: "Against whom were the Union troops fighting?" This lack has been supplied, and the lines of all troops carefully indicated by tablets, as at Chickamauga, without censure and without praise, and, above all, with historical accuracy.

The Shiloh Military Park for which Congress passed an authorizing act under the lead of Representative David B. Henderson, of Iowa, comprises about 3000 acres, woods and farming lands. Over 4000 Confederates lie buried on that hard-fought field (April 6 and 7, 1862), and in the National cemetery are 3000 Union dead. A commission like those of Chickamauga and Gettysburg has located the battle lines and sites for tablets and monuments for the 258 organizations engaged in the battle. The arrangement of roads and brigade sections has been placed under the supervision of the best landscape architects procurable by the War Department. The regulations as to tablets and monuments will be uniform for all three parks—Chickamauga, Gettysburg and Shiloh.



GENERAL VIEW OF THE GETTYSBURG BATTLE-FIELD FROM SUMMIT OF LITTLE ROUND TOP. SEMINARY RIDGE IN THE DISTANCE.

SPECIMEN UNION MONUMENT, GETTYSBURG BATTLEFIELD.

A PNEUMATIC BOAT.

Constructed of Rubber and Inflated by Means of Air Tubes.

Boats and pneumatic tires are now manufactured on the same principle. The latest craft of this sort constructed can be deflated and packed in one corner of a trunk, together with the jointed oars used to propel it. It is capable of carrying comfortably from three to six persons. It is durable and absolutely safe, being non-capsizable. If filled with water it would still float several hundred pounds.

These rubber boats are totally unlike anything ever before constructed, except that rubber has in the past been used for pontoons. There are two kinds. One is of rubber cloth, with a continuous air chamber around the top, which is made in two separate compartments. On each side the oarlocks are buckled. The oars slip in and out of these little rowlocks, but are not fastened by thole pins. There is also an air tube running lengthwise under the centre of the boat. This serves as a keel and also as a bumper. The other style is, perhaps, the most notable. It is given full form and rigidity in inflated tubes running lengthwise. The oarlocks are buckled on to the sides of the top roll. When being transported these boats are placed in a small case, something like a valise, and can be either carried in that form, or, as stated, in a trunk. Both boats are made in four separate compartments, and are fitted with either pneumatic seats or seats of plank, as may be desired.

It is not only in calm waters that the boat has been tested, but it has

THE PNEUMATIC BOAT.

been given an ample trial in New York harbor, well down toward Sandy Hook, on several occasions when a rather heavy sea was running. The result has been to show that the craft possesses any amount of buoyancy, and rides either a heavy swell or a considerable sea and ships very little water. One boat of this description, with six persons aboard, made the journey to Perth Amboy on a day when it was almost hazardous for small sailboats in the open without meeting disaster of any sort and hardly wetting the clothes of its passengers.

The method of inflating or deflating the craft differs with the size. The arrangement for holding the air is such that it is hard to conceive an accident that would disable it so that the air would escape. While it is not an uncommon matter for the tire of a bicycle to be punctured, the material of the rubber boat is so much heavier and so carefully prepared to resist the impact of even a sharp pointed instrument that the danger of a puncture is hardly among the possibilities. In any event, it would withstand a much heavier shock than the ordinary boat, and for that reason alone promises to be of value.—New York Herald.

There are thirty-seven newspapers and periodicals published in Guatemala, according to a recent consular report. Of this number seven are dailies, fourteen weeklies and twelve are issued once a month.

A NOVELTY IN SEASON.

LATEST INNOVATION IN THE REALM OF FEMININE FASHIONS.

It Consists of an Exquisite Costume of Mauve Color Crepe-de-Chine, and is Adapted to Light Summer Fabrics—A Waist Which Gives a Youthful Look.

A youthful appearance is given to this charming waist by the slight blouse effect that droops gracefully over the deep satin girdle. The stylish combination consists of Royal-blue canvas with

LADIES' FANCY WAIST.

a woven figure in silk, plain blue canvas and narrow black satin ribbon. Although somewhat elaborate in design, the construction is extremely simple and very effective in black and white or other combinations. Glove-fitted linings close in centre-front and support the full fronts and back, the pretty pointed revers extending to form epaulettes over the sleeve puffs. The pointed yoke in back and front ih of plain blue canvas and closes with either of silk, percaline, muslin or lawn. A black organdy sun-plaited costume is frequently worn over a lining of white organdy.

The waist here shown has a glove-fitted lining that closes in the centre-front. Upon this foundation or lining the material is mounted, the fullness at the shoulders, neck-edges and waist being arranged in plaits. The closing is effected invisibly at the left side, which finishes with a full outstanding ruffle. The neck is completed by a close standing band, with collar above made of lace and ribbons. The stylish sleeves have upper and under portions fitting the arm closely from wrists to shoulders, where the fulness is deftly arranged in a puff of moderate dimensions that is caught through the centre in butterfly effect.

The waist is encircled by a ribbon girdle finishing at the left side with dainty bow and long flowing ends that can be substituted for a sash of mousseline or gauze, if preferred. The skirt consists of a foundation or slip of moderate width. It has an interlining of crinoline to the depth of six inches and a narrow dust ruffle of silk with a lace ruffle as a foot decoration. The upper or sun-plaited skirt is cut in a complete circle, and if made of extra wide material, will have but one seam at the centre-back where the placket opening is finished. If cut in narrower or silk width the skirt must be seamed, care being taken to place the pattern correctly on the material according to the constructions given on our label. The plaiting must be done at a plaiting establishment by machines made especially for this purpose before the bottom of the skirt is finished. Then it is mounted on a foundation skirt and must be the same length as the foundation, which just escapes the ground.

The advantage of this costume is that once the sun-plaiting is made the garment is in reality completed as the finishing requires but little time and skill, and the expense of plaiting is far less than the work of a competent dressmaker or seamstress.

COSTUME OF MAUVE COLOR CREPE-DE-CHINE.

the standing collar at the left shoulder. A puff of mousseline stands out over the collar and the full fronts are similarly disposed at the shoulders. The two-seamed sleeves are fitted closely to the arm with a slight puff above. The wrists have triple rows of satin ribbon and are finished with frills of lace. The mode will develop prettily in grenadine, barege, mousseline, silk, etamine, nun's veiling, challies, etc., and can be decorated with either ribbon, lace or passementerie.

To make this waist for a lady in the medium size will require five and one-half yards of twenty-two-inch material.

Latest Innovation in Costumes.

The exquisite costume depicted in the large illustration is composed of mauve color crepe-de-Chine over violet taffeta silk. May Manton says it portrays the latest innovation in the realm of fashion, as the entire garment is arranged in sun-plaits. The design is particularly adapted to sheer and light summer fabrics, such as barege, organdy, crepe-de-Chine, Swiss, gauze, grenadine, mousseline, China, India and glace silks, and is invariably made over colored linings, that may be

To make this waist for a lady in the medium size will require six yards of twenty-two-inch material, for a skirt sixteen yards of the same width goods, and six and three-fourths yards for the foundation skirt.

Hints About Hats.

Picture hats of white Leghorn and fine black straw are the latest productions in millinery. They are very large, with black and white ostrich feathers for the principal trimming. To these are added pink roses, black velvet bows, lace and rhinestone ornaments.

The English walking hat with the brim rolled up a little at each side is brought out in great variety as to shape of crown and kind of straw; the most stylish one of all is the Panama, trimmed severely with black wings and black satin rosettes.

Violets Favored in Millinery.

Violets in all the pretty blue and pink tints, and so natural that they look like the real article, are greatly favored in millinery, and while they are perhaps the most common, they are the most refined of all the artificial flowers.

CHILTON COUNTY CALL.

M. B. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

WE ARE SATISFIED.

R. G. Dun & Co., in their last weekly review of trade, declare that business is much better than the people realize.

It is doubtless a fact that the people up North fail to realize that they are living in comparatively good times, for they are not, if we are to believe what they say themselves; but the South is enjoying prosperity, is aware of the fact, and is advertising it broadcast over the earth.

Messrs. Dun & Co. should confine their remarks to Yankeedom hereafter, and not seek to make the universal public believe that our section is setting up a calamity-howl, for it isn't. On the contrary, we are very well-satisfied with the outlook.

If a person is a patriot—if he is a lover of liberty—if he is an American to the very core of his being, he is forthwith called a jingo by every little 2'-penny-bit Anglomaniac in the land. Of course, the Anglomaniac is always a Mugwump, and a Mugwump is always a friend and defender of despotism. The last one of them ought to pack his duds and depart to a country where he could roll himself in filth, spittle and pollution at the foot of a royal throne. There is no room for him in a Republic like ours.

Ambassador Bayard says his highest ambition in future is to remain a private citizen.—Ex.

His ambition will be gratified with an unanimity that will make his Anglomaniac head swim. We doubt if he could be elected to even the humble position of dog pelter in any self-respecting American community.

Morgan, Alabama's veteran U. S. Senator, is not satisfied with pushing his Cuban resolution through the Senate, but is making himself prominent again by claiming that the present session of Congress is unconstitutional. Senator Morgan is one of the best-posted men in the United States on Federal and parliamentary law, and will probably convince those Down Eastern chaps that "there are other tin-cans in the alley."

REAL ESTATE TRANSFERS.

STRASBURG.

A gloom was cast over our community by a message from Montgomery late Saturday afternoon announcing the death of Mrs. Robinson, which occurred in that city, whither she had gone to be treated by a surgeon specialist. Her remains were brought home and buried in the Childers' family cemetery Sunday afternoon by a host of sorrowing relatives and friends. Hers was the first death in her immediate family (Foshee) in many years. We extend our sympathy to the bereaved ones, especially the husband and daughter.

Our orchards present a picturesque appearance with their ripening fruits, but they defy the painter's art in coloring. Plums red and yellow, apples amber-hued and peaches with crimson cheeks, all so inviting that the boys are making pennants of their waists and trousers trying to secure those from the topmost branches.

Our churches have instituted cottage prayer meetings. Everybody is invited. Come and aid us in keeping the altar-fires of religion burning. Meetings will be held at Mrs. Vine's next Sunday at 3 p. m. Why not have them held at the church on the hill? It is convenient to all.

Since writing you last our neighbors that moved away find that, after all, Strasburg is the most desirable place. They did not unload their goods, but hauled them back and deposited them under the same vine and figtree.

Notwithstanding last month was so dry our crops are flourishing, all early planted corn being more than waist high and cotton is prospering well.

We will rejoice in the convenience of a money order office in our sister town, thanks to the efforts of our energetic and accommodating postmaster.

Visitors brighten our lives daily by their smiles and cheering reports of signs "about the size of a man's hand," of better times.

As this is a healthy locality and good board cheap, our Summer schools are growing.

The plowman's gee-up will be heard some time yet, even though the corn-tassle is modestly peeping forth.

TEMPE.

Dr. Walter Nyman, Surgeon-General of the United States Marine Hospital Service, advocates the annexation of Cuba as a sanitary measure necessary to the welfare of this country, because it is the worst plague spot upon the map and the source of nearly all our epidemics. From the beginning of the century until now there have been only nine years in which this country has been free from yellow fever. It has been proved that in twenty-three of the eighty-five years the disease came from Havana direct, and in twelve cases from elsewhere in Cuba. The source of its infection in many other years is believed to have been the same, but there is no positive evidence. Since 1862 there have been twenty-six invasions of yellow fever. The sources of nineteen are absolutely known—sixteen from Havana, two from elsewhere in Cuba and one from Honduras. Since 1893 there has been no yellow fever in the United States, which, the Chicago Record declares, is due to the extraordinary precautions taken by Dr. Burgess, the United States inspector at Havana, who will not give a certificate of health unless he is sure that it is correct, and without his certificate no passenger can leave Havana for this country.

It may interest young New Yorkers whose careers have been pretty much coterminous with the period of elevated railways and cable roads to learn that a correspondent of a daily newspaper recalls the time, some thirty-five years ago, when mules or asses were used to draw street cars on the Sixth avenue road. The experiment was soon abandoned, however, as the hoofs of the animals aforementioned could not bear pounding on the stones, nor were the mules capable of making a spurt of speed when a car was behind time. Truly, the world moves, if the mules did not.

The Peruvian oil region is said to cover 72,00 square miles. That of Pennsylvania is about 350 square miles.

An interesting sight these summer days is the large herds of Jersey cows grazing in the open meadows of South Anniston and Oxanna. Fifteen years ago there were only a few Jerseys in this county and now there is scarcely any other kind. —Anniston Hot Blast.

A twenty-five foot addition is being made to the Washington Street Methodist Church at Eufaula. An average attendance at the Sunday School of 300 scholars, besides a large and constantly increasing congregation necessitated the step.

Justice Simmons at Hamilton gave Jim McKinley sixty days for the alleged stealing of an old hen and some eggs. There being no contract for working convicts for less than ninety days, McKinley was hired to one of his neighbors to work out his sentence.

The following appointments to Alabama fourth-class postoffices have been made: Lineville, Clay county, G. H. Autins; Beloit, Dallas county, S. A. Calhoun; Graham, Randolph county, W. H. Walker; Pike Road, Montgomery county, T. U. Baskin.

A detective at Norfolk, Va., writes Governor Johnston that he has a negro located, who, he thinks, is wanted in Alabama. His name, he says, is Jeff Adams, and it is said he killed a man and woman in Alabama about seven years ago, and that he either killed a sheriff or deputy sheriff and made his escape. His description is as follows: Age, about 28 years; height, 5 feet 6 or 7 inches; color, dark ginger cake; weight, about 155 or 165 pounds and has part of his ear gone.

The warehouse of the Opelika compress No. 2, and 500 bales of cotton were burned Wednesday night. Loss fully covered by insurance. But for favorable wind, the entire plant would have burned.

Alexander Oldham, a former leading manufacturer, of Wilmington, N. C., died at Anniston Wednesday, aged 65 years. He built and owned what was at one time the largest flour milling plant in the south and he was the first American manufacturer to export flour in China. He originated the idea of employing saw mill waste as a steam producing fuel for manufacturing plants, thereby placing a commercial value on the hitherto worthless accumulation difficult to dispose of and practically creating a new industry.

NEW ORLEANS SELECTED

As the Next Meeting Place of the Southern Presbyterians.

The thirty-sixth annual assembly of the Southern Presbyterian church was dissolved at Charlotte, N. C., Saturday at 2 o'clock, after a session of ten days. The morning was devoted to disposing of various reports and resolution as they came up. The assembly paid Dr. Goetchis, the moderator, a handsome tribute, testifying to his ability and efficiency.

The assembly was a notable one in many respects. There were eleven ex-moderators present.

The 250th anniversary of the Westminster symbols was celebrated. Drs. Dabney and Hoge were present.

The next assembly meets in New Orleans.

GREAT DEPARTMENT STORES!

FIRST GREAT GUN OF THE NEW SYSTEM OF MERCHANDISING.

We commence the GREATEST SALE of Dry Goods, Groceries, Clothing, Shoes Hardware, etc., in the history of Birmingham. All goods in our wholesale departments will be forced on through the retail departments. We must have room for our fall wholesale stock. We sell the best of everything the cheapest.

CHURCH WORKERS ON WHEELS.

Christian Endeavor Bicycling Squad Organized in Jersey.

In Plainfield, N. J., where about 5,000 of the 20,000 people are bicycle riders, and many of them enthusiasts, the church workers have found that in summer months many persons sacrifice time usually devoted to spiritual duties to bicycle riding. The Union of Christian Endeavor Societies decided recently on a plan which they believe will be a solution of the problem of maintaining an all-the-year-around interest. In accordance with this plan the Christian Endeavor Bicycling squad was organized, which is to include in its membership all members of the society who ride bicycles.

The movement is original with Plainfield, as was the first church bicycle run arranged by the Rev. C. L. Goodrich, of the Congregational church, last summer. At frequent intervals runs will be arranged, whereby exercise and the work of the Endeavorers can be united.

DENOUNCED CHRIST.

A Free Thinker Denounced Christ on Atlanta's Streets.

Rev. James Hoskins, a preacher of Free Thinker faith, who has been holding forth on the streets of Atlanta, Ga., for thirty nights, was tried in the police court the other day and fined. His arrest was caused by the vicious terms with which he characterized Christ, denouncing Him as a hypocrite, liar and pretender. The preaching created general indignation and many complaints were made. Hoskins was warned to desist, but, refusing to do so, he was arrested. Only a nominal fine was assessed, as Hoskins promised to discontinue his sermons.

DR. O. T. DOZIER,

(The Renowned Southern Specialist)

Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice. Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

BEET SUGAR.

The Origin and Progress of a Rising Generation.

Southern Soil Well Adapted to Cultivation of Beets.

The manufacture of sugar from beets is by no means a recent industry, although the popular interest which attaches to the subject at this time makes it so appear. In a recent magazine article from the pen of M. Deherain, one of the leading economic writers of France, it is claimed that the industry originated in that country during the time of the first Napoleon.

Several years before this, however, a French chemist by the name of Margraf had discovered the process, but failing to use it to any practical advantage, it had lain dormant for more than a quarter of a century. The occasion which at length drew it forth, was a blockade enforced by Napoleon against English commerce, during which time the importation of cane sugar into France was strictly forbidden. Calling attention to the fact that excellent sugar could be made from beets, the man of destiny encouraged its manufacture within the bounds of the empire, and such was the marvelous growth which the industry attained that, in spite of the overthrow of Napoleon's power, later on, it continued to flourish with undiminished vigor.

M. Deherain is authority for the statement that smaller beets, as a rule, contain more sugar than larger ones, that great care is necessary in selecting beets for the sugar industry on this account. When the industry first began to assume definite proportions, the refiners adopted the plan of paying for beets by the ton, without regard to their sugar producing qualities; but as this plan failed to give satisfactory results, it was soon afterwards discontinued. The success which attended the manufacture of beet sugar in France soon aroused the jealous competition of the Germans, and a fierce commercial rivalry between the two countries followed, resulting at last in Germany's triumph over France. The countries now engaged in the manufacture of beet sugar are France, Germany, Austria and Russia. According to M. Deherain, Germany's product of beet sugar amounted to 1,000,000 tons in 1884. Reaction set in during the next few years, and it was not until 1889 that the industry enjoyed a revival. Since that time the annual product has not fallen under a million tons, while in 1894, it reached 1,800,000 tons. In 1894 Austrian production reached 1,000,000 tons, but has since declined. Russia in 1895 produced as much as 730,000 tons, while France for the same year produced 745,000.

These figures show that beets have largely supplanted cane as sugar producers in some localities; but as this country is equally favored with both products of the soil, it is simply a matter of convenience which of the two is used. The South has long been recognized as the cane-producing section of the country, but the soil of the South readily admits of the cultivation of beets also and the section is, therefore, able to compete with its rivals in either branch of the industry. —Atlanta Constitution.

A Romantic Sea Captain.

A sealer is not generally credited with being a romantic man, but Captain Fred Neilson is the exception. Being compelled to go to sea, he has utilized carrier pigeons to bear messages of love to his bride ashore.

While hunting along the California coast for the rich skins his thoughts turn to a little woman in a cozy home in the Bienmond district. Thinking of this woman Captain Neilson writes out a brief reiteration of his affections liberates a carrier pigeon, and a loving message speeds over the sea to comfort the bride.

Not an Alchemist.

His wife—What makes you think that, Horace?

Author—Well, every book I write becomes a drug on the market.

A Definition.

Wee Marjorie is six years old,
And learns to read and spell,
But more than this, of each hard word,
She must the meaning tell,
Miss Brown says 'tis the only way
To understand them well.

One morning "daughter" was the word,
"Tell me the meaning, pray,"
Said kind Miss Brown, "You surely know
'Tis something used each day."
"Oh, yes, I know, dear teacher, but
I find it hard to say."

"It means, it means," and Marjie stood
With pinafore atwirl
"A sister! No"—she shook her head
And waved each sunny curl,
"Oh, now I know, why it just means
A father's little girl."

—E. L. Macnaughton in Detroit Free Press.

HUMOROUS.

"How dreadfully stout the general is getting!" "Yes; isn't it fortunate? Otherwise he wouldn't be able to wear all his medals."

Mrs. Gummey—Do you believe in proverbs? Mrs. Gianders—Certainly, I believe that a bird on the hat is worth two in the bush, for example.

"I'm a man that likes to keep my own business strictly to myself." "Well, then, you ought to quit carrying home packages of coffee in the street car."

Critic—You say in your story, "A flood of tears blinded her." Author—Yes. Critic—It would be more realistic to say, "A cataract of tears blinded her."

"The more I see of men," said the potentate of Pbloo, "the more I like dogs. Just pass the sausage, will you?" The decadence of anthropophagy was coming on apace.

"Never attained a man's estate? You surprise me. Why, I understand he lived to an advanced age." "He did, but he never had any property that wasn't in his wife's name."

Mrs. Newlyblessed—Ear muffs? Why, Algernon, I thought you swore you never would use them! Mr. Newlyblessed (wearily)—I am going to wear them in bed nights, until little Clarence is five.

Grymes—The bride was quite a popular girl, wasn't she? Gobang—Yes, indeed. The Daily Whoop sent their sporting editor to report it. He printed a list of rejected lovers half a column long under the heading, "Among Those Who Also Ran."

"I may be overcareful," she said, as she hid the plated spoons and her curling irons in the bottom of her trunk before she went out shopping, "but I just can't bear to run any risks." Then she pinned her gold watch to the outside of her dress by a blue ribbon and went out.

"What nonsense they do print about the nobility of the horse! I never knew a man yet who had much to do with horses who was not made coarser in his manners," said the finical boarder. "Still," said Asbury Peppers, "you must admit that there is something elevating about a mule."

Old Gotrox (indignantly)—I am surprised, sir, that you should be so destitute of all reason as to ask for my daughter's hand in marriage! Young Hardupp—Well, you needn't be; that girl has some really fine points about her; you don't know her as well as I do, or you would think the world of her.

"The man who brou[illegible] this in," remarked the editor's assistant as he unrolled half a yard of manuscript, "told me confidentially that he needed the money for it." "Yes," was the melancholy answer, "it's a strange fact that the longest poems seem almost invariably to be written by the shortest poets."

A Gamekeeper's Extraordinary Shot.

David Reid, a gamekeeper at Aberlow castle, Tipperary, writes to the London Field to tell about a shot which has seldom been equalled. Reid was hunting woodcock on a preserve late in the season with a shotgun, when he saw two deer jump up and run away. He raised his gun and fired when the animals were about thirty yards off. On going to the place the hunter found that he had killed both deer with No. 6 shot. Other men have killed two deer, elk, or even bears with one rifle bullet, but Reid is probably the first man to kill two deer with such fine shot as sizes.

SUNDAY SCHOOL LESSON.

INTERNATIONAL LESSON COMMENTS FOR JUNE 13.

Lesson Text: "Paul's Advice to Timothy," II Tim. i., 1-7; iii., 14-17—Golden Text: II Timothy iii., 15—Commentary by Rev. Dr. D. M. Stearns.

The second epistles are all suggestive of the last days when the world shall have corrupted the church and contain special instructions to God's servants for times of disorders, confusions, formality, etc. The faithful witness is taught how to deal with those who "turn away from," "err concerning" and "resist" the truth, or "will not endure sound doctrine" (II Tim. i., 15; ii., 18; iii., 8; iv., 3).

1. "Paul, an apostle of Jesus Christ by the will of God, according to the promise of life which is in Jesus Christ." He loved to think of himself as one sent forth by Jesus Christ and chosen for this honor by the will of God. Why God should choose any of us is certainly a great wonder, but if we have truly received the Lord Jesus Christ as our Saviour, resting wholly and only on His finished work of atonement, we need not fear to believe that we were chosen in Him before the foundation of the world (Eph. i., 4); that we should be holy before Him, and that He might send us forth in His name, even as the Father sent Him (John xvii., 18; xx., 21). The life that God gives is in Christ, and apart from Him there is no life (I John v., 12).

2. "To Timothy, my dearly beloved son: Grace, mercy and peace from God the Father and Christ Jesus our Lord." In I Tim. i., 2, he calls Him "My own son in the faith," and in Phil. ii., 20 (margin), He wrote that he had no man so dear unto Him as Timothy. We first read of him in Acts xvi., 1, as a disciple living as Lystra, his mother a Jewess, his father a Greek. And Paul on his second missionary tour took him with him. It is by the grace or undeserved favor of God through Jesus Christ that we are saved.

3 "I thank God, whom I serve from my forefathers with pure conscience, that without ceasing I have remembrance of thee in my prayers night and day." Before the council he also said that he had lived in all good conscience before God (Acts xxiii., 1)' or as he puts it in Acts xxvi., 5, "After the most straitest sect of our religion I lived a Pharisee." He does not attempt to excuse his great sins against Jesus Christ and His redeemed, but says that he verily thought that he ought to do these thing (Acts xxvi., 9).

4 "Greatly desiring to see thee, being mindful of thy tears, that I may be filled with joy." Paul prayed much for those whom God had given him, but he would pray, especially for such a one as his son Timothy. If Paul had the Philippian and other believers in his heart (Phil. i., 7) and prayed much for them, how much more does our Lord Jesus carry love and pray for His redeemed ones. We are not told the cause of Timothy's tears, but if Paul was mindful of them how much more is our Lord of ours. There is comfort to human weakness in the thought that the joy of such a one as Paul might be increased by Timothy.

5. "When I call to mind the unfeigned faith that is in thee." Not in him only but in both mother and grandmother; not that faith is hereditary, but children may be so taught and trained that from earliest infancy they may be true believers in the Lord Jesus Christ. Blessed are the mothers and grandmothers who so train the children. Unfeigned faith makes us think of the "most surely believed" and "know the certainty" of Luke i, 1, 4.

6. "Wherefore I put thee in remembrance that thou stir up the gift of God which is in thee by the putting on of my hands." He refers to this also in I Tim. iv., 14. The Spirit bestows gifts upon people severally as He, the Spirit, will, and God places the members in the body as it hath pleased Him (I Cor. xii., 11, 18). He gives to every man his work and something to work with, and says, "Occupy till I come" (Mark xiii., 34; Luke xix., 13). Then at His coming He will reward every man according to his works.

7. "For God hath not given us the spirit of fear, but of power and of love, and of a sound mind." Judging from the portion of the epistle following, such as i., 8, 12, 13; ii., 3, 10, 12; iii., 12; iv., 5, 16, we would infer that the fear referred to is a fear of what one might be called upon to endure; but thoughts of the perfect love of God cast out all fear (I John iv., 18).

8-14. "But continue thou in the things which thou hast learned and hast been assured of." Our Lord said, "Continue ye in My love," "If ye continue in my word, then are ye My disciples indeed" (John xv., 9; viii., 31). I like to remember that Luke said in the beginning of his gospel that he wrote concerning the things which were "most surely believed," that his friend might know the certainty" of these things (Luke i., 1, 4), and that Abraham was fully persuaded that what God had promised He was able to perform (Rom. iv., 20, 21).

15. "And that from a child thou hast known the Holy Scriptures, which are able to make thee wise unto salvation through faith which is in Christ Jesus." These could be none other than what some despise as the Old Testament writings, in which Paul testifies there was wisdom unto salvation and the way of faith in Christ Jesus. I think the way of salvation, God's way, is nowhere in all the Bible more simply set forth than in Gen. iii., 21. The Lord Himself provided the clothing by the shedding of blood, and Adam and Eve had only to drop as useless their own works, the fig leaf aprons, and accept God's provision. Blessed are the children who from their youth are taught these things.

16. "All Scripture is given by inspiration of God and is profitable for doctrine, for reproof, for correction, for instruction in righteousness." While the Bible contains the very words of God and some of the very words of the devil, as well as some words of good and bad men, yet the whole book, from beginning to end, was written by the Spirit of God, He giving the men whom he used the very words to write, as is plain from such texts as Ex. iv., 12; II Sam. xxiii., 2; Jer. i., 7, 9; xxxvi., 2, 4, 6, 8; John xii., 49. The Spirit who wrote the book is still in the book, and its words are spirit and life (John vi., 63).

17. "That the man of God may be perfect, thoroughly furnished unto all good works." A man of God is one who is first a child of God by faith in Christ Jesus, and then fully yielded to God as His purchased property for His service, the Lord's messenger with the Lord's message, receiving his orders from God and responsible to God, seeking in all things His approval. While we are saved freely by grace, it is that we may walk in the works. He has prepared for us (Eph. ii., 10), and the Scriptures alone are sufficient to qualify fully for all good works. If we will only yield fully, God will work in us both to will and to do His good pleasure (Phil. ii., 13; Heb. xiii., 21).—Lesson Helper.

Modern progress has inflicted the Japanese as the most intelligent o[illegible] nimble race of mankind.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We can give you a good bargain in anything you may need in the line of groceries. If you are not satisfied with your grocer give us a trial. We have a fine line of

GENERAL MERCHANDISE.

ROLISON & ROLISON,

Postoffice Building

HOTEL CONCORDIA,

JOHN STEVENS, Prop'r.

THORSBY, ALABAMA.

RATES, by the day, $1.00.
by the week, $4.00.

DOLLARS OF PROFIT

Come from well invested pennies.

You'l believe if you see; you'l save if you buy.

You can't turn without looking value full in the face.

If you think you haven't money enough to buy just what you want, come and see if we haven't put the price within the reach of your pocket book.

Rockers, $1.00 up.
Chairs, 75c up.
Suits, $15.00 up.
Tables, $1.00 up.
Other goods in proportion—not.

PETER ZINSZER'S,

Mammoth Furniture House, 2115 to 2119 2nd Ave.

BIRMINGHAM, ALABAMA.

GOSSIP FOR THE FAIR SEX.

Some Items of Interest For Our Feminine Readers.

Women Officials in Kansas—Coat Sleeves Coming—Dressy Styles of Coiffure Etc., Etc.

WOMEN OFFICIALS IN KANSAS.

The women do not possess full suffrage in Kansas, but they secured more public offices in the last election than did the women of of Utah or California —twenty County Superintendents of Public instruction and all the offices from Mayor to Chief of Police in two cities.

COAT SLEEVES COMING.

Sleeves grow steadily smaller and many women bewail the fact that next summer's thin gowns will have to be made with coat sleeves, which, though suitable enough for cloth, are less well adapted to organdies and grass linens.

DRESSY STYLES OF COIFFURE.

Nearly all the dressy styles of coiffure just now point to wearing the hair on the crown of the head. Neck bands are furnished with tall upstanding frills and fraises which may extend no further than the ears or be carried in a sloping direction towards the front, narrowing to nothing or turning backward to form long, slender revers. For evening wear the Medici collars are still in high favor, but if these are not fancied, there are scores of other pretty styles both modern and antique to choose from to adorn either bodice or wrap.—New York Post.

A CORSET 'KERCHIEF.

Many fastidious women wear, with their low-necked corset covers, a large kerchief—the word used by our grandmothers is the only correct one—of the finest and sheerest linen, hemstitched, crossed over the neck, and brought up well in the throat. This is to protect the lining of the gowns. One of these kerchiefs, after once wearing by the daintiest of women, shows dusky shadows upon it, which point a hygienic moral.

Sensible Dame Fashion—she is at bottom an old lady of much common sense—has not as yet provided a covering for the bare arms that are thrust into elegantly lined gowns. My lady does not realize how much she needs them. But she woud be horrified at the thought of wearing another garment next her skin for two weeks without submitting it to the laundress.—New York Times.

NOVELTY IN WHITE SKIRTS.

A novelty in which white skirts for evening wear is made of fine lawn, with two wide lace-trimmed flounces, set one over the other, and a richer one of silk, which buttons on underneath to give the skirt body and furnish the desired rustle. Pretty skirts of book muslin are made with a nine-inch ruffle edged with lace set in at the bottom, a much wider—a full half yard—ruffle sewn on above to meet the lower edge of the narrow one, but still another flounce reaching well above the knees, over all. This has insertions of lace set in and a frill of lace on the edge. But the inner ruffle has a lace frill, so that the effect at the bottom is that of three skirts in one. The fit around the hips is very carefully considered in these days, and the short under petticoat, as well as the long one, should fit very smoothly over the hips, with the fulness well gathered in at the back.

GO WEST, YOUNG WOMAN!

There are thousands of acres of Government land yet unclaimed. Self-supporting women have here an opportunity to obtain land and homes in the West. The discomforts and loneliness incident to pioneering are the greatest drawbacks, but they are materially lessened when friends go in colonies. The length of residence in a homestead is to a certain degree optional with the "filer." The filing fee, including all expenses, is $18. At the end of five years one may make final proof on the land, but the homesteader is not compelled to make proof until the end of seven. Where a claimant temporarily leaves her land for the purpose of earning an honest livelihood, coupled with bona-fide intention of complying with the law, such absence is accounted a constructive residence.—New York Tribune.

LATEST RIDING HABITS.

The new riding habits are remarkable for two things—their grace and their comfort—neither of which was very conspicuous in the old riding habits. A lovely riding habit is of Galatea cloth, that material that is warranted never to wear out. The waist is in the form of a coat to wear over a shirt waist of any color. The coat is cut to a deep V in the front and fastened with hook and eye; the only visible fastening is a nice little clasp at the waist. This takes away the severity of buttons and buttonholes and makes the costume prettier.

Another point about the new riding habits is the slashing of the lapels; these are cut to the waist and lined with a contrasting color. If the riding habit is of brown cloth a pale green silk is used for the lining of the lapels; in this way the piquant colors are introduced into the new riding habits of the year.

HOME FOR WORKING GIRLS.

Plans are under consideration for the erection of the Clara de Hirsch home for working girls from the donation of $1,250,000 by the Baroness de Hirsch for the relief of Russian Hebrews in America.

The Baroness has taken a keen interest in the working girls of this country, and at her request Mrs. Oscar S. Straus visited the homes and institutions devoted to the relief of working girls in New York City. While Mr. and Mrs. Straus were abroad some months ago, Baroness Hirsch consulted them at length about the needs of the working girls. She then decided to have $200,000 of the fund used for the erection of a non-sectarian home for working girls, and a sufficient amount put out at interest to yield $12,000 a year for the running of the home.

The objects are "to benefit working girls and other unmarried women who are dependent on their own exertions for a livelihood; those who are resident, as well as those arriving from other countries; to improve their mental, moral and physical condition, and train them for self-support; to instruct them to become domestic servants; to provide industrial training, or fit them for such occupations for which they may be best qualified."

A CHANGE FOR THE SHUT-INS.

An invalid often shrinks from the touch of a wet linen or cotton washcloth. Secure a piece of white baby flannel and make of two thicknesses lightly tacked together. We all know how pleasant it is to receive a few flowers. Put only one kind in a vase; lend one of your dainty ones, for the invalid will enjoy looking at it. Lend also some of your choice pictures, putting them where she can look at them; change after a few days, or ask another friend to lend hers. If she has to take cough drops, make a dainty bag to hang by the side of the headboard where she can reach it. Loan her some of your dainty dishes to be used on her tray; it will tempt her appetite. When you have plants in bloom, loan her one for a week, or some choice foliage plant; she will learn every leaf by heart.

If she is a shut-in for any length of time, have a window box fastened outside her window. Different friends furnish a plant for it. She will watch every leaf and flower that grows. If you have a handsome silk quilt, have it put on her bed a few days; it will help to pass away many an hour looking at the variety of pieces. If you have a fine canary and she is fond of music, loan that, or take your music box with you when you call; make a writing board for her 8x20 inches and a slip for it like a pillow case. It can be used for her book, if she is well enough to read. Have a piece of pretty elastic long enough to reach around the board, sew the ends of elastic together, put on the board and slip the book under elastic. The board can be propped up at any desired angle.

Make two or three night gowns of pretty, light calico of chambray; trim collar and cuffs with soft lace or dainty crochet lace. These she can wear daytimes in the bed, and they will be a pleasant change from the white ones she wears at night.—New England Homestead.

DRESSING CHILDREN IS HER BUSINESS.

One more new business for women is the buying of children's clothes for mothers who cannot do it satisfactorily for themselves.

"Drat that boy! How baggy his clothes do look to be sure!" complained Mrs. St. Nicholas, as she gave her six-year-old offspring a twitch that jerked him halfway out of his new suit. Then, as Master James St. Nicholas began to bellow so that you could hear him almost as far as 125th street, she quieted him down and continued her mournful tale:

"I cannot get clothes to fit this boy. They look all right in the store, but as soon as I get him up to Harlem he is as graceful as a pickax in a sack. What can I do?"

Then it was that the girl in the tight-fitting jacket and demure, green-trimmed chenille hat, smiled and said, tentatively: "Why do you not let me buy his clothes?"

"You?"

Mrs. St. Nicholas has a high voice at all times, but she threw out this monosyllabic pronoun with an interrogative sharpness that made Master St. Nicholas jump as if he had been prodded with a hatpin.

"Mrs. St. Nicholas, I am in a new business," went on the demure girl. "I have been practicing it for three months past, and I really believe that I give my customers more than the worth of the fee they pay me."

"What do you do?"

"I buy clothes for their children, just as I should like to do for your James and the rest of them. I see that they fit, too. I make a contract with my customers that the clothes shall be satisfactory, because I make the tailor change or fix them till they are. Do you see?"

Miss Winters, the demure young woman took the care with Mrs. St. Nicholas and two boys, aged eight and ten respectively, the next day and went down town. They found the clerks in a big clothing house ready to wait upon them, and smilingly sure that they could dress the young men so well that they would not be recognized by their friends.

This was the moment for which Miss Winters had been waiting, and the suddenness with which she attacked the bland salesman made him doubt whether this demure young woman in the tight-fitting jacket and chenille hat was as harmless as she looked.

"We want his friends to recognize him; that is the point. They come down here and to other ready-made clothing places to be improved in appearance, but to retain their own individuality; not to be disguised so that no one knows them. Let me see that gray suit."

The gray suit is handed to the young woman, who turns it, twists it and pulls the cloth one way and another until she is satisfied that it is of good quality. Then she sends the eldest boy into a little curtained alcove to try them on.

The suit looked to Mrs. St. Nicholas as if it were all right. But Miss Winters was not so easily pleased. She borrowed a mouthful of pins and set to work. The shoulders were too full, the back too baggy and the sleeves too long. With pins she fixed them all up until the boy declared that he could feel the clothes touching him all over.

The demure maiden's eyes flashed, and the clerk, who recognized a foeman worthy of his steel, smiled sympathetically.

The second boy went through the same experience, save that he was sentenced by the inexorable Miss Winters to try on four or five suits before she saw one that she thought could be made to fit. The young man became red in the face, and would have objected audibly to the ordeal but for his awe of Miss Winters. That energetic young woman was in her element, and ruled every one, from the salesman to the mother.

Talking about her business yesterday, Miss Winters said: "I took to it accidentally, as one generally does to a new thing. My little brothers and a small sister have been in my care for years, so far as buying clothes is concerned. Mama used to take me with her, until I could advise her in the buying of things. So, one day she said that she would trust me to get a suit for my youngest brother. She had a headache and did not want to go out. I acquitted myself to her satisfaction, and always did the buying thereafter. Three months ago a neighbor asked me to buy a suit for one of her boys. I did it, and then it occurred to me that it might be a better and more profitable occupation than typewriting in an office for nine hours a day."

"And is it?"

The demure young woman smiled comfortably.—New York Press.

Mean Breadth of the Country.

The distance across the United States is found to be 2,625.2 geographical miles from the lighthouse, six miles north of Cape May, New Jersey, to the lighthouse six miles south of Punta Arenas, following the 39th parallel of latitude as closely as possible. This is conceded to be about the mean breadth of the country. A glance at the map will show that the United States is much wider toward the north and much narrower toward the gulf coast, but the 39th parallel is about as fair an average as can be drawn. The mesurements were made by triangulation—that is, by taking observations from fixed landmarks and verifying them by astronomical tests. This distance across the continent thus obtained is 140 feet longer than that reported by Bessel in 1856, and ninety-eight feet longer than that reported by Professor Clark in 1866. It has also been discovered that the radius of the equator is twenty-six and one-half miles greater than when the earth was last measured. This is attributed to errors in former calculations and defective instruments, rather than to any material change in the globe.

There has been very great improvement in scientific apparatus during the last few years, both as to accuracy and convenience. The instruments now used are so much superior in every respect to those employed thirty years ago that more confidence may be placed in the results of the recent surveys. The officers of the coast survey are making some interesting discoveries in resurveying the coast of the United States. They find, for example, that Coney Island is a mile and a half to the westward of where it was twenty-five years ago.—Chicago Record.

The German traveler Von Ihering has discovered in Brazil a species of ants which have regular summer and winter resorts. In winter they live on the ground, in summer in big nests constructed on trees, in order to escape the danger of inundation when the snow melts and the rivers rise.

Bud Newman, step-son of H. McClenahan, who lives near Paducah, Ky., is only six years old, but he weighs 162 pounds and is 4 feet 9 inches in height. He is taking on flesh at the rate of three or four pounds a month.

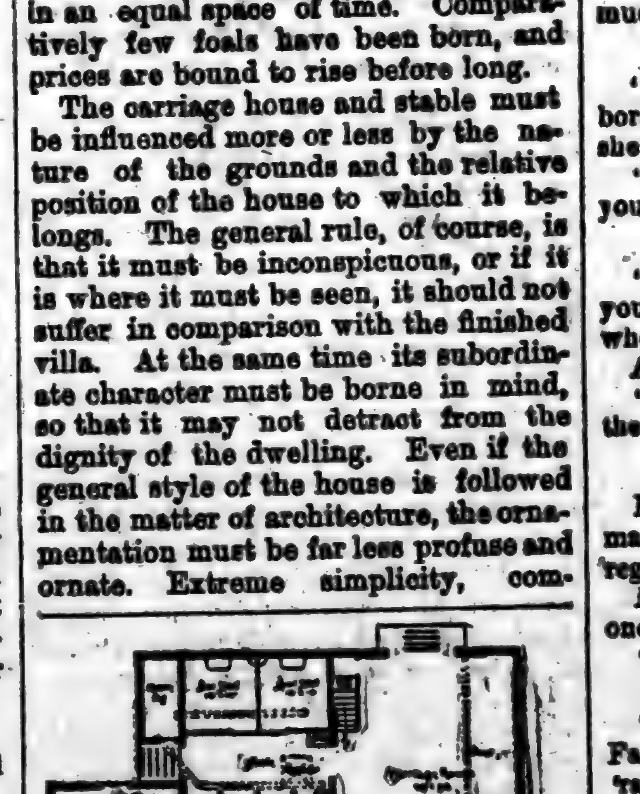
THE MODERN STABLE.

Extreme Simplicity Should Mark This Adjustment to a Country Residence.

The great vogue of the bicycle, the extension of trolley railroads, and the introductions of the Auto Mobile cabs; have called out many dismal predictions. The public has been told times without number that the reign of the horse is forever over. In illustration of this statement the unprecedentedly low prices at which horses have lately been sold are quoted, and there come grewsome stories from the West of the shooting of entire herds of horses on the ranges, in order to save the pasture for the more valuable beef creatures. As a supplement to these tales, it is even said that canning factories have been established where horseflesh is put up in potted form for our use or unsuspecting foreigners. The paragraphers and cartoonists have had their fling at the subject, and if one should take the signs of the times, everything would seem to point to the virtual extinction of the equine species in the not remote future. But those who love man's best friend and servant among the dumb beasts, and who do not care to surrender him for studs of steel or naphtha fed cabs, need not be unduly alarmed. In fact, horseflesh would seem to be an excellent investment at this very moment. With the fall in prices, that was due to a variety

of reasons, horse-breeding has been giving adequate returns for the past few years, and more brood mares have come upon the market than ever before in an equal space of time. Comparatively few foals have been born, and prices are bound to rise before long.

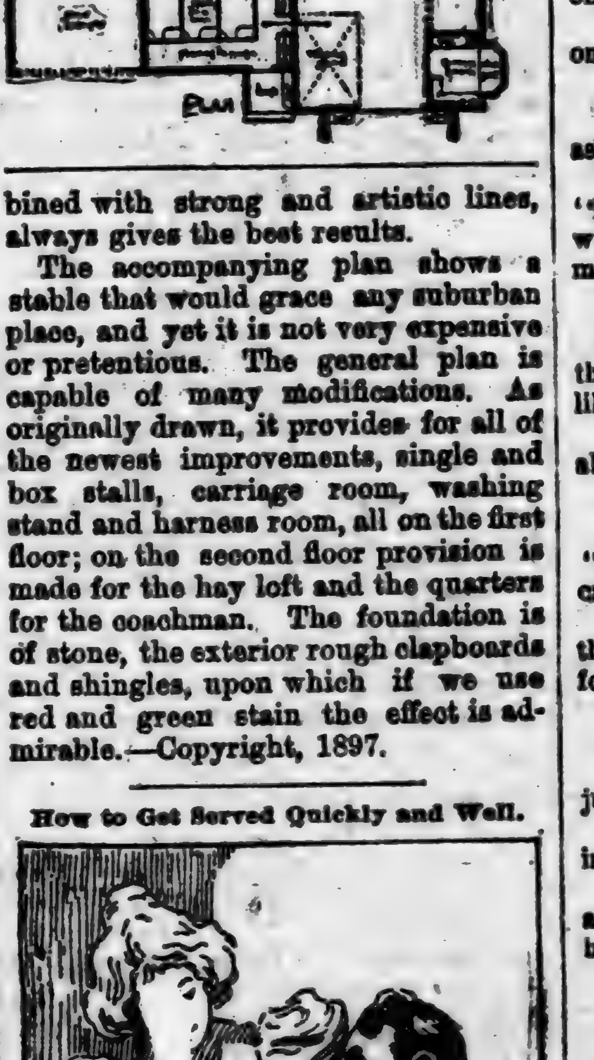
The carriage house and stable must be influenced more or less by the nature of the grounds and the relative position of the house to which it belongs. The general rule, of course, is that it must be inconspicuous, or if it is where it must be seen, it should not suffer in comparison with the finished villa. At the same time its subordinate character must be borne in mind, so that it may not detract from the dignity of the dwelling. Even if the general style of the house is followed in the matter of architecture, the ornamentation must be far less profuse and ornate. Extreme simplicity, com-



bined with strong and artistic lines, always gives the best results.

The accompanying plan shows a stable that would grace any suburban place, and yet it is not very expensive or pretentious. The general plan is capable of many modifications. As originally drawn, it provides for all of the newest improvements, single and box stalls, carriage room, washing stand and harness room, all on the first floor; on the second floor provision is made for the hay loft and the quarters for the coachman. The foundation is of stone, the exterior rough clapboards and shingles, upon which if we use red and green stain the effect is admirable.—Copyright, 1897.

How to Get Served Quickly and Well.



Diplomatic Stranger—"Tell me, miss, is there anything else worth seeing in this town beside your pretty self?"—Fliegende Blaetter.

A forty-pound turkey was served at an Allentown (Penn.) feast.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

THINGS WOMEN SAY.

"What very engaging manners he has!"

"Yes; more engaging than marrying, they say."

WHY HE WENT.

"Do you go to school, my little man?" asked the smiling visitor.

"Naw," drawled the hopeful: "I'm sent."

THE RULING PASSION.

"I bet that girl's always borrowing trouble. She has such a sad face!"

"Yes, she's probably looking for a sorrow to match."

THE NEW CLASSIFICATION.

"You know Buggins, the prize fighter, don't you?"

"Some."

"What sort of a fighter is he—kinetoscope or phonograph?"

HER FIERCE GRIP.

Dolly Swift—Miss Oldgal holds her age wonderfully, doesn't she?

Sally Gay—Oh, yes! She has been holding it at twenty-six ever since I can remember.

HIS ALIBI.

Wife—And you pretend to tell me that you came home as early as midnight?

Husband—Truly, I did. Just ask our neighbors on the street. They must all have heard me.

A POSER.

Bertie—Please, Auntie, was every living thing drowned that didn't go into the ark?

Auntie—Yes, Bertie.

Bertie—Fishes?

ITS HOUR HAD STRUCK.

Bibman—Did your watch stop when you dropped it on the floor?

Magley—Of course it did. Did you think it would go through?

HER PREFERENCE.

Rose—Why do you prefer Charley Gillig to Fred Pelton? I think Fred's twice the man that Charley is.

Minnie—He may be, but Charley buys much the finer candy.

TRUTHFUL JIMMY.

"I saw your mother going to the neighbors as I crossed the street. When will she be home?" asked the lady caller.

"She said she'd be back just's soon as you left," answered truthful Jimmy.

UNAPPRECIATIVE.

"Might I ask what school of poetry you prefer?" inquired the young man who writes.

And the old gentleman replied:

"The homeopathic school. The smaller the dose the better its suits me."

CONCEDED.

Mr. Crimsonbeak—I don't believe a man ever stole anything but he lived to regret it.

Mrs. Crimsonbeak—You stole my heart once, John.

"Yes."

A CAREFUL BOY.

"Freddy," said the teacher to Freddy Fangle, "you have spelled the word 'rabbit' with two t's. You must leave one of them out."

"Yes, ma'am," replied Freddy; "which one?"

A COURTEOUS DEBTOR.

"Well, did he pay you anything?" asked the business manager.

"Yes," replied the female collector, "he paid me a compliment. He said he wouldn't be afraid to trust me with the money if he had any."

UNCHANGED.

Mrs. Jarway—You used to say that there was no other woman in the world like me, and you were so glad about it!

Mr. Jarway—Well, ain't I still glad about it, I should like to know.

A HINT TO THE KING.

Mr. Bellefield—It seems to be true that "Uneasy lies the head which wears a crown."

Mr. Bloomfield—No wonder. I should think a King would put on a more comfortable nightcap.

GENIUS AND INSANITY.

Perry Patetic—All these great men is just a bit nutty some way.

Wayworn Watson—What set you think-in' of that?

"Old Gladstone. Look how he goes around choppin' wood when he don't have to."

A BRILLIANT SMILE.

"It does me good to see Bilker smile."

"I don't know. Never hit me that way; why?"

"Oh, he has such a nice mouth full of gold, plugged with teeth."

EQUALIZE IT.

Fond Parent—If your enemy should smite you on the right cheek, what is the proper thing for you to do?

Bobby—Turn my left cheek to him to smite.

Fond Parent—That is right, Bobby. But why?

Bobby—'Cos it looks better not to have it all red on one side.

WELL NAMED.

"The month of May is very appropriately named," remarked the youth to his friend.

"In what regard?"

"Because its weather is so uncertain."

"How does the name May apply to uncertain weather?"

"Well, it may be hot or it may be cold, it may be wet or it may be dry."

Mastro Valerio, of Daphne, Baldwin County, Ala., has succeeded in raising an Italian pea of the variety known as "fava," which he represented as a staple food supply among the Italian peasantry, and the plant of which he advocated as a trustworthy agent for the renewal of exhausted soil.

Keep on Something.

PISO'S CURE FOR CONSUMPTION

Cures where all else fails. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists.

No-To-Bac for Fifty Cents.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00 at all druggists.

Thirty creameries in Central Kansas pay to farmers $40,000 a month for cream.

A. M. Priest, Druggist, Shelbyville, Ind., says: "Hall's Catarrh Cure gives the best of satisfaction. Can get plenty of testimonials, as it cures every one who takes it." Druggists sell it, 75c.

An Iowa contemporary says that "the cigarette law is a dead failure." The cigarette itself, however, is still a deadly success.

Judicious Expenditures Cause Big Returns.

To the merchant who is happy if he can sell his goods at an increase of ten to twenty per cent. over the cost how almost incredible must it seem that typewriting machines and bicycles, which cost from about sixteen to twenty-five dollars to manufacture, can be sold for $100—or even $50—each?

What machines are more universally used today than these two, excepting the sewing machine?

How hard the merchant struggles for his ten per cent. profit while the typewriting machine and the bicycle sell at a price which is from four to six times the cost of manufacture.

Judicious and continuous advertising has made this possible.

Fair Enough.

His fiancee—Are you sure you would love me just as tenderly if our conditions were reversed—if you were rich and I were poor?

He—Reverse our conditions and try me.—Harlem Life.

Extracting Gold.

A process of extracting gold by which every particle of the metal in the ore is recovered is stated to be in successful operation in West Australia. It is called the ore atomic process. Gold quartz is crushed into small lumps and is then put into a closed chamber, subjected to the heat of a furnace, to the action of water and of hydrogen gas. This eliminated sulphur and reduces all oxides to the metallic state. After being heated, the material is suddenly cooled by jets of water—an operation repeated several times till the quartz crumbles to powder at the touch of the finger. It is then thrown into a tank and the gold is separated by washing.—Chicago Tribune.

In speaking of the widow of William Morris, who has just asked that letters of the dead poet be sent to her to be used in his biography, the Boston Transcript says: "Her extraordinary beauty was for years in her youth a sort of outward and visible sign in this world of what the young painters and poets of Morris' set were striving for in art. It is her face which appears in numbers of the paintings of all the pre-Raphaelites, notably in Rossetti's—her wonderful brow, with the thick masses of hair above and the not-to-be-forgotten eyes and mouth, appearing in many pictures, well known also in copies and prints dear to many lovers of art, who have not associated them with the personality of the woman who became the wife of William Morris."

Humorist's Wife—You must not trouble your papa just now, dear; in his present mood he is not to be trifled with. Humorist's Child—What is he doing, ma? Humorist's Wife—He is writing things to make people laugh.—Tid Bits.

Family Doctor—Well, let me congratulate you. Patient (very excitedly)—Am I going to recover? Doctor—No, not exactly, but—well, after long consultation we find that your disease is entirely new, and if the autopsy should prove the fact we have decided to name it after you.—Tid Bits.

Dennis—Arrah, Pat, and so yez have come back to shtay? Why didn't yez loike it out West in that place where yez had such a good job? Pat—Och, it's no place for a Christian mon, Dennis. There ain't a livin' soul about the place that hasn't died wid the malayrium.—Cleveland Leader.

The Bashi-Bazouks.

Makers of trouble for the Sultan are the wild, inhuman horde known as the Bashi-Bazouks. To the Turkish army they are what the Cossacks are to the Russian. The Cossacks are, however, immeasurably their superiors in all that goes to make the soldier. Bashi-Bazouks are almost without discipline; their courage is that of the wild beast seeking its prey, and once on the war-path they are merciless, devilishly barbaric. It was the Bashi-Bazouks who, by their monstrous cruelties, gave such point to the pen and tongue of Mr. Gladstone at the time of the "Bulgarian atrocities." These wolves have been ordered to the Thessalian frontier. Bashi-Bazouk means "hot brained." From every quarter of the Empire and its numerous suzeraintics this horde of cutthroats has been gathered—from Diarbekar, from Yemen, from the far-off Soudan, from every nook and corner of the Caucasus and from every other imperial slum. Their motto is "Kill—kill!" to which they freely add "and rob." Their weapons are the long lance, such as used by the Cossack, the sabre, two or three pistols and as many murderous-looking daggers.—New York Press.

Camphor in Japan.

Camphor is a product of Japan. The tree thrives only in certain localities, usually within reach of the sea atmosphere. They must face south and have an average yearly temperature of 15 degrees C. The tree grows about one and one-half inches a year. It sometimes attains a circumference of forty feet. When a tree is about forty years old its yield per cho (two and one-half acres) is equal to $10,000 (silver) a year. The trees have been felled so indiscriminately that there are practically none available, and the price of the product has greatly advanced. Chips of stumps and roots of trees cut down decades ago are used by the Japanese farmers in winter for making crude camphor. The process is so wasteful that it is estimated that only 2 per cent of the camphor is obtained from the chips. It is expected that the introduction of improved apparatus will increase the yield manifold. Crude camphor contains on an average 10 to 15 per cent of camphor oil, which yields, in turn, 50 per cent of camphor.—Chicago Inter-Ocean.

A Vocal Tree.

In the great forests of Nubia grows a tree from which, when swayed by the wind, come strange sounds, like the notes of a flute, a fife or a penny whistle. The vocal tree is regarded with superstitious terror by the natives, and it was indeed a puzzle to every one who has heard the mysterious sounds until some scientific traveller investigated the matter. He found that at certain seasons of the year hordes of insects deposited their eggs on the young shoots and extremities of the branches. These produced gall-like excrescences about an inch in diameter. When the young insects emerged small holes were left in the galls. The wind blowing through these little apertures caused the strange noises. It is probably the only instance of a tree which bears ready-made whistles.—New York Sun.

Most Northern Forest Land.

The northern limit of true forest land has been found by Herr K. Roder, a German student, to reach its highest latitude 72 1-2 degrees, in the Talmyr peninsula, from which it runs eastward to the Tschuktschee peninsula; then bends rapidly southward. On the Alaska coast it is near the Arctic circle, and goes gradually northward to the Mackenzie delta, where it attains its highest American latitude in about 69 degrees. Its most southerly point is in 57 degrees (52 degrees?) on the East Main river, from which it crosses Labrador, Greenland and Iceland in the direction of the North Cape.

A Converted Skeptic.

An exchange tells of an old man who would not believe he could hear his wife talk a distance of five miles by a telephone. His better half was in a country shop several miles away where there was a telephone, and the skeptic was also in a place where there was a similar instrument, and on being told how to operate it he walked boldly up and shouted: "Hello, Sarah!" At that instant lightning struck the telephone and knocked the man down, and as he scrambled to his feet, excitedly cried: "That's Sarah, every inch!"

Tree That Shadows Livingstone's Heart.

An English traveller by the name of Poulett Weatheraby has just visited in Africa the tree under which the heart of Livingston is buried. He says the old tree has now become a mere shell and may fall any day. The jungle is rapidly encroaching about it, and unless steps are taken immediately to mark the spot it will be impossible to find the place in future years. Mr. Weatheraby also says that Chitamboo, the chief who ruled the district in the great explorer's day, lies buried at his side under the same tree.—New York Independent.

A pearl that was afterwards sold to a jeweler for $75 was found in the gizzard of a turkey in London recently.

PHYSICIANS BAFFLED.

Prof. R. S. Bowman, Instructor of Natural Science in Hartsville College, Cured of a Severe Illness by Dr. Williams' Pink Pills for Pale People After Physicians Failed.

From the Republican, Columbus, Ind.

Prof. R. S. Bowman, the able instructor of natural science in the famous Hartsville (Ind.) College, is well and favorably known, not only as an educator, but also as a minister of the gospel, as for a number of years he was pastor of the United Brethren church at Charlotte, Mich., before coming to Hartsville.

PROF. R. S. BOWMAN.

Some time ago he had a severe illness which was cured almost miraculously. A reporter hearing of this, interviewed him regarding his experience. Prof. Bowman was in the midst of his work when the reporter called, but he cheerfully gave him a hearing.

"A year ago last fall," said the professor, "I broke down with nervous exhaustion, and was unable to properly attend to my duties. I tried different physicians but with no relief, and also used many different proprietary medicines, spending almost fifty dollars for these medicines alone. I then succumbed to a seige of the grip in the middle of winter, and was left in a much worse condition. My kidneys were fearfully disordered, and my digestion became very poor. I was indeed in a bad condition.

"A minister in conference learning of my condition advised me to tried Dr. Williams' Pink Pills for Pale People. I had heard much about the wonderful curative powers of this medicine, but it was with reluctance that I was finally persuaded to try it, as it seemed that nothing could do me any good. However, I procured three boxes of pills and took them strictly according to directions. By the time the last dose was taken I was almost cured, and in better health than I had been for years. I continued using the pills awhile longer and was entirely cured. I can cheerfully recommend Dr. Williams' Pink Pills for Pale People.

Such was Professor Bowman's wonderful story, which was fully endorsed by the following affidavit:

HARTSVILLE, Ind., March 16, 1897.

I affirm that the above accords with the facts in my case.

R. W. BOWMAN.

Subscribed and sworn to before me this 16th day of March, 1897.

LYMAN J. SCUDDER, *Notary Public.*

STATE OF INDIANA, *ss.*

Dr. Williams' Pink Pills for Pale People contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are sold in boxes (never in loose form, by the dozen or hundred) at 50 cents a box, or six boxes for $2.50, and may be had of all druggists or directly by mail from Dr. Williams' Medicine Co., Schenectady, N. Y.

Mechanism of the Human Body.

The human body is an epitome in Nature of all mechanics, all hydraulics, all architecture, all machinery of every kind. There are more than three hundred and ten mechanical movements known to mechanics to-day, and all of these are but modifications of those found in the human body. Here are found all the bars, levers, joints, pulleys, pumps, pipes, wheels and axles, ball and socket movements, beams, girders, trusses, buffers, arches, columns, cables and supports known to science. At every point man's best mechanical work can be shown to be but adaptations of processes of the human body, a revelation of first principles used in Nature.—Ladies' Home Journal.

One of the standing needs of the country, says a sloppy organ, is more Massachusetts people. They will be more needed, perhaps, when the rate of illiteracy is reduced in Massachusetts to the Western average.

GROVES

TASTELESS CHILL TONIC

IS JUST AS GOOD FOR ADULTS. WARRANTED. PRICE 50 cts.

GALATIA, ILLS., Nov. 16, 1893.

Paris Medicine Co., St. Louis, Mo.

Gentlemen:—We sold last year, 600 bottles of GROVE'S TASTELESS CHILL TONIC and have bought three gross already this year. In all our experience of 14 years, in the drug business, have never sold an article that gave such universal satisfaction as your Tonic. Yours truly,

ABNEY, CARR & Co.

How to Do more Business

It is our business to help business men to do more business. Drop a Postal to

Fowler Correspondence College of Advertising, Tribune Building, New York City

MEDICAL DEPARTMENT,

Tulane University of Louisiana.

Its advantages for practical instruction, both in ample laboratories and abundant hospital materials are unequalled. Free access is given to the great Charity Hospital with 700 beds and 30,000 patients annually. Special instruction is given daily at the bedside of the sick. The next session begins October 14, 1897. For catalogue and information address

PROF. S. E. CHAILLE, M. D., DEAN,

P. O. Drawer 261, NEW ORLEANS, LA.

DRUNKARDS CAN BE SAVED.

The craving for drink is a disease, a marvellous cure for which has been discovered called "Anti-Jag," which makes the inebriate lose all taste for strong drink without knowing why, as it can be given secretly in tea, coffee, soup and the like.

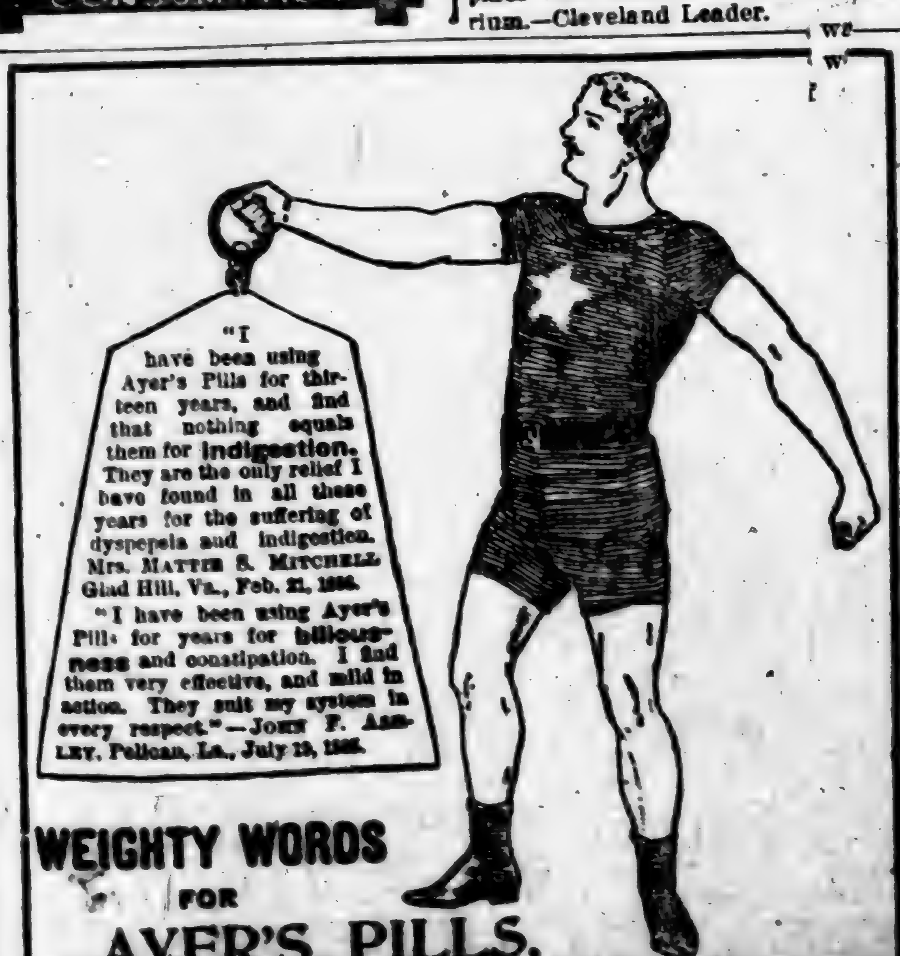
If "Anti-Jag" is not kept by your druggist send one dollar to the Renova Chemical Co., 66 Broadway, New York, and it will be sent postpaid, in plain wrapper, with full directions how to give secretly. Information mailed free.

CANDY CATHARTIC Cascarets CURE CONSTIPATION

REGULATE THE LIVER

10¢ 25¢ 50¢ ALL DRUGGISTS

ABSOLUTELY GUARANTEED to cure any case of constipation. Cascarets are the Ideal Laxative, never grip or gripe, but cause easy natural results. Sample and booklet free. Ad. STERLING REMEDY CO., Chicago, Montreal, Can., or New York.



WEIGHTY WORDS FOR AYER'S PILLS.

DECLARES CONGRESS ILLEGAL

THE ALABAMA SENATOR ATTACKS SPEAKER REED'S METHODS.

SAYS THEY ARE UNCONSTITUTIONAL

A Point of Order Raises Morgan's Ire And He Proceeds to Create Consternation.

Senator Morgan raised the question of the legality of the sessions of the house in the senate Saturday afternoon by declaring it to be his opinion to the contrary. Senator Morgan is a very able lawyer whose opinion on legal matters carries great weight, and a very able legislator than whom no man knows more about parliamentary laws.

He believes that the house of representatives is not legally in session and that it follows necessarily that congress is not legally in session.

In the course of a discussion of adjournment over decoration day he took occasion to pay his respects in vigorous language to Speaker Reed.

Hale, of Maine, raised a question of order, making the point that it was not in order to criticise a co-ordinate branch of congress. Senator Gallinger was in the chair and sustained the point.

When Morgan rose to appeal, Mr. Hale withdrew his point.

This gave the Alabama senator undisputed right to the floor, and he went ahead with his criticism of Speaker Reed's methods, culminating in the declaration that congress is not legally in session.

The rule which the house majority adopted and which provides three day adjournments whether they have a quorum present or not, is the ground for Morgan's attack.

The rule is believed to be in the very teeth of constitutional provision, which is that less than a quorum of either legislative body can adjourn from day to day.

This resolution Morgan calls an "automatic trap door resolution for adjournment." He goes so far as to maintain that the house is not in session legally, hence all legislation put through this congress would be unconstitutional.

The Alabama senator will be heard from at length in support of his position at some future time.

SULTAN FEARS ISLAM.

Fanaticism Acts as a Barrier to Peace Arrangements.

Advices of Saturday from London state that the negotiations at Constantinople have entered upon the anxious stage owing to doubts as to the real intention of the sultan whether he means to resume the war or not.

A spirit of conciliation is shown at the Yildiz Kiosk toward the ambassadors, but the Turkish government is playing a double game and is inciting public opinion secretly to oppose the abandonment of Thessaly.

The sultan affects to be greatly afraid of the Islamic party and the attitude of the grand vizier, as shown by the report which he presented to the sultan urging that the whole of Islam was fully determined to retain Thessaly and tendering his resignation in case Abdul Hamid differed with these views, has strengthened the suspicion that the sultan is prepared to plead that Islamic pressure is the reason for not yielding to the powers.

CONDEMED COUNCIL'S ACTION.

Citizens of Atlanta Hold a Mass Meeting and Express Their Views.

A mass meeting was held at Atlanta Saturday night for the purpose of taking action on the abolishment of the old board of education by the city council. Resolutions were adopted declaring that the action of the council was illegal, revolutionary, without cause and without warrant of authority, and was an usurpation of power, and is despotic and dangerous in the extreme, in that it throws the public school system into politics, and makes it a prey to political heelers at every election, and threatening an upheavel in the board of education as a result.

HARD ON IRISH MEMBERS.

They Are Driven From House of Commons For Expressing Their Opinions.

John E. Redmond, the Parnellite leader, was suspended in the commons at London Saturday, owing to his persisting in an irregular discussion of the financial relations between Great Britain and Ireland.

John J. Clancy, member for the north division of Dublin county; William Redmond, member for West Clare and William Field, member for the St. Patrick's division of Dublin, for similar conduct, were removed from the house by the sergeant-at-arms.

Mr. Clancy first opposed the harbor vote, declaring Ireland is overtaxed to maintain English establishments.

CHILDREN HURLED TO DEATH.

Locomotive Crashes Into Wagon Loaded With the Little Innocents.

A special from Denver, Col., says: At 8 o'clock Sunday evening a spring wagon driven by Henry Marsau, a carpenter, and containing eight children, ranging in age from three to nine years, was struck by a special train on the Denver and Rio Grande railroad and as a result four of the children are dead and the others are terribly injured, two so badly that they will die.

Marsau with his three children had been spending the day at the home of a friend in the southern portion of the city. When ready to start for home he took a load of children up in the neighborhood for a short ride.

It is claimed by the police that Marsau was intoxicated and paid no attention to the signals of the engineer, but drove upon the track while the train was in plain sight and but a few feet away. The engine struck the wagon, demolishing it and crushing and mangling the children in a horrible manner. The dead are:

Elsie Marsau, aged three; Otto Schoneweiss, aged five; George Baker, aged five; Etta Speaker, aged nine.

The fatally injured: Alfred Marsau, aged seven, badly mangled; Will Baker, crushed and internally injured, badly but not fatally; Emily Marsau, aged five, leg broken; Bertha Schoneweiss, badly bruised. Henry Marsau, the driver, sustained a severe scalp wound.

THE RUIZ REPORT

Said to Have Been Sent the State Department by Secret Messenger.

A special from Havana says: The commission conducting the inquiry into the circumstances surrounding the death of Dr. Ruiz has closed its labors.

A mysterious messenger from Washington came from Tampa on the steamer Mascotte Saturday morning, but did not land. Mr. Fishback, secretary of the commission, accompanied by Consul General Lee's son, went on board the steamer before she sailed and held a brief consultation with the stranger, and it is supposed they delivered to him the report of the commission and other highly important dispatches from Consul General Lee and Mr. Calhoun, who was selected to investigate Dr. Ruiz's death, to be conveyed to the state department at Washington.

The messenger was registered upon the Mascotte's inward passenger list as H. W. Kimball and the same name appeared on the steamer's outward list.

Dr. Joseph Congosto, the Spanish consul at Philadelphia, who represented the Spanish government in the inquiry, is also said to have forwarded a long report to Senor de Lome, Spanish minister at Washington, by Saturday's mail.

Messrs. Calhoun, Fishback and Congosto will leave in a few days for New York direct.

SNOW STORM IN NORTHWEST.

Points in Michigan and Wisconsin Experience Cold Weather.

Many points in Michigan and Wisconsin experienced the novelty of Decoration Day snowstorms Monday.

At Menominee, Mich., it snowed at frequent intervals all day Sunday, at times quite hard.

At Bayfield, Wis., sufficient snow fell Saturday night to cover the ground and the thermometer dropped to 30.

At Oshkosh snow fell Sunday morning and at noon the thermometer registered the lowest that it has for many years at this season.

WAR MATERIAL BIDS.

The Tredegar Company of Richmond, Gets the Contract.

The ordnance department of the army has just opened bids for supplying about 1,904 cast iron projectiles for sea coast and seige cannons, the lowest bidders in each class being the Tredegar company of Richmond, Va., at these rates: 500 seven-inch 125 pound eye shells, $5.50 each; 200 eight-inch 300 pound seacoast shells, $7.90 each; 300 ten-inch 575 pound seacoast shots at $13.50 each; 300 twelve-inch 1000 pound seacoast shots at $19 each, and 604 twelve-inch 800 pound mortar shells at $22 each.

Banker Gets Five Years.

In the criminal court at Lebanon, Tenn., Saturday, W. E. Hale was found guilty of unlawfully receiving deposits and his sentence was fixed at five years in the penitentiary. Hale was cashier of the Bank of Watertown, which failed about a year ago.

NO MINOR POSTMASTERS.

Department Shows Its Policy Toward Appointment of "Children."

The policy of the postoffice department as to the appointment of minors in postoffices has been definitely fixed, and they will be debarred from chief clerkships and deputy postmasterships except a few of the third-class offices where circumstances urge their peculiar fitness.

Even then they will not be allowed to become acting postmasters on account of the legal declaration that contracts made by minors are voidable.

This effectually bars them from being even temporary postmasters, so far as the assumption of the real responsibility of that office is concerned.

School house and vineyard at Thorsby.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and [illegible]t notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks:

"In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a will, a heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

CHILTO

VOL. I. NO. 10.

OUR TOWN PHILOSOPHER.

WHAT HE THINKS OF THE PRESENT SYSTEM OE ROAD-TAXATION.

HE BELIEVES IN IMMIGTATION, BUT HATES A RECKL SS LIAR.

Our Town Philosopher came up to the door of our journalistic den, yesterday morning, on a bicycle, and a moment later he stood before us, with a healthy glow and a hearty grasp-o'-hand.

"Taken to the wheel, "said the Call.

"Ye—s; or the wheel has taken to me—can't say which; but I can say that we need better roads in Chilton county, and it tickled me all over when you suggested in The Call that our convicts be turned into turnpike-builders. The present convict system was illustrated by a poet in eight eloquent words, when he said, "Man's inhumanity to man makes countless thousands mourn." It seems to me that certain law-makers, law-expounders and law-enforcers are inspired by the very devil himself. If this wasn't the case there would be no hangings, no electric chairs, no tortures, no shutting up in mines under guards more brutal than the men they guard. There would only be the universal sentiment that a mortal is just what circumstances make him, and not what he makes himself. If he breaks loose and destroys, he should be treated like any other raving maniac, and if he can be made of service to the State he should be made."

Our Town Philosopher took a pinch of snuff, sneezed and began again:

"The present system of road-taxation is an outrage, pure and simple. Why? Because it makes Jim Jones, who has an income of $500 per year, pay precisely as much to keep the highways in shape as it exacts from Christopher Caelebs, who has an annual scoop of $50,000. These are a few of my many reasons for recommending that convicts be taken from the mines and farms—be taken from where they are interfering with honest laborers and be placed at mending roads. It will be better for everybody and everything concerned."

A bright little schoolboy flashed into our sanctum for an extra copy of the last Call, and, having received it, flashed duly out.

"That puts me in mind," said Our Town Philosopher. "Up North there is a revival, in certain quarters, of the infamous old curfew law, compelling lads, like the little fellow who was here a few minutes ago, to be off the streets by 9 p. m. That's paternalism with a vengeance. It is un-democratic, un-republican, un-American. It is a relic of despotism. Make that lad, or any other, wear the collar of a tyrant in his youth, and he will come to believe that he must wear the collar of a tyrant all his life. Thank God, there is no curfew bell in Thorsby yet! and, pray God, no curfew bell shall ever ring over our fields and vineyards. The only curfew that a child should know is the tender warning of a father or the gentle admonition of a mother. By-the-way, I see that Governor Pingree, of Michigan, has just vetoed a curfew bill. He characterises the act as interference by the State in matters of purely domestic concern.

"I think that Governor Pingree has one of the most level heads that is toted on top of any pair of shoulders in these United States of ours."

"I believe in immigration," quoted Our Town Philosopher, after a brief intermission that he had devoted to reading the Yazoo City (Miss.) Herald. "Yes, I believe in it most heartily. It has been the making of every civilized country under the sun, and of every State in the Union, but do you suppose home-seekers will settle in a section that is represented by reckless liars as

These are a few of my many reasons for recommending that convicts be taken from the mines and farms—be taken from where they are interfering with honest laborers and be placed at mending roads. It will be better for everybody and everything concerned."

A bright little schoolboy flashed into our sanctum for an extra copy of the last Call, and, having received it, flashed duly out.

"That puts me in mind," said Our Town Philosopher. "Up North there is a revival, in certain quarters, of the infamous old curfew law, compelling lads, like the little fellow who was here a few minutes ago, to be off the streets by 9 p. m. That's paternalism with a vengeance. It is un-democratic, un-republican, un-American. It is a relic of despotism. Make that lad, or any other, wear the collar of a tyrant in his youth, and he will come to believe that he must wear the collar of a tyrant all his life. Thank God, there is no curfew bell in Thorsby yet! and, pray God, no curfew bell shall ever ring over our fields and vineyards. The only curfew that a child should know is the tender warning of a father or the gentle admonition of a mother. By-the-way, I see that Governor Pingree, of Michigan, has just vetoed a curfew bill. He characterizes the act as interference by the State in matters of purely domestic concern.

"I think that Governor Pingree has one of the most level heads that is toted on top of any pair of shoulders in these United States of ours."

"I believe in immigration," quoted Our Town Philosopher, after a brief intermission that he had devoted to reading the Yazoo City (Miss.) Herald. "Yes, I believe in it most heartily. It has been the making of every civilized country under the sun, and of every State in the Union, but do you suppose home-seekers will settle in a section that is represented by reckless liars as being populated by barbarians? Certainly they won't. Well, I want to read you something that I find here in the Yazoo City Herald, copied from the Cleveland (O.) Recorder:

"'David Milroy, a wealthy business man of Bellefontaine, O., has special reason for regretting the devastation caused by the Mississippi overflow in and about Yazoo City. Mr. Millroy sat with two or three friends in the Hotel Anderson corridor, at Pittsburg, the other evening, listening to the reading of an account of the floods. When the newspaper crrespondent touched on the damage done around Yazoo City, Miss., Mr. Millroy contributed to the discussion an interesting bit of reminiscence.

"'I was down there last Spring,' he remarked, 'to visit an old friend named Hutchinson. Colonel Hutchinson owns a beautiful plantation, and one of his prides is a splendid pack of hounds, used in hunting. He invited me to take a hunting trip with him, and I enjoyed his outdoor hospitality very much. One day we stopped in at the Piazza hotel, an historic house overlooking the Mississippi. During the evening I walked into the billiard-parlors and found perhaps thirty men, mostly young chaps, engaged either in playing or watching the game. Stepping over toward one of the windows I was horrified to see perhaps fifty revolvers, of every make, fierce-looking weapons, stacked on the sill. Just as coolly as I could approach the hotel proprietor I did so, and inquired the meaning of the display! 'O, you know,' he said, in his rolling dialect, 'guns ah cumbahsome while playing billiards, so the young gentlemen have slipped them off for the time. Steal 'em? O, no, sah. Niggahs would nevah dare.'

"'I had to laugh at the man's evident assumption that no one but the plantation-hands would think of stealing from the pile of weapons, and yet that was probably a very natural point of view for him. However I came back to Ohio just as soon as I could.'

"I think that is precisely what this man should have done," said Our Town Philosopher," for we don't want any delectable liars like him in this section. But I can't help pitying Ohio. In copying what I have just read to you from the Recorder, the Yazoo City Herald says that 'no man by the name of Hutchinson owns a plantation in Yazoo county; that "there is no Piazzi Hotel in Yazoo City, and neither does the Mississippi river touch an inch of Yazoo county lands,' and, finally, that 'there is not a hotel in Yazoo City that has a billiard-hall. Hence, Mr. Millroy could not have seen his fifty imaginary revolvers.'

"I hate a liar as I hate a snake, the last one of them is a coward and a secret assassin at heart. The paper states that this fellow Millroy is wealthy. Now, I don't know him, and don't want to know him, but if I were a betting man I'd bet my vineyard to a V, that his wealth was made through dishonesty—that he would swindle his kindest relative if he had half a chance!"

With this scorching sentiment Our Town Philosopher mounted his steed of steel and went spinning rapidly down the street.

Scientific cultivation trebles the sugar crop on the Hawaiian plantations, declares the New York Tribune. An acre which formerly would not support in comfort one cannibal now grows a maximum of eleven tons of sugar, a crop never equalled elsewhere.

A woman's bicycle club was organized in Detroit the other day, but the Free Press says that it collapsed within a week because no two members could agree as to the uniform to be worn. When Colorado musters in its company of women militia there will be trouble.

Before the end of this year every one of the 168 towns in Connecticut will be connected by telephone.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

Tuesday night Attorney Tipton Mullins and Sheriff Cooley went up to Jemison and closed up the general merchandise business of C. W. Reynolds. Attorney Mullin's represented A. C. Mims, Schloss & Kahn of Montgomery, and May & Thomas of Birmingham.

Rev. J. E. Hedburg left here Monday evening for Rock Island, Ill., to attend a meeting of the Sweedish Lutheran Synod. He will meet representatives from all over the country and will not forget to do some good work for Thorsby.

Wednesday morning a lot of boys drained the mill pond at Maddox's mill, two miles east of Clanton. They then took over a thousand pounds of fish out of the sand. Fish were drawn to Clanton in wagon loads.

Oscar Johnson left here Tuesday for a ten days trip to Chicago. He goes to settle up his affairs there so when he returns to Thorsby he will make this his permanent home.

√The Concordia Land Co. has been notified that Henry Hansen, of Estherville, Ia., will bring a party of home-seekers to Thorsby on the 15th of this month.

Mrs. M. R. Hunter and Miss Georgia Hunter, who have been visiting the family of J. B. Woodward, returned Tuesday to their home in Lincoln, Ala.

The frame work for the new office to be occupied by the Call is now up. The balance of the work will be pushed as rapidly as possible.

The school formerly known as the Strasburg school, will hereafter be held in the big school house in Thorsby.

A trap shooting gun club will be organized in Thorsby.

Are you going to build? The Hawkins Lumber Co., at Birmingham, is prepared to furnish you with lumber, sash, doors, blinds, window frames, stair work, cabinet work, office fixtures, store fixtures, church pews, pulpits, etc. They offer special prices to out of town customers.

STRASBURG.

Picnics are in order now that the farm work is so well advanced. We can boast of two fish-fry picnics last Saturday. One at Salem church, on Yellow Leaf Creek, the other at the trestle near here, on L. & N. R. R. Each report a surplus of fish.

There is a stir among our people in the village and country in the way of social visiting. It is rest and recreation to lay down the plow and hoe, hitch the team to the family carriage and go among friends for several days.

Our farmers are shipping fruit to outside markets, domestic and native berries, wild currants, etc. Nature is lavish with her fruits in our sunny South from May till December.

Your correspondent attended services at the Lutheran church Sunday morning at Thorsby. The sermon was very impressive, the readings well chosen and the music splendid.

Sunday afternoon cottage prayer-meeting was held at Mr. Vines' as per appointment, and they report a great revival of religious feeling.

We hear that Professor Moore will open a school at the crossroads below here, some time next month.

Mrs. Dr. Matthews, from Clanton, visited her relative, Mrs. McKenzie, here this week.

Prayer-meeting at the church on the hill next Sunday at 9 a. m. and preaching at 10:30.

THEPE.

SWEEPING

EVERYTHING BEFORE IT

BIG SALE

OF SUMMER CLOTHING,

Bought at a price named by us, and selling at a price less than the cost of the raw material. This is the largest sale of Men's reputable Clothing at such, sweeping prices that has ever taken place in the Magic City. We have also started a

Shoe Sale

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$3.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

$3.50 for the Famous Royal Blue Shoe; factory price $4.00.

$2.48—Odds and Ends in Patent Leather, Calf and Cordovan; were good value at $4.00 and $5.00.

$2.48 for Tans, in all Shapes and Shades; their former price $3.50.

$1.98—These Shoes in Tans and Calf never sold for less than $2.50.

$1.35 for Men's Shoes, in all Styles that were formerly $2.00.

98c.—A good Shoe, that always sold at $1.50.

$1.29—Men's Oxfords, light, cool and neat; were formerly $2.00.

MAIL ORDERS ACCOMPANIED BY CASH

WILL RECEIVE PROMPT ATTENTION.

J. BLACH & SONS,

ONE PRICE

CASH CLOTHIERS,

1912-1914 First Ave.,

Birmingham, - Alabama.

...d at Thorsby.

...the time. A green-house and exper-
...tal garden is a new feature for this year,
...hich I saw tomato-plants a foot high. This
...ny seems to be making grape culture a spe-
...y, and now have about 80 acres in grapes,
I understand, are putting out this Spring
...00 cuttings. Young orchards are being set
...all kinds of fruit, the houses are substan-
...and well-built, mostly two story. The ur-
...need now is a canning-factory, and nego-
...ons are pending looking toward the estab-
...nent of one in the near future."
...he Concordia Land and Improvement As-
...ation, spoken of in the foregoing excerpt is
...rporated under the laws of Alabama, pos-
...es a capital of $150,000, and has land for
...in all directions from Thorsby—some of it
...ining the town limits and some of it fur-
...out to a distance of nine miles.
...m a booklet lately published by the As-
...tion we learn that "this land is of differ-
...varieties, but it is all very productive.
...e parts are level, while other parts are more
...ng. That which is not under cultivation is
...ered with timber of many different varie-
...such as the long leaf yellow pine, all kinds
...ak, hickory, chestnut, persimmon, poplar,
...h,-all kinds of gum trees and black walnut.
Therefore fuel costs nothing but the labor of
...ing it, and lumber is very cheap. Good,
...hard pine lumber is bought here for only
...$7 per 1000 feet. This growth of timber
...idently shows the good quality and
...ngth of the soil. The Association has some
...roved farms for sale at very reasonable
...es. It has the land surveyed in tracts of
...n, ten to eighty acres each, so that the pur-
...ser may have his choice also in this respect,
...it is to be remembered that twenty acres
...this fertile farm and fruit land is a good-
...l farm, because the crops are so abundant.
...h tract of land has a road laid out at least
...one side."
...he proximity of Thorsby to the Gulf, and
...fact that it is 790 feet above tide-water,
...bine to make its climate ideally equable. It
...never too hot, never too cold, and one season
...its into another with none of the abruptness
...t is so unpleasantly common in the higher
...itudes. This fact, together with the abso-
...e absence of malaria, and the purity of the
...estone water, combine to make this locality
...of the healthiest that can anywhere be
...d.
...he soil of Thorsby and Chilton county can-
...be surpassed for fertility. They are of the
...h, dark, grayish, red and brown loam
...ils, with a proper mixture of sand on a clay
...soil, and are adapted for general farming,
...k-raising and fruit-growing.
Where the North can only raise one crop of
...n, potatoes and other hardy products in a
...r, this part of the South can raise two, and
...raise, at the same time, cotton, sugar-cane
...all the other semi-tropic staples, to say
...hing of fruit!
...et the new-comer select a spot like Thorsby
...his home, let him set to work with a [illegible]
...art and a steady hand, and he will find that
...rtune will change her frowns to smiles and
...ward him according to his deserts, no matter
...hat they may hap to be.

Still Waters.

Here, dreamily, with soft deceits,
The pool reposes
A summer sky; bright clouds that pass
On this brown glass.
Here imaged is the phantom moon
Of afternoon
And a swift bird that dips its wing,
Home hastening.

Soon, yonder, where the path is laid
In hush of shade,
A glimmering gown, a dusky tress,
My sight will bless;
I'll lean above an olive cheek,
So cool and slick,
And eyes where veiled reflections shine
Of love in mine.
—L. C. Cook in Harper's Bazar.

Little Heroine-Cat.

BY LEANDER S. KEYSER.

They were "thrashing" over at Neighbor Shanewalter's that afternoon. The Shanewalters lived only half a mile from the Bensons as the crow or the bee flies; but around by the road, as men walk or ride, it was more than three-quarters of a mile.

As Katie Benson stood on the portico, looking across the intervening valley along the crow-and-bee line, she could see the straw-carrier of the thrashing machine pointing obliquely upward out of the back door of the barn, while the straw floated in ragged-edge clouds of yellow from its upper end and then dropped airily upon the great round stack where three or four men were laboriously trudging about to trample down the straw.

Now and then a cloud of dust and chaff would pour out of the door, driven by the fresh breeze, and completely enveloped the workmen on the stack. At intervals the hum of the machine would reach Katie's ears. One of the men was her father—he was building the stack—and she wished that she was over there herself, jumping about on the springy straw.

But it was Katie's duty to stay at home that afternoon with her sister Liza, two years older than she, and Neddie, the "baby" of the family, 4 years of age. Shortly after dinner Mrs. Benson had said:

"Now, girls, I must go over and help Mrs. Shanewalter to cook supper for the thrashing hands. Stay close to the house all the afternoon. Don't go away for anything. And take good care of Neddie."

"Yes, of course, you can play anywhere about the house."

"And mayn't we haul Neddie in his little wagon out in the road?" persisted Liza.

"If you promise not to go more than a few rods from the gate."

"Oh, we promise, don't we, Katie?"

Katie nodded her promise readily enough, but there was a strained expression on her pale little face as if she were trying to suppress some agitating emotion.

"What's the matter, Katie?" her mother queried. "You're not afraid to stay with Liza and Neddie, are you?"

A little red rose-bud suddenly blossomed out on each of Katie's pale cheeks and her eyes scrutinized a crevice in the floor into which she was trying to thrust her bare little toes.

"No—I guess not—just a little," she stammered, in a self-contradictory way.

"You needn't be afraid at all, Katie," said Mrs. Benson, putting all the assurance she could into her tones. "There isn't anything to harm you."

"Oh, Katie's such a 'fraidy-cat," scoffed Liza. "She'd be scared at a mouse's shadow, so she would, if she was alone. The other day she saw a little snake in the yard, two rods away from her, and what do you think she did? She just stood in her tracks an' screamed as loud as ever she could, till I got a stick an' killed the snake. Pooh! It wouldn't have hurt her."

"I can't help being afraid of things," Katie sobbed.

"What's the use to be afraid!" boasted Liza. "I'm not at all afraid of anything. I wouldn't be such a 'fraidy-cat as Katie is! I'd have more spunk!"

Liza's lofty way of putting her own heroism in contrast with Katie's timidity stung her little sister to the quick, bringing hot tears to her eyes. She knew she was a "'fraidy-cat," and that was just what made her sensitive to her sister's jibes.

For awhile after her mother had gone, Katie could not revive her courage. She stood on the portico, and gazed longingly across the valley at the thrasheys. Every sound about the house and barn startled her, and she had visions of tramps and robbers galore, if not of wild and savage beasts pouncing down upon the unprotected children left alone in charge of the large, rambling farm-house. Liza guyed her for awhile, making her weep still more.

But presently a game of hide-and-seek in the large, bushy yard drove all the little "'fraidy-cat's" fears out of her mind. A jolly afternoon they were spending, sometimes putting Neddie into his small wagon and pulling him back and forth along the road in front of the house. The wagon was an old-fashioned, home-made one, with a rough box and pole and heavy little wheels hewn out of a thick board; but it was strong and serviceable, and no doubt pleased the children fully as well as the trig express-wagons of today please our own boys and girls.

At about half-past three they were playing with the wagon in the road. Katie began to feel a little tired with her vigorous romping, and presently she said to Liza:

"I'm going to sit on our post and rest awhile."

She opened the gate and stepped into the yard, and then followed a little path winding through a thick clump of rose bushes and berry stalks to one corner of the yard, where a couple of steps enabled her to climb to the top of a large fence-post. This was a favorite perch for the children when wearied with their play. The tall, sharp pickets prevented their climbing down on the outside into the road, but made a convenient support for a tired back. Perched on top of the post, Katie watched Liza and Neddie playing in the road, her cheery laugh often ringing out at the roly-poly little fellow's comical looks and conduct.

But suddenly there seemed to be a change in all their surroundings. A strange obscurity was falling over the landscape, wrapping everything in gloom.

"Oh! oh!" cried Liza, "it's getting dark!"

Such really seemed to be the case. A kind of flickering twilight enveloped the earth, filling the children's hearts with dismay. The chickens began to fly up into the trees, intending to go to roost, as if they thought the evening had come. Brindle and Spot, the two gentle milk-cows standing at the bars of their pasture-field, began to low.

"Look, look at the sun!" screamed Liza, growing pale with terror.

Sure enough, the sun had turned almost red, and—oh! oh!—a huge black sphere was slowly creeping over its disk and blotting out its light. The children had often read and talked about the end of the world and the Judgment Day, and such thoughts had always filled them with awe and terror.

"The world's coming to an end! The world's—coming—to an end!" cried Liza. "Oh! oh! o-o-h! Come, come, Katie, let's run over to Shanewalter's and find papa and mamma."

Panic-stricken, Liza seized the pole of the wagon, in the box of which sat Neddie too much frightened to cry, and then she ran, as fast as her nimble feet could carry her, down the road in the direction of the neighboring farm. She did not wait for her little sister perched on the fence-post.

Katie was almost paralyzed with fright as the darkness gathered about her. She could dimly see Liza and Neddie and the wagon speeding down the slope, but the high palings, sharpened at the top, made it impossible for her to climb over into the road. By the time she had clambered from her perch into the yard, and had shouldered her way through the bushes, her brave little sister was scampering far away.

Her first impulse was to dash out of the gate and follow; but, with all her cowardice, Katie was an obedient child, and even in her intense agitation she remembered that her mother had bidden her and Liza in no case to leave the house.

How she wished she were a brave girl—brave and fearless like Liza, and not such a "fraidy-cat!" Still, she would do as her mother had bidden her, and if the great Judge came, he would find her at her post, as the preacher had said last Sunday in his sermon. This resolve infused new courage into her palpitating heart, and slipping back from the gate, she found a cosy hiding-place among the bushes, where she sat and tremblingly kept watch in the shadows. She lisped a prayer to God to make her brave and forgive all her wrong-doings.

"I believe its getting lighter," she whispered to herself a few moments later.

Looking up, she saw that the shadow on the sun was gradually moving across it, exposing a part of its red disk. A few more moments of breathless waiting, and then the twilight was succeeded by sunlight almost as radiant as it had been before the eclipse came. For, of course, it was only an eclipse of the sun, although Katie did not know at the time what the strange phenomenon meant.

"Maybe it wasn't the Judgment Day, for all," she thought. "Well, if 'twasn't, I'm glad I stayed at home, any way, and didn't run away from the house. I'm glad I obeyed mamma."

The chickens began to crane their necks in wonder, and, finding that daylight had come again, they flew down to the ground, and resumed their picking and scratching. Katie was bravely recovering from her fright, when she saw something that almost made her pulse stop beating. A rough-looking man in seedy clothing came stealthily through the front gate, and looking suspiciously this way and that, walked along the path to the front door. Through the aperture in the screening bushes Katie saw him glance around narrowly, then turn the door-knob, and slip into the house, closing the door quietly behind him.

For the timid girl this was the climax. What in the world should she do? The man was, no doubt, a robber. He might steal something valuable from the house—one of the best spoons in the closet, her mother's silver spoons just bought a week ago or her father's gold watch, which she had heard him say he would leave at home lest it might be broken at the rough work of this afternoon.

Should she run over to neighbor Shanewalter's and give the alarm? Before she could do that, she reflected, the thief would have ransacked the house. Couldn't she—her pulses beat quickly at the thought—in some way prevent him from carrying out his thieving purpose? It frightened her half to death to think of it; and yet if she could not foil him in some way, no one else could. Everything depended on her coolness and courage. She knew that.

She half started to her feet; then dropped behind the bushes again, the prey of the most terrible panic, her heart leaping into her throat. But presently she rallied her courage, for great, heroic resolve had taken possession of her frail frame. She would be a "fraidy-cat" no longer. She would prove herself a heroine. Now was her chance.

On her hands and knees she crept along the edge of the bushes, keeping herself well screened, until she reached the kitchen door. Slipping through it, she stood still and listened breathlessly, but could hear no sound. Evidently the robber was in a distant part of the house.

With trembling hands she pushed open the door leading into the sitting-room, and then stood still again, listening intently. A moment later she almost screamed out with terror, for she could hear the muffled sound of a footstep in the next room, which was the spare bedroom, and then the creak of an opening drawer reached her ear.

"He's getting at the bureau," she thought. "Papa's watch is in one of the drawers, I think. The robber musn't find it; I'll not let him!" she added, a wave of heroism sweeping through her bosom.

She hesitated no longer. Her whole being was mastered by one supreme purpose—to save her father's gold watch. Swiftly and noiselessly she glided into the hallway, on the wall of which hung her father's shot-gun on two stout wooden hooks. She knew that it was loaded. Under the circumstances she felt justified in touching it, although she had never dared to touch it before. She sprang upon a chair standing beneath the weapon, whose muzzle pointed directly over the top of the door of the room in which burglar was plying his business.

Yes, she could reach the gun. It took but a moment to cock the hammer, as she had often seen her father do; then, bracing her nerves by a supreme mental effort, she placed her slender forefinger against the trigger, closed her eyes, and pressed with all her might. There followed a deafening explosion and a blinding flash, and the load of shot was buried in the opposite wall. The concussion almost stunned the girl, but she had self-possession enough to spring from the chair and dodge into a dark corner for safety, should the robber come into the hall.

A moment of silence ensued, and then she heard a few heavy foot-falls in the next room, followed by a loud crash of broken glass, and she knew that the terror-stricken robber had leaped through the window and made his escape. Her plan, which had been simply to frighten him away, had succeeded, and her heart bounded with exultation.

Through one of the windows she saw the bold robber scampering across the meadow toward a tract of woods. Then she rushed out of the front door and dived in among the bushes, where she lay trembling with excitement and fright for half an hour. Then her father, mother, Liza and little Neddie returned, her parents having become uneasy about her.

"Oh, papa! mamma!" she cried, laughing and crying hysterically, as she sprang from her hiding-place, "I scared him away! I scared him away!"

"What do you mean, Katie?" they asked in surprise.

"I scared the robber away;" and she quickly sketched her adventure.

Her father hastened into the house, and examined the dismantled bureau.

"You dear, brave girl!" he said, pressing her to his bosom; "you frightened the rascal away just in time. He had almost found the watch. See, it was under the pile of clothes that he was tumbling aside when you scared him by firing off the old gun. You're a genuine heroine, Katie."

Her mother, too, had to kiss and hug her.

"And nobody'll call me 'fraidy-cat any more, will they?" she asked demurely.

"No, indeed," declared her father, his face beaming with smiles. "You're a soldier—as brave a soldier as ever fought on a battlefield; and, more than that, you know how to obey orders when—when other people run from the post of duty."

As he spoke he looked slyly at Liza.
—Detroit Free Press.

Residents of Jefferson street, Topeka, Kan., have been victims of a trained or perverted dog, which stole their newspapers and took them to its master.

In Binghampton County, Ind., about 40,000 rabbits were killed during the winter—something like 1,000 rabbits for each inhabitant.

MICA MINING.

Where the Mineral is Found and Mining Methods.

For many years the mountains of western North Carolina were the principal and almost the only source from which we obtained our commercial supply of mica. There are few sections in that region where the soil does not carry a glittering admixture of more or less minute mica grains, while holes in the ground, surrounded by shining dump piles, are almost as numerous as the houses. Mica mining, as a profitable industry, has been less widespread, however, than the indications of possibly profitable mines. Although there is perhaps no country in the mountains without at least two or three mines that have paid for the working, the most remunerative district has been in the counties of Mitchell and Yancey, in the northwestern part of the state. It is there that the bulk of the work now being done is carried on.

Mica, as is well known, is one of the component parts of granite rock. Examination of any true piece of granite shows it to be a mingled mass of the three minerals, quartz feldspar and mica. In the ordinary granite, used for the constructive and other purposes, these substances occur in small and closely mingled particles. In the rock from which commercial mica is obtained, the formation is upon what may be termed a gigantic scale. The quartz and the feldspar occur in hugh masses, and the mica in blocks of varying size, from those weighing but a few pounds up to rarely occurring specimens of four to five hundred pounds weight.

I visited not long ago a mine of the larger formation. I entered through an underground passage cut straight into the hillside. I noticed, here and there, in its walls and along its roof, large blocks of mica, which had not been removed, for fear that their displacement would bring down more than was desirable. The candle which I carried enabled me to note the places from which there had been removed the masses of mica-bearing feldspar, often as large as a good-sized room.

As has been said, the mica comes from the mines in block form of varying thickness. These blocks range in size from the most abundant of four to eight or ten inches measurement across the face, up to those of very rare occurrance, of 24 to 30 or even 36 inches. A block was recently obtained in Mitchell county which measured 34 inches by 26 on its face, with a thickness of 18 inches. Its weight was 450 pounds. The points of color, clarity and freedom from flaws are all important in the question of market value.

The blocks after being cleared from their feldspar matrix, are split into sheets of proper thickness, and the sheets are sorted into grades. The sheets are sometimes sold in the rough, but usually are cut into certain fixed sizes, ranging from small bits of two inches by three up to the largest sizes obtainable. As so large a percentage of the product is used for stove doors, there are certain sizes for which the demand is greatest. The sheets are sold by the pound, the price being based upon the size and quality, and ranging from about forty cents up to almost as many dollars.

The mica is cut and trimmed by means of large shears. Here is presented a curious claim, which my observation leads me to accept as true. It is said that these shears really, if ever, require sharpening, and are practically kept in sharp-cutting condition by abrasion of the material through which they pass.

During the last few years the American industry has greatly fallen off. From 1881 to 1885, inclusive, the demand for mica was good and prices were high. A large army of men were tramping the hills and digging holes in the ground in search of what is locally known as "glass." This is doubtless a contraction of "isinglass," under which mistaken name the material is commonly known. During that period the output of mica from North Carolina amounted in value to a million and a quarter of dollars. For the same term of years, from 1891 to 1895, the value of the output was but a little over $300,000. This was owing both to the production of a smaller quantity and to reduced prices, due to competition with the mica imported from the East Indies.—New York Post.

Distinctive Trades in Turkey.

Distinctive trades and profession in Turkey are those of the seal cutters—for the signing of all documents by seal is obligatory, and everyone is obliged to have his name in Turkish cut or engraved on stone or metal—the public letter writers, the itinerant chiropodists, the bird fanciers, the herbalists who deal in all manner of "simples," the sedan chair carriers, besides a vast and peripatetic throng of mohalibe venders, windmill peddlers, sakas or water-carriers, chimney sweeps, grape-cabbage, frangiola (rolls), pilaf and sweetmeat peddlers.

Mohalibe is a sort of cold jelly, composed of ground rice and milk, and is served in brightly colored saucers, powdered with sugar and sprinkled with rose-water, with oftimes a lump of clotted cream added. With his row of gaily gilded saucers, his polished metal bowl, a stack of silver metal, arrow-shaped spoons, and an Oriental flask of rose-water sparkling and flashing in the sunlight, the mohalibe vendor would tempt an anchorite to eat. Nor must we forget the outdoor barbers, who combine the offices of dentist, barber and leech. The itinerant coffee seller confines his rounds to the business haunts, and at noon his trade is especially brisk, for every clerk along the street rushes out to supplement his luncheon of bread and cheese or bread and olives, by the liquor that he loves. The gypsy women form another unfailing attraction to the Occidental visitor. They are wild, merry, picturesque creatures, with flashing eyes, and have various devices for increasing their bank account beside that of fortune telling. Some sell lavender and herbs, and others sing, play the tambourine, or dance after the manner of the Egyptian girls. They are all adroit thieves, and in their vicinity the fruit from orchards and pullets from hen yards vanish as by magic.

FOREST GIANTS.

Stately Grandeur of Some of California's Big Trees.

In the national parks and forest reserves of California the big trees are by far the most interesting and greatest natural features. There are two varieties, namely, Sequoia sempervirens, ordinarily known as the "redwood," the tree which has furnished most of the redwood lumber of commerce, and Sequoia gigantea, from which a comparatively small amount of similar lumber has also been made. The former is the smaller variety, and grows on the foothills along the coast; the latter attains a considerably larger growth, is, more strictly speaking, the "big tree" of California, and is seldom found at a lower altitude than 5,000 feet.

Scattered along the extent of the Sierra Nevadas from north to south are many distinct and separate groups or groves of Sequoia gigantea. These are generally known by names significant of locality, as, for instance, "Calaveras," "Tuolumne," "Mariposa," and "Fresno," names of the counties in which the groves so called are situated. The Tuolumne Grove is in the Yosemite Park, and the Mariposa near by. This latter is the one most frequently visited by tourists, and contains the "Wawona"—a tree with a hole burnt in its base, through which the stage road runs and four-horse stages are driven without difficulty—and the "Grizzly Giant," one of the largest trees in the world.

The stately grandeur of these enormous and lofty trees is so impressive it seems quite fit and natural that some of the larger ones should have been individualized and honored with distinguished titles. Nearly every State in the Union and every distinguished general of the civil war has a namesake among them. The "General Grant," in the General Grant Park, and the "General Sheridan," of the Giant Forest (situated in the Sequoia Park), are individuals of the largest size. It is difficult to determine just which of the big trees is the largest, but these two and the "Grizzly Giant"—the gnarly base of any one of which will exceed thirty feet in diameter—are probably the biggest trees yet discovered.

The trees often grow in such inaccessible mountain retreats that some of the territory covered by them has never yet been thoroughly and systematically explored. Outside the lands reserved by the government, a California lumber company owns several thousand acres of these trees—enough to last forty years, cutting many millions of feet per day.—Harper's Weekly.

Horses' Keen Instinct.

The horse has a strong sense of smell. He will leave musty hay untouched in his bin, no matter however hungry; neither will he drink objectionable water, however thirsty. His intelligent nostril will widen, quiver over the daintiest bits offered by the fairest hands. Blind horses, Tit-Bits says, will gallop wildly about a pasture without striking the surrounding fence. The sense of smell informs them of its proximity. Others will, when loosened from the stable, go to the gate of bars opening to their accustomed feed-grounds. The horse, in browsing, is guided to its choice of proper food entirely by its nostrils. Blind horses do not make mistakes in their diet. In the temple of Olympus a bronze horse was exhibited, at the sight of which real horses experienced the most violent emotions. It is said that in casting the statute a magician had thrown hippomanes upon it, which, by the odor of the plant, deceived the horses, and therein is the secret of the miracle.

An Interesting Butter Experiment.

An interesting experiment has been recently made by the Queensland government in regard to the export of butter to Great Britain. Hitherto the product has been shipped in a frozen state, which, in a great measure, destroys the flavor of the butter. In the present case the shipment had a specially prepared cold chamber fixed on board the steamer, the temperature of which could be kept at a uniform height of thirty degrees. The result is said to have been eminently satisfactory, the butter having been delivered in splendid condition.

GOSSIP FOR THE FAIR SEX.

Some Items of Interest For Our Feminine Readers.

Philadelphia Nocturnal Bicycle Girls. A Terrible State of Affairs. Compliment to a Queen, Etc., Etc.

PHILADELPHIA'S NOCTURNAL BICYCLE GIRLS.

One of the odd and curious things is to see women out alone on wheels on Bread and other streets as late as 2 or 3 o'clock in the morning. In occasional instances they are trained nurses who take that means of getting exercise and going to distant homes, but generally they are not, and to the belated wayfarer it is a subject of curiosity and speculation as to who these young women and girls are who go whizzing by in the lonesome streets just before daybreak, and where they have been and where they are going and what causes them to be out at such hours.—Philadelphia Times.

A TERRIBLE STATE OF AFFAIRS.

An exchange tells a charming story of a man who went to sleep the other day and dreamed that he was in a city governed by women. It was scrupulously clean, and while walking around he saw three men arrested for spitting on pavements. A garbage barrel at the rear of each lot was hand-painted and tied with a blue ribbon. Mail boxes were decorated with hand throws, and the fire plugs had cushioned seats on top of them. Sweet pea vines were climbing the electric light poles, and a hand-painted cuspidor occupied a prominent place on every corner. There was no business, not a team being allowed to pass up or down the main street, for fear of making dust.

COMPLIMENTS TO A QUEEN.

Austria is the only country in the world where it is a penal offense, entailing imprisonment, to wear certain flowers. Thus the daisy is under the ban of the imperial authorities, who look upon it as a badge of treason, owing to its having been adopted as an emblem by that powerful political party known as the "Italian Irredenta," which aims at the restoration to the kingdom of Italy of Trieste and all the Italian-speaking provinces of the Austrian empire. The French and Italian names for the daisy are marguerite and margherita, and the party in question has adopted it as its badge in compliment to the popular consort of King Humbert.—Chicago Record.

A SINGER'S BILL OF FARE.

Only food of the plainest kind should be indulged in by the woman who aspires to be a singer, says the London Figaro. Pastry, nuts, pickles, sweets and rich sauces are simply poison to her. With regard to fluid, milk is good, but it is best when mixed with soda water or seltzer. Wines of any kind are injurious. It must be remembered that the voice is regulated by the health of the possessor; a good voice cannot come from an unhealthy constitution. If ever two things were inseparable they are good health and a good voice. With the former the latter is possible; without it vocal excellence is impossible.

FOR BLONDE AND BRUNETTE.

A while ago, comments a practical dressmaker, the very mistaken belief prevailed that persons with chestnut or even downright red hair could wear nothing but light blue and certain shades of green if they wish to look their best. Now there is nothing, on the contrary, that is more unbecoming than these two colors to such a one, unless she has a very fair skin and rather dark eyebrows and lashes.

The most attractive hue that a woman with a shade of red in her hair can wear is as near the color of her locks as possible—only darker, in some material without gloss, such as cashmere, ladies' cloth or velvet. In the evening she will appear at her best in white, with mauve, turquois blue or delicate pink, which has a suggestion of purple in it.—New Orleans Picayune.

SHE FARMS VIOLETS.

Handsome profits are being made from violet-farming by a young woman who was suddenly awakened from her dream of luxury as a gay society butterfly and thrown upon her own recourses. Her business capital was her visiting list, host of acquaintances and plenty of friends, who led luxurious lives and required a supply of hot-house flowers to wear or display at social functions.

This young matron had always been fond of violets and determined to make a business of raising them. She began with one small glass-covered pit, and has now a dozen large greenhouses under her direction. Her violets are unusually large and fragrant, and as she only sells the very best she has more orders than she can fill.

She gives her whole attention to this business and her income is now $7,000 a year.

Many of us could worry along on that.

metal, arrow-shaped spoons, and an Oriental flask of rose-water sparkling and flashing in the sunlight, the mohalibe vendor would tempt an anchorite to eat. Nor must we forget the outdoor barbers, who combine the offices of dentist, barber and leech. The itinerant coffee seller confines his rounds to the business haunts, and at noon his trade is especially brisk, for every clerk along the street rushes out to supplement his luncheon of bread and cheese or bread and olives, by the liquor that he loves. The gypsy women form another unfailing attraction to the Occidental visitor. They are wild, merry, picturesque creatures, with flashing eyes, and have various devices for increasing their bank account beside that of fortune telling. Some sell lavender and herbs, and others sing, play the tambourine, or dance after the manner of the Egyptian girls. They are all adroit thieves, and in their vicinity the fruit from orchards and pullets from hen yards vanish as by magic.

Her violets are unusually large and fragrant, and as she only sells the very best she has more orders than she can fill.

She gives her whole attention to this business and her income is now $7,000 a year.

Many of us would worry along on that.

FORMER MISTRESSES OF THE WHITE HOUSE.

Three former mistresses of the White House are now in Washington—Mrs. Grant, Mrs. Harriet Lane Johnson and Mrs. Danbridge, daughter of President Taylor. Mrs. Grant and Mrs. Johnson are settled in permanent homes of their own, and Mrs. Danbridge is the guest of Mrs. Barnes, widow of Surgeon-General Barnes. It lacks but a year of half a century since General Taylor, "Old Rough and Ready," the hero of the Mexican War, became President. Mrs. Taylor was an invalid, and their only daughter, the "beautiful Betty Bliss," presided as mistress of the White House. She was a bride of twenty, having been married shortly before to Major Bliss, a young officer on her father's staff, and who became President Taylor's private secretary. Many old residents of Washington still remember her as the graceful young hostess who brought sunshine and happiness into the mansion for the few months of her father's life there. Mrs. Danbridge, now a white-haired woman of seventy, has had an eventful life. As a bright and vivacious girl she was the belle of the military posts where her father was stationed. She entered the White House a bride, and on her father's sudden death, four months after his inauguration, retired to private life with her husband and mother. Mrs. Taylor died two years afterward, and a year later Major Bliss died. After years of seclusion she married Mr. Danbridge, a grand nephew of Martha Washington. But to her countrymen and countrywomen Mrs. Danbridge will always be known as the "beautiful Betty Bliss."

ANCIENT FASHION REVIVED.

From "hammered brass" effects, beaded brass work has become popular, and is again used in odd forms of ornamentation.

To give this beaded effect, round-headed brass nails are themselves extensively used in decorating chests, etc.

It is well known in repousse or sheet-brass work, that a very important part consists in introducing, at regular intervals, bosses, or round studs, of such a nature that they shall attract the eye.

Thus, in the days when every room had its salvers and plates of hammered brass, favorite subjects were oranges, grapes and other round forms, whose hemispherical and rounded surface gave a rounded reflex of light. A favorite subject for a brass platter in those times was the spies returning from Canaan, bearing between them an immense bunch of grapes. During 300 years there were as many salvers made with this subject as with all other subjects combined.

The employment of a boss, or knob, or circle in art, is as old as art itself; it was common among the earliest races, and it is said that the white dots in a blue ground which form the undying "polka-dot pattern" is a survival of the heads of the rivets in ancient armor.

It is as curious as instructive to observe how in Romanesque dress, for instance, very good effects were produced by simple circlets, surrounded at times by dots. These are seen, too, not only on the dresses of the old Anglo-Saxon and Gauls, but on all objects where it was desirable to produce the most ornamental effect in the easiest manner, and from these early times until now there have been periodical "crazes" for the art of nail decoration.

Nails can be had at the brass furnishers in great variety and of every pattern, from one to two inches in diameter to the tiniest tacks. There are various patterns shown for their use in decoration.

THE IDEAL HOSTESS.

Opinions differ as to what constitutes an ideal hostess, but according to a number of society women, who were recently discussing the subject, here are some of the indispensable qualities she must possess:

She must make you feel individually that you are the favored guest.

She must make you feel perfectly at home.

She must see everything, and yet possess the art of seeming to see nothing.

She must never look bored.

She must be able to bear the same story over a hundred different times, and still be competent to smile approvingly at the right point.

She must know how to get congenial people together.

She must know how to keep discussions of religion and politics off of the carpet.

She must know how to compliment a guest's gown.

She must never monopolize the conversation.

She must know how to let people be mistaken.

She must be generous enough to let other people have different opinions from hers.

She must never let anyone be slighted or overlooked.

She must know when to ask the amateur musician or elocutionist to display their talents.

She must never dress as handsomely as her guests.

She must be perfectly unselfish about her own pleasures.

She must never know fatigue, but be able to stand and smile "So glad to see you. So good of you to come" by the hour.

She must listen courteously to the long-winded talker.

She must not neglect her guests, nor yet give them too much of her society.

She must remember that nothing is so tiresome, so surely death to all enjoyment, as the feeling that one is being entertained.

In a word, the ideal hostess must possess patience, long-suffering endurance, charity.

If she has all these she may be rewarded by being permitted to wag her tongue at somebody else's tea, when some other woman is the martyr to social conventions.—Dorothy Dix.

FASHION NOTES.

In London and Paris everything Etruscan is in vogue.

Jewelled girdles are important adjuncts to the modern tea gown.

It is rumored from foreign fashion centres that earrings of the old-time type are coming back to us.

The advanced fashions for summer indicate that jewelled belts and buckles will be more popular than ever.

The new shirt waists of transparent materials are improved by a fitted and boned lining of lawn in some plain color.

Ribbons of graduated widths, put on straight around or in intricate patterns, are a very fashionable skirt trimming.

A gorgeous effect is now possible without a prodigious outlay of money, as fashion sanctions imitation jewels in dress decorations.

The turban trimmed with tufts of flowers and a scarf is the latest fancy in millinery, and it is very pretty and becoming when the hair is arranged perfectly.

Petticoats of ecru linen batiste with colored polka dots are sold in the shops for summer wear, and they certainly have qualities of comfort on a hot day which silk does not possess.

Victorian coiffures, which consist of one or two upstanding loops of hair on the top of the head, with a bow of ribbon and a comb for a finish at the back, are the English fasion.

The craze for violet, mauve, and all the shades of purple has extended to the corsets, and yards of violet silk and satin, either plain or flowered, are made up in this important article of dress.

Narrow satin ribbon, plaited, gathered or shirred, is used at wrist and throat, instead of lace or lisse rushing, by some ultra-fashionable women. If two ribbons are used together, one of them is sure to be black satin.

Aprons of ample porportions are said to be the fashion in Paris for home wear either morning or afternoon, and they are made of alternate rows of ribbon and lace insertion, printed silk, or flowered muslin trimmed with lace.

The lightest shade of silk in underskirts is now permissible under the severest walking gown, but they are not so pretty as the rich, dark ones. Mahogany red, or hunter's green, with black guipure lace, makes the prettiest.

French millinery shows a fondness for clusters of black plumes curling in every direction, or standing stiffly rampant. They seem to be in their element in company with the white rose, cool-looking and "young," with a costume of any color.

Gold canvas is one of the features of dress at Queen Victoria's drawing rooms this season, and entire bodices and the fronts of dresses are made of this material, which is often made more beautiful by little sprays of diamonds and pearls.

Broad effects across the shoulders and a small waist are the two things considered very desirable in a gown, but the prevailing style this season seems to be a slightly pinched front cut like a pinafore to show an under bodice of lace or chiffon.

A check silk in black and white has black silk ruffles down all of the seams of the skirt and around the hem. There is a wide rest and a bolero of the ruffles, and the shoulder caps are very full and elaborately trimmed with the same garniture. There is a high collar with an outstanding ruffle of the silk. Below the elbows the sleeves are perfectlyplain.

For the Happy Pair.

In a country district of Germany "pay weddings" were in vogue until recently, each guest paying for his entertainment as much as he would at an inn, and the receipts being placed aside to set up the happy pair in their new home.

Baseball Birds.

Harry B. Keech goes to the Reading baseball grounds every day with nine pigeons, one of which he releases after each inning. It takes the bird two minutes to get to his store, where Mrs. Keech puts the score on a blackboard. —Philadelphia Record.

FOR THE YOUNG FOLK

THE TREE'S REMARK.

Little green tree, so slim and small,
Standing under the schoolhouse wall,
Planted there upon Arbor day,
Tell me, what are you doing, say?
So quiet you stand, and so still you keep,
I really believe you have gone to sleep.

"Oh, I'm dreaming now," said the little tree,
"Of the pleasant days that are to be,
Of the robins and bluebirds that every spring
Will come and sit in my boughs and sing,
Oh, plenty of company I shall see
In my gay green tent," said the little tree.

"I'm dreaming of all the little girls,
In gingham aprons and yellow curls,
That under the shade of my leafy boughs
Will make for themselves a wee playhouse,
With nice bur-baskets, the dear little souls!
And pepper-pod teapots and sugar-bowls.

"I'm dreaming of all the barefoot boys
That will fill my branches with merry noise,
And climb my limbs like an easy stair,
And shake down my nuts till the boughs are bare.
Oh, a jolly good comrade I shall be
When I grow up!" said the little tree.
—[Elizabeth H. Thomas.

HOW FOXES PLAY 'POSSUM.

A fox can play 'possum almost as well as a 'possum itself. Two cases are on record of foxes being discovered in hen houses. In each case the fox not only completely deceived the finder, but allowed himself to be dragged out by the brush and thrown down. In each instance the fox then jumped up and ran away. Another example is that of a fox which dangled across a man's shoulder as it allowed itself to be carried along a road for more than a mile. At last it bit the man and was promptly dropped. A cat was observed to carry a weasel home in its mouth, the weasel dangling helplessly. The door of the house was closed and the cat, in conformity with its usual habit, mewed to gain admission. To mew, however, it had to set down the weasel, which jumped up and fastened on its nose.

Thus animals show almost human shrewdness in protecting themselves. Most boys would be too much frightened under similar circumstances to do anything.

A MERRY EVENING GAME.

One of the merriest of merry evening games goes by the name of "mummies." All the boys and girls, excepting four or five, leave the room. Two of those remaining act as dressers. They place the others in chairs and put over the head of each a tall newspaper cap, with holes cut in it through which the eyes may be seen. Cover the dresses of the three mummies with sheets, so that they will not reveal the owner. Now call in the other boys and girls and set them to trying to find out who each of the mummies is by peeping through the eye-holes. This causes great laughter and fun. After the party is all agreed as to who is who remove the papers and see how many mistakes have been made. This game is almost as much fun for grown people as it is for children.

ANTS THAT WERE USEFUL.

In cold countries ants make very little trouble, further than getting into the cake-box or the sugar-barrel. But in the tropics they are often an absolute pest. They march in great armies and destroy everything in their way. And yet even these ants have their uses. An Australian explorer says in regard to them:

"In justice to the ants, I am bound, however, to admit that I have found them useful in more ways than one. For instance, I bought an opossum-skin rug from a native. I soon became painfully aware of the fact that it literally swarmed with fleas and other vermin. In vain did I exhaust my stock of pepper. Even turpentine seemed to have no effect beyond increasing the reckless activity of these irritating settlers.

"At last, in despair, I threw my rug down on an ant hill. In less than half an hour every flea and objectionable parasite was eaten, but the rug was full of ants. I therefore hung it on a mimosa bush, and as soon as the ants found they were suspended they hastened to leave the rug and descended by the bush as best they could.

"Again, I had killed a snake in Tasmania and wished to clean and bleach the skeleton, which I intended to have mounted as a necklace. I left the body near an ants' nest. In a few hours there was not a vestige of flesh on the bones. The sun soon did the rest."

DAISY'S CANARY.

His name was Goldy. Daisy called him so because he was all over bright gold. He was not bought in any shop, or brought into the house by any one. He was just hatched out of a pretty little egg, on which Aunt Bertha's canary had been sitting ever so long. There were other eggs in the nest, and little birds came out of them. But Goldy was the first, and Daisy was standing on a chair looking into the cage when his little beak came through the shell. So Aunt Dora said he should be hers.

When he was old enough to feed himself, he was hung in Daisy's room, such a shining ball of golden fluff, with such cunning ways, you never saw.

Daisy was delighted. She took the best care of him, filled his seed-cup regularly, kept fresh water in his cage, saw that he had cuttle-fish and lump sugar, and played her little music box to him every day.

Under such good care Goldy prospered and grew to be a very fine singer.

It was warm summer weather when Daisy's father and mother decided to take a trip to Europe. Of course, they did not mean to leave their little girl behind, and Daisy was delighted, until she heard that she could not take Goldy with her.

Then she was so sad that papa and mamma scarcely knew what to do with their little girl.

She went and sat down beside Goldy's cage, which she had just put upon a table, leaned her head against the bars, and began to cry.

Goldy, of course, had no idea what all this meant; probably he thought it was some new play, so he hopped along his perch and put his beak through the bars, and pulled out one of Daisy's hairs.

That made her laugh, and then her mamma told her that Nurse White, who was one of the most careful old ladies any one ever knew, had promised to take Goldy home with her and keep him until they returned. "If your Aunt Dora can let her care for her new baby, I am sure you can feel safe about Goldy," mamma said. Poor Daisy was not quite sure, but it was the best thing that could be done, and so it was arranged. Mrs. White took Goldy to her home, which was only in the next street, so that he could see his own house whenever he was hung out of the back window.

Of the voyage I shall only say that it was very pleasant. While abroad Daisy saw many interesting things. All went well, and at last they returned in good health and spirits, and started for home in a carriage. Of course, they were going to stop for Goldy. Daisy was all impatience. She was out of the vehicle as soon as it reached Mrs. White's. The old nurse opened the door herself. "Run upstairs, my dear," she said. It's the first room you come to." But she caught Mrs. Hunter by the arm, and whispered, "Wait a minute; I have something to say, something to tell you."

There was a long talk in the hall, which ended by Mrs. White saying, "I don't think she'll know the difference," and Mrs. Hunter answering, "I am sure she will."

When at last they went upstairs, Daisy was standing quite still in the middle of the room, looking at a cage in which hopped and fluttered a golden canary bird.

Mrs. Hunter looked at Mrs. White, and shook her head. As she did so Daisy turned around and said solemnly, "Mrs. White, did you think I could believe that was my Goldy?"

"Well, my dear," said the old nurse, "I did hope you would not know the difference."

"Was it the cat?" asked Daisy. Then she went to her mother and put her arms about her waist, and hid her face on her bosom, and so sheltered listened for the reply.

"No, dear, it was not the cat. I don't keep one. The way it happened was this: I just opened the cage door to fill the bath, and while I was pouring the water out he came. He used to come out often and perch on the chair backs, and I did not know that the window in the next room was open. My cousin had opened it when she made the bed. Goldy flew into the room, but that he often did. I went after him in a minute, but he was gone. I had all the boys in the street after him, but it was of no use. Well, dear," she went on after a pause, "what could I do but buy you another? He is just the same color, and a lovely singer. After a while you may come to love him just as well. I did not think you would know the difference."

"Mrs. White," said Daisy, "if Aunt Dora's baby had got away, would you have bought her a new one? If you had, would you have supposed she wouldn't know?"

"Why, what a question!" said the old nurse. "Birds and babies are very different things, child."

"Well, I can't put any other bird into Goldy's place," said Daisy, rising to her feet. "Please, may we go home now, mamma?"

"Ah! but you will take the bird I bought for you, won't you?" asked Mrs. White.

"Please excuse me," said Daisy. "Give him to some other little girl who never knew Goldy, and does not know what a bird can be."

But what was Daisy's delight, when, on reaching home, she found Goldy in his cage and his song trilling through the house! When he escaped from Nurse White's he had flown to Daisy's home and been caught by Jane and Sarah.

"I think I am the happiest little girl in the world just now," Daisy said.

Memoranda of the Civil War.

It may be interesting to to mention some memoranda of the deaths on both sides in the civil war. The figures are authoritative as to the casualties of the Northern armies. In the South there are no complete and accurate data. The losses by death in the Northern armies were 360,222, of whom 67,000 were killed in action, while 43,000 died of wounds received in battle. On the Southern side the total deaths from all causes were put at 270,000 men.

The aggregate of men who perished in that terrible war was nearly 550,000. The total of soldiers and sailors enlisted in the Northern armies in the period of 1861-65 was 2,778,304. On the Southern side there were possibly 1,000,000, although the records show for the Confederate forces on the 1st of January, 1864, a total of 472,781, the largest number ever reported. Add to that, 250,000 dead up to that date, gives an aggregate of 700,000, which was probably the whole of the Confederate forces. At that rate the Southerners fought nearly four to one all through the struggle.—New Orleans Picayune.

A Massachusetts editor celebrated the arrival of triplets at his house by printing his paper in red.

CHILTON COUNTY CALL

M. B. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

LUXURIOUS LAZYBONES.

Soft snaps come high—to the taxpayers, but people with a political pull must have them, and if the toilers dislike to foot the bills of these gilded gentry, they can file a protest that will be promptly pigeonholed, and there you are!

Messrs. Wolcott, Stevenson and Paine have gone on a bimetallic mission, at your expense, to ask the old countries if they will p-l-e-a-s-e permit us to settle our financial affairs to suit our American selves.

That hero of the camera, mirror and ball-room, Gen. Miles, has gone Greeceward, at your expense, for the purpose of studying the Greco-Turkish war. He studied it valiantly in the lah-de-dah drawing-rooms of the Old World capitals while en route and the latter part of May found him paying court to the Sultan at Constantinople, with the centers of carnage still in the dim, safe distance. We fear that he will never reach his destination, for he has been appointed to represent the United States as their special Ambassador to the British Queen during her Jubilee.

When the Government creates a special job for a man, a job that requires the recipients of the favor to travel far and wide; a job for which the United States Treasury "pays the freight," you can safely surmise that it is a "put-up job" on the public every pop—a job that is useless, and one that is simply intended to fatten the purses and fan the pride of some political, military or social favorite.

When a class of luxurious lazy-bones like Wolcott, Stevenson, Paine and Miles, are sent to the ends of the earth in royal style, at a big, round salary, with champagne frappe, regal banquets, obsequious servants and all the other et ceteras thrown in, it is certainly high meridian hour to blow the whistle.

OSMAN PASHA.

Dr. Covington, of this city, says if Osman Pasha of the Turkish army, was formerly Col. Crawford of the Confederate army, as has been alleged, he knows him well, having saved his life on the Mexican frontier during the late war.—Ohio Ex.

The Colonel Crawford alluded to was a coward, a man of the most volatile temperament, and, if the truth must be known a pillager, with small knowledge of the law pertaining to meum et teum. Osman Pasha is the very reverse of all this, being a silent, honest, dignified scoundrel, and is everything that Crawford was not, nor could be, if he tried.

The Governor of Alabama should use all the power of the State to cause the arrest of the cowardly "White Caps" in and around Kennedy. These White Cappers have made, so it is reported, three visits to that locality—whipping two negro women and killing a negro man by the name of Andrew Hayden. We believe that Governor Johnston will do his full duty in this matter.—Birmingham Times.

This White Cap business began in Indiana, and its infandous spirit has been manifested in other States beyond our border. It must not be permitted to hold sway in the South—never! The Governor of Alabama cannot adopt any measure too drastic in bringing the Kennedy cut-throats and cowards to the gallows-tree. Down with the last one of them at once!

McKinley and his Cabinet will visit Biltmore (Vanderbiltmore), N. C., on their way home from the Tennessee Centennial. It's a great thing to own such a princely palace that the Chief Magistrate of the most commanding country in creation must e'en call with his ministers to pay his respects to the Lord of Locre who rules within; but it's a still greater thing to own the most magnificent manor-house on our swinging star, without having done a lick of honest work to deserve so royal a retreat.

It is a fact that there are fewer croakers in Montgomery today than ever in its history. That element of discord seems to have taken wings and flown, perhaps, to Birmingham or Mobile.—Montgomery Journal.

That's the way Eyer Hood of the Journal tries to hoodwink his readers into the belief that Montgomery is a better city than Birmingham: but a majority of his readers refuse to be hoodwinked, and there you are!

OUR NEAREST NEIGHBORHOOD.

HOW THE SURROUNDING SPOKES IN THE THORSBY WHEEL ARE RUNNING.

Every journalistic Birmingham-printed flag-station youngling that desires to make its advent known just spreads itself and jumps onto The Reaper. Two weeks ago one of these took occasion to jump on us because we said something about that alien sheet, the New York World, and it said the World's circulation was due to the bright, original things it was always springing. Maybe so. But we can name a dozen weekly papers in the State of Alabama that are brighter, more original and far more piquant. Everything considered there is more bright originality about the press of Alabama than that of any other State, and the daily press is much superior to its environment.—Sheffield Reaper.

Perhaps we deserve the above for ever daring to attempt to lift ourselves to a level with such a great molder of public opinion as The Reaper, and especially so when we were not toting bushels of conceit around under our tiles; but then, we awfully hated to see a little fellow like the "New York World" kicked by the heels of the long-eared quill pusher of The Reaper, and then again we were not aware that this same quill pusher is one of the few who are far more original and piquant than the staff of the World. Never mind, brother, we didn't think you would take it to heart so. Thorsby may be a small place, but when it comes to size—well, we don't wish to hurt The Reaper's feelings again.

The Wetumpka Advocate no doubt believes in preparing for the future. In its editorial column, last week, there were three Populistic editorials of a very consoling nature, and then before continuing further with its editorials, there is an Arnica salve advertisement. It is probably meant that this salve is to be used on the bruises and the black eye that the Populists party will receive at the next election.

It is reported that Selma will give a $100,000 subscription to the new A. & A. railroad.

The Dadeville New Era, in its last week's issue, takes a few notes from an issue of the Dadeville Headlight, published February 5, 1876, and then, by publishing a brief write-up of the town at present, gives a fair comparison of what Dadeville was 21 years ago, and what it is today. Dadeville should soon be one of the most popular towns in the State, when it has such a bright specimen of newspaperdom as the New Era to champion its cause.

The Eutaw Mirror uses a half column to explain what fools the farmers are thereabouts, to put all their time to raising cotton and then have to buy corn, meat and other food for the table and for stock. If those farmers will send a committee over to Thorsby they can learn what a Southern farm, properly worked, is capable of raising. King cotton is a stranger to our farmers.

The Decatur Herald proposes that the citizens of that place get a hustle on themselves if they intend to celebrate the Fourth of July in a befitting manner. If the citizens can make as big a success of their celebration as Brother Lorana is making of the Herald there will be no reason for a complaint from any quarter.

A large and enthusiastic meeting of the citizens of Brierfield was held in the interest of a new high school. Those present went down in their pockets and $405 was raised. A piano and an organ were donated for the use of the school.

The Probate Judge of Cleburne county has issued a proclamation prohibiting cattle, horses, sheep, goats and hogs from running at large in beat 6, in that county.

The Prattville Progress will hereafter be published by the Progress Printing Co. New machinery and type have been put in the office, and the paper has been improved by carrying more home news and in typographical appearance.

This is the last day of May. We hope it is also the last of Winter.—Ohio Ex.

Winter ended in this part of God's country before it began.

A movement is on foot in Alexander City to establish a girls school.

J. L. Wilkes is being talked of as a probable candidate for Mayor of Sylacauga.

WANTED.—Persons to accept, gratis, in view of future orders; rubber stamp of their own name for making clothing, books, etc. Write plainly and enclose four postage stamps to defray mailing, packing, etc. H. P. MAYNARD, 16 Arcade, Cincinnati, O. Agents wanted for rubber stamps, rubber type, pads, daters, white letter signs, "Bottled Electricity," for catarrh and pain, electric belts, etc. Write for agents' terms.

Railway Building.

The Dunham Railroad company is pushing its survey with vigor. The corps of engineers are now within six miles of River Falls, and the belief is that the road bed will be permanently located within twenty days, crossing Conecuh river at River Falls and thence to Lake View, Fla., a distance of about forty miles. This will give a continuous line of railway of sixty-one miles, the starting place between Dunham, two miles south of Georgiana, Ala. This road will pass through a belt of the finest timber in South Alabama. The object of the Dunham Lumber company is to open up the comparatively inexhaustible pine forests and to develop near and at River Falls, on the Conecuh and Patsaliga streams, the hitherto unknown great water powers.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

F. MOBECK'S
CASH SUPPLY STORE

A. M. JOHNSON, Manager,

Gen'l Steamship and Foreign Exchange Agency. **THORSBY.**

GROCERIES

We can give you a good bargain in anything you may need in the line of groceries. If you are not satisfied with your grocer give us a trial.

We have a fine line of

Late News Items of General Interest to Alabamians.

Mrs. Pearl Bryan was awarded $8,000 damages by a Jefferson county jury against the Southern railroad for the death of her husband in a collision between a freight train on the Southern and one on the Birmingham Mineral road last March.

A Fugitive Apprehended.

Anderson Bates, a well-known young man, who left Birmingham some months ago and after he went away was indicted on three counts of forgery, was brought back Tuesday from New Orleans, where he was arrested by Deputy Sheriff Waldrop, and had his bond placed at $300 in each case.

Medical Society Meeting.

The Madison County Medical society held its regular monthly business meeting at Huntsville, Monday. After the regular business was transacted arrangements were made for entertaining the district convention of physicians, which meets in Huntsville June 15 and 16. During the convention Dr. H. A. Moody, of Florence, will deliver an address on the subject "Medicine and Its Relations to Christianity."

Officers Selected.

Brig-Gen. L. V. Clark, commanding the Alabama National Guard, in assuming command issued a general order in which he named the following as his staff and aides: Capt. E. A. DeFuniak, of Birmingham, chief of staff and assistant adjutant-general, Second regiment; Maj. E. P. McConnell, of Talladega, inspector of rifle practice. Third regiment; Capt. O. P. Fitzsimmons, Birmingham, chaplain Second regiment; Capt. W. H. Hayden, Demopolis. commissary of subsistence Third regiment; Capt. H. C. Gunnells, Oxford, inspector Second regiment; Lieut. D. M. Scott, Selma, quartermaster First cavalry; Capt. R. S. Teague, Montgomery, Second regiment; Capt. T. J. Cornwall, Bessemer, ordinance Third regiment. Each has the grade of major. Capt. C. A. Jones, of Birmingham, and Capt. J. K. Warren, Birmingham, are aides-de-camp Second regiment, each with the grade of captain.

Reception to Governor Johnston.

The most brilliant social event of the season was the reception given in honor of Governor and Mrs. Joseph F. Johnston Monday night by Judge and Mrs. W. J. Wood, of Florence. The palatial home of Judge Wood was thrown open at 8 o'clock, when the guests commenced to assemble, and from that time until a late hour the home was a scene of gaiety, the crowd being composed of beautiful women and gallant men. More than 300 guests were present, and they were the handsomest women and most brilliant men of the state, who were attending the annual convention of the Alabama Press association. The Wheeler Rifles, the local military organization, forty strong, under Captain McFarland, met Governor Johnston at the train and escorted him to Judge Wood's home. Governor Johnston addressed the Press association.

Wetumpka's Agricultural School.

The governor has appointed the following board of control of the Fifth District Agricultural school at Wetumpka.

George S. Livingston, of Prattville, for a term of two years, ending June 5, 1899,

Felix L. Smith, of Rockford, for a term of four years, ending June 5, 1901.

J. P. Oliver, Sr., of Dadeville, for a term of four years, ending June 5, 1901,

Peter A. Buyck, of Wetumpka, for term of six years, ending June 5, 1903.

W. P. Gaddis, of Wetumpka, for term of six years, ending June 5, 1903.

A meeting of the board will be called at an early day by Hon. I. F. Culver, commissioner of agriculture, at which time the body will organize.

OVER A SLOW FIRE.

Twenty-Five Catholic Monks Were Roasted to Death.

A telegram from Vancouver, B. C., says that further interviews with officers of the steamer Hupeh, now in port, elicit the fact that twenty-five Catholic monks were roasted by the rebels in the Philippine islands, and not by Spanish troops as previously reported.

The customary mode of roasting sucking pigs in the island is by thrusting a bamboo through the pig and then fastening it to an iron, roasting it over a slow fire. This was done to the monks, the bamboo being thrust through them while they were alive.

WORLD'S FASTEST BOAT.

GREAT BRITAIN IS BUILDING A MARINE WONDER.

Object to Beat the United States—Little but Mighty—Construction as Remarkable as Speed—Problem of Fresh Air Solved—Would Turn Rather Than Sink.

The English government, says the New York Herald, is engaged in building what will be when completed the fastest boat in the world. Its object in constructing this craft is to possess a vessel that will be superior to the Admiral Porter, owned by the United States, and until a short time ago known as torpedo boat No. 8. This marvellous craft that Britain is building will be able to steam thirty-three knots an hour, a trifle less than thirty-eight miles.

The Express—for that is the name of the record breaker—is now in process of construction at the shipyards of Laird Brothers, at Birkenhead, England. Her engines will be capable of attaining 10,000 indicated horsepower. The tremendous power of this little boat—for she is only 350 tons burden—can best be appreciated by considering the fact that she will be able to develop fully as great an engine power as the Renown, a battleship of 12,350 tons. The Express will have as an armament one 12-pounder quick firing gun, five 6 and 3-pounder quick firing guns and two Whitehead torpedoes.

The most noticeable point about the engine lies in the arrangement of the valves. The high and intermediate pressure cranks are similarly located, although at right angles to the high and intermediate cranks. The arrangement described renders the design of valves adopted possible. All the valves are combined in pairs, one above another in one chamber, each pair having a common valve rod. The result of this is a reduction of the number of moving parts, and renders possible that very desirable arrangement of placing the engine in less fore and aft space.

The construction of the boat with regard to safety, if the plans are carried out, will be as remarkable as her capacity for speed. She will have all the compartment her size will permit, and although the ordinary torpedo boat can be smashed like an eggshell, this destroyer will be armed with a ram that could pierce the side of a battleship. As far as danger to herself is concerned, if a battleship or any other craft should strike her a blow she would be more likely to turn turtle than to sink. Her steering apparatus is of such a nature that it will act much quicker than that of the ordinary craft.

The accommodations for officers and crew will be superior to those in any torpedo boat destroyer afloat. The problem of air to the people who live between decks has always been very unsatisfactory in point of solution. The Express, however, will have vents for the foul air and modes of ingress for fresh air that will result in supplying all hands with a full measure of that which the lungs need so much.

It is further apparent, too, that while on most vessels of this sort the crew is compelled to remain below when the sea is at all heavy, on the Express the decks will be of use in very rough water.

The executive officer, or the captain, as the case may be, stands on the little bridge just abaft the winch, and cones from that point. From the conning tower and turret combined, on which the bridge rests, projects the 12-pound rapid fire gun. Most of the guns, however, are between decks, and the firing is done through portholes. A shot from the 12-pounder, however, would send the majority of torpedo boats with all on board to Davy Jones' locker, for when a torpedo boat sinks there is, as a rule, small hope for those who man her.

QUEER SLIPS OF THE TONGUE.

Funny Mistakes of Language Picked From Various Planes of Life.

A transposition of two or more letters, or the mistakes of hasty punctuation, offer a miscellaneous comic literature that, from its absurdity, is worth collecting. Take for instance this extract from a bride's letter of thanks: "Your beautiful clock has been received and is now in the drawing-room on our mantelpiece where we hope to see you often."

The literature of advertisements is sometimes as humorous as the sayings of the funniest men. In the far west a man advertises for a woman "to wash, iron and milk two cows." A rather ghostly humor surrounds the announcement of an enterprising undertaker, who says in the daily paper: "No person who has once tried our air-tight caskets will ever use any other."

A dry goods firm put a placard in the window which read: "Bargain sale now going on. Don't go elsewhere to be cheated come in here."

A compilation of curious advertisements results in the following:

"Wanted—An organist and boy to blow the same."

"Wanted—A boy who can open oysters with a reference."

"A lady desires to sell her piano as she is going abroad in a strong iron frame."

"Widow in comfortable circumstances wishes to marry two sons."

"Bulldog for sale; will eat anything; very fond of children."

A dentist advertises: "Teeth extracted with great pains." There is a delicious humor in the description of "a young man who sold peaches with red hair."

The mistakes of speech are sometimes amusing to all except the embarrassed speaker. For instance, that of the insignificant youth who was introduced to a distinguished lady, and completely transposed the meaning of his elaborate address when he bowed low and said: "I think, madam, you have had the pleasure of meeting me before." Or that of the charming elocutionist who thus rendered the climax of the heroic poem she was reciting: "Go, your liver loves," said Cromwell, "Curfew shall not ring tonight." And the mishap of the smart boy of the village, who spoke his piece before a large audienc, beginning thuswise:

Under the spreading blacksmith tree
The village chestnut stands.

Then come the slips of reverend tongues, when it is wicked to laugh, and worse not to, for who could preserve a normal gravity on hearing the hymn "Conquering kings" given out as "kinkering congs," or the "fig tree" transposed into the "wig tree," and not feel a sinful inclination to laugh? And the parson who took for his text "Bow not thy knee to an idol," and read it to his congregation "Bow not thine eye to a needle," must have been chagrined to see the smiles follow; and not know why. So with another of the cloth who intended to read "This world is all a fleeting show," but by a slip of the tongue rendered it thus: "This world is all a floating shoe."

One can imagine the embarrassment of the grand lady who, finding a stranger in her pew, asked him haughtily if he intended to "occupew that pie." An Oklahoma editor expressed his thanks for a basket of oranges in this strain: "We have received a basket of oranges from our friend Fred Bradley, for which he will please accept our compliments, some of which are nearly six inches in diameter.—Chicago Times-Herald.

The Shah's Daily Life.

A vivid account of the daily life of the Shah of Persia is contributed to the Illustrated Magazine by Mr. J. F. Fraser, who has just visited Teheran in the course of his world's tour on a bicycle.

"How does the Shah spend an ordinary day? Well, he is a busy man. He rises early, performs his devotions, has a piece of thin, pasty Persian bread and a glass of sweetened tea. Then, at about 8 o'clock, he receives his ministers. He is slovenly in habit, and walks up and down the room with his slippers flipflapping; indeed, the story goes that the reason he parted with his first wife was because she constantly complained that he did not wash himself.

"He dictates dozens of letters, hears dispatches read, consults authorities, attends minutely to every detail of business. This continues for six hours at a stretch. Then he has his breakfast. All the food is carefully prepared, and a prince of the royal blood is responsible that no tricks are played. The Shah, according to etiquette, eats alone. Between 50 and 60 dishes are served, but his Majesty only touches two or three. Knives and forks are things unknown at court, and the Shah eats everything with his fingers—greased rice, mutton and fruit.

"During breakfast extracts from European papers, chiefly French, are read to the Shah. Following breakfast the Shah probably has an hour's sleep, and then, after some glasses of tea, he will amuse himself with working a little telegraph instrument, playing backgammon with his ministers—who are careful not to win—setting and resetting plants in the gardens, or taking photographs. He has even been photograhed in bed, and has pictures of himself dressed in uncomfortable Prussian military attire, and even in the garb of an English curate."

Gunpowder as a Motive Power.

A number of inventors are at work just now in designing a gunpowder engine in which the motive power will be developed from a high explosive. Colonel Barker, the superintendent of the British Royal Small Arms factory, has found by special experiments that one pound of gunpowder will develop over 170,000 foot pounds of energy. The most improved smokeless powder is even more powerful. It is thought by some that if gunpowder may be used as a motive power it will work a revolution in mechanics and bicycles.

Interesting to the Clergy.

A minister who used to preach in Somerville had a little boy. A few days before his father left the city to go to his new parish one of his neighbors said to the little boy:

"So your father is going to work in New Bedford, is he?"

The little boy looked up wonderingly.

"Oh, no," he said. "Only preach."
—Somerville Journal.

A Vermonter, living at Danby, shot fifty foxes last winter.

GREAT DEPARTMENT STORES!

FIRST GREAT GUN OF THE NEW SYSTEM OF MERCHAN-DISIHG.

We commence the GREATEST SALE of Dry Goods, Groceries, Clothing, Shoes Hardware, etc., in the history of Birmingham. All goods in our wholesale departments will be forced on through the retail departments. We must have room for our fall wholesale stock. We sell the best of everything the cheapest.

Drennen & Co.,

BIRMINGHAM, ALA.

SHOT HIMSELF.

Sensational Suicide of R. B. McConnell at Ocala, Fla.

R. B. McConnell, the defaulting president of the defunct Merchants' National Bank, committed suicide at Ocala, Fla., last Saturday. He sent a bullet crashing through his brain, and before medical aid could be summoned was a corpse. The deed was committed at the home of his brother-in-law, W. K. McDonald, where he, his wife and mother were taking dinner.

G. C. Stapleton, Receiver of the Merchants' Bank, had made some new discoveries in the bank business that showed up very badly against McConnell. He at once communicated them to United States Commissioner G. S. Williams, who at once issued a warrant for McConnell's arrest. This was placed in the hands of Deputy United States Marshal James Clarke, who proceeded to the McConnell residence. He learned there that the bank president was dining at Mr. McDonald's.

He went to the house and read the warrant, when McConnell asked permission to go up stairs to get his coat. A moment later the household was startled by the report of a pistol. The officer rushed up stairs, only to find McConnell breathing his last, with a hole in the right side of his head over the ear, and the smoking revolver still in his hand.

The mother and wife are prostrated with grief. The affair caused greater excitement in the city than even the bank failure.

Getting Dangerous.

A special dispatch from Naples says that Mount Vesuvius is in eruption. An area of 2,000 yards long by 500 wide is covered with lava and it is dangerous to approach within 400 yards of the principal crater.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

LANGVILLE & SON,

General Blacksmiths and Wagon Flakers.

Prices reasonable and first-class workmanship.

DR. O. T. DOZIER,

(The Renowned Southern Specialist)

Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice, Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)

We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother [illegible] fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

• • • Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His [illegible] record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. • • • He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of [illegible] skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and [illegible] is above reproach.

Address

DR. O. T. DOZIER,

Lock Box 132, Birmingham, Ala.

"JUNGFRAU" CONQUERED

A TROLLEY LINE TO THE TOP OF THE FAMOUS ALPINE PEAK.

Heretofore Only the Boldest of Alpine Climbers Have Overcome Her Almost Inaccessible Heights. Route Will Largely Underground.

"Jungfrau" is conquered. The famous snow capped Alpine peak that only the most skillful and adventurous mountain climbers have hitherto been able to ascend has yielded to the trolley. A railroad, largely underground, has been surveyed and partially built to its highest peak, and work will be completed this summer. By next summer the traveller can reach the summit in two hours, and all that will be required of him is to put on a heavy overcoat and seat himself in a comfortable car. Electricity does the rest.

Nor is this the limit of the humiliation of lofty Jungfrau. Stations have been provided at dizzy heights en route, hotels are projected, and if all goes well excursion trains will be run to these points. Large parties, luxuriously housed, will spend days and weeks on ledges hitherto only painfully reached by hardy climbers, and Swiss villagers will make a day's merriment over cakes and beer at heights hitherto regarded as practically inaccessible.

This remarkable railway, which will make one of the most famous mountain summits in the world accessible to any one, man, woman or child, whose lungs are able to bear the strain occasioned by the rarefied aifr, is modelled after the road constructed on Mount Saleve, Geneva, which was, by the way, the first electrical mountain road of considerable size ever constructed.

The bold projector of the Jungfrau railroad is Herr Guyer-Zeller, of Zurich. His proposition, when placed before the Swiss Government, provoked unbounded astonishment. So great is Jungfrau's reputation for inexorable impassability that it was at first regarded as utterly impracticable.

Extensive surveys were made and heated arguments were indulged in. In the fall of 1894 the Government consented to the concession. Work was begun the following spring.

The tiny village of Scheidegg lies at the foot of Eiger, the smallest of the three great peaks of Jungfrau. It is there that the road begins. It will lie on the surface for a considerable distance, winding in and out over convenient ledges and approaching the great mountain by a serpentine course. Then it will plunge into the solid rock, traversing a tunnel for a while, to emerge again into open air at a higher altitude, and frequently disappear again.

These glimpses of mountain scenery will be wild and glorious in the extreme, and the passenger will become frightened long before he really attains an appreciable altitude.

The first station will be Eigergletscher, part way up the slope of Eiger and 2,280 metres above sea level. Up to this point no special engineering difficulties will be met. It will be a simple ascending railroad varied with a few short tunnels.

A magnificent outlook will be had from this station, which will doubtless prove to be a very popular excursion resort. One looks forward over a superb view of Alpine scenery stretching for many miles, and backward upon the massive walls of Jungfrau, which here appear to be absolutely impossible of ascent.

Leaving Eigergletscher, the road will skirt the mountain for a short distance and finally plunge into its heart. A strong curve will carry it to the left in a steep ascent up the cliff of Eiger, sometimes emerging to show the traveller a view of immense extent and majesty, and again plunging into the rock. Thus it winds up the snowless side until the station of Eiger is reached. This is about half way up the smallest peak of Jungfrau, and 3,221 metres above sea level. Here the road runs in nearly a straight line toward the supreme summit. When opposite the second great peak, Monch, the third station is reached. This is called Monch, and is 3,623 metres above sea level. Here will be built another hotel.

From this point there is a gradual descent to the Guggigletscher Galerie, where at a height of 3,393 metres, the cars will pass along the top of one of the steepest walls of the mountain, a precipice of 1,400 metres sheer descent. From there a tunnel carries the road on a sharp incline straight to the summit of Jungfrau, 4,100 metres above sea level.

And yet, at the terminus of the road, the actual summit is not yet reached. The real apex is a ledge of rock that shoots up sixty-six metres higher, but with a crown so narrow that the railroad cannot reach it. So the passenger will dismount and enter a tower through whose interior an elevator quickly lifts him to the supreme point. Within the tube is a winding staircase so that travellers not caring to use the elevator may reach the summit afoot.

All the tunnels and stations are to be lighted by electricity and connected with the world below by telephone and telegraph. Near the top a magnificent road is to be built, extending for miles, upon which visitors may enjoy sleigh rides.

The cost of a round trip will be only $8. It now costs $40 to hire guides and a carrier for the two days necessary to make the ascent afoot.—New York Herald.

WEIGHING AN ENGINE.

Curious Test Recently Applied to a Famous Locomotive.

A peculiar scientific experiment has been made with the famous engine 870, of the New York Central Railroad, at the shops at West Albany. Some months ago this large engine, which, in the opinion of many well-informed railroad men, excels even the famous 999, was taken into the shops and completely overhauled. It was taken apart completely, and every part of the engine, from the massive driving wheels to the very smallest bolt and nut, was separately weighed. The heavy portions were weighed in the shops and the small parts were taken to a Watervliet avenue pharmacy, where they were weighed on the pharmacist's scales.

The greatest care was taken by the machinists under the direction of Master Mechanic Buchanan to see that the weighing was accurate. When every part of the engine had been weighed a force of the best skilled mechanics was put to work to reassemble the engine. When it was complete again it was put into active service.

A short time ago the engine was taken back to the shops and mechanics were put to work dissecting it again. Once more every part was weighed. The scales of the pharmacist were brought into service again. When every portion had been weighed the record was compared with the former one. Then Master Mechanic Buchanan knew just how much the engine had lost in weight through the wear of a known amount of work. The records of the weights of the separate parts showed which parts were subjected to the most wear.

The test cost many hundreds of dollars, but the New York Central was willing to spend the money in order that it might be able to know what parts of an engine wear out most quickly and in what ratio the several parts wear out. The exact figures have not been made public. There is no doubt that they will be interesting to mechanics and scientists.—Albany, N. Y., Express.

A Widow, Yet a Wife.

An application at Washington for a pension every now and then brings to light a romance. This is true in the case of Mrs. Frederica Wolfe, of Fort Wayne, Ind., who recently wrote to Senator Fairbanks requesting him to introduce a bill to give her a pension, she being a soldier's widow. It appears that her former husband, Jacob Stenebrenner, who was private in Company E, Twenty-first Regiment, Indiana Heavy Artillery, was mustered out of the service at Baton Rouge, La., on October 29, 1865, and disappeared. She made repeated efforts to find him, but without success. She then applied for a pension, but the Pension Office rejected her claim on the ground that she could not produce sufficient evidence to prove the death of her husband.

Believing her husband dead, Mrs. Stenebrenner married Mr. Wolfe in the year 1875. Now being a widow once more she again applies for a pension, which she hopes to obtain through the medium of a private pension bill. The case was turned over to Major J. H. Stine, historian of the Army of the Potomac, to investigate. The result of the investigation was the discovery of the Enoch Arden, Jacob Stenebrenner, an inmate of the National Military Home at Marion, Ind., and he is drawing a pension of $6 per month. These facts have been communicated to Mrs. Wolfe, who, for thirty years, has mourned for her supposed dead husband.—Louisville Courier-Journal.

Kingfisher and Swordfish Fight.

George Craft witnessed a fierce battle between a kingfisher and a swordfish at Lake Mahopac, New York. The battle lasted for at least fifteen minutes, and when it was over the combatants were both dead. The kingfisher was flying over the lake looking for prey, when it was seen to make a quick dive into the water. In a few seconds it appeared on the surfact with a swordfish.

Both were fighting fiercely. The swordfish plunged his long, sharp beak repeatedly into his opponent, while the kingfisher attempted to strangle its quarry. The water was churned into foam during the struggle.

Finally it was observed that the swordfish was about exhausted. Suddenly, however, it made a terrible lunge at its enemy and the battle was over. Both fighters lay dead on the surface of the lake.—New York Press.

Bishop F. D. Huntington, Episcopal, of Syracuse, N. Y., has confirmed 22,000 persons during the 27 years of his episcopate.

The Maine bear is fast becoming a tradition. There is talk of abolishing the $5 bounty on bear.

NOTES AND COMMENTS.

The railway companies of Great Britain carried 950,000,000 passengers in 1895, of whom 386 were killed. During the same year, in the city of London alone, 586 persons were killed by falling from buildings or out of windows.

A projectile from the new English wire guns in a recent trial at Shoeburyness completely penetrated an eighteen-inch steel-faced compound armor plate backed by a six-inch wrought iron plate, by eight feet of solid oak and three inches of iron, and was found imbedded in a clay bank thirty-five yards behind the target.

Spain, according to the war office statistics, had sent, up to the end of 1897, 198,047 men and 40 generals to Cuba. The deaths in the field and from yellow fever and other diseases were four generals and 22,731 men and officers. No account is given of the men sent home invalided, but at least 22,000 have returned many of whom have since died.

The new transatlantic cable, which is to be laid between Brest and New York during the coming summer, will, it is said, be the longest in existence. The length will be 3,250 nautical miles, and the total weight of the cable with its envelope is estimated at 11,000 tons. Four large ships are to be employed in stretching it across the ocean's bottom.

A flock of wild pigeons so numerous as to recall the hunting stories of days that were supposed to have passed forever has taken possession of a grove in Shasta county, Cal. When the birds are on their foraging expeditions they are said to form a line a mile in length and from 100 to 200 yards wide, while the sound of their wings is like that of a furious storm. At night they gather in a black oak forest, where, over an area of about 160 acres, they seem to cover every twig and bough.

It may be of interest to know what church in the world is accounted the wealthiest. This recognition is generally assigned to the Orthodox Church of Russia. As an evidence of this, it is stated "that it could easily pay the national debt of the empire, amounting to about £200,000,000, or nearly $1,000,000,000, and yet not be impoverished." This seems almost incredible, but it must be remembered that it has some very lucrative sources of revenue. One of the most profitable is the sale of candles.

A "floating church" has just been built in the English fen country. The parish of Holme, in the diocese of Ely, has, in consequence of the drainage of the fens, especially the famous Whittlesea Mere, so extended itself that about half the population are practically out of reach of their parish church. To assist him in getting at these outside parishioners, the vicar is trying the experiment of using a kind of houseboat, which can be moved from point to point on the large fen dyke, or canalized river, surrounding three-fourths of the parish.

The towns of Woodsdale, Moscow, Springfield and Fargo, in Kansas, which had a population of eleven hundred in 1890, have now only a population of eighteen, according to a correspondent of "The United States Investor." Hugoton has three families out of the four hundred that used to live there. Nine children go to the $10,000 schoolhouse, and there is standing, like a monument of folly, a waterworks system that cost some Eastern plutocrat $36,000. The town never paid a cent of principal or interest on all this and never will.

The Agricultural Department's Experiment Station Record states that a colony of bees, of which there appeared to be at the beginning about 10,000 bees, was watched from January to December, 1891, and at the end of the season it had about 20,000. For the whole time there were about 800 eggs laid per day; for the season of the honey flow (March 3 to August 3) the number of eggs per day averaged 1,760. The highest daily average was between March 18 and April 10, and was 2,600. The colony did not swarm. Over 300,000 bees were hatched and passed away. The colony made 180 pounds of honey.

Some idea of the rapid growth of the telephone service in this country may be obtained from the statement recently made on good authority that the number of telephone stations in the United States has reached 352,810. Estimating the population of the country at 62,622,250, the figures given by the last census, there is one telephone to every 192 inhabitants. Considering the short length of time which has elapsed since the telephone was invented, the growth of the service is indeed marvellous. As compared with other countries the figures are still more striking. The combined population of Europe is 354,957,776, or nearly Six times that of the United States, and yet there are only 336,037 telephone stations on the continent, or one to every 970 of the population. France, with a population of 38,343,193, has only 29,500 telephones, or less than the New England state alone. Boston, with only 496,920 inhabitants, has more telephones than London, with 5,000,000 inhabitants.

NEW USE FOR SKY SCRAPERS.

The Tall Office Buildings Now Provided With Living Accommodations

One of the novel features of a sky-scraping office building, now being finished in New York, is that for the first time in the history of such buildings sleeping rooms will be allowed and provided for persons who want them with offices. Of course sleeping rooms at a rental of one to two dollars a year for each square foot of floor space, besides the cost for care, are rather expensive luxuries, but when the president of one of the companies that have hired offices in the building saw the magnificent views over the rivers and down the bay, he decided to have a room there if possible, where he could sleep during the summer when his family was in the country. So a bedroom is being fitted up for him, and it is understood that a number of other similar rooms will be provided. The men who will occupy these rooms will never have to leave the building if they do not want to. Some of them will have private bathrooms attached to their bedrooms, but these will not be necessary, for another novel feature of the building is that there are regular bathrooms in the toilet rooms, and these baths are to be kept ready for the use of tenants, and may be had by application to the janitor for a key. Even in the general toilet rooms there will be no round towels, but individual towels, supplied as freely as they are in the most expensive hotels. If the tenants in this building want ice water, they will find it on tap at two places in the hallway of each floor. This is another of the new features. The restaurant will be built upon the regular roof, and will have accommodations for 500 persons, besides having a large open space outside of it where one may dine in the open air. It will also have a number of small private dining rooms and a smoking room. The building also recognizes that the bicycle has come to stay, and in the basement a storeroom for wheels has been provided where fifty or sixty of them can be kept for the tenants.—Argonaut.

How the Ostrich Feeds.

The ostrich feeds in a peculiar manner. It tosses the food into a sack in the upper part of the neck, and then swallows it. I have seen a bird toss fully a quart of mealies (Indian corn) into this sack before swallowing; and it is no uncommon thing to see two "swallows" travelling down the neck at the same time with a clear interval between them; or to see one of them (if of large and loose food, e. g., grain) slide back into the sack after being swallowed, if the bird lowers its head to continue feeding before the food has travelled considerable distance down the neck. The food travels slowly and performs a complete circuit of the neck before reaching the crop. Crushed bones are greedily eaten; if too large a piece should stick in the neck it is a simple matter to cut it out and sew the wound up again. The wound, as a rule, heals quickly, and causes but little inconvenience. As is well known, ostriches will swallow almost anything small enough to pass down the neck. An ostrich's crop always contains a large quantity of smooth stones, many of them brightly colored.—The Zoologist.

Oldest Brick House in Chicago.

The oldest brick house in Chicago was built in 1844. It stands on 21st street, next to the First Presbyterian Church. Originally the house stood on Madison street, blocking La Salle street, which then extended only as far as Madison street. It was the first three-story house in Chicago, and William Wheeler, who owned it, was much commended for his enterprise. The Chicago Democrat contained a long account of the erection of the house and all Chicago watched its progress with interest. William Wheeler was then an alderman, and the proprietor of a hardware store Professor Wheeler, his son, well remembers the old house, and the woods and marshes that surrounded it, where tall office buildings now scrape the sky.

Amphibious Man.

Man becomes most amphibious in certain regions. Temperature permitting, he swims as well, dives better, than many animals—better for instance, than any dogs. The Greek sponge-fishers and the Arabic divers must have sight almost as keen below the water as that of the sea otter. They have learned, by practice, to control the consumption of the air supply in their lungs. The usual time for a hippopotamus to remain below water is five minutes. The pear fisher can remain below two and a half minutes. In a tank a diver has remained under water for four minutes. But temperature marks the limit of man's amphibious habits.—Spectator.

Manufacturing a Giant.

Bishop Berkeley (he who wrote "Westward the star of Empire takes its way") once tried to make a giant. He thought that an orphan would be good material to start with, so he got one and reared him on such food as he thought most favorable to great stature. The orphan died at the height of 7 feet 8 inches and the age of twenty years.

ONE OF CRETE'S NEIGHBORS

Corfu is a Sort of Geographical Mosaic

Corfu and Crete are said by a recent writer to be the most beautiful of the Ionian Islands, and the former has been described by Bishop Wordsworth as "a sort of geographical mosaic to which all the countries of Europe have contributed colors." Corfu was never conquered by the Turks, and its inhabitants are considered to bear a strong resemblance to the ancient Greeks. It has belonged at different times to the Romans, Venetians, Neapolitans, French and English. In 1863, when Prince George of Denmark was chosen by the powers for King of Greece, the Corfiotes petitioned that their island might be incorporated in the kingdom of Greece and Great Britain consented.

The climate of the island is delightful and the scenery enchanting. In other portions of Southern Europe the gray-green of the olive groves grows somewhat monotonous, but in Corfu it is relieved by stretches of green grass. Pomegranate and fig, orange, lemon and banana trees grow in profusion, and palms, eucalypti and papyri flourish. There are quantities of oleanders, magnolias and roses. The inhabitants are so lazy that they hardly attempt even the easiest cultivation, and fortunately for them the soil and climate render it almost unnecessary. A Corfu olive tree left to its own devices will frequently yield as much as two gallons of oil each season, with no more labor involved that a simple gathering and pressing of the fallen fruit.

Corfu is the favorite place of residence of the Empress Elizabeth of Austria, who has built there a winter palace, which she calls the Villa Achilleion. It was rumored that the name was given in reference to the one vulnerable spot ever discovered in the heart of the Empress. Several million dollars have been spent in beautifying the palace and surrounding park, and an ideal spot is the result. A most beautiful and artistic monument is erected in the grounds to the memory of Prince Rudolph, the son of the Empress, who, less Spartan than his imperial mother, fled from unhappiness in love by the way of suicide. When at her home in Corfu the Empress Elizabeth spends much time studying the Greek language and literature, with which she is very familiar.

Bet Both Ways, Yet Lost.

Daniel Webster, Tazewell and Gen. Jackson's Secretary of the Navy were once walking together on the north bank of the Potomac, and while Webster lingered a little in the rear, Tazewell offered to bet Branch a ten-dollar hat that he could prove him to be on the other side of the river. "Done," said Branch. "Well," said Tazewell, pointing to the opposite shore, "isn't that one side of the river?" "Yes." "Well," isn't this the other side?" "Yes." "Then, as you are here, are you not on the other side?" "Why, I declare," said the victim, "so it is; but here comes Webster, I'll win back my bet from him." As Daniel came up, Branch saluted him with, "Webster, I'll bet ou a ten-dollar hat I can prove you are on the other side of the river." "Done." "Well, isn't this one side?" "Yes." "Well, isn't that the other side? "Yes, but I am not on that side." Branch had to pay for two hats, and learned that it is possible to bet both ways and win upon neither.—Auronaut.

A Standard Joke With the Cavalry.

The United States cavalry officers have one standard joke which they play on the infantry whenever the two branches of the army come together. For instance, says a correspondent, I happened recently to be a guest at a dinner in Omaha, the hosts being some twenty cavalrymen and as many infantrymen. When one of the latter attempted to speak he was interrupted at a critical point by a cavalryman, who said to the guests: "Gentlemen, excuse me one moment. I must order my horse." Then turning to the infantrymen, he continued: "Boys, you know what I mean? A horse! A h-o-r-s-e, horse! Animal, rectangle, four corners with a leg at each corner. Pardon me for the interruption." The laugh follows, and the speech is finished.—New Orleans Picayune.

A Brave Bully.

When Judge Pendleton grows reminiscent he is aways interesting. Court was short this morning and when Mr. Henry Tompkins walked in he said: "Mr. Tompkins, your cousin, Louis Garth, was the only bully I ever saw who was a brave man. He was in a poker game in camp with Lieutenant Forrest, a brother of General N. B. Forrest, and he called Forrest a liar, Forrest pulled his pistol, a double-barreled weapon, and placing it to Garth's breast, he pulled the trigger. The cartridge failed to fire, and Garth spat out a chew of tobacco and without moving a muscle, said: 'Lieutenant, you had better try the other barrel' Forrest put his weapon up, and said: 'Garth, you are a brave man, and I will not shoot a brave man.' They were inseparable friends forever afterward."—Owensboro (Ky.) Inquirer

---

If you can't sing, or recite, or play the piano, give thanks; you escape more abuse than the Sultan of Turkey.

A little colored boy, the grandson of an old servant in a New England family, is a constant playmate of the boy of the house, whose parents are particularly anxious that their child shall treat his colored companon with gentleness.

They are so anxious, in fact, that the little negro has acquired a habit of running to his playmate's mother with any trouble which may have befallen him, sure of her protection.

One day the two boys were snowballing, and in some way or other the negro received an especially damp and "sloshy" snowball in his face, though it had been aimed at his back.

"You beter look out, William Percival!" he cried, turning a snow-plastered face, from which gleamed two small but wrathful eyes on his playmate. "If you don't say you won't do dat again I take dis countenance right in and show it to your ma jes' as it is!"

Brave Men.

Alex McClure of the Philadelphia Times says: "The two boldest men he knows are John Wannamaker of Philadelphia and Tilly Haynes of Boston. Both went to New York. Mr. Wannamaker took the Stewart property, the finest dry goods store in the world, and Mr. Haynes took the great Broadway Central Hotel, the largest in the city. But dry rot had crept into both of these magnificent properties and no one dared to grasp them, until John Wannamaker took one and Tilly Haynes the other. A complete and unqualified success has crowned the efforts of both. Verily a good reputation is better than riches."

Visitor (gruffly)—Are you the editor? Editor (without looking up from his work)—I am. Stranger (more gruffly)—Do you hold yourself responsible for everything appearing in the paper? Editor (rising to his six feet three inches)—I do. What's on your mind? Visitor (meekly)—Oh, nothing at all, I assure you. I was under the impression that the little man over in the corner took all the responsibility.—Spare Moments.

Prayer and Profanity

are all right in their proper places, but if you have Tetter or Eczema, or Salt-Rheum, or Ringworm, better save your breath and buy "Tetterine." 50 cents a box at drug stores, or by mail from J. T. Shuptrine, Savannah, Ga.

A thief in Monterey, Mexico, threw a hook and line through an open window, and stole the bedclothes under which the owner of the house was slumbering.

No-To-Bac for Fifty Cents.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00 at all druggists.

Few animals possess the sense of smell in a greater degree than the horse.

Hall's Catarrh Cure is a liquid and is taken internally, and acts directly on the blood and mucous surfaces of the system. Write for testimonials, free. Manufactured by F. J. Cheney & Co., Toledo, O.

Military physicians in India prescribe opium as a harmless tonic for soldiers in fatiguing marches.

Just try a 10c. box of Cascarets, the finest liver and bowel regulator ever made.

A mine in Idaho last week shipped out three cars of bullion valued at $8,880.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free Dr. R. H. Kline, Ltd., 931 Arch St., Phila., Pa.

Piso's Cure for Consumption relieves the most obstinate coughs.—Rev. D. Buchmueller, Lexington, Mo., February 24, 1894.

The year 1897 is predicted to be one of great note as a big crop year.

Cascarets stimulate liver, kidneys and bowels. Never sicken, weaken or gripe; 10c.

Some how the wittiest girl isn't the one a man picks out to marry.

When bilious or costive, eat a Cascaret, candy cathartic; cure guaranteed; 10c., 25c.

The melancholy days for many office-seekers are here.

If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

Scrofula Cured

"When three months old my boy was troubled with scrofula. There were sore places on his hands and body as large as a man's hand, and sometimes the blood would run. We began giving him Hood's Sarsaparilla and it soon took effect. When he had taken three bottles he was cured." W. H. Garner, West Earl, Pennsylvania.

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier.

Hood's Pills cure all Liver Ills and Sick Headache. 25c.

ONE OF CRETE'S NEIGHBORS.

Corfu is a Sort of Geographical Mosaic.

Corfu and Crete are said by a recent writer to be the most beautiful of the Ionian Islands, and the former has been described by Bishop Wordsworth as "a sort of geographical mosaic to which all the countries of Europe have contributed colors." Corfu was never conquered by the Turks, and its inhabitants are considered to bear a strong resemblance to the ancient Greeks. It has belonged at different times to the Romans, Venetians, Neapolitans, French and English. In 1863, when Prince George of Denmark was chosen by the powers for King of Greece, the Corfiotes petitioned that their island might be incorporated in the kingdom of Greece and Great Britain consented.

The climate of the island is delightful and the scenery enchanting. In other portions of Southern Europe the gray-green of the olive groves grows somewhat monotonous, but in Corfu it is relieved by stretches of green grass. Pomegranate and fig, orange, lemon and banana trees grow in profusion, and palms, eucalypti and papyri flourish. There are quantities of oleanders, magnolias and roses. The inhabitants are so lazy that they hardly attempt even the easiest cultivation, and fortunately for them the soil and climate render it almost unnecessary. A Corfu olive tree left to its own devices will frequently yield as much as two gallons of oil each season, with no more labor involved that a simple gathering and pressing of the fallen fruit.

Corfu is the favorite place of residence of the Empress Elizabeth of Austria, who has built there a winter palace, which she calls the Villa Achilleion. It was rumored that the name was given in reference to the one vulnerable spot ever discovered in the heart of the Empress. Several million dollars have been spent in beautifying the palace and surrounding park, and an ideal spot is the result. A most beautiful and artistic monument is erected in the grounds to the memory of Prince Rudolph, the son of the Empress, who, less Spartan than his imperial mother, fled from unhappiness in love by the way of suicide. When at her home in Corfu the Empress Elizabeth spends much time studying the Greek language and literature, with which she is very familiar.

Bet Both Ways, Yet Lost.

Daniel Webster, Tazewell and Gen. Jackson's Secretary of the Navy were once walking together on the north bank of the Potomac, and while Webster lingered a little in the rear, Tazewell offered to bet Branch a ten-dollar hat that he could prove him to be on the other side of the river. "Done," said Branch. "Well," said Tazewell, pointing to the opposite shore, "isn't that one side of the river?" "Yes." "Well," isn't this the other side?" "Yes." "Then, as you are here, are you not on the other side?" "Why, I declare," said the victim, "so it is; but here comes Webster, I'll win back my bet from him." As Daniel came up, Branch saluted him with, "Webster, I'll bet ou a ten-dollar hat I can prove you are on the other side of the river." "Done." "Well, isn't this one side?" "Yes." "Well, isn't that the other side?" "Yes, but I am not on that side." Branch had to pay for two hats, and learned that it is possible to bet both ways and win upon neither.—Aurorant.

A Standard Joke With the Cavalry.

The United States cavalry officers have one standard joke which they play on the infantry whenever the two branches of the army come together. For instance, says a correspondent, I happened recently to be a guest at a dinner in Omaha, the hosts being some twenty cavalrymen and as many infantrymen. When one of the latter attempted to speak he was interrupted at a critical point by a cavalryman, who said to the guests: "Gentlemen, excuse me one moment. I must order my horse." Then turning to the infantrymen, he continued: "Boys, you know what I mean? A horse! A h-o-r-s-e, horse! Animal, rectangle, four corners with a leg at each corner. Pardon me for the interruption." The laugh follows, and the speech is finished.—New Orleans Picayune.

A Brave Bully.

When Judge Pendleton grows reminiscent he is always interesting. Court was short this morning and when Mr. Henry Tompkins walked in he said: "Mr. Tompkins, your cousin, Louis Garth, was the only bully I ever saw who was a brave man. He was in a poker game in camp with Lieutenant Forrest, a brother of General N. B. Forrest, and he called Forrest a liar. Forrest pulled his pistol, a double-barreled weapon, and placing it to Garth's breast, he pulled the trigger. The cartridge failed to fire, and Garth spat out a chew of tobacco and without moving a muscle, said: 'Lieutenant, you had better try the other barrel.' Forrest put his weapon up, and said: 'Garth, you are a brave man, and I will not shoot a brave man.' They were inseparable friends forever afterward."—Owensboro (Ky.) Inquirer.

If you can't sing, or recite, or play the piano, give thanks; you escape more abuse than the Sultan of Turkey.

A little colored boy, the grandson of an old servant in a New England family, is a constant playmate of the boy of the house, whose parents are particularly anxious that their child shall treat his colored companon with gentleness.

They are so anxious, in fact, that the little negro has acquired a habit of running to his playmate's mother with any trouble which may have befallen him, sure of her protection.

One day the two boys were snowballing, and in some way or other the negro received an especially damp and "sloshy" snowball in his face, though it had been aimed at his back.

"You beter look out, William Percival!" he cried, turning a snow-plastered face, from which gleamed two small but wrathful eyes on his playmate. "If you don't say you won't do dat again I take dis countenance right in and show it to your ma jes' as it is!"

Brave Men.

Alex McClure of the Philadelphia Times says: "The two boldest men he knows are John Wannamaker of Philadelphia and Tilly Haynes of Boston. Both went to New York. Mr. Wannamaker took the Stewart property, the finest dry goods store in the world, and Mr. Haynes took the great Broadway Central Hotel, the largest in the city. But dry rot had crept into both of these magnificent properties and no one dared to grasp them, until John Wannamaker took one and Tilly Haynes the other. A complete and unqualified success has crowned the efforts of both. Verily a good reputation is better than riches."

Visitor (gruffly)—Are you the editor? Editor (without looking up from his work)—I am. Stranger (more gruffly)—Do you hold yourself responsible for everything appearing in the paper? Editor (rising to his six feet three inches)—I do. What's on your mind? Visitor (meekly)—Oh, nothing at all, I assure you. I was under the impression that the little man over in the corner took all the responsibility.—Spare Moments.

Prayer and Profanity

are all right in their proper places, but if you have Tetter or Eczema, or Salt-Rheum, or Ringworm, better save your breath and buy "Tetterine." 50 cents a box at drug stores, or by mail from J. T. Shuptrine, Savannah, Ga.

A thief in Monterey, Mexico, threw a hook and line through an open window, and stole the bedclothes under which the owner of the house was slumbering.

No-To-Bac for Fifty Cents.

Over 400,000 cured. Why not let No-To-Bac regulate or remove your desire for tobacco? Saves money, makes health and manhood. Cure guaranteed. 50 cents and $1.00 at all druggists.

Few animals possess the sense of smell in a greater degree than the horse.

Hall's Catarrh Cure is a liquid and is taken internally, and acts directly on the blood and mucous surfaces of the system. Write for testimonials, free. Manufactured by

ANIMAL CUNNING.

A Fox Came to Life After Being Killed, Bit Its Captor and Escaped.

Two cases are on record of foxes being discovered in hen-houses. In each case the fox not only completely deceived the finder, but allowed himself to be dragged out by the brush and thrown down. In each instance the fox then jumped up and ran away. Another example is that of a fox which dangled across a man's shoulder as it allowed itself to be carried along a road for more than a mile. At last it bit the man and was promptly dropped. A cat was observed to carry a weasel home in its mouth, the weasel dangling helplessly. The door of the house was closed and the cat, in conformity with its usual habit, mewed to gain admission. To mew, however, it had to set down the weasel, which jumped up and fastened on its nose.

The following instance was observed by the late Professor Romanes: A corncrake had been retrieved by a dog, and, having every appearance of being dead, was put in a man's pocket. Presently violent struggles were felt and the man drew the bird out. To his astonishment it again hung in his hand limp and apparently lifeless. It was then set upon the ground and watched from behind some cover. In a short time it raised its head, looked around and decamped at full speed. A singular fact that must not be overlooked in connection with this phenomenon is that some animals have been found to be actually dead which were at first thought to be shamming. Romanes, for instance, found this to be the case with a squirrel which he had caught in a cloth and with which he wanted to experiment with regard to feigning of death.

Sir E. Tennent also relates, in his book on the "Natural History of Ceylon," that the wild elephant sometimes dies when being taken from the corral by tame elephants. Further, he relates a case in which, being convinced that an elephant was dead, he had its leashings taken off, he and a friend leaning against it the while to rest. Hardly had they left it when it rose hurriedly, and trumpeting vociferously, rushed off in the jungle. The fact, however, that a squirrel or an elephant when captured unhurt will die is sufficient to show that a most powerful nervous derangement of some sort is induced.

When the late Joseph Thompson lectured on his African experiences he related how the first buffalo he shot tossed him, and how, when he came to himself and tried to sit up, he found his antagonist glaring at him a few yards away. He told how he recollected that a buffalo does not try to toss a creature which shows no signs of life, and how he let his head sink slowly back, and lay shamming death.

Pheasants, in flying across wide stretches of water, have been noticed suddenly to fall. In this way they are apparently drowned. It is perhaps dangerous to assert positively that fear is here the active cause of death; yet, we are apparently justified in believing that a paroxysm of fear can produce sudden death. The squirrel and the elephant may have died of fright; certainly death in man can be produced by sudden fear, and although man has a much more sensitive nervous mechanism, the lower animals have an extremely active instinct of fear.

Professor Lloyd Morgan mentions the case of a surfaceman working in the Severn tunnel who was nearly killed by a train. It is stated that "his attention was so riveted that he was unable to make, or rather he felt no desire to make, the appropriate movements;" that he could not help watching the train, but felt no terror. With the greatest difficulty he managed to shake himself free of his fascination. In describing his feelings when the danger was past he is reported to have said: "I came over all in a cold sweat and felt as helpless as a baby. I was frightened enough then." This may perhaps be taken as a cataleptic condition without fear.—Scotsman.

British Royal Pages.

In talking of the English royal households one often hears of "royal pages," who must not be confounded with the so-called "pages of honor." The latter are boys of gentle birth, ranging in age from twelve to seventeen, who receive a salary of $1,200 a year, and bear the trains of royalty on state occasions. Moreover, by virtue of precedent and tradition, they receive a nomination to the military college at Sandhurst, and if they can pass the examination there, a commission in the army on completing their term of service at court. The pages of the ordinary class are grown men, and merely a superior kind of footman. Thus it is the pages who do the waiting at the royal tables, to footmen conveying the dishes to them from the kitchen. The footmen likewise wait at the table of the gentlemen and ladies of the royal household. The footmen wear scarlet coats and vests, blue plush breeches, white silk stockings and low shoes, while the pages wear coats of a dark navy blue, with gilt buttons, black velvet breeches, white silk stockings and gold garters. I may add, says a London correspondent, that at Marlborough House, over eighty indoor servants are employed, and until the two daughters of the prince and princess were married they, as well as still unmarried sister, Victoria allowed the services of two footmen each to attend exclusively to their service, one man being always on duty and the other off. In addition to these many indoor servants, there are fifty men more employed at the Marlborough House stables.

In Search of a Hidden Island.

A ship set sail from San Francisco last week in search of a hidden island. Her trip promises to be a long and romantic one, and before she comes back her crew expect that the American flag will be floating over a little coral reef close to the equator that no man or nation has claimed. New Haldayo is the name given to the island, but so far the most accurate location that can be given for it is that it is in the north Pacific ocean. The island is said to be covered with an enormous and wonderful deposit of guano, and for nearly fifty years numerous vessels have started out in search of it, but they have always returned without being able to give its location. It was first reported as being in existence by Lord Clipperton, an eccentric English navigator, naturalist and discoverer, and the man who gave his name to Clipperton Island. He said in his report of his cruises that the island lay approximately in north latitude 16 and west longitude 137, but is described as a low atoll, and navigators say a vessel could sail within a dozen miles of it and pass by without seeing it.

The Indians' Pipe Quarry.

In southwestern Minnesota is a celebrated quarry where the Indians have for centuries obtained a soft red stone out of which they carve pipes. The quarry belongs to the Sioux, to whom it was ceded by the United States government forty years ago. Mr. A. H. Gottschall says this is the only place in America, and probably in the world, where this particular kind of stone is found. Many tribes of the red men formerly resorted to the quarry, and the pipestone seems to have been an article of commerce among them, for it has been found in Indian graves scattered all the way from the Great Lakes to the Gulf of Mexico. It has also been found as far west as the Rocky Mountains, and in British America.

Greek Beauties.

Professor E. A. Grosvenor, of Amherst College, who has spent many years in Greece, says that the English language has changed more in a few generations than the Greek in thirty centuries. The ancient type is frequently seen, both in men and women; the modern sculptor could find models almost fac similes of those after which the grand old masters chiseled their masterpieces. "The most beautiful woman I ever saw in all Europe," says Professor Grosvenor, "was a Grecian girl. She was only a servant, and totally uneducated, but her beauty was almost divine. She died afterwards, I learned, of starvation. Her employer's circumstances caused it, I believe."

Dangers in Writing Inks.

It sometimes happens, says the London Lancet, that a trifling scratch or puncture made with a pen gives rise to a dangerous septicaemia, due to the liability of ink to contain pathogenic bacteria. Nigrosin ink, taken from a freshly-opened bottle, was found to contain both saphrophytes and bacteria. Red and blue inks also yielded numerous bacteria. In two instances Dr. Marpmann succeeded in cultivating from nigrosin ink a bacillus which proved fatal to mice within four days. This ink had stood in an open bottle for three months, and the inference to be drawn from the inquiry is that ink used in schools should always be kept covered when not in use.

The Ooglywoo.

The London Mail says that a number of wealthy Englishmen have organized an exhibition to come to the United States to shoot wild horses in the Rocky Mountains.

The gentlemen can, after they get through shooting "wild horses in the Rocky Mountains." come down onto the plains and shoot the Ooglywoo, which is found in great numbers in that vicinity. It has six legs and a very strong, short tail.

When danger appears, it at once stands on its tail and spins rapidly around. Of course this makes a hole, into which the Ooglywoo sinks rapidly out of sight. The hole then disappears also.—Forest and Stream.

The Electric Lucifer.

The electric match is the next important invention promised. Before very long the phosphorus-tipped wooden splints now in use will be replaced by a handy little tool that may be carried in the pocket or hung up conveniently for striking a light when wanted. Twentieth century people doubtless will speak of the "hell sticks" of the present day as primitive and absurd, just as we are disposed to look with scorn upon the flint and steel of our forefathers. Already there is on the market a gaslighter which affords more than a suggestion of the electric match of the future, a twist of the handle generating sufficient electricity to accomplish the purpose.—Industrial Journal.

DARING FEATS OF A DIVER.

Narrow Escape from Death While Exploring a Sunken Ship.

One diver crippled for life, another made a raving lunatic, and still another escaping death by a mere shave—that is the record up to date of the effort to recover the treasure on the sunken steamship Skyro.

The Skyro, bound from Carthagena to London, struck on the Meixiddo reef and sank in twenty-eight fathoms, low water. The Meixiddo reef is on the coast of Spain, nine miles south of Cape Finisterre.

The accident occurred in 1891, and it was not until four years later, May, 1895, that any attempt was made to recover the valuable cargo which the sunken steamship contained, the most tempting part of which consisted of eighty-eight bars of silver, valued at $45,000. This treasure was stored away in a spare berth in the cabin, while in the hold was 700 tons of pig lead, valued at $70,000.

It was J. K. Moffat, an Englishman, living in Bilbao, who made the first attempt on the treasure. After four or five months' labor and terrible under-water work by the divers all Mr. Moffat had to show for his time and money was a grimy piece of the Skyro's brass cabin skylight grating. One of the divers went raving mad from his sufferings under water, and when confined jumped through a window in his delirium. A fellow worker was incapacitated for life as a result of his exposure. Mr. Moffat let things rest at this until July of the present year.

During the two months following the beginning of these second operations a diver named Erostarbe descended forty-four times and recovered fifty-nine bars of silver, the average time of each descent being thirteen minutes. After the first thirty-seven bars had been got to the surface it was found necessary to use dynamite.

The dynamite so cleared things that in three dives Erostarbe brought up $10,000 worth of silver bars. But even this adept at submarine work did not come off without some close shaves during his career. On one occasion in coming up he fouled his air pipe with a float attached to the buoy rope. He was ascending with a strong impetus and the impact with a float turned him downward and his head slipped out of the helmet below the breast plate. He could neither right himself nor replace his head. But he never for an instant lost his presence of mind, but worked swiftly and deftly with his hands in this reversed position. He managed to free the air pipe and shot up to the surface feet foremost, where he was quickly reversed by his assistants and restored to the world after such a close call as it is the lot of a very few men to survive.—New York Sun.

His Confession.

Mrs. Dowley—John, it is really frightful the way you swear. Before we were married you said you never gave way to profanity at all.

Mr. Dowley—And I told the truth. I never was married before.—Cleveland Leader.

For Herself Alone.

She—Do you love me for myself alone, dearest?

He—Of course I do. You don't suppose I want your mother about all the time, do you?—Judy.

HALL'S Vegetable Sicilian HAIR RENEWER

Beautifies and restores Gray Hair to its original color and vitality; prevents baldness; cures itching and dandruff. A fine hair dressing.

ASK STATE TO INTERFERE.

MACON, GA., CITIZENS ARE AFTER THE SOUTHERN RAILROAD.

CLAIM ILLEGAL CONSOLIDATION

The Governor Is Asked to Investigate the Matter—May Be Finally Carried to the Courts.

A petition has been filed with Governor Atkinson, of Georgia, asking him to direct the attorney general of the state to institute proceedings to break the relations between the Southern Railway, the Central of Georgia, the Georgia Southern & Florida and other lines.

The petition was presented by attorneys on behalf of citizens of Macon. The names of seven individuals and firms are signed to the petition.

The petition was filed a few days ago and Judge Miller of Macon, had a conference with the governor. It is alleged in the petition that the Southern controls a number of railroads in Georgia and that the control tends to defeat competition in violation of the constitution of the state.

The paper is a long one and recites the history of the Southern, explaining in detail how it has grown up by the acquisition of the East Tennessee, Virginia and Georgia, the Georgia Pacific, the Central of Georgia, the Georgia Southern and Florida, the Atlanta and Florida, the Georgia Midland and Gulf, the Macon and Birmingham and other lines. All these roads have been consolidated, the petition declares, and it goes on to say that the city of Macon has now no competition and the petitioners ask the state to go to their relief and break the relations existing between the several lines.

The governor has been carefully examining the paper and has been getting information about the relations existing between the different companies.

Under the Bacon act of 1893, proceedings can be instituted in two ways to break an illegal consolidation of railroads. The governor is empowered to direct the attorney general to bring suit for the forfeiture of charters or any party interested in the properties can go into the courts for redress.

After hearing from both sides, the governor can direct the attorney general to proceed in the name of the state or he may decline and leave the parties who are interested to appeal direct to the courts themselves.

FIRED SOCIALIST DEPUTY.

Soldiers Remove Member of French Chamber of Deputies.

There was a dramatic incident in the chamber of deputies at Paris Saturday. During the discussion of the labor troubles at La Grand Combe, in the department of the Guard, noted for its coal mining, glass works and zinc smelting furnaces, M. Gerault Richard, a socialist deputy, referred to some of his colleagues as "police spies."

The chamber thereupon passed a vote to peremptorily expel him from the house. M. Richard, however, refused to leave and the president of the chamber, M. Brisson, sustained the sitting and sent for the guard on duty.

A moment or so later a squad of eight soldiers entered the chamber of deputies and the colonel in command placed his hand upon the shoulder of the socialist deputy, who thereupon consented to go with the officer, saying he yielded only to superior force.

WILL RECALL WEYLER.

Queen Regent of Spain Confirms Senor Canovas, the Premier.

A special of Sunday from Madrid says: The queen regent has confirmed Senor Canovas, the premier, in his ministerial powers, and the cabinet will remain in office with personnel and policy unchanged.

All of the leading members of the senate and of the chamber of deputies who were consulted by her majesty have advised the recall of Captain General Weyler from Cuba.

At a cabinet council at his residence Senor Canovas, the premier, announced that the queen regent had renewed his powers and those of the cabinet in terms most flattering to him and to all his colleagues.

TO INVESTIGATE WATTS' CONDUCT

Governor Ellerbe, of South Carolina, Names Members of a Court of Inquiry.

Governor Ellerbe, of South Carolina, has appointed the court of inquiry to sit in General Watts' case. The court will meet at Columbia and take the evidence.

The court consists of Brigadier General Joseph L. Stoppelbein, Summerville, first brigade of cavalry; Colonel J. G. Wardlaw, Gaffney, third regiment of infantry; Captain Henry T. Thompson, Darlington; Darlington Guards.

Senator S. G. Mayfield, of Barnwell, as judge advocate general on the governor's staff, will prosecute the case.

BANK PRESIDENT SUICIDES.

McConnell, Accused of Crooked Transactions, Puts Bullet in His Brain.

At Ocala, Fla., Saturday afternoon, R. B. McConnell, the defaulting president of the defunct Merchants' National bank, sent a bullet crashing through his brain, dying instantly.

The deed was committed at the home of his brother-in-law, W. K. McDonald, where he and his wife and mother were taking dinner.

It seems that the receiver of the Merchants' National bank made some new developments in the bank's business that showed up very badly against McConnell. He at once communicated them to United States Commissioner D. S. Williams, who at once issued a warrant for McConnell's arrest. This was placed in the hands of a deputy United States marshal, who proceeded to McConnell's residence. He learned there that the bank president was at dinner at Mr. McDonald's.

When he went thither and read the warrant McConnell asked for permission to go up stairs and get his coat. In about two minutes the household was startled by the loud report of a pistol, and the fall of a heavy body on the floor told the tale. The officer rushed up stairs only to find McConnell breathing his last with a big hole in the right side of his head over the ear and a smoking revolver still in his hand.

TRIED TO KILL WHOLE FAMILY.

Story of a Midnight Assault Supposed to Have Ended In Lynching.

News has been received of a fiendish crime which was perpetrated at Orangedale, Fla., about twenty miles from St. Augustine, in which an endeavor was made to murder a whole family. The details are meagre.

The story is that a negro supposed to be Isaac Barrett, entered the home of H. J. Hewson, a farmer, and murderously assaulted Mr. Hewson, his wife and seven-year-old son while they slept. All were hit on the head with a piece of scantling.

The daughter, Miss Maggie, grappled with the negro and so bravely did she fight him that he left the house. The son is said to be dying, but the parents may possibly recover.

Later on Barrett was arrested and the report is that a party of twelve men took the prisoner from the officers and a lynching was probably the result.

CONDEMNS THE SHERIFF.

Trouble at Urbana Laid at His Door, Causing Him to Leave the City.

A special from Urbana, Ohio, says that the city has resumed its normal condition and the scene has changed entirely.

Immediately after the trouble Sheriff McLain and Captain Leonard left for Springfield.

It was reported later that a mob of 150 was organizing to go to Springfield after the sheriff and such word went to Springfield, having the effect, it is said, of driving the sheriff off to Dayton.

Threats of getting the body of Mitchell and burning it were freely made. Before being removed from the courthouse yard relic hunters had nearly cut the coat off the dead man. Every button was gone and even his shoes and stockings were taken off and carried away.

GEORGIA DAY IN SENATE.

Saturday Session the Occasion of Speeches By Bacon and Clay.

Saturday was Georgia's day in the senate. The notable features of the tariff discussion during the day were furnished by the Georgia senators. Senator Clay delivered his maiden speech as a member of the body, and Senator Bacon spoke at length upon a feature or the tariff of special interest to Georgia.

This was the lumber schedule, and in favoring the tariff on lumber as against a motion to put it on the free list, Senator Bacon took emphatic grounds against the doctrine of free raw materials, as did Senator Clay in the more elaborate speech in which he discussed this and other features of the tariff measure.

ASK BARRETT'S RETENTION.

President McKinley Receives a Telegram from Bangkok.

A cablegram from Bangkok to the Associated Press says that the Americans of Siam have signed a unanimous petition asking President McKinley to retain John Barrett as United States minister to Siam. The dispatch is signed: "Hays, Bennette, committee."

PRESIDENTIAL NOMINATIONS.

Names Are Sent to the Senate by McKinley For Confirmation.

The president has sent the following nominations to the senate:

Andrew Barlow, of Missouri, to be consul general to the city of Mexico.

Harold S. Van Buren, of New Jersey, to be consul at Nice, France.

Carl Bailey Hurst, of the District of Columbia, now consul at Paraguay, to be consul general at Vienna, Austria.

Henry V. Morgan, of Louisiana, to be consul at Horgen, Switzerland.

William W. Canada, of Indiana, to be consul at Vera Cruz, Mexico.

Louis A. Pradt, of Wisconsin, to be assistant attorney general.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

THOSE POLISHED FLOORS.

She: Do you like to slide on toboggans?

He: Yes!!!

The Call will be sent to any address in the United States or Canada for one dollar per year.

Boy (on the stump, who has been patiently watching the strange angler for about an hour): "You ain't caught anything, 'ave yer?"

Stranger: "No, not yet, my boy."

Boy: "There wasn't no water in that pond till it rained last night."

THE USUAL WAY.

Geraldine: Oh, yonder comes Mr. Beggents. Are you acquainted with him, Clementine: No; that is, only partially. We were in the mountains last year, and as he was the only man at the hotel, we were engaged during June, July and August. It was only a passing acquaintance, however.

CHILTO

VOL. I. NO. 11.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

EXPLANATORY.

Owing to a break-down on the part of some of the printing machinery, we find it impossible to furnish our usual amount of home and editorial matter this week. Will make up for it in our next issue.

Charles Hayes, a negro, near Jemison, stole $30 from Albert Simons, another negro and on Monday morning was arrested. He was taken before a justice of the peace, where he waived examination and, Tuesday morning, he was borne to the county jail.

Several parties have been inspecting the gold mines in the southern part of this county, near Verbena. It is probable that the mines will soon be developed.

Parties wishing to buy a bicycle can save money by calling at this office. We can sell you a good wheel for a little money, cash or on the installment plan.

Oliver Rierson left here Monday for Estheville, Ia. He has purchased a vineyard tract in Thorsby, and will return with his family in the fall.

Surveyors are at work this week in Clanton surveying out the new incorporation preparatory to making a new plat of that place.

M. Bard, of Ganado, Tex., was in Thorsby last Saturday, and made arrangements to purchase a vineyard tract.

The new school district incorporation at Jemison is being surveyed this week by the county surveyor.

Sam Thorson's new residence is nearly completed, and presents a fine appearance.

Some much needed improvements are being made about the hotel this week.

H. Rierson has moved his family in his new house.

PASSING OF JUDGE HUGH J. CALLEN.

One of the best known citizens of Chilton county passed away when Judge Callen, of Clanton, answered the inevitable summons that comes to all. For a period of eighteen years he was Probate Judge of this county, and administered the duties of his office with a dignity, ability and probity that commanded encomiums from all. His last days were days of suffering that he bore with Christian fortitude. He had a host of warm, personal friends in Central Alabama who heard of his death with a lasting and loving regret.

THE LATE MR. J. B. GRINLEY.

The subject of this brief sketch was born in Norway on September 14, 1866, but made his home in the United States from 1870 until the day of his death. After residing in the Northwest until his 30th year he came South in search of health, locating in Birmingham on December 15, 1896. But the lung trouble contracted in the cold climate of the higher latitudes had progressed too far for a cure, and desiring to be with people from his own country at the last, he moved with his family to our town on Jan. 25, 1897. Here he bought a tract of land, built a home, and waited for the inevitable end, that he felt had only been postponed for a little time. On the 9th of the present month his life went peacefully out, and he was borne to his final rest on the following day. He leaves a wife and four children, to whom the hearts of

time. A green-house and exper- arden is a new feature for this year, I saw tomato-plants a foot high. PASSING OF JUDGE HUGH J. CALLEN.

One of the best known citizens of Chilton county passed away when Judge Callen, of Clanton, answered the inevitable summons that comes to all. For a period of eighteen years he was Probate Judge of this county, and administered the duties of his office with a dignity, ability and probity that commanded encomiums from all. His last days were days of suffering that he bore with Christian fortitude. He had a host of warm, personal friends in Central Alabama who heard of his death with a lasting and loving regret.

THE LATE MR. J. B. GRINLEY.

The subject of this brief sketch was born in Norway on September 14, 1866, but made his home in the United States from 1870 until the day of his death. After residing in the Northwest until his 30th year he came South in search of health, locating in Birmingham on December 15, 1896. But the lung trouble contracted in the cold climate of the higher latitudes had progressed too far for a cure, and desiring to be with people from his own country at the last, he moved with his family to our town on Jan. 25, 1897. Here he bought a tract of land, built a home, and waited for the inevitable end, that he felt had only been postponed for a little time. On the 9th of the present month his life went peacefully out, and he was borne to his final rest on the following day. He leaves a wife and four children, to whom the hearts of whole community go out in this hour of their great bereavement.

Mr. Grinley was a good man, a loving husband and father, a true friend, and an upright citizen in all the walks of life.

Oscar K. Mullins, one of Chilton county's most respected residents, died at his home in Clanton on Sunday morning the 13th instant, at the age of 35 years, and was buried Monday afternoon in the family cemetery at Jumbo, this county. About eighteen months ago Mr. Mullins was taken sick with the measles and has never been well since that time. He was at one time a very prominent and influential business man in Clanton, and was well and favorably known in the county. A wife and two children are left to mourn his departure. They have the sympathy of a large circle of friends and relatives in their hour of sad bereavement.

PRESIDENT M'KINLEY

Addresses a Large Gathering in the Auditorium at Nashville.

In the Auditorium at the Nashville Centennial grounds last Friday, President McKinley addressed an immense crowd, speaking half an hour. In the course of his remarks he said:

"You have done wisely in exhibiting your resources to your own people and to your sister states, and at no time could the display be more effective than now, when what the country needs more than all else is restored confidence in itself. This Exposition demonstrates directly your own faith and purpose and signifies in the widest sense your true and unfailing belief in the irrepressible pluck of the American people and is a promising indication of American prosperity.

"The knowledge which this beautiful and novel Exposition gives will surely stimulate competition, develop your trade, increase your output, enlarge your fields of employment, extend your markets, and so eventually pay for all it costs as well as justify local sentiment.

"The men and women I see about me are from all parts of the country, and thousands more will assemble here before the Exposition is closed. Let ourselves and let them always remember that whatever differences about politics may have existed or still exist, we are all Americans before we are partisans and value the welfare of all the people above party or section. Citizens of different states, we yet love all the states. The lesson of the hour, then, is this: That whatever adverse conditions may temporarily impede the pathway of our national progress, nothing can permanently defeat it."

UNITED CONFEDERATE VETERANS.

One Thousand Camps Have Already Registered—More to Come.

Adjutant Moorman, by direction of General Gordon, commanding the United Confederate Veterans, has issued an order announcing that 1,000 camps have been registered in the United Confederate Veterans, with applications for over 100 more. He urges those Confederate soldiers and sailors who have not joined this benevolent brotherhood to at once organize and apply by letter or wire to the headquarters at New Orleans for proper papers, so as to be represented at the Nashville reunion and assist in devising means to help their more needy comrades and the widows and orphans of those comrades who have preceded us into eternity.

Nearly a Dozen Lives Lost.

After a day of real June weather the reports from New England show flooded rivers and lakes. The Maine and New Hampshire rivers are doing the greatest damage especially to manufacturing industries along their banks. The two days' loss record will include nearly a dozen lives lost and damage to railroad and mill property aggregating at least $500,000, distributed over a small territory.

To Curtail the Production.

At a recent meeting of the Southern Cotton Spinners' Association held at Charlotte, N. C., a motion to curtail the production of yarn mills 25 per cent. beginning June 15 was offered and adopted. The committee on freight rates reported that beginning June 15 the Seaboard Air-Line would make a rate of 25 cents per bale for cotton from all points on its line.

MR. GLADSTONE

Has Been Snubbed by the Managers of the Jubilee.

THE LIBERALS ARE INCENSED.

"What Kind of a Show is it that Gives Prominence to Turkish Barbarism and Excludes the Greatest Living Statesman of the Age?"

A telegram from London says: The The official programme of the procession of the Queen's jubilee festivities, as published, has given umbrage to the liberals, owing to the utter absence of recognition of the civil and industrial side of the Queen's reign.

The London Daily Chronicle is very outspoken on the subject, especially at the omitting of Mr. Gladstone and adds, "What kind of a show is it that gives a prominent place to the soldiers of Emperor William and to the Turkish barbarism, and excludes the greatest living English-speaking statesmen of the age?"

Continuing, the Chronicle remarks: "The Victorian era is conspicuous above all in the progress of labor and the steady growth of self-government. Yet, the working classes are ignored. A still more striking fact is that the presiding officers of the two houses of parliament are not recognized. The speaker's office is centuries old. He is the first commoner in England, presides over the most famous representative institution and is the figure-head of a Democratic Government, yet he has no place in the procession. What will the colonies, who are wedded to pure Democracy, think of this?"

In conclusion, the Chronicle says: "If the crown has done anything for the country it is also true that the country has done much for the crown, for its own progress and for the general use of human welfare."

GOLD SEEKERS' FATE.

Total Extinction of a Party Who Went to Dig Gold in Bolivia.

The death of William H. Korn, of Leadville, Col., from yellow fever, in quarantine at New York, marks the total extinction of one party of prospectors who left Colorado last March to dig for gold in Bolivia. The other members of the party, Thomas Quayle, of Aspen, and Frank O'Keith, and William Hahn, of Leadville, died of the fever in Bolivia. Of another party of four who went from Colorado to Bolivia about the same time, only William Hurley survives, and he is reported to be ill in quarantine at New York. The fate of these adventuresome gold seekers will probably stop emigration from Colorado to South America for some time.

THE WORK OF FIENDS.

Diabolical Attempt to Cremate a Family Living Near Gallatin, Tenn.

About 2 o'clock Friday morning Mrs. John Stratton, who lives three miles west of Gallatin, Tenn., was awakened by the roar of fire, to find that her house was in flames. She at once began to get her children out, and they barely escaped with their lives. The house and entire contents were destroyed.

Upon investigation it was found that the smoke house, near by, had been robbed, and coal oil had been poured in profusion around the dwelling and then set on fire, which shows that it was the desire of the brutes to cremate the inmates.

The people of that section of the county are very much enraged over the brutal act, and if the felon is apprehended he will be dealt with severely. Up to date there is no clue to the guilty parties.

Woman Suicides in Church.

While services were being held in Calvary church, New York, last Sunday afternoon, an unknown woman walked into the vestibule and killed herself by shooting. Death was instantaneous. The services were stopped. Some of the women fainted. The suicide was well dressed, and apparently about 50 years old.

SWEEPING

EVERYTHING BEFORE IT

BIG SALE

OF SUMMER CLOTING

Bought at a price named by us, and selling at a price less than the cost of the raw material. This is the largest sale of Men's reputable Clothing at such, sweeping prices that has ever taken place in the Magic City. We have also started a

Shoe Sale

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$2.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

$3.50 for the Famous Royal Blue Shoe; factory price $4.00.

$2.48—Odds and Ends in Patent Leather, Calf and Cordovan; were good value at $4.00 and $5.00.

$2.48 for Tans, in all Shapes and Shades; their former price $3.50.

$1.98—These Shoes in Tans and Calf never sold for less than $2.50.

$1.35 for Men's Shoes, in all Styles that were formerly $2.00.

98c.—A good Shoe, that always sold at $1.50.

$1.29—Men's Oxfords, light, cool and neat; were formerly $2.00.

MAIL ORDERS ACCOMPANIED BY CASH

J. BLACH & SONS,

ONE PRICE

CASH CLOTHIERS,

1912-1914 First Ave.,

Birmingham, - Alabama.

Finland employs six thousand hands in paper manufacture, and is making itself felt as a competitor for the paper trade of the world.

The Imperial University of Tokio has undertaken the task of preparing an exhaustive history of Japan, and a committee of sixteen scholars is now at work classifying the voluminous materials.

Japanese cotton weavers prefer the long staple cotton of Texas to any other they can find for use in a majority of their manufactures from this staple. That accounts for the presence of Japanese buyers at the cotton exchanges of the South.

Electric lighting will cost New York City $1,250,000 this year. Philadelphia will spend $647,000 for the same purpose; Brooklyn, $360,000; Baltimore, $140,000; Cincinnati, $75,000; Washington, D. C., and St. Paul, Minn., $175,000 each; St. Louis and San Francisco, $100,000 each, and Buffalo about $125,000.

In North Topeka, Kansas, there has been found a father, avers the New York Sun, who gave his son twenty-five cents for doing some work about the house, but repented after the boy had gone to bed and picked the little fellow's pocket. To follow out his creed to the end, he reproved the child the next day for carelessness in losing the money.

The largest Lutheran synod in the United States is that of Missouri, which embraces many states within its limits. According to the latest statistics, it has 2916 ministers, 1915 congregations, and 380,000 communicants. It has also 1527 parochial schools, with 87,908 scholars. The number of baptisms last year was 36,233, and there were 18,167 confirmations.

Chancellor Day of Syracuse (N. Y.) university in an address to the Methodist conference, quoted the remark of a Methodist some years ago that the permission of baseball in the university would ruin the institution. But baseball was permitted, and, while its critic is dead, the number of students has increased from 630 to 1135. Dr. Day was enthusiastic in his approval of college athletics.

The total number of applications for patents for inventions during 1896 was 42,077. The total number of patents issued to citizens of the United States was 21,285, and to citizens of foreign countries 2027. New York heads the list of states with 388 patents, while Nevada stands at the bottom with nine. Connecticut leads in the proportion of patents issued to inhabitants, the total number of patents being 983 or one to every 759 persons in the state.

A few years ago the world rejoiced over the discovery of cocaine as a local anesthetic. Dr. Lambuth, declares a writer in the New York Press, who has been practicing medicine in Pekin, China, says that the Chinese have long had a similar anesthetic, the principal ingredient of which is frog-eye juice. It costs $2 an ounce, and is prepared in small, hard cakes, resembling beeswax, but of darker color and semi-transparent. He dissolved a piece in water, which required twenty-four hours, and tried the solution on his lips, hands and tongue, each of which became numb instantly.

The blind men of New York City are combining. Every year each total blind male adult who is a citizen of the United States, and who has resided in New York City for three years, is given a certain lump sum by the department of public charities. Last year each deserving member of this class got $50. Since the agitation of the Greater New York scheme these men have been troubled. They fear that when the nightless adults of Brooklyn, Long Island City and other places are brought into New York the individual allowance will be cut down. They are going to protest. They have formed an association, with dues of ten cents per month, and the money will be used to defray the expenses of making a proper representation of their claims. If last year's figure is made the permanent rule they will be satisfied.

OPPORTUNITY.

Master of human destinies am I!
Fame, love and fortune on my footsteps wait.
Cities and fields I walk; I penetrate
Deserts and seas remote, and passing by
Hovel and mart and palace, soon or late
I knock unbidden once at every gate.
If sleeping, wake; if feasting, rise before
I turn away. It is the hour of fate,
And they who follow me reach every state
Mortals desire and conquer every foe
Save death; but those who doubt or hesitate,
Condemned to failure, penury, and woe,
Seek me in vain and uselessly implore.
I answer not, and I return no more.
—The Watchman.

The Special Envoy.

BY CHARLES D. LESLIE.

When Pepworth Tring, the well-known South African millionaire, sent for me, and after inquiring if I was at liberty for a few weeks, said that he was about to commission me to take a small map to his Johannesburg representative, I was rather surprised that he should go to the expense of a special messenger when the postal service was available.

"It seems a very simple undertaking," I said.

But he speedily enlightened me.

"Ah, that's where you are wrong," he replied, giving me a shrewd glance. "In this case the post is not to be trusted, and an unscrupulous enemy will strain every nerve to defeat my intention."

My present employer, a well-known Kimberley man, who had lately turned his attention to the Witwatersrandt gold mines, was middle-aged, about fifty, but looked more, owing to the hard and adventurous life he had led. His tanned, weather-beaten face appeared commonplace enough, but behind the small steady gray eyes lay a quick brain and unerring judgment. Few, indeed, could boast with any degree of truth on ever having got the better of Pepworth Tring. As a judge of diamonds also he had barely an equal. All this I know from common hearsay.

"You anticipate there will be an attempt to rob me during the journey?"

"I am quite sure of it. The matter on the face of it is simple enough. This map,"—(he held up a small piece of parchment a few square inches in size—it appeared to represent the course of a river, some red crosses were marked on one portion, and some lines of writing ran along the bottom) "has to be given to Mr. Howard, of Fox street, Johannesburg. There your mission ends. But whether you will be able to accomplish it is another matter. Gibson, my old partner, is determined to obtain possession of this map by some means; he is rich, unscrupulous, and can command the services of men even more unscrupulous than himself. This is the reason I do not trust the post. The corruption prevalent among all Bore officials extends to the Post Office; my letters have been opened. He has creatures there in his employ. You must trust no one, and conceal the paper in such a manner that it cannot be found."

"But while on board ship it would surely be better to entrust it to the captain or purser?"

"That would be risky, and only postpone their attack on you. If you received the map back safely you would without doubt be robbed of it between Capetown and Johannesburg. No; when the boat reaches Capetown, they must be under the impression that you are not the bearer."

"When am I to leave London?"

"The Roman leaves the docks tomorrow and Plymouth on Saturday. Your berth is booked; Gibson is also a passenger, and several of his following. But perhaps I had better explain why this map is so important.

"Gibson, like myself, is an old Kimberley man. We both did very well there, and lately, like me, he has been dealing in Transvaal mining property. We have often gone partners in various undertakings. In the autumn of '94, being then in Johannesburg—about six months ago—and feeling the want of a holiday, I determined to go on a shooting expedition through the Transvaal towards the sea. Accompanied by two Zulus, I carried out my intention, and after some weeks' traveling we found ourselves in the low country bordering on Swaziland. Here quite by chance I made a remarkable discovery. In the dried-up channel of what had been a river I came upon traces of diamonds. The find to my eyes was most promising, but before I could pursue my investigations further, one of my Zulus dispatched to get food from a neighboring kraal, came hot-foot with the news that the Swazis were up in arms. Irritated by some act of Boer oppression, they seemed inclined to wreak their vengeance on me, and we fled forthwith for our very lives. Before leaving, I drew up a plan of the place, so that it could be found again.

"After various adventures I reached Durban, and took ship for England. Meeting Gibson in London, I acquainted him in general terms with my discovery, stating that in course of my journeying I had found diamonds. I had intended to take him into partnership in this affair, but the knowledge which I gained immediately afterward that he had swindled me in the matter of some gold mines changed my purpose, and I broke with him for good.

"Now the value of my find is problematical. Diamonds have not yet been found in paying quantity in the Transvaal. This place may be a second Kimberley, and shake the De Beers monopoly. It is quite possible. Therefore I want the ground pegged out in the usual way, and to register myself as the owner; but if Gibson could get hold of the map he would forestall me. It is not convenient for me to go myself just now, as I have some important business in hand; so not to delay obtaining the claims, I have ordered Howard to peg them out and register in my name, but he can do nothing until he has the particulars contained in this. Now, do you understand?"

"Yes; but how far is Gibson cognizant of your plans?"

"He has found out that I intend sending the map immediately to Johannesburg. This office is watched; you will be shadowed on leaving, and when they find that you are a passenger by the Roman they will conclude that you are my messenger. It will be your business to nullify that belief."

"I see."

"You had better pretend to be a new submanager sent out by me to represent my interests in Johannesburg. Now, can you, do you think, conceal the map in such a way that these thieves cannot get hold of it?"

I sat silent a few moments thinking over the situation, then my eyes strayed to some books lying on the table between us. I took up one. It was "Lock on Gold," a standard work.

"I will do my best," I said at length.

"Trust no one," concluded my employer, giving me money for my journey and the best ticket. "Rely on yourself alone. Put the map in your breast pocket for the present, but find a securer hiding place before you go on board. Good-by, and good luck to you."

My preparations were soon made, and the following morning found me on board the Roman. I had reduced my luggage to as small a compass as possible. It consisted of two small portmanteaus which would go under my bunk, some wraps, and a few novels, with "Lock on Gold," the latter obtained from my employer to sustain my character as a mining manager, and with its covers encased in gray calico. I had joined the ship at the docks to avoid the crush at Waterloo, and to see the mouth of the Thames. There were two other men in my cabin, for the ship was full, every berth being taken, but they had not yet come on board, so I arranged my belongings at leisure, and then went on deck as we left the dock to smoke and view the river and the miles of wharves and shipping as we slowly and majestically steamed out to sea. The ship was nearly empty, and I passed a quiet twenty-four hours anticipating the coming duel which was to take place, and wondering if my simple scheme would be successful.

The mail bags and passengers came on board at Plymouth, and a scene of animation and confusion followed; but a rough sea and head wind calmed the exuberance of many of the company, and the dinner tables in the saloon that evening showed an abundance of empty seats. Both my cabin mates succumbed and I left them white and groaning. Fortunately I was a good sailor; and, having enjoyed my dinner, later in the evening found myself in the smoking room smoking one of "Jim" Gibson's cigars and engaged in a chat with that worthy, who was most friendly and evinced some curiosity about myself.

I told him my tale, which he accepted with perhaps suspicious readiness.

"Employed by Tring, are you? Peppery fellow; I know him well. We used to be friends; now he hates me like poison."

He introduced me to his friends, Spellman, Dunbarton and Vandermit, who severally expressed themselves delighted to make my acquaintance.

The first two or three days my adversaries only skirmished, tried to pump me, and dropped broad hints as to the advantages which would follow if I joined them—hints I ignored.

As, however, they felt pretty sure that I was the bearer of the coveted map, my portmanteaus were searched more than once, and my spare clothes when I was absent from my cabin. It was Spellman who was told off for this portion of the quest; finding I was not very cordial toward him, he struck up a friendship for one of my cabin mates, which gave him an excuse for entering at all hours. I did not think it advisable to enlighten the latter, as my attitude was to blandly ignore my adversaries' behavior.

Spellman's researches proving of no avail, the great endeavor to discover if I had the paper took place about a week after Madeira was passed. I was playing in a whist tournament, and noticed that Dunbarton and Vandermit were playing nap with the two men who shared my cabin. I guessed that Spellman was making a thorough search, and as soon as I was at liberty I hurried there.

It had indeed been thorough. Every article had been taken out of the portmanteaus and examined, and the portmanteaus themselves cut and hacked in search of a secret hiding place. Everything had been scrutinized; even the gray calico cover was pulled off "Lock" to make sure that nothing was between it and the binding. Nor was this all, for while I surveyed the wreck I became conscious of an overpowering feeling of drowsiness, and knowledge came to me that I had been drugged. Too late I remembered having just accepted a drink from Gibson; but I had only sense enough left to tumble into my bunk before falling into a heavy sleep.

They no doubt searched me to the skin that night, for I slept as the dead; but though I woke next morning with a bad headache, I felt well pleased, for no result had awarded their toil. Of course I made a fuss as to the conduct of some mysterious thieves, who had not even spared the lining of my boots, and certain inquiries were instituted which came to nothing. I innocently complained to Gibson as to the bad quality of his whiskey, and there apparently the matter ended, for I was molested no more.

I felt that I had won, as I saw by my enemies' manner that they had decided they were mistaken in imagining I had the map; but great cautiousness was still necessary till the journey's end. Never crow before you are out of the wood is an excellent piece of advice. Still, feeling that the worst was over, a sense of calm possessed me as I lounged in my Madeira chair, under the shade of the awning, for the tropical sun was very sultry, and made iced drinks a necessity instead of a luxury.

Gibson continued good friends with me, and often came and chatted as I languidly studied "Lock on Gold" in my deck chair. As a practical mineralogist, he pointed out the best parts to study, and I imbibed much information valuable enough had I designed to turn miner. He was an amusing man, and his creed simple enough—"Get money, honestly, if you can; but get money." A more efficient auctioneer for selling the numbers of the ship's run in the daily sweeps it would be impossible to find, and I enjoyed the privilege of acting auctioneer's clerk with "Lock" for a desk on my knee.

It was 4 o'clock on a Tuesday afternoon when we reached Cape Town, and Gibson managed to get away by that evening's train, leaving two of his followers to bring his luggage on next day when the rest of the passengers bound for the Rand travelled.

The third morning after landing found me in Fox street, Johannesburg, seeking Howard's office. I had just seen the name on the window, and had ascended the steps to the door of the building when a passer-by pulled up on recognizing me. It was Gibson.

"Hello!" he said, "where are you off to now?"

The time for caution was passed, victory was mine, and I could safely enjoy my triumph. I surveyed the baffled financier with a smile of infinite satisfaction, and replied:

"I am the bearer of a certain document from Mr. Tring to Mr. Howard."

From the expression on my face and the accent on my words, he read the truth, and knew I had baffled him, for he was taken quite by surprise, and bewilderment rendered him speechless.

Enjoying his discomfiture a few seconds, I turned and went in, leaving him on the pavement below the most unhappy man in Johannesburg.

Having entered the outer office and given my name to a clerk, I was speedily shown into Mr. Howard's private room. He greeted me warmly, and in the same breath inquired if I had been successful.

I said I had.

"That's good news. I've just got my mail and heard of your coming. Look—you see; the envelope has been tampered with! You are sure Gibson hasn't set eyes on the map?"

"Absolutely," I replied, then gave him a short account of the efforts made to secure it.

"Ay, ay, they wouldn't stick at much; you're fortunate to get here with a whole skin. But where is it after all?"

In answer I produced "Lock on Gold," and taking my penknife, cut off the gray calico cover, which I had put on again after it had been pulled off. Then inserting the point into the cover itself, I cut it open. There, snugly concealed, lay the precious map. I had, before leaving London, cut the cover open with a sharp knife, and placing the map in between, glued up the edges with great care. Being unable to absolutely conceal that the cover had been cut, I had put on the calico cover, and when it had been torn off by the eager searcher he had never noticed that the binding itself had been cut.

Thus safely and securely the map had travelled unseen by any eye, untouched by any hand, and now having placed it in the possession of Mr. Howard, my mission as a special envoy was over.

With the knowledge gained by the map, Howard took steps which very shortly made the land where Pepworth Tring found diamonds the property of that worthy, and I know no more, as nothing further has been heard of the discovery—no company has been publicly formed to work it. But I have a strong idea that the find turned up trumps, and that the reason of the silence is that it is too good a thing for the public to be admitted.—New York Journal.

Some Lawmaking Bodies.

In these days of belligerent small things, when almost any little insular nation may bob up and declare war against some other little nation too small to draw a bead on, it is essential that the general reader should recognize whether or not such a declaration is a forgery. If that declaration hasn't the endorsement of the legislative body it isn't loaded; but if the reader doesn't know the name of the legislative body, how is he to judge? Some of these lawmaking bodies which have the privilege of breaking a quorum and making pi out of English type may be named as below:

The reichsrath, Austria; the orzaggyules, Hungary; the chung chi ch'u, China; the nei wu fu, Korea; the rigsdad, Denmark; bureau des affaires Tunisiennes, Tunis; bundesrath and reichstag, German empire; landtag, Baden; reichsrathe, Bavaria; burgerschaft, Bremen; staatsministerium, Brunswick; diet, Mecklenburg-Schwerin; nerrenhaus and abgeordneten haus, Prussia; landstande, Wurttemberg; boule, Greece; senato and camera di deputati, Italy; imperiel diet, Japan; states-gentral, Netherlands; volkraad, Orange Free State; cortes geraes, Portugal; narodna-skhpshtina, Servia; senabodi, Siam; cortes constituyentes, Spain; storthing, Norway; standrath and nationlrath, Switzerland; ulema, Turkey.

In a good many of the lesser countries of the globe, of course the chief ruler is the whole thing, and a good deal harder to pronounce, as for instance, Shah Nasr-ed-din of Persia, and Chulalongkorn I. of Siam.

Where Engines are Curiosities.

In many parts of South Africa railways are comparatively a new departure, and in consequence a large proportion of the farmers are wholly ignorant of the way engines work, says London Answers.

One stalwart colonist who thought himself cleverer than his companions was standing on the platform at Bloemfontein, the capital of the Orange Free State, during shunting operations. He had been explaining the principles of steam motive power to an amused crowd, when suddenly the engine began to move backward, pushing a string of trucks.

His jaw dropped and he gasped out:

"I can understand how the engine pulls the trucks, but I'm blessed if I know how the trucks pull the engine back again!"

Then the crowd yelled.

An Explosive Bean.

A peculiar vegetable product of Java is a bean-like pod containing the seeds of the plant on which it grows. The seeds are distributed by the violent explosion of the pod when ripe. Dried pods, brought to Europe recently, exploded with a loud noise when thrown on water. The cause of the explosion appears to be that as the pod ripens a strong internal pressure is brought to bear upon the shell, though if plucked before they are quite mature the pods withstand the pressure until a sudden wetting weakens the tissues along the groove joining the two halves of the shell.

Bought a Husband for $3,000.

In an action for debt brought against Mrs. Julia Fritzley a few days ago it was discovered that she had deeded all her property to Peter Keeler, of Montgomery County, Pennsylvania. Mr. Fritzley swore that she was married to Keeler in Windsor, Broome County, N. Y., last January, and that he deeded the property to her in "consideration of his marrying her and for other considerations."

This is the first case on record in the county where a woman bought a husband. The property is valued at $3,000.—New York Press.

Novel Excavating Machine.

One of the most novel excavating machines of recent date has been patented by a North Dakota man, and consists of two immense earth augers attached to a portable upright frame and operated by power, the augers bringing the earth to the surface, where it can be shoveled to one side. When the excavation is deep enough the machine is moved forward to a new section of ground.

OR THE YOUNG FOLKS.

OVER AND OVER.

"Over and over, little lad,
The same thing over and over;"
So sings the robin from his nest,
And buzzes the bee in the clover.

"Every spring I build my nest,
Over and over, bringing
Tiny twigs and wee wisps of straw,
Toiling, dreaming and singing.

"Every day I search the flowers,
To find the hidden treasure;
Over and over, home at night,
I bring o'erflowing measure."

Over and over, every day,
The sun bursts forth in glory;
Over and over, soft, warm winds
Whisper the same sweet story.

Over and over mother toils,
And plans for one boy's pleasure,
Over and over bears with him,
And gives love without measure.

So weary not, dear little lad,
But bravely do your duty;
Over and over; then you'll find
The whole may bloom in beauty.

TRICKS WITH EGGS.

Fill a quill with quicksilver, seal it at both ends with good strong wax. Then have an egg boiled, take a small piece of the shell off the pointed end, and thrust in the quill with the quicksilver; lay the egg down, and it will not cease tumbling about as long as there is any heat in it. Or if you put quicksilver into a small bladder, it will jump about as long as it keeps warm.

Another trick is to offer to put an egg into a bottle, and let the neck of the bottle be ever so straight, the trick never fails. Steep the egg, shell and all, in very strong vinegar for some hours; in process of time the vinegar so softens it that the shell will bend and extend lengthways without breaking. Once within the bottle, pour in plenty of cold water, and the egg will recover its original shape and hardness.

THE MONKEY AND THE DITTY BAG.

Every petty officer and sailor in the American navy owns a ditty bag, writes "H. H." In it he keeps his needles and thread, his tapes and buttons, for repairs, and, above all, his treasures; his precious home letters also, and the pretty trifles he has picked up for his loved ones as he roams the boundless sea.

The name ditty bag comes from Dittis cloth, a Manchester stuff of which it was originally made. Until within two years each sailor provided his own ditty bag. Since that time the navy serves to all forward what they call a ditty box, which is divided into compartments to hold the haberdashery, and having a little mirror in the inner part of the lid.

The first time I ever heard of a ditty bag was in connection with the antics of a mischievous monkey on board a man-of-war. A sailor lad was one afternoon sewing some buttons on his jacket, his ditty bag lying beside him, crowded with its many treasures. The monkey seized it and ran, the lad giving instant chase. After dodging him at every turn, the monkey sprang out upon the bowsprit, and running to the extreme end, began beating the bag upon it, to the destruction of everything breakable within. Then fixing his eye upon the sailor with an expression of grinning defiance, he took the bag by the two corners at the bottom; after well loosening the string, and deliberately shook all the contents into the sea.

ANTS AS BIG AS DOGS.

In olden times people believed in all manner of fabulous creatures, and the scientists described them in all soberness just as if they really existed. One famous old writer, who was supposed to be very accurate, was telling about ants. After relating several stories about the common ants he says:

"There is another kind of ant up in Ethiopia which is the shape and size of a dog. They have strange habits, for they scratch into the ground and extract therefrom great quantities of fine gold. If any one wishes to take this gold from them he soon repents of his undertaking, for the ants run upon him, and if they catch him they devour him instantly.

"The people who live near them know that they are fierce and savage, and that they possess a great quantity of gold, and so they have invented a cunning trick. They take mares which have unweaned colts, and give them no food for three days. On the fourth the mares are saddled and to the saddles are fastened boxes that shine like gold. Between these people and the ants flows a very swift river. The famished mares are driven across the river, while the colts are kept on the bither side. On the other side of the river the grass is rich and thick. Here the mares graze, and the ants, seeing the shining boxes, think they have found a good place to hide their gold, and so all day long they fill and load the boxes with their precious gold, till night comes on and the mares have eaten their fill. When they hear the neighing of their colts they hasten to return to the other side of the river. There their masters take the gold from the boxes and become rich and powerful, but the ants grieve over their loss."

How is that for a traveler's story?

THE ELEPHANT'S TOOTHACHE.

It must be terrible for an elephant to have the toothache; particularly so if the ache is in proportion to his size. A dentist tells the following story of an elephant that belonged to circus:

He was very good-natured, but one day when his keeper went near him he made a vicious switch at him with his trunk. The keeper knew the elephant so well that he said at once that he was sick; something was the matter with him. He sat a safe distance and watched him. The elephant trumpeted loudly, and acted

unable to absolutely conceal that the cover had been cut, I had put on the calico cover, and when it had been torn off by the eager searcher he had never noticed that the binding itself had been cut.

Thus safely and securely the map had travelled unseen by any eye, untouched by any hand, and now having placed it in the possession of Mr. Howard, my mission as a special envoy was over.

With the knowledge gained by the map, Howard took steps which very shortly made the land where Pepworth Tring found diamonds the property of that worthy, and I know no more, as nothing further has been heard of the discovery—no company has been publicly formed to work it. But I have a strong idea that the find turned up trumps, and that the reason of the silence is that it is too good a thing for the public to be admitted.—New York Journal.

Some Lawmaking Bodies.

In these days of belligerent small things, when almost any little insular nation may bob up and declare war against some other little nation too small to draw a bead on, it is essential that the general reader should recognize whether or not such a declaration is a forgery. How is that for a traveler's story?

THE ELEPHANT'S TOOTHACHE.

It must be terrible for an elephant to have the toothache; particularly so if the ache is in proportion to his size. A dentist tells the following story of an elephant that belonged to circus:

He was very good-natured, but one day when his keeper went near him he made a vicious switch at him with his trunk. The keeper knew the elephant so well that he said at once that he was sick; something was the matter with him. He sat a safe distance and watched him. The elephant trumpeted loudly, and acted as though he was angry, but no one could decide what was the cause of the change in this good elephant's disposition. This continued for three days. At the end of that time one of the men said: "Why, when Jack (that was the elephant's name) lies down, he keeps rubbing one side of his head; I think he has got the toothache;" and everybody immediately said: "Yes; that's what's the matter."

The elephant was chained safely to posts and iron rings, so that he could not move, and the dentist was sent for. The dentist looked in his mouth and saw that one tooth was badly decayed. He touched it, and the elephant trumpeted as though in great pain; then the dentist went to work and filled the tooth. After a time the elephant seemed to understand that the dentist was trying to do something for his pain, and he gave every evidence of appreciating the attention. Some weeks later the dentist visited the winter quarters of the elephant and the elephant recognized him. It was rather an expensive operation, for it cost $100 to fill that one tooth.

Doubtless, then, the elephant's toothache is a larger ache than either you or I ever know when our teeth ache.

FISHING BY HAND.

Boys are sure to discover all manner of ways in which to have sport; and they are marvelously ingenious in finding new modes of capturing game; and in all of these they are apt to be reckless as to danger and consequences in regard to their clothing. This is well illustrated by the boyish practice of catching fish with the hands.

This mode of fishing can be practiced only in narrow streams; and the best sort of stream is such a one as is frequently found flowing through meadow lands. We will suppose that it is ten or fifteen feet wide, and from six inches to three feet in depth; its banks are mainly low and over-hanging; and along this we will follow a group of boys for a mile or two.

The boys are equipped with a bag to contain their spoils; and the one who is to do the fishing is provided with a pair of rubber boots. The method of procedure is for him to stretch himself at full length on the bank, with head and arms over the edge; then he stretches his hands as far apart as possible, thrusts them deep into the water, close to the banks, and then brings them slowly toward each other, feeling carefully for the fish. The fish may be frightened by one hand, and swim direct toward the other, which being pressed against the bank will be enabled to clasp it firmly. If the bank slopes considerably, some of the other boys will find it necessary to hold onto the feet of the fisherman, to prevent his falling in. When a fish is secured it is thrown out upon the bank, on the grass, and then deposited in the sack.

In the course of a mile of this sort of work, one is likely to secure several dozens of chubs, and mullets, and such common fishes as are usually found in meadow streams. In some cases, the boy with the boots on will find it advisable to wade into the water, and use his hands from that side; it is well to be prepared for both methods of work.

The mere taking of fish would not afford quite spice enough to satisfy the average boy, were it not for the fact that there is always a possibility of putting the hands upon some creatures not so gentle. We have followed this sport, sometimes, when in the course of a few hours several snapping turtles were flung out by a daring boy, with as much sang froid as the minnows themselves. We have also had a muskrat whirled through the air past our heads; while an occasional snake was taken for granted.

When the fishes in small streams are not disposed to bite, it is not a bad plan for the boys to thus go after them under the banks with their hands.

Elephant Cutlets for Dinner.

The greatest luxury at dinner in Central Africa is elephant steaks. Any big native feast without elephant's flesh is as rare as an English society dinner without venison.

In dressing the carcass of an elephant the rough outer skin is first removed in large sheets. Beneath this is a sub-cuticle—a pliable membrane, from which the natives make waterskins. The rib bones are cut out and stewed, but all the other bones are destroyed.

The most delicate part, very strangely, is the first joint of the leg below the knee, which one would suppose to be the toughest portion of the animal. This joint is cooked by being buried in a hole in the ground, a huge fire over the top supplying the heat.—Answers.

Human Density.

A French scientific writer points out that a mere gain in weight should not, in itself, be taken as an indication of improved bodily condition. It is, according to him, rather a question of the density than of the quantity of tissue that covers the bones. When increase of weight results from increased density, then the health is really improved. In order that this principle may be practically applied, he suggests the use of baths containing a known quantity of water, and supplied with appliances for measurement whereby the density of the immersed body may be calculated, in the manner in which Archimedes ascertained the density of King Hiero's crown of adulterated gold.

In 1894 Costa Rica exported 1,576,650 bunches of bananas, a first-rate bunch being shipped at a cost of about 25 cents. A single acre of this incredibly rich soil may yield 200 excellent bunches. One Costa Rica banana plantation covers 2471 acres.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press.

THE REASON

Trump—Do you think very much of Sayboy?

Grump—Yes, he owes me a hundred.

SINCERE LOVE.

"Did he marry for love, Storker?"

"Yes; for that love which is said to be the root of all evil."

HER AMENDMENT.

Brown—Yes, Miss Smythe and I were boy and girl sweethearts in the long ago.

Miss Smythe—Not so very long ago.

KNOWN AT LAST.

Chicago Little Boy—Mama, what is a York?

Chicago Mother—It is the iron that holds the front wheel of a bicycle.

SILENCING HER.

Leola—But, papa, why wont you le me study French?

Mr. Grump—Because, my dear, one tongue should be enough for any woman.

THE TIME TO FIND THEM.

"Parker tells me he has found his log."

"Yes, found him the next day after he assessor was around."

THE REAL THING THIS TIME.

Carmelita—Oh, Jack is back from Italy and he has a monkey that will black his shoes.

Her Aunt—He always was up to monkey-shines!

THE INEVITABLE ARGUMENT.

"Mrs. Saver must feel that she was very extravagant in buying that new gown."

"What makes you think so?"

"She's begun to argue that it will be the cheapest in the end."

A FAMILIAR FEELING.

Knocked-out pugilist (faintly)—Wuz me wife in de gallery? Are yer sure?

Bottle holder—Yes, why?

Knocked out pugilist—Are yer sure lat it wuzn't her dat wuz in de ring wid me?

NOTHING ELSE LEFT.

He—You say you married a Western man?

She—Yes.

"And that he never drinks?"

"Never."

"Nor smokes?"

"No, sir."

"Nor loses his temper?"

"That's what I said."

"When did he die?"

AN ABSURD PROJECT.

"Colonel, we are intending to erect an artistic drinking place in the centre of the park, and thought perhaps you might subscribe a small—"

"The project is sheer nonsense, Sir. Do you imagine fo' an instant that the city will grant a license?"

MERELY EXPERIMENTAL.

"I didn't know there had been any death in Miss Wayter's family."

"There hasn't. She's wearing black as an experiment."

"An experiment?"

"Yes, old Giltedge has proposed and she wants to see how she would look in mourning."

SOME NATURAL PECULIARITIES.

"I wouldn't like to marry an auctioneer," remarked Miss Northside.

"Why not?" asked Miss Manchester.

"Auctioneers are all morebid men."

"And I wouldn't like to marry a road commissioner."

"Why not?"

"He is likely to be wayward."

A BRUTAL PROCEEDING.

"Well, old man, I guess I'd better go home. My wife will raise a holy row even as it is."

"Why don't you do as I do, when you find you have stayed out too late?"

"What do you do?"

"I just keep on staying out, until I know she is scared and will be overjoyed to see me."

PERSISTENT, AS USUAL.

Agent—Here is a book, Sir, every gentleman ought to have—"Hints on Architecture."

Mr. Smallpurse—I have no use for it.

"But, Sir, it teaches you how to build a beautiful villa, a regular little palace, for only $5,000."

"I haven't $5,000. I haven't over $5 to my name."

"Well, the book is only $1."

A DEFINITION.

"Father," said the bright little girl "what is loaf sugar?"

"There are several kinds, my dear," replied Senator Sorghum. "The most important variety is that which enables a man by a little superior knowledge and prompt action to place himself beyond the necessity of working any more."

WHAT HE WANTED.

Publisher (impatiently)—Well, sir, what is it?

Poet (timidly)—O—er—are you Mr. Jobson?

Publisher (irritably)—Yes.

Poet (more timidly)—Mr. George Jobson?

Publisher (excitably)—Yes, sir, that's my name.

Poet (more timidly still)—Of the firm of Messrs. Jobson & Doodle?

Publisher (angrily)—Yes. What do you want?

Poet—Oh—I want to see Mr. Doodle.

A THEOSOPHICAL DEFINITION.

"Papa," asked Rollo earnestly, "what is a mahatma?"

"A mahatma, my son, is a man who talks through his hat."

"Papa, are you a mahatma?"

"No, my son, why do you ask that?"

"Because, to-day I heard three men say you talked through your hat."

"My son, they were mahatmas."

[illegible]

"Here's a story of a California girl who saved her life by a kiss," he said, looking up from a paper.

"How was that?" she asked, with interest.

"She was confronted by a desperate man"—he began.

"That's just the trouble," she broke in, scornfully. "You never seem to get desperate."

Immediately thereafter he gave her an imitation of a desperate man, and, while it was not very good, it served the purpose.

Impurities in the Atmosphere.

Professor S. H. Woodbridge, of Massachusetts Institute of Technology, says that although carbonic acid gas, or carbon dioxide, is by no means the only impurity in the air we breathe, it is the one which can be easily measured and furnishes a fair test of the others.

The best normal air contains three and a half parts to every ten thousand of carbon dioxide. The air in the streets of an ordinary city contains four and a half to five parts. The streets of London are on occasions charged as heavily as twelve parts per 10,000, and the air above an old graveyard is said to be sometimes as high as sixteen parts. This is all outside air. Within a public hall or a church the air will get much worse.

Mr. Woodbridge found in the Boston Theatre one evening air in the galleries which contained 49 parts carbon dioxide per 10,000, with other impurities in a ratio to correspond. The method of making these measurements is to exhaust the dry air from a dry bottle of known size, and let it fill up with the ordinary air of the room, of course continuing the exhaustion long enough to secure a fair sample, and then subject that sample to chemical tests.

Another interesting fact is that it is the combustion, particularly of coal, which loads the air of our city streets with carbon dioxide, rather than the breathing of living animals. Compared with a huge chimney over a steam boiler, a room full of people is very harmless.

The "Rope Cure" for Grasshoppers.

The intelligence of scent of the red-legged grasshopper enables it to select its food while on the wing in the air, where by some process of signalling known only to itself, it gathers a great army of its kind to descend with massed force on the field beneath when a forty-five acre field of corn will only afford them a single meal.

Last year the grasshopper reports sent to the University of Nebraska at Lincoln caused apprehension of an invasion this year, as great quantities of eggs had been deposited in the soil over a large area of country, and those eggs are expected to furnish an army of active "locusts," as they are technically named.

Farmers call them "hoppers," but the college entomologist talks knowingly of "M. Atlantis," "Packardi" and "Camnula Pellucida."

In Utah they have what they call a "rope cure" for the pest, and every man, woman and child takes part in the performance. It consists of drawing ropes, held taut by persons at each end, across the back, over the fields of grain, so that Mr. Grasshopper shall not find any room for the sole of his foot, and they keep this seesaw up until he is starved out.

No doubt the agricultural college will find a way to meet another visitation with some exterminating process when the migratory locust will migrate to a clime where he will disturb no more, whither forbears of his ilk have gone.—Chicago Times-Herald.

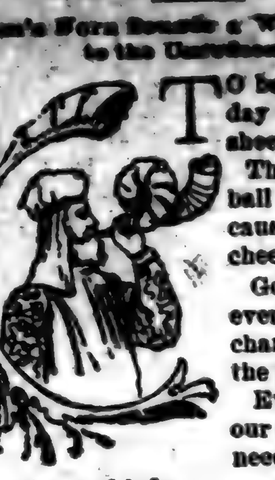
Cheerfulness in a Medicine.

Surprising recoveries occasionally happen which can be ascribed to no other cause than a cheerful state of mind and the healthful nervous influence which it diffuses through the frame. A singular but instructive instance fell under the observation of Sir Humphrey Davy, when, early in life, he was assisting Dr. Beddoes in his experiments on the inhalation of nitrous oxide. Dr. Beddoes having inferred that the nitrous oxide must be a specific for palsy, a patient was selected for trial, and placed under the care of Davy. Before administering the gas Davy inserted a small thermometer under the tongue of the patient to ascertain the temperature. The paralytic man, wholly ignorant of the process to which he was to submit, but deeply impressed by Dr. Beddoes with the certainty of its success, no sooner felt the thermometer between his teeth than he concluded the talisman was in operation, and, in a burst of enthusiasm, declared that he already experienced the effects of its benign influence throughout his whole body. The opportunity was too tempting to be lost. Davy did nothing more, but desired his patient to return on the following day. The same ceremony was repeated, and the results followed, and at the end of a fortnight he was dismissed cured, no remedy of any kind except the thermometer having been used.—New York Ledger.

Hounding of deer is to be prohibited in New York State during the next five years.

TRUMPET CALLS.

Ram's Horn Sounds a Warning Note to the Unredeemed.



To be a lion for a day would spoil a sheep forever.

The cheer of the ball room has caused many a cheerless life.

God will give every Daniel a chance to go into the lion's den.

Every man is our neighbor, who needs our compassion and help.

Every blow aimed at the saloon, is bound to hit the devil somewhere.

It is a long start toward evil, to move in a circle that is moving away from Christ.

The giants who frighten us most often turn out to be common-sized men on stilts.

The man who wears a face like a coffin, should not complain if he finds no welcome.

Nobody ever goes to a ballroom companion for comfort when there is death in the house.

The Christian should always be found doing something that the devil doesn't want him to do.

When we bring our lives into harmony with God's will, he will see that our rights are protected.

Let all who claim to be on the Lord's side be there in reality, and the powers of evil will soon be routed.

Teach a boy no higher morality than that honesty is good policy, and he will only be honest when it is policy.

Every fine picture on the walls of a gin palace, or hotel bar, strips more than one home of its last decoration.

It is because the pocket of the brewer is better filled then that of the preacher that he has more influence in politics.

If the glamour and glitter could be taken out of sin, the devil's right arm would be cut off close to the shoulder.

We are more apt to get what God wants us to have when we are not in too much of a hurry to choose for ourselves.

It is doubtful if even angels ever weep any over the man who never finds out where the mud is, until he gets into it up to his neck.

The devil is still making some people believe that they are doing all the Lord expects, if they spend an hour or two each week in church.

The man who falls on a banana skin once will have sympathy, but he will only make fun for the boys the next times he lands on his back.

There is something wrong with the man's head, who has to have the delirium tremens before he will believe that liquor will hurt him any.

When you get where you feel the need of something that only the Bible can give, you will feel differently from what you do at an infidel lecture.

The thing that makes hell possible, is that so many hellish things can show a certificate of good character, from those well up in public and social life.

The chapter telling of Abraham's great trial; begins thus: "After these things God did tempt Abraham." God always knows when to call for our Isaac.

STATE NORMAL COLLEGE.

The Peabody Fund Agent, Hon. J. L. M. Curry, once an honored Congressman from Alabama and late U. S. Minister to Spain, joins State Superintendent Dr. J. O. Turner of Alabama and the State Normal College authorities in holding an annual Peabody Summer School of Pedagogy for Alabama Teachers. This is held along with the College classes during four weeks, June 1, to 24, and 150 teachers and candidates for teachers, are now in attendance there, and many more are expected to enroll, yet.

The Dothan School Board requires their entire corps of teachers to attend this Training School for Teachers and prepare for better and better work in their schools, and increase salaries to enable their teachers to do so. It would be well if every city and town School Board would insist thus upon Professional Training for their school teachers, and it begins to be almost a necessity that teachers should take a course of training, thus.

The State Normal College of Troy has many calls for trained teachers, and the college is sending out scores of such every year, as it is glad to do. School Boards may rest assured that their calls for trained teachers will have prompt attention. Dr. E. R. Eldridge, the President, takes pleasure in thus helping to make better schools in Alabama.

One thousand bills have been introduced in the Minnesota house of representatives. Probably most of them are counterfeit, and will not pass.

It is proposed to call New York "Manhattan." This is an Indian name signifying, "The place where we all got drunk together."

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

The Imperial University of Tokio has undertaken the task of preparing an exhaustive history of Japan, and a committee of sixteen scholars is now at work classifying the voluminous materials.

Japanese cotton weavers prefer the long staple cotton of Texas to any other they can find for use in a majority of their manufactures from this staple. That accounts for the presence of Japanese buyers at the cotton exchanges of the South.

Electric lighting will cost New York City $1,250,000 this year. Philadelphia will spend $647,000 for the same purpose; Brooklyn, $360,000; Baltimore, $140,000; Cincinnati, $75,000; Washington, D. C., and St. Paul, Minn., $175,000 each; St. Louis and San Francisco, $100,000 each, and Buffalo about $125,000.

In North Topeka, Kansas, there has been found a father, avers the New York Sun, who gave his son twenty-five cents for doing some work about the house, but repented after the boy had gone to bed and picked the little fellow's pocket. To follow out his creed to the end, he reproved the child the next day for carelessness in losing the money.

The largest Lutheran synod in the United States is that of Missouri, which embraces many states within its limits. According to the latest statistics, it has 2016 ministers, 1915 congregations, and 380,000 communicants. It has also 1527 parochial schools, with 37,908 scholars. The number of baptisms last year was 36,233, and there were 18,167 confirmations.

Chancellor Day of Syracuse (N. Y.) university in an address to the Methodist conference, quoted the remark of a Methodist some years ago that the permission of baseball in the university would ruin the institution. But baseball was permitted, and, while its critic is dead, the number of students has increased from 630 to 1135. Dr. Day was enthusiastic in his approval of college athletics.

The total number of applications for patents for inventions during 1896 was 42,077. The total number of patents issued to citizens of the United States was 21,285, and to citizens of foreign countries 2027. New York heads the list of states with 388 patents, while Nevada stands at the bottom with nine. Connecticut leads in the proportion of patents issued to inhabitants, the total number of patents being 983 or one to every 759 persons in the state.

Congressman Bailey of Texas is not the first man of national prominence to rebel against the wearing of society's evening uniform, recalls the New York Times. Most of his predecessors in revolt, however, have based their action on mere personal taste or comfort, and have not claimed that the funny little black coat would lead them so far into the giddy world of fashion that official duties would be neglected or forgotten. The late Hon. R. S. Spofford used to tell us of an exciting experience he once had in trying to keep General Caleb Cushing in a "swallow-tail" at some great public entertainment. The general fussed and fumed for a while in the unaccustomed garment, and at last, drawing Mr. Spofford into a recess, said: "Take this blamed thing off and give me something else, or I will go in my shirt sleeves!" The coat came off, and the old blue coat with brass buttons went on.

Professor Powers Chosen.

Professor James K. Powers, of Florence, will be the next president of the University of Alabama.

The nominating committee of the board of trustees, composed of Mr. James E. Webb, of Birmingham; Judge William Richardson, of Huntsville, and Judge W. S. Thorington, of Montgomery, met Tuesday morning at the office of Mr. Webb in Birmingham.

As the result of their conference Professor Powers was nominated for the University presidency. His nomination is equivalent to an election, as it is understood that the full board of trustees has pratically clothed the committee on nominations with complete power in the matter of filling the University chairs.

The dean of the law faculty was not chosen, nor were any other selections that might have been determined upon given out.

A Brief Sketch.

Professor Powers is the president of the State Normal School at Florence. He is one of the best known and ablest educators in Alabama. The following brief sketch of him is taken from the "Memorial Record of Alabama," published in 1893:

"James K. Powers, A. M., President of the State Normal School at Florence, Ala., was born in Lauderdale county, August 15, 1851. He was educated at the Florence Wesleyan University, and University of Alabama, and was a tutor in the former institution in 1870-71. In 1873 he was graduated from the State University, with the degree of Master of Arts, when that institution was granting that as a graduating degree, for a grade of ninety or over in every department in the institution. Immediately after his graduation, he was appointed Professor of Mathematics in the State Normal college.

In 1888 he was elected president of the Normal college, and was re-elected in 1890 and 1892. Under his presidency the Normal college has reached the highest point of efficiency and attendance in its history. The average attendance in 1891 was 291, whereas the highest enrollment, previous to his election to the presidency, never exceeded 240 in any one year. It has attained the position of a Normal school, principally under his management. Professor Powers was one of the originators of the Alabama Educational Association, and has served as chairman of the executive committee for two years, and president for one year. He has a very extensive acquaintance among the teachers of the South, and has probably supplied more places with teachers than any other man in the South. He is a member of the Methodist Episcopal church, is a Knight of Pythias, and is a Past Grand Dictator for the state in the order of the Knights of Honor. He was married January 30, 1879, at Nashville, Tenn., to Miss Lula Reynolds, daughter of the late Calvin A. Reynolds, of Giles county. As Professor Powers' connection with the Normal college dates from the first day of the first session, he is now completing his twentieth year's service. Every graduate and under-graduate sent out by the institution (hundreds in number) has passed through his hands. These fill many of the most important positions in Alabama. To know these facts is to realize the influence that Professor Powers has had in molding the educational sentiments of the state."

BALLOON DISASTER.

Two Aeronauts Meet With a Fearful Death in a Balloon Car.

At Berlin Herr Wolfert, an aeronaut, accompanied by a machinist named Knabe, made an experimental ascent in a so-called steering air ship from the Tempelhof common last Saturday. When the balloon, which had been filled at the military balloon establishment, had reached a height of 3,000 feet, a loud explosion was heard and the next moment the balloon was seen to be ablaze. The car, which was also on fire, detached itself from the burning silk and fell wih great rapidity to the ground.

Both of its occupants were found to be dead. Their bodies were horribly burned. It appears that the benzine used in the steering motor exploded, causing the disaster.

SANTA TERESA.

The Maiden Who Was Banished From Her Country.

Santa Teresa, the Mexican maiden, who was banished from Sonora, Mexico, five years ago, because of her wonderful cures and influence over the Mexicans, left El Paso, Tex., for Morenci, Arizona, after a residence of one year in El Paso. Over 200 Mexicans were at the depot to bid the living saintess adieu, including some elegantly dressed aristocratic looking women, who crowded around to kiss Santa Teresa's hand. She explained that they were going to Arizona, where her father could work in the mines and she would not be in hourly dread of being kidnaped.

UNIVERSITY OF GEORGIA.

Women May be Admitted on an Equality With Men.

Chancellor W. E. Boggs, of the University of Georgia, in a report made to the board of trustees at Athens last week recommends the admission of women to the university on an equality with men. The women of the state have been conducting an agitation to this end for several years past, and the chancellor's recommendations is the first practical result of their labors. It is not known what action the trustees will take, but the tone of Mr. Boggs' reference to the matter ir construed as indicating that he has good ground for expecting his suggestion to be put into effect.

CAUSE OF YELLOW FEVER.

Physicion Hopes to Discover a Serum for Preventive Vaccination.

At Montevideo, Dr. Sanaralli, in a lecture delivered before delegates from all parts of South America, members of the diplomatic corps and others, announced recently that he had discovered the cause of yellow fever to be a baccillus which he had named leteroid and which was very rare. He explained that it infested the blood of parents and their bodies after death. The baccilli, he continued, could be easily eliminated by secondary injections, and he hoped soon to discover a curative serum for preventive vaccination.

KILLED HER HUSBAND

By Beating His Brains Out With a Hammer.

Near Tillar, Ark., a few days since, Mrs. P. A. Wilson killed her husband by beating his brains out with a hammer. Wilson was a well-known lumberman and brother of T. C. Wilson, formerly president of the T. C. Wilson lumber company, of Tillar. After committing the deed Mrs. Wilson surrendered to an officer. According to Mrs. Wilson's story she and her husband lived unhappily and her husband had often persuaded her to commit suicide with him.

THE STATE NORMAL AT FLORENCE, THE BEST IN THE SOUTH.

JAS. K. POWERS, President.

DR. MAYO TO GOVERNOR JOHNSTON.

Dr. A. D. Mayo, of Boston, spent a month last spring in visiting the several institutions of learning in Alabama. The following extracts are from a letter to Gov. Johnston under date May 8, 1897.

"During the past 17 years I have visited every State Normal College in the 16 Southern States.

* * * * * * *

"I can honestly say that in all my experience in the South, I have seen no State Normal which seems to me to have more completely grasped the true idea of that style of school or more completely carried it out than the one at Florence. * * * * * *

"I have never seen in any State so much good work done for so small a sum of money as I see here at the State Normal at Florence."

Prices reasonable and first-class workmanship.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping ageong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

THE TOWN OF HAY.

The town of Hay is far away.
The town of Hay is far.
Between its hills of green and gray
Its winding meadows are.
Within the quiet town of Hay
Is many a quiet glen,
And there by many a shaded way
Are homes of quiet men:
And there are many eyes alway
That turn with longing night and day,
Back to the town of Hay.

Within that good old town of Hay
There was no pride of birth,
And no man there pursued his way
A stranger in the earth.
And none were high and none were low
Of golden hair or gray,
And each would grieve at other's woe
Down in the town of Hay.
And many a tired soul today,
Mid crowded thousands far away,
Weeps for the town of Hay.

A road leads from the town of Hay
Forth to a world of din,
And winds and wanders far away,
And many walked therein,
For in the crowds of toil and stress
Their restless footsteps stray,
Their souls have lost the quietness
Of that old town of Hay.
But in some respite of the fray,
In transient dreams they float away
Back to the town of Hay.

Old men are in the town of Hay
Amid its quiet trees,
Who dream of strong sons far away
Upon the stormy seas,
Old mothers when the twilight dew
The woodbine leaves has pearled,
Dream of their boys who wander through
The wideness of the world.
And tears fall in the twilight gray,
And prayers go up at close of day,
In that old town of Hay.

A hillside in the town of Hay
Is slanting toward the sun
And gathered 'neath its headstones gray
Are sleepers one by one.
And there are tears in distant lands
And grief too deep for tears,
And farewells waved from phantom hands
Across the gulf of years.
And when they place that headstone gray
It crushes hearts so far away
From that old town of Hay.
—Sam Walter Foss, in New York Sun.

The Moonshiners' Revenge.

The little group had been indulging in reminiscences through the smoke of their cigars. The stories had taken on a tragic turn. In the party was a Representative from a Southern State, and when the others stopped as though it had come to his turn he was slow to break the silence. He ran his fingers through his mass of iron-gray, hair as if in meditation and then leisurely consulted his watch.

"I might tell you a bit of history," said he, "a story which was familiar to almost all the inhabitants in our section some thirty years ago, but I do not know that I can expect you to believe it, things are so different now than they were then, you know."

There was a general request to "go on," and during the time consumed by the Congressman in relating the story each one present sat as if bound by a spell, no one uttering a word from start to finish. This is what he said, to the best of my recollection, and I paid strict attention to every word he uttered:

"At the time this little tragedy was enacted the mountainous regions of our state were infested with illicit distillers. They were dangerous men, and as reckless of the consequences of law-breaking as they were dangerous. It happened that one day, after an exciting chase, a sheriff's posse overtook and captured two of the moonshiners who were wanted, and as a result of the trial which followed, each received a long sentence in prison. I remember the incident quite well and I recall with distinctness that there were many threats, some of them made openly, that the witnesses for the prosecution would suffer dire consequences for having taken the parts they did. One of these witnesses was a man of middle age, as fearless as a lion, who lived in a small log cabin, some three and a half miles from the county seat where the trial had been held, in an isolated mountainous region. He lived with his son, a young fellow, born and reared in the section, a man who had seemingly inherited the courage and vigor of his father. He was one of my own age, and as I was, and have since been, on intimate terms with him, I am able to relate the incidents which occurred in an accurate manner.

"Scarcely a week had elapsed from the time the pair of moonshiners were convicted when the old man was surprised one afternoon, an hour before sunset, just as he was entering his cabin home. Two men had their rifles leveled at his breast, and, being taken unawares, he had no course left but to throw up his hands as they commanded. As it turned out, had the outlaws been content to shoot their victim then and there and thus ended the affair it would have been well for them, but they were intent upon torturing their enemy and the means they employed were the most fiendish and cold-blooded that a pair of cut-throats' minds could well conjure up. They followed the old man into his home, bound his hands securely behind his back, tied his feet tightly together and finally lashed him in an upright position to the stonework of the fireplace. They next gagged their prisoner, dragged the heavy article of furniture which answered for a table to a position in front of him, placing an old-fashioned chair on its top. In another moment they had securely fastened the barrel of the old man's rifle to the chair, in such a manner that its muzzle was directly on a level with his heart. One of the villains next produced a piece of stout cord, carefully made a slip-noose in one end and drew the noose tightly over the hammer of the weapon. The other end of the cord was soon fastened to a convenient nail in the wall at the other side of the room, after which, with deliberate coolness, the heavy table and chair were pushed a little nearer the bound man until the rifle was almost at a full cock. It would be difficult for any man accustomed though he might be to danger and death to imagine the feelings of the prisoner as he realized that the severing of the cord meant instant death! He was not left long in suspense as to the nature of the death-dealing means his enemies had prepared for him, for in a shorter time than it takes to relate it, they had taken a candle from the window sill, lighted it, placed it conveniently upon a small box they had placed upon the table in such a manner that the flame had but to burn a half hour until it should reach the cord and burn it in two. And in another moment, with a few taunting remarks, they were gone.

"How the helpless man must have longed for the return of his son! How he must have watched with bulging eyes and fainting heart the flame of doom burn closer and closer! It was a situation to drive the strongest man to madness. But I will not dwell at any length upon that sad portion of the story. A few moments more, shortly before sunset, the son came down the lonely mountain road, whistling a merry tune. Wholly unconscious of what he should find, he approached his cabin home, tried the door and found it securely locked. Not a sound came from within. Still unaware that anything unusual had happened, he placed his rifle beside the door and walked slowly to the first of the two windows the cabin contained. It was fastened, nailed securely from the inside. A look inside and a wonderful change came over him. He rushed frantically to the one remaining window, only to find that it also resisted his best efforts to open it. At this moment the father's eye rested upon the form of his son, and tears of gratitude wet his rough cheeks. There was not an instant to lose—a less observing man than the son could have seen that. In the fraction of a minute he had gained possession of his trusty rifle, shoved the muzzle through the window pane and fired. His nerve was not the steadiest nor the light the best, but simultaneously with the discharge of the weapon the flickering flame of the candle went out and the whole weight of the pinioned man's form tested the strength of his bonds. He had fainted! With a muttered curse, knowing not but his father was dead, he picked up a log of wood and with three giant sweeps battered the door in. In another moment he had cut the bonds which held the limp form of his father and placed him tenderly upon his cot in the corner.

"Then, with his father safe for the present, the thought of personal danger came to him. Rushing to the window overlooking the road, he saw in the gathering twilight the forms of two men, as they approached, with uncertain steps. The true condition of affairs dawned upon him in an instant! These men, temporarily content with the success of their plans, had left, imbibed freely of moonshine, and, having heard the report of a rifle from the cabin, were now returning to loot the premises, thinking it was all over! They were soon to realize their error, however, for, before they had proceeded half a dozen more steps, the report of a rifle again broke the stillness, and the foremost of the two went down without a cry."

The narrator paused a moment at this juncture, and wiped the prespiration from his brow, while his three auditors awated the resumption of his story with eagerness.

"The other villain took to a tree," he went on, "but as the son injudicously showed his form at the window, a rifle ball came crashing in and tore his good right hand almost to pieces. His teeth were set now and a look of intense hatred glowed in his eyes. His opportunity came before long, for the desperate moonshiner was imprisoned behind the tree. Knowing escape to be well nigh impossible, he hastily reloaded his weapon, and, getting down upon his knees, cautiously peeped from his covering, unable to resist the chance of taking another shot at the man in the cabin. It is needless to tell you what followed, except to say that the single look caused his death, which might otherwise have been averted for some time, perhaps indefinitely, as darkness was fast coming on.

"There is little more to relate. The older man, he upon whom the torture had been inflicted, lived for many years after the tragedy, and the son—well, he is living today."

"And the son was never brought to trial, I presume," spoke the treasury official, with a rising inflection of his voice.

"No, sir," was the emphatic response, "that is not the way things are done, in our section of the country, at least. Why, sir, he was one of the most talked-of men in the whole state, and, strange as it may seem, was elevated to a position of some prominence. In fact, some of you may have heard of him."

He arose as he spoke, took a deep breath of cool air at the open window, slung his overcoat over his arm and extended his hand to his host with a hearty "Good night."

"But his name; who was he?" I asked. But the colonel, more used to such revelations than the treasury official and myself, made answer for him. There was no word spoken, but raising the hand he held in his own, so that it was fully exposed to the electric light, we saw, with feelings of awe, that it bore a ragged, unsightly scar extending from the second joint of the forefinger clear to the wrist!—Washington Star.

WHERE FORTUNES ARE STORED.

A Look at the Strong Room of a Great New York Bank.

No little dramatic interest is latent in these huge boxes of heavy masonry, of the dimensions of a large room, with their thousands of interior safes, each with its own locks of various complexity and strength. In a single vault on Broadway there are 15,000 compartments, from a size just sufficient to contain a dozen railroad bonds to the huge caverns of masonry that hold tons upon tons of silver and gold.

The main doors which furnish entrance to the great box are the points on which the utmost mechanical skill is lavished. No burglar would ever think of trying to effect an entrance through the walls. If he disposed of the watchman who tramps around the outside in a little alley between the outer walls of the building and the vault, it would require days to drill sufficient holes to take a solid piece out of the wall. But if a burglar can only overcome the lock of one of the main doors, there is the entrance ready-made. These doors are marvellous. One of them weighs fifteen tons. They are constructed by welding together layers of different hard metals, sometimes seven distinct kinds, so that if an ingenious burglar finds a way of piercing the first, an entirely different problem confronts him at the second, and so on. At any moment his drill is likely to make connections with an electric alarm, which not only raises the guards of that vault, but tells the watchman of half a dozen others, some a mile away, that trouble is at hand. But even if the lock were overcome the monster doors would not open, because a large section of the stone floor has to be sunk down by an electrical device before the bottom of the doors are above the masonry. Just above each door appears an ominous-looking pipe; it can, in the event of burglarious efforts, belch forth boiling water and steam on the assailants below.—C. D. Lanier in Scribner's.

PEARLS OF THOUGHT.

Fine teeth beget broad grins.

Pride often wears sackcloth under its dress suit.

Don't blame others for getting rich on what you throw away.

Some of the front pews may be found at the tail end of the parade.

Genius sometimes seems to be that sort of gift which gains unmerited sympathy for recklessly degrading itself.

We learn wisdom from failure more than from success; we often discover what will do by finding out what will not do.

If people could see their obituaries while they are still living, it would encourage them so much that they might live longer.

It is not putting things in the right place that bothers a man so much as finding the right place after he has put things in it.

Resentment seems to have been given us by nature for defense only; it is the safeguard of justice and the security of innocence.

A man may love a woman enough to give up smoking when she asks him to do it for her sake, but he will never love so much again.

No man should trust himself alone with a girl who talks about affinity, and her need of daily companionship with a kindred soul.

Neither accept an opinion, nor except against it, merely on the score of its novelty; all that is new is not true but much that is old is false.

Be a man's vocation what it may, his rule should be to do his duties perfectly, to do the best he can, and thus to make perpetual progress in his art.

Real friendship is a real grower, and never thrives unless grafted upon a stock of known and reciprocal merit. Remember to make a difference between companions and friends.

Regulating the Pitch of Bells.

In the casting of bells of large size for chimes or given tones, the skill and secret of success lie in getting the thickness of the ring which is at the mouth of the bell just right. It will be noticed that just a little back from the edge of the bell, on the flange, the metal is thicker than in any other portion. The maker, in order to get the desired tone, makes a drawing of the bell, and in a cross section of this thicker ring describes a circle the diameter of which determines the tone.—Albany Express.

THE FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Value of Ensilage. What Makes Posts Decay. The Striped Cucumber Beetle, Etc., Etc.

VALUE OF ENSILAGE.

Ensilage, being of a succulent nature, seems to have a cooling effect, and cows will bear a heavy ration, with ensilage as a base, without injury, when, if the same feed unites without ensilage, they would suffer with alimentary and secretory troubles. Ensilage gives us an abundance of starch in the cheapest form that it can be grown upon the farm. An acre of corn put in the silo has six times as much starch as an acre of good hay.

WHAT MAKES POSTS DECAY.

It is the rapid alternation from cold to heat and from dry to moist that makes posts decay so rapidly. This is, of course, worse on sandy soil, through which the air rapidly percolates, while in the heavy soil the air does not enter. The best preservative for posts in any kind of soil is to thoroughly dry them and then char their surface. After rubbing off the flakes of coal dip the charred ends in oil, taking care that both the charring and the oiling come up above the point where the post enters the soil. Posts treated thus have been found sound after fifteen or twenty years, when without this treatment posts on sandy soil had rotted at the junction with the ground after eight or ten years' service.

THE STRIPED CUCUMBER BEETLE.

While present to some extent nearly everywhere, in some seasons it is more numerous than usual. As soon as the plants are above ground the beetles attack the leaves and in a few days but little is left. The beetles always attack the plants on the highest ground first, so that many times those on the top of a hill are destroyed while on lower ground they are unharmed.

There is no remedy for this insect that is applicable on a large scale. A good preventive, however, consists in placing tobacco dust around the plants, as this will keep the beetles away. The tobacco dust can be obtained through a druggist at very little cost other than the freight, and a bag of it should be kept on hand on every farm at all times, as it is useful for many purposes, especially for killing lice on domestic animals. The tobacco dust should be placed around the cucumber plants just as soon as they are up, beginning on the high places first and then after a few days, if the beetles are attacking the plants on lower ground, the tobacco should be placed around them also.—New England Homestead.

THE PLUMED HYDRANGEA IN A MASS.

Few of us have yet learned how great was the grain of our gardens when the large flowered form of the hardy panicled hydrangea, H. paniculata grandiflora, reached our shores from its Japanese island home. By the use of this plant there is at command a means to brighten garden grounds and lawns, easily and permanently, in late summer and the early autumn—a season when the lack of blooming shrubs is most seriously felt. The hardness and vigor of this plant enable it to withstand great severities of climate and great neglect of attention. If once planted in fair soil it sturdily pushes a growth which insures its future endurance and usefulness. Its profusion of bloom, and the great size of its panicles make it an extremely showy object. Even small plants will bloom the first year of their planting, and every annual increase of size also adds to the amount of bloom. The plumed hydrangea makes a very good single specimen, and can be trained in bush form, or as a standard in the form of a small tree, with about three feet of stem and a large, broad head. It is thus, in one or the other of these forms, and as a single specimen on the lawn, that it is most frequently seen.—Vicks Magazine.

THE BROOD PEN.

Incubator-hatched chickens that are raised in brooders will do much better with a small run, or enclosed space, attached to one end of the brooders, says Epitomist. They need to get out on the ground in order to invigorate and harden them, and to keep them from growing up too much on the hot house plan—weak and delicate. This run, we term the brood pen, and it is about as necessary as the brooder, in order to attain the highest degree of success. We have two kinds of brooders, one is kept indoors and the other out in the yard. When the chicks first come from the incubator, we put them in the former. But, after the chicks are two weeks old, we move them to an out-door brooder, with a brood pen attachment. Then, on bright days, we let them out on the ground, where they wallow in the sand and ashes, and scratch among clover hulls and wheat chaff for the small grain that is scattered among it. The brood-pen system reduces the care and anxiety about the chickens, especially when a storm approaches, to a minimum, because the brooder is left open at the end and the chickens can run inside at the first approach of danger, and if they become chilly they can go back into the hover department, which is heated all the time, by a lamp beneath. Even when the chickens are with a hen the brood-pen system is desirable. Many a chicken is run to death while young and weak, by an unreasonable and flighty mother that keeps on the go all the time. But if the brood should be cooped within a small pen, about ten by twelve feet, and kept within the enclosure until the chickens are all well feathered and large enough to stand the wet grass and to travel about with the hen, a much larger per cent of them may be raised.—The Silver Knight.

KILLING CABBAGE WORMS.

H. E. Weed, of the Mississippi tion, writes: The most common cabbage caterpillar is the larval form of the white butterfly so often seen about the plants depositing its eggs. Aside from this larva there are also several others which attack the cabbage plant, being the larva of several species of butterflies and moths. But while there are several species of caterpillars on the plants, yet the habits of all are very similar, so that the same remedies are applicable to all.

As soon as the worms are noticed on the plants, apply paris green, either dry or mixed with water. In this case it is perhaps best to make the application in a dry form by means of any of the many ways for making the application. A common flour sack will do for this purpose if nothing better is at hand, When applied to the cabbage the green should be diluted with about twenty parts of flour, the effectiveness of the application depending not so much on the amount used as the evenness of the distribution. The green, however, should not be applied to the plants after they have formed heads, but pyrethrum or insect powder should then be used instead. But the question is often asked, "Will not the green poison the plants and render them unfit for use?" But the cabbage grows from within out and there is no danger in the use of paris green provided it is not applied after the heads have formed. By the time the outer leaves are taken off and the cabbage is ready for the table, there is left no trace of arsenic.

FEED THE LAMBS GRAIN.

For several years past there has been a disease among the lambs in Iowa that kills a few and lowers the condition of the entire flock, so that there is practically no gain while it continues, generally about a month. We had it in our flock two years, and, thinking that possibly the land was infested with the germs of the disease, we sold the flock entire and gave the sheep pasture a turn in the rotation, intending to replace the flock when the pastures were again well set in grass, about a year hence. While this disease is not universal, we nevertheless hear of it from many quarters, and especially among the mutton grades.

We have sent lambs to veterinarians who reported that the disease was caused by myriads of minute worms in the stomach. The lambs pine and manifest dropsical symptoms around the neck and jaws, and the loss by death has been from three to six per cent. in addition to the loss of a month's feed. Part of this may be due to the condition of the pasture during our dry season, and therefore may not appear with the flush pastures this year. We do not know any remedy for it except that of better nutrition, and we suggest that where farmers have been troubled with this disease, they begin feeding lambs grain while running with the ewes on pasture.

There is, however, another reason for the advice, namely, to get the lambs into first-class condition so as to come into the early market at about a hundred pounds weight. We are fast becoming a mutton-eating people, but it will be noted that the preference is for lambs instead of old sheep. A reference to any of the detailed market reports will surprise those who have not given special attention to the subject. Week before last, for example, a bunch of fifty-four pound lambs sold as high as $6.35, good to choice from $5 to $5.90, and clipped native lambs occasionally reached $5.25, while prime export muttons brought only $4 to $4.25.

It is nothing uncommon for the hundred-pound lamb to sell for more dollars than the matured sheep a year old, while at present prices the wool will not begin to pay for the keeping of the sheep a year. By feeding even low-grade lambs grain on pasture during July and August they can be easily raised to the desired weights. Corn and oats are plenty and cheap, and it is a poor sort of lamb, indeed, that will not pay a better price than the market will afford. It will not pay to feed the ewes. The lambs should be given grain by themselves in a separate enclosure, which can be easily made.—Wallace's Dairyman.

Capital punishment is to be abolished in Nicaragua.

GOSSIP FOR THE FAIR SEX.

Some Items of Interest on Feminine Topics.

DuMaurier's Daughter—An Unconventional Queen. A Deep Ribbon Girdle, Etc., Etc.

DU MAURIER'S DAUGHTER.

In the pre-Trilbian days, when George Du Maurier was a struggling, half-blinded artist, his daughter Silvia apprenticed herself to a prominent London dressmaker and served her time in all the tediovs details. She has since married a young barrister who has his way to make in the world, and the young bride designs and makes her own dresses with the satisfaction of being considered one of the best dressed women in London.

AN UNCONVENTIONAL QUEEN.

Next to Carmen Sylva, the Queen of Roumania, Queen Olga of Greece is considered one of the most unconventional of reigning queens. She walks about a great deal alone, and has climbed to the top of Mount Lycabettos without a companion. One of her most intimate friends is an American, Mme. Bakmaetieff, wife of the first secretary of the Russian legation, formerly Miss Beale, of Washington. For several years after Queen Olga's coronation she frequently appeared in Greek costume, and it is said that she has lately been considering the possibility of making the ancient Greek dress the court costume.—San Francisco Chronicle.

A DEEP RIBBON GIRDLE.

A girdle that begins at the hips and reaches to the belt line should be made of satin ribbon three inches wide. There a is foundation of black crinoline, upon which the ribbon is sewed; it is lightly folded and carried around the figure nine or ten times, fastening with two large bows, which can be drawn through jeweled buckles. A very pretty finish for the girdle is an embroidered lapel. This is a piece of the cloth, upon which iridescent beads and mock gems are sewed in patterns. In the back of the revers have two points, each finished with the jeweled trimming.

The girdle and revers are, of course, adjustable, and can be worn with shirt waists or old gowns of any kind or color.

THE WOMAN DECORATOR.

The word decorator has come to stay. There are good reasons for her success, the first of which is her intuitive sense of color and quick appreciation of what is good. With her aptitude for details and with her ability to manage several lines of work at one and the same time, she is enabled to combine utility with beauty. Counting the cost at the start is another of her recommendations. You do not need to give her carte blanche, but you can give her the highest figure beyond which you will not go, and she will be just as painstaking in her efforts. Show her the room of which you have despaired, and, with her knowledge of materials and furnishings, she will soon accomplish a wonderful transformation. It is the woman decorator who looks at the old-fashioned brick mantel and makes it a thing of beauty by the addition of wrought-iron trimmings, which are really very inexpensive. This is much better than tearing down the old mantel and replacing it with a modern cabinet affair, for the result is more unique. It is the woman decorator who helps popularize the stuffs of homely origin and furniture of simple design. Above all, it is the woman decorator who contrives an air of cosy comfort even in the midst of grand surroundings.—New Orleans Picayune.

OLD SHOES.

The Chinese value a pair of old boots which have been worn by an upright magistrate, and the custom of wishing a friend a "happy foot" is still observed all through Europe. The casual putting on the left shoe on the right foot, putting it on uneven and crosswise, bursting the latch or tie, lacing it wrong and losing a button are all bad signs. English girls have been known to hang their boots outside the window on St. Valentine's night for love luck. Professor Black tells us of a singular superstition existing in England, which insists that if the younger daughter of a family marries first her sisters must dance at her wedding without shoes, so as to insure husbands for themselves. Old shoe throwing is done for many purposes. The gypsies say:

Hurle after an old shoe,
I'll be merry what here I do.

In the Isle of Man an old shoe is all ways thrown after the bride, as well as the groom, when leaving their homes, and in the south the oldest person on the plantation, white or black, always throws a shoe after any one starting on a long journey. It is said that Mme. Patti and other women of high standing on the stage preserve most carefully the boots which they wore at their debut, which they consider lucky to wear on the first nights of engagements forever after.

AMERICAN MANNERS.

In a series of papers on the above subject and published in The Outlook, Ian Maclaren says of the chivalry of American men toward women:

"The first point of good manners is chivalry, and the test of chivalry is a man's bearing to women. The reason one is suspicious of French breeding is that, though a Parisian—who is a Frenchman raised to the highest degree—may lift his hat on entering a shop, he would show the shopgirl no deference on the street, while French fiction is a standing insult to womankind. From end to end of America a woman is respected, protected, served, honored. If she enters an elevator every man uncovers; in a street car she is never allowed to stand if a man can give her a seat; on the railways, conductors, porters and every other kind of official hasten to wait on her; any man daring to annoy a woman would come to grief. The poorest woman can travel with security and comfort in the States, which to an European seems most admirable. Her richer sister has a maid and footman in Europe; she has a nation in attendance. In society she holds a court, with every man listening to her, deferring to her, reflecting her. Perhaps the American woman may be unconsciously exacting at times—it is the penalty of absolute monarchy; perhaps the men exceed in deference when they allow the women to read for them and think for them in everything except politics—this is the drawback of hereditary loyalty. The American queen might complete an almost perfection by granting her subjects an occasional experience of equality, upon which they would never think of trading. Perhaps the American loyalist might do his ruler true service and safeguard her from selfishness by an occasion and quite limited assertion of the rights of man. It remains, however, that it must be good for a strong and restless people to be possessed with noble ideas of woman, and from the poorest to the highest man to be engaged and sworn unto her service. The woman cult in the States is in itself a civilization, and next door to a religion."

MAKING CLOSE CONNECTION.

With the return of the bicycle season comes the shirt waist, and the young maid and matron look forward to the time when the stiff, thick waists of the winter gowns will give place to the cool, comfortable garment of cotton or silk. This year the clever inventor, who "slumbers not, neither does he sleep," has developed from his active brain devices which promise to be a boon to all wearers of the shirt waists. One, and perhaps the most popular just now, takes the form of a narrow, steel belt, three-quarters of an inch in width, and fastening in front with hooks and eyes resembling those of a corset. On the back of the gown are sewed two broad, steel catches through which the belt is run. This simple and almost indestructible device is warranted to hold the skirt in place, and not show either above or below the belt.

The next device is also a belt, but in this case of strong woven belting. To it is attached, in the movable back, three straps, in both ends of which are fastened strong safety pins. The upper safety pin, to catch the shirt waist, thereby making it impossible to bag or bulge. The pins in the lower end of these straps, which are about three inches long, are fastened in the underskirt. Of course the dress skirt goes over this, and should fit very snugly about the waist.

Other inventions for the same purpose consist of several varieties of buttons, clasps, catches and pins. The most useful of the catches, perhaps, is that which may be had to match any belt. It consists of a piece of steel about two inches long, curved to fit the waist, with a narrower hook which extends over the top of the belt. The lower part is furnished with eyelets; and should be sewn to the dress skirt. The hook is leather covered, and can be had to match the most expensive or cheapest belt. Of course, the covering of this hook regulates the price of the article.

An arrangement which has the advantages of cheapness and simplicity consists of a soft piece of leather about two inches long by a half inch wide, and with two sharp hooks attached. The back of this leather is covered with a strong glue, and is to be pasted in the inner side of each belt. The two sharpened hooks are slipped through the belts of both skirt waist and gown, and as one pulls up and the other pulls down, the necessary result is obtained.

Besides these new devices against the separation of shirts and skirts, the old belt pins and clasps will be used. The only difference between those of this season and last lies in the ornamentation. The new ones are much more ornate, and, as a rule, larger.—Chicago Record.

Spain smoked $31,000,000 worth of tobacco last year—$1.80 per capita.

FIGHTING FISH OF SIAM.

Fierli Contests Which Prove the Gambling Instinct of the Natives.

Fighting fish are a novelty found only in Siam. The residents of that country are inveterate gamblers. They will wager their last coin on any proposition that offers a chance of winning. They will bet on wrestlers, jugglers, fighting cocks or fighting fish. These fish are found in the rivers of Siam, and when two or more of them are put in a bowl of water they begin fighting, and the conflict continues until all but one of the fish have been killed.

These fights occur in the streets in midday and often a crowd of twenty or thirty natives surround a bowl, chattering and gesticulating and making bets on the success of their favorite fish.

A writer in St. Paul's describes a fight that he witnessed at Bangkok. The fish were in a bowl filled with water, which was churned into a foam by their rapid movements. The water was red with blood, and as the fight progressed the tinge became deeper. Occasionally a fish would turn over several times, blood oozing from wounds all over its body, and would then turn on its back, dead. Its victorious adversary would immediately engage in a fight with another fish.

The fighting fish resemble the common perch or pike, but have gills that give him a fierce aspect. No reason is known for his predisposition to fight. But they "scrap" with all the power they possess, biting each other, lashing about them with their tails and using their sharp fins like daggers. These fins are sharp as knives and inflict grevious wounds when two fish meet in combat.

In describing the fight in Bangkok, the English writer adds:

"The excited onlookers never paused one moment, either as regarded the babel of their raised voices, the pantomime of their gesticulation or the quantities of atts—as the copper coinage of the country is called—which they were staking upon the fishes of their fancy. Such as had not the actual coin employed cowrie shells, which, being the original currency of Siam, still find favor with the masses, and are recognized as legal tender.

"I never waited for the final result of the fish fight, but walked away, though the hoarse shouts and cries of the gamblers lingered in my ears for many hundreds of yards. It is a curious spectacle to European eyes, and one not without a semi-savage interest of its own. Look for it beyond the borders of the Land of the White Elephant and you will find it not. These fighting fish make excellent eating."

Balks Telegraph Operators.

Chinese cannot be telegraphed, and to meet this difficulty a cipher system has been invented by which messages in that language can be transmitted over the wires. The sender of the message has no need to trouble himself about the meaning, and, in fact, may be telegraphing all day without the slightest idea of the information he is sending, for he transmits only numerals. It is very different, however, with the receiver of the message at the other end, as he must have a code dictionary, and after each message is received must translate it, writing such literary character in the place of the numeral that stands for it. Only about an eighth of the words in the written language of China appear in the code, but that has been found sufficient for all practical purposes.

A Diamond Candle.

Many diamonds which have been exposed to sunshine give out light on being placed in a dark room. When placed in a vacuum and exposed to a high-tension current of electricity, diamonds phosphoresce, or shine, with different colors. Most South African diamonds, under these circumstances, exhibit a bluish light, while diamonds from other parts of the world shine with such colors as "bright blue, apricot, pale blue, red, yellowish green, orange and pale green." After reciting the preceding facts, in a recent lecture in London, Prof. William Crookes made this interesting statement: "One beautiful green diamond in my collection when phosphorescing in a good vacuum, gives almost as much light as a candle; the light is pale green, almost white."

A Mississippi Experiment.

A man named Gilbert and his sister, from the west, are going to purchase a small farm near Newton, Miss., on the products of which exclusively they expect to live, says the New York Tribune. They will raise their own food and make their own clothing; they propose to sell nothing and buy nothing. Mr. Gilbert was employed as an architect on some of the world's fair buildings. He has suffered from dyspepsia and nervousness, and attributes his illness to the tension of modern life. His sister is a graduate of a high school, and has been persuaded by her brother to join in the experiment.

Russia has 615 new cases of leprosy last year.

Left by Say.

Among the late Leon Say's papers were found five decrees dated on the same day, signed by President Grevy and countersigned by all the proper officials, appointing him to all the grades of the Legion of Honor, including the Grand Cross. Grevy went out of office without making the appointments public in the Journal Officiel, and Leon Say never mentioned the matter to any one, and never wore any of the decorations.

Every sleeping car conductor wants a law adopted compelling the porter to divide.

Ungallant Dutch Gentlemen.

In Holland a woman is a secondary consideration and a poor consideration at that. No Dutch gentleman when walking on the pavement will move out of his way for a lady. The latter turns out invariably, however muddy or dangerous the street.

It is entirely superfluous to tell people that you are getting old; you show it.

Exhausted Resources.

"What are you bothering your father about?" asked the boy's mother.

"I want him to tell me a story, and he says he doesn't know any."

"Perhaps he will make up one as he goes along."

"I asked him to. But he said he had been testifying before an investigating committee all day and it had used up all his material."—Washington Star.

The English newspapers are becoming venturesome. One of them has sent a correspondent on a secret mission, of which it speaks in the following mysterious terms: "We cannot indicate his destination, for the journey that lies before him is one of the most perilous kind, and a whisper of his identity or the purpose of his mission would seal his death warrant. He purposes to tread a path that has never known the foot of a white man, and will travel with such a following as no newspaper correspondent has ever mustered for his private ends. Hundreds of men and scores of horses will follow his banner and every man of the party will carry his life in his hand." Whew!

The Alton turfman who killed himself because "horses were so slow" verified the common experience. The only fast horses are those you did not bet on.

A Virtue and a Vice.

Vanity and a proper regard for the feelings of others should both urge you to get rid of that disgusting skin disease. Whether it be a simple abrasion, a chap or a burn, or whether it is a chronic case of Eczema, Tetter or Ringworm, Tetterine will positively, infallibly cure it. Cure it so it will stay cured, 800. 50 cents a box at drug stores, or by mail for 50 cents in cash or stamps from J. T. Shuptrine, Savannah, Ga.

There are twenty-three acres of land to every inhabitant of the globe.

FIGHTING FISH OF SIAM.

Fierll Contests Which Prove the Gambling Instinct of the Natives.

Fighting fish are a novelty found only in Siam. The residents of that country are inveterate gamblers. They will wager their last coin on any proposition that offers a chance of winning. They will bet on wrestlers, jugglers, fighting cocks or fighting fish. These fish are found in the rivers of Siam, and when two or more of them are put in a bowl of water they begin fighting, and the conflict continues until all but one of the fish have been killed.

These fights occur in the streets in midday and often a crowd of twenty or thirty natives surround a bowl, chattering and gesticulating and making bets on the success of their favorite fish.

A writer in St. Paul's describes a fight that he witnessed at Bangkok. The fish were in a bowl filled with water, which was churned into a foam by their rapid movements. The water was red with blood, and as the fight progressed the tinge became deeper. Occasionally a fish would turn over several times, blood oozing from wounds all over its body, and would then turn on its back, dead. Its victorious adversary would immediately engage in a fight with another fish.

The fighting fish resemble the common perch or pike, but have gills that give him a fierce aspect. No reason is known for his predisposition to fight. But they "scrap" with all the power they possess, biting each other, lashing about them with their tails and using their sharp fins like daggers. These fins are sharp as knives and inflict grevious wounds when two fish meet in combat.

In describing the fight in Bangkok, the English writer adds:

"The excited onlookers never paused one moment, either as regarded the babel of their raised voices, the pantomime of their gesticulation or the quantities of atts—as the copper coinage of the country is called—which they were staking upon the fishes of their fancy. Such as had not the actual coin employed cowrie shells, which, being the original currency of Siam, still find favor with the masses, and are recognized as legal tender.

"I never waited for the final result of the fish fight, but walked away, though the hoarse shouts and cries of the gamblers lingered in my ears for many hundreds of yards. It is a curious spectacle to European eyes, and one not without a semi-savage interest of its own. Look for it beyond the borders of the Land of the White Elephant and you will find it not. These fighting fish make excellent eating."

Balks Telegraph Operators.

Chinese cannot be telegraphed, and to meet this difficulty a cipher system has been invented by which messages in that language can be transmitted over the wires. The sender of the message has no need to trouble himself about the meaning, and, in fact, may be telegraphing all day without the slightest idea of the information he is sending, for he transmits only numerals. It is very different, however, with the receiver of the message at the other end, as he must have a code dictionary, and after each message is received must translate it, writing such literary character in the place of the numeral that stands for it. Only about an eighth of the words in the written language of China appear in the code, but that has been found sufficient for all practical purposes.

A Diamond Candle.

Many diamonds which have been exposed to sunshine give out light on being placed in a dark room. When placed in a vacuum and exposed to a high-tension current of electricity, diamonds phosphoresce, or shine, with different colors. Most South African diamonds, under these circumstances, exhibit a bluish light, while diamonds from other parts of the world shine with such colors as "bright blue, apricot, pale blue, red, yellowish green, orange and pale green." After reciting the preceding facts, in a recent lecture in London, Prof. William Crookes made this interesting statement: "One beautiful green diamond in my collection when phosphorescing in a good vacuum, gives almost as much light as a candle; the light is pale green, almost white."

A Mississippi Experiment.

A man named Gilbert and his sister, from the west, are going to purchase a small farm near Newton, Miss., on the products of which exclusively they expect to live, says the New York Tribune. They will raise their own food and make their own clothing; they propose to sell nothing and buy nothing. Mr. Gilbert was employed as an architect on some of the world's fair buildings. He has suffered from dyspepsia and nervousness, and attributes his illness to the tension of modern life. His sister is a graduate of a high school, and has been persuaded by her brother to join in the experiment.

Russia has 615 new cases of leprosy last year.

Left by Say.

Among the late Leon Say's papers were found five decrees dated on the same day, signed by President Grevy and countersigned by all the proper officials, appointing him to all the grades of the Legion of Honor, including the Grand Cross. Grevy went out of office without making the appointments public in the Journal Officiel, and Leon Say never mentioned the matter to any one, and never wore any of the decorations.

Every sleeping car conductor wants a law adopted compelling the porter to divide.

Ungallant Dutch Gentlemen.

In Holland a woman is a secondary consideration and a poor consideration at that. No Dutch gentleman when walking on the pavement will move out of his way for a lady. The latter turns out invariably, however muddy or dangerous the street.

It is entirely superfluous to tell people that you are getting old; you show it.

Exhausted Resources.

"What are you bothering your father about?" asked the boy's mother.

"I want him to tell me a story, and he says he doesn't know any."

"Perhaps he will make up one as he goes along."

"I asked him to. But he said he had been testifying before an investigating committee all day and it had used up all his material."—Washington Star.

The English newspapers are becoming venturesome. One of them has sent a correspondent on a secret mission, of which it speaks in the following mysterious terms: "We cannot indicate his destination, for the journey that lies before him is one of the most perilous kind, and a whisper of his identity or the purpose of his mission would seal his death warrant. He purposes to tread a path that has never known the foot of a white man, and will travel with such a following as no newspaper correspondent has ever mustered for his private ends. Hundreds of men and scores of horses will follow his banner and every man of the party will carry his life in his hand." Whew!

THE CURE OF DIABETES.

A Case Successfully Treated in Madison County, N. Y.

From the Press, Utica, N. Y.

On the recommendation of Mr. William Woodman, of South Hamilton, New York, that Mr. Amos Jaquays, a resident of Columbus Centre, New York, be interviewed regarding his extraordinary recovery from advanced kidney trouble, embracing diabetes in its worst form, Mr. Jaquays was visited and willingly made the accompanying statement:

"I am fifty years of age, and five years ago began to suffer with pains in the back and weakness in the region of the kidneys, and I had a tremendous flow of urine. Strange to say my appetite increased to an extraordinary degree, but instead of giving me strength my food seemed to make me weaker and thinner, and I was terribly constipated. My mouth was pasty, I had continuous heartburn and pain across the lower part of my stomach and frequent vomiting. Indeed all or nearly all my functions became impaired, my sight was dim, memory deserted me, and life became irksome. I consulted the best medical talent in the county, and they all diagnosed my case as sugar diabetes in its most aggravated form, but gave me no relief whatever. At last I was in such a desperate condition that a council of physicians was called but their good offices did me no good, and I looked forward to death with satisfaction as the only relief I could expect.

"My old friend, William Woodman, about this time came to visit me, and from him I first heard of Dr. Williams' Pink Pills, which he declared had cured him of rheumatism, with which he had suffered all his life, and he believed they would do me good, as he had read of a case of diabetes being cured by their use. I believe it was next day after Mr. Woodman's visit that Mr. F. Hyde, of South Hamilton, New York, called on me, and I was told by him that Pink Pills had saved his life and he advised me by all means to try them.

"This settled the question and I at once began a course of home treatment with Dr. Williams' Pink Pills. Within a week the medicine began to do its work, the constipation was relieved, my skin, which had been dry and hard, assumed its normal feel and appearance, I no longer had the insufferably bad taste in my mouth, and though still weak and almost helpless, the pain in my back and kidneys began to abate, and the flow of urine decreased. But I was far from health, and built very few hopes on permanent cure, though I continued to take the pills constantly for the next year and a half, growing slowly but surely during that time better and better. Then I began to reduce the daily dose, and kept mending until six months ago, when I discontinued them, and I was entirely cured.

"I am still subject to cold which is apt to settle in my kidneys, and always keep Pink Pills by me, as they bring me round very quickly. In all, I have, I believe, taken fifty boxes of Dr. Williams' Pink Pills, and shall never be without them as long as I have half a dollar. I have recommended them to all my suffering friends, and they seem to be good for any disorder of the system as they have never failed to do their work in any case that I know of, and some were pretty low.

"I certify the above statement to be true in every particular, and if I commanded stronger language, I should use it in praising Dr. Williams' Pink Pills.

"AMOS JAQUAYS."

Mr. Jaquays is a highly respectable and well-to-do farmer and builder, and highly connected in Madison County.

The proprietors of Dr. Williams' Pink Pills state that they are not a patent medicine but a prescription used for many years by an eminent practitioner who produced the most wonderful results with them, curing all forms of weakness arising from a watery condition of the blood or shattered nerves, two fruitful causes of almost every ill to which flesh is heir. The pills are also a specific for the troubles peculiar to females, such as suppression, all forms of weakness, chronic constipation, bearing-down pains, etc., and in the case of men will give speedy relief and effect a permanent cure in all cases arising from mental worry, overwork, or excesses of whatever nature. They are entirely harmless and can be given to weak and sickly children with the greatest good and without the slightest danger. Pink Pills are sold by all dealers, or will be sent post paid on receipt of price, 50 cents a box or six boxes for $2.50 (they are never sold in bulk or by the 100), by addressing Dr. Williams' Medicine Company, Schenectady, N. Y.

Here is a Nupe poem on the Emir dashed off in a moment of wild, intoxicating joy by the poet lariat of the London News:

It's tough, said the Emir of Nupe,
When you're suddenly chucked in the soup,
I'd sooner have pains,
Soft corns and chilblains,
Or appendicitis, or croup.

Harry Lockwood, of Newark, Ohio, has been arrested for trying to blow up his mother-in-law with dynamite. Mr. Lockwood shouldn't take so seriously what the funny papers say about the mother-in-law.

HOW MEAT IS SLICED.

The People of the World Can Be Classified by the Way They Do It.

A member of the Professional Woman's League, who has traveled extensively in foreign lands, said the other evening that you can classify the peoples of the world by the way they cut their meat. The powerful physical nature of the Angle-Saxon is well illustrated by the huge rib roasts and the immense shoulders of mutton. The more artistic nature of the Frenchman is shown by his cutting his meat into thin slices of fillet, into epigram and into the filmy affairs he calls "rosbif."

The Arab cuts his meat into a thin ribbon, wraps it around an iron skewer, broils it over a charcoal fire, and, lo and behold! there is the famous kabob. Strange to say, it is very rare for the Anglo-Saxon to cut his meat thin, just as it is rare for the eastern races to serve it in massive portions. Yet we could improve our daily bill of fare, especially in the summer season, by adopting many of the dishes and methods of these other races.

Thus the kabob system may be applied to any kind of flesh or fowl, and produces a crisp, palatable and nourishing culinary creation. Another series of very pleasant dishes are made by cutting meat into long strips about the size of a lead pencil and frying them, after they have been salted and peppered, in either their own fat or in olive oil. The liquid should be very hot before the meat is put in, so as to close up all the pores and keep the juice within the fiber. These pencils, when cooked properly, are clean, delicious, brittle and very appetizing. Still another system comes from Italy and Spain in that very attractive preparation known as fritas. These consist of little pieces of meat about the size of a hickory nut. One will be made of beef, another of lamb, a third of chicken, a fourth of duck, a fifth of corned beef, a sixth of cold beefsteak. The greater the variety the more successful the dish. These pieces are very well seasoned, they being rubbed with a clove of garlic, salted, peppered, and usually touched with a drop or two of onion juice. They are then dipped in batter and fried over a very hot fire. When they come out all look alike, so that the guest has the additional attraction of novelty, variety and surprise.—New Orleans Picayune.

Has a Sparrow for a Pet.

At Carbondale, Penn., W. E. Frisbie, a jeweler, has a little English sparrow as a pet. The other morning when Mr. Frisbie was unlocking his shop door the bird flew upon his arm. Looking around, he saw an excited cat coming toward him which had evidently been trying to catch the bird. Mr. Frisbie scared the cat away, and then gave his arm a little toss to start the bird on its flight.

It flew up about thirty feet, and then, circling down again, returned to its former perch. He noticed this time that the bird's wing was broken, and took the little thing into the shop. The sparrow seems perfectly contented in its new quarters. When Mr. Frisbie is alone it perches itself on his shoulder or on a chair opposite, and watches him at work, occasionally giving a few lively chirps to show how happy he is. The moment the bird hears the outer door open it hides away, and stays hidden until the visitor departs.—New York Press.

An Historic Church.

The history of the First Parish of Dorchester, now a part of Boston, is the history of one of the oldest churches in New England. The parish was organized June 23, 1636, and the first church was built in 1641. The second church was built in 1646, and the third in 1677. In 1743 they erected their fourth church, and on May 16, 1816, the corner-stone of the church burned a year ago was laid. Now a beautiful reproduction of the old church is ready for dedication.

The old bell which has been recast and hung in its old position in the belfry, will continue to call parishioners to service, as it has done for over 145 years. This bell has been a part of the civil as well as of the religious history of the town, for not only has it called the settlers to meeting, aroused them to attend fires, called them to town meetings and tolled at deaths, but it announced the birth of liberty in 1776 and called the troops for the Civil War in 1861.

The Evil of the X-Ray.

In a recent discussion on improvements in the X-ray apparatus, one of the speakers mentioned that he possessed a fluorescent screen measuring six feet by one and a half feet. It is intended to show the full length of the figure at one view, and on an occasion when the apparatus was being inspected by a number of persons it was the means of creating an embarrassment almost beyond the power of words to describe. A lady having incautiously passed in the line of rays was displayed on the large screen, and as dress materials are very transparent in the rays her costume, of course, did not count for much in the picture.

BICYCLE EXCITEMENT.

BENJ. S. LOVELL, Treas. Lovell Arms Co.

The greatest sensation of the season in the bicycle market has been occasioned by four of the leading manufacturers combining to protect the retail trade from being imposed upon by agents and others who have no reputation to lose as bicycle dealers. This combination, of which the John P. Lovell Arms Co. are the moving spirits, have forced down the price of high grade wheels so that there is now no reason why a cyclist should ride anything but a first-class, guaranteed wheel, and at prices charged from the nameless and unguaranteed wheels. There is considerable opposition to this combination on the part of those who handle low grade wheels, but the public will be the winners, thanks to the Lovell Arms Co. A catalogue of our regular bicycle stock and a special list of wheels issued by the Big Four Combination mailed free on application.

GENERAL GORDON

Declines to Stand for Re-Election as Commander in Chief.

Atlanta, Ga., June 10, 1897.

To My Confederate Comrades:

It was my proud privilege to announce officially a few days since that a thousand camps have been incorporated into the "United Confederate Veterans," a glorious brotherhood organized for non-partisan and noble ends. All these camps will be represented, I trust, at our national reunion at Nashville. This remarkable growth of our organization must be to you a source of sincere pride and pleasure. It will be welcome news to brave and magnanimous men in every section of our country, who comprehend its philanthropic and patriotic aims. To me it is a source of profound gratification that our brotherhood has reached its present vast proportions during the years in which you have so steadfastly and with such unparalleled unanimity honored with the position of Commander-in-Chief. This growth is more remarkable because it has occurred in an organization which has no partisan purpose to stimulate its efforts, and no cohesion of sectional passion or selfish aims to bind it together. While eliminating from its life all narrow prejudices that tend to dwarf its manhood, and while inspired by a sentiment most helpful to the harmony of the sections and the well being of the Republic, this representative body of Ex-Confederate soldiers is resolved to guard through the potent agency of impartial history, the self-respect of our people and to conserve the manhood of Southern youth by transmitting, not the passions, but the hallowed memories of a marvellously heroic struggle.

Such a success could never have been attained except by the earnest co-operation of the able commanders of departments and divisions, and of their co-workers in the camps. But these distinguished officers and the noble men commanded by them, will unite with me in according to General George Moorman, my chief of staff, the largest share of honor in the achievement of this great result. It is but simple justice to this superb staff officer to say that in all these years of upbuilding, of anxiety, and of labor, often amidst difficulties and discouragements of the gravest character, he has given his time, his thought, his energies and his talents, ungrudgingly and without a dollar of compensation to the arduous task imposed upon him by the duties of his office; and no amount of work for the welfare of the organization has been too onerous or exacting for him to cheerfully and efficiently perform.

In announcing this gratifying success I wish to make my most grateful acknowledgements to my comrades of every rank, in every state. While it has been one of the chief pleasures, as well as highest honors, of my life, to serve in the station to which your partiality has so repeatedly called me, and while I shall ever cherish the numberless evidences of your confidence, yet I must ask you to prepare for the selection at Nashville of some one else as your commander. You are my witnesses that I have repeatedly in the past sought to surrender this high and responsible position; and I have yielded my purpose only at your earnest solicitations. It must be apparent to you now that whether the exigencies supposed to exist in the past were real or fancied, there certainly no longer exists any sufficient reason for asking my continuance in that high office. Fortunately for the well-being of our association, there is no difficulty in selecting from the many illustrious ex-soldiers of the Southern army a commander, whose ability and devotion will ensure the continued growth and harmony of the United Confederate Veterans.

J. B. GORDON.
Commander-in-Chief United Confederate Veterans.

Exploded Near the President.

An attempt was made Sunday afternoon to assassinate President Faure, of France, while en route to Long Comps to witness the grand prix. A piece of tubing about 6 inches long, charged with powder and shot, was the instrument used. No one was hurt by the explosion. A man named Gallet was arrested as the prime mover. He refuses to talk.

In Honor of Mr. Reid.

Our Ambassador at the Court of St. James, Mr. Hay, gave a dinner last Friday evening in honor of Whitelaw Reid, the special ambassador of the United States to the diamond Jubilee festivities. Most of the guests were Americans, the company including Andrew Carnegie and Chauncy M. Depew.

Turks Gathering the Harvest.

It is understood that Satur day's peace conference at Constantinople was regarded as satisfactory to the ambassadors, but the sultan's direct appeal to Emperor William is again delaying matters. The Turks have already begun to gather the harvest in Thessaly.

STARVATION AND FEVER.

Appalling Fatality From Famine and Plague in China.

Advices by steamer Empress of Japan says; The fatality from famine and plague in China is appalling. The famine north and east of Szechuam is causing many deaths. A traveler who has just returned from there reports having seen numerous dead bodies lying about unattended to. In one large town half the population had perished from starvation and the fever that follows in its wake. The government has sent rice to the afflicted, but grain cannot be got to the sufferers beyond certain parts owing to sections made impassable by swollen rivers. Along the route to smaller towns numbers of bodies lay decomposing, while the sky was black with vultures.

Smallpox is prevalent in Tooghe, many new cases being reported daily. Smallpox and other epidemics are very prevalent in Tokio, while 200 more cases of the black plague are reported from Taihoku and Taiwon, Formosa. There are about 850 cases altogether.

NEW INDUSTRIES.

The Tradesman Reports a Number Established During the Week.

Among the most important new industries for the week The Chattanooga Tradesman reports the following: The American Bauxite Co., capital $100.000, Rome, Ga., a cotton compress at New Albany, Miss.; electric light plants at Bainbridge and Eatonton, Ga., and Prattville, Ala.; a $30,000 fertilizer factory at Alexandria, Va.; flour and grist mill at Weldon, N. C.; machine shops at Louisville, Ky.; the G. B. Griffin Land Co., capital $25,000, Jacksonville, Fla., a 100-ton oil mill at Sequin, Tex., and one to cost $30,000 at Victoria, Tex., the Menard Oil & Gas Co., capital $15,000, at Dallas, Tex., and the Ohio Falls Dye & Finishing works, capital $20,000, at Louisville, Ky. A cotton mill be erected at Lexington, N. C., and woodworking plants at Montevallo, Ala.; Columbus, Miss., and Decherd, Tenn.

JAP'S FILE COMPLAINTS.

Three in Addition to the Demand With Reference to Immigration.

The Hawaiian legation in Washington is advised of three new complaints filed against the Hawaiian government by the Japanese. One of these charges Hawaiian customs officials with discriminating against the Japanese in favor of the California wine; another takes exception to the order of the Hawaiian board of immigration to the owners of plantations requiring them in making contracts for oriental labor to make she contracts for two Chinese to one Japanese in every case; a third complains of an order displacing a Japanese physician on a plantation. The legation is also informed that there is no abatement of the Japanese demands on account of Hawaii's position with reference to Japanese immigration.

SIAMESE KING.

He Will Visit New York on His Trip Around the World.

Mail advices to the Associated Press from Gibraltar give further details of the movements of the Siamese yacht Maha Chakskri. They say:

"The yacht is now on its way to Cronstadt, Russia, to await his majesty's pleasure to continue the tour of the world, which he is now making. This includes a visit to the United States, Canada and Mexico. It is stated by the officers of the vessel, who are all Englishmen, that the King will spend sufficient time in America to allow the yacht to go from New York, where he will land, to San Francisco, the place of his re-embarkation. The date of his arrival in the United States is not yet definitely decided."

GERMANY S ATTITUDE.

Report That the Emperor Wishes to Overthrow the Greek Dynasty.

The correspondent of the Daily Mail at Athens says rumors are current as to the attitude of Germany; it is alleged that the German government seeks to overthrow the Greek dynasty and to establish a rigorous control of Greek finances. In order to attain this double object Germany wants a continuance of the war and to have the terms of peace finally dictated in Athens itself.

THE SULTAN APPEALED.

Ambassadors of the Other Powers Highly Displeased.

The sultan has appealed to Emperor William and Emperor Nicholas to support his claim to annex Thessaly to the Ottoman empire. This proceeding highly displeases the ambassadors of the other powers, who are expected to mark their displeasure by refusing to negotiate the other points in Turkey's demand until the evacuation demand is settled.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section, The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story schoolhouse, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be found.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

FOR THE FAMISHING.

Cargo of Corn and $200,000 for Starving Indian Natives.

The whaleback steamer City of Everett sailed from San Francisco for India Saturday afternoon, with a cargo of 2,600 tons of corn for the famine-stricken natives of that country. Cash contributions of $200,000 were also taken. Prior to her departure Rev. Hobbs, of Jacksonville, Ill., conducted religious services on board the steamer, and blessed her cargo.

WANTED.—Persons to accept, gratis, in view of future orders; rubber stamp of their own name for making clothing, books, etc. Write plainly and enclose four postage stamps to defray mailing, packing, etc. H. P. MAYNARD, 16 Arcade, Cincinnati, O. Agents wanted for rubber stamps, rubber type, pads, daters, white letter signs, "Bottled Electricity," for catarrh and pain, electric belts, etc. Write for agents' terms.

VOL. I. NO. 13.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

Every nice or naughty story that our neighbors may befall,
Will be found within the columns of The Chilton County Call;
Stay! We tell no little secrets that were better left untold;
Would that every other gossip hewed unto this Rule of Gold—
Same old Golden Rule that ran
Through the Teachings of The Man—
He, the One and Only Perfect, since Humanity began!

Maplesville, Chilton county, Ala., is a station on the Southern Railway between Birmingham Junction and Selma, and is a good location for a spoke and handle factory. There is a sufficient quantity of white oak and hickory nearby. The other timbers in that section are yellow pine, affording a good location for a shingle mill, also a good supply of gum and beech timber. Desirable farm lands can be purchased in this county at low prices. Maplesville has a population of over 200, and during the year 1896 several buildings were erected.—Southern Field (Washington, D. C.)

E. Gardiner, of Superior, Ia., was in Thorsby over Saturday and Sunday. He has been traveling over the South for the past few weeks and thinks that Thorsby has the brightest prospects of any colony in the South.

The recent heavy rains have done a great deal for Chilton county farmers. Corn and other crops are now doing very good, and the indications are that there will be an unusually large crop this year.

The Concordia Co. have received a letter from Dr. Young, of Waseca, Minn., in which he states that he is fast closing up his business in the North and will soon be able to move to Thorsby.

Grapes in Thorsby are now growing very rapidly, and the one year old vines will bear a surprisingly large crop this year.

Oscar Swansen has completed an excellent well on his place. The water is some of the best to be found in the country.

The new livery barn is now completed and Mr. Thorson is already doing a good business.

Chicago capitalists are figuring on putting in a $40,000 brick machine at Thorsby.

Tomorrow, Saturday, Thorsby will take a holiday and celebrate the Fourth.

Emanuel Boostrum is building an addition to his residence.

Minister Called to Texas.

Dr. A. W. McGaha, former president of Howard College at East Lake, near Birmingham has accepted a call from the First Baptist Church at Fort Worth, Tex., and leaves for his new post soon. Dr. MaGaha is one of the most prominent Baptist divines in North Alabama. He has been in charge of the Pratt City Baptist Church since he retired from the educational field.

Three Kansans Are Dead.

News reached Salina, last Thursday of a terrific cyclone which passed fifteen miles northwest of that city about 10:30 Wednesday night. As far as heard from three are dead and a number dangerously injured. The dead are: Mrs. Anna Geesy, aged 34; Nona Geesy, aged 13; Ida Geesy, aged 5. Four members of the family are also badly hurt.

A lot of Wisconsin farmers will soon move to Dodge county and go extensively into the hay mining business.

Social Democracy Colony.

George Harrison, of Birmingham, a former railroad man, who has been the local leader of the American Railway union since the strike of 1894, has a scheme on foot looking to the location of the southern end of Debs' social democracy colony in South Alabama, near Mobile. Harrison says that Washington state is too far away for Southern people in sympathy with Debs' plan to go, and he has written to the leader with regard to establishing a Southern colony in this state. He says that the American Railway union has 1,900 members in Birmingham, 1,000 in Montgomery and 400 in Mobile. He says there are vast tracts of land which could be obtained near Mobile for the purposed colony and he believes Debs will approve the scheme. Harrison says he is arranging for the American Railway unions all over the south to take up his project and help him push it to consummation.

University Faculty Announced.

President Powers, of the University of Alabama, has announced the following as the faculty elected by the board of trustees for the next scholastic year. James K. Powers, president; W. L. Wyman, Latin, re-elected; B. F. Meek, English, re-elected; William A. Parker, modern languages, re-elected; Eugene A. Smith, geology, re-elected; Thomas C. McCorvey, history and philosophy, re-elected; William B. Safford, Greek, formerly held by John C. Calhoun, George S. Wilkins, civil engineering, formerly held by W. A. Hardaway; Thomas W. Palmer, mathematics, re-elected; George M. Edgar, physics and astronomy, re-elected; J. M. Pickel, chemistry, re-elected; John J. Harris, quartermaster, re-elected, Mrs. Amelia G. Gorgas, librarian, re-elected; Dr. Wm. Hester, surgeon, formerly held by Dr. Somerville; John Y. Graham, biology. No elections in the law department yet. The trustees have vested President Powers with full power to control the university for a term of three years. His executive committee is composed of J. E. Webb, W. S. Thorington and William Richardson. The fees of the university have been reduced from $172 to $130. Of the new men elected in the faculty Professors Wilkins and Graham are Princeton men and Professor Stafford is from Johns Hopkins.

Preparing to Meet Competition.

News has reached Birmingham of a conference which was held in Washington recently between the officials the Southern railway and representatives of the American Coal company, the Virginia and Alabama Coal company, the Corona Coal and Coke company and the Sloss Iron and Steel company, with regard to taking steps to provide better facilities for the Alabama coal trade down the Mississippi river, from Greenville, Miss., in order to meet competition from Pittsburg. In view of the fact that private contractors who have undertaken to establish large lines for transporting coal down the river to the sugar plantations have not succeeded very well in the undertaking for a lack of capital and other reasons the Southern railway itself has decided to take up the project and accordingly has leased 100 barges with tow boats sufficient to pull them and will engage in the business of transportation on the Mississippi river on its own account. The road has also determined to reduced the freight rate on coal by rail from the Birmingham district to Greenville, Miss., from $1.25 per ton to $1 per ton, a lowering of 20 per cent. The lease of the barges is for a period of five years with the option to buy. They will ply between Greenville and points on the river not reached by rail and every effort will be made to drive Pittsburg coal out of that market. Coal men in the Birmingham district are very buoyant over the prospects and expect to furnish the section in question a very large part of the million and a half tons of coal it annually consumes.

Russia Will Not Protest.

The Berlin correspondent of the London Standard says: Russia will not join in Japan's protest against annexation of Hawaii by the United States, but she regards the measure as a dangerous precedent.

Degree for Mr. McKinley.

At Cleveland, O., the trustees of Western Reserve university at their meeting conferred the degree of L. L. D. upon President McKinley.

TWENTY KILLED.

The St. Louis Express Plunged Through a Trestle.

AN APPALLING CATASTROPHE.

A Farmer Saw the Impending Danger, and Stood in the Storm Trying to Warn the Engineer, but His Signals Were Not Seen.

The St. Louis express on the Wabash railway, which left Kansas City at 6:20 Saturday evening, plunged through a trestle at Missouri City, Mo., at 6:55 o'clock, carrying down the entire train, with the exception of the rear car, a Pullman. The gorge, which a few hours previous was practically empty, had become a raging torrent, because of a tremendous downpour of rain, and the structure weakened.

Seven people are known to be dead, and the lost may reach twenty-five passengers in the chair car, and only a few of these are accounted for.

The number of dead is estimated from nine to twenty-five. The known dead number nine. Their names are:

Chas. C. Copeland, of St. Louis, conductor of the train.

Edward Greidrod, of St. Louis, expressman and baggagemaster.

C. M. Smith, of St. Louis, postal clerk.

Frank W. Brink, of St. Louis, postal clerk.

Saul Winters, of St. Louis, postal clerk.

W. S. Mills, of St. Louis, postal clerk.

Gus Smith, of St. Louis, postal clerk.

C. P. Cressley, of St. Louis, brakeman.

Train boy, name unknown.

A farmer tried to flag the train, but owing to a heavy rain, which made a murmuring creek a raging torrent, the engineer was unable to see the signal. A freight train was flagged within 300 feet of the gaping trestle. Two newsboys who were on the front end of the car, are supposed to be dead, as are the baggagemaster and the express messenger.

The engine passed safely over the trestle when the structure gave way and the tender and rest of the train plunged through. The recent heavy rain had weakened the trestle and the weight of the train broke it through. All of the trainmen except the engineer, fireman, and a Pullman conductor were killed.

The accident came without warning and the scene which presented itself was an absolutely indescribable one. The cries of the wounded were frightful. Fortunately the agony of fire was not added to the other horrors of the occasion.

The bodies of the conductor, express messenger, brakeman, five postal clerks and an unknown boy were recovered.

Staff Officers, Second Regiment.

The following order has been issued by Col. H. B. Foster, announcing his staff as commander of the Second Regiment, Alabama National Guards:

National Guard, Tuscaloosa, Ala.
Regimental Orders No. 13:

The following named are hereby announced as the staff officers on the staff of Col. H. B. Foster, commanding the Second infantry regiment of the Alabama National Guard:

Adjt H L Carter, captain, Anniston, Ala.
Quartermaster John D Elliott, captain, Birmingham, Ala.
Captain Rev L O Dawson, captain, Tuscaloosa, Ala.
Surgeon Dr G B Wimberly, captain, Vernon, Ala.
Assistant Surgeon Louis J Robinson, first lieutenant, Birmingham, Ala.
Inspector Rifle Practice W R Foster, captain, Bessemer, Ala.
Non-Commissioned Staff—Sergeant-Maj John T Bradford, Tuscaloosa, Ala; Quartermaster Sergeant Charle B Townsend, Tuscaloosa, Ala; Ordinance Sergeant D C Carleton; East Lake, Ala; Hospital Steward D B Lockie, Birmingham, Ala; Assistant Hospital Steward D H Gass, Birmingham, Ala.

Dr. Depew's Opinion.

The London Echo publishes an interview with Dr. Chauncey M. Depew, in which he is quoted as expressing the belief that the arbitration treaty between the United States and Great Britain will be a law before the end of President McKinley's term of office.

CHILTON COUNTY CALL.

SOUTHWARD THE STAR OF EMPIRE TAKES ITS WAY.

VOL. I. NO. 13. THORSBY, ALA., FRIDAY, JULY 2, 1897. $1.00 PER YEAR.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

Every nice or naughty story that our neighbors may befall,
Will be found within the columns of The Chilton County Call;
Stay! We tell no little secrets that were better left untold;
Would that every other gossip hewed unto this Rule of Gold—
Same old Golden Rule that ran
Through the Techings of The Man—
He, the One and Only Perfect, since Humanity began!

Maplesville, Chilton county, Ala., is a station on the Southern Railway between Birmingham Junction and Selma, and is a good location for a spoke and handle factory. There is a sufficient quantity of white oak and hickory nearby. The other timbers in that section are yellow pine, affording a good location for a shingle mill, also a good supply of gum and beech timber. Desirable farm lands can be purchased in this county at low prices. Maplesville has a population of over 200, and during the year 1896 several buildings were erected.—Southern Field (Washington, D. C.)

E. Gardiner, of Superior, Ia., was in Thorsby over Saturday and Sunday. He has been traveling over the South for the past few weeks and thinks that Thorsby has the brightest prospects of any colony in the South.

The recent heavy rains have done a great deal for Chilton county farmers. Corn and other crops are now doing very good, and the indications are that there will be an unusually large crop this year.

The Concordia Co. have received a letter from Dr. Young, of Waseca, Minn., in which he states that he is fast closing up his business in the North and will soon be able to move to Thorsby.

Grapes in Thorsby are now growing very rapidly, and the one year old vines will bear a surprisingly large crop this year.

Oscar Swansen has completed an excellent well on his place. The water is some of the best to be found in the country.

The new livery barn is now completed and Mr. Thorson is already doing a good business.

Chicago capitalists are figuring on putting in a $40,000 brick machine at Thorsby.

Tomorrow, Saturday, Thorsby will take a holliday and celebrate the Fourth.

Emanuel Boostrum is building an addition to his residence.

Minister Called to Texas.

Dr. A. W. McGaha, former president of Howard College at East Lake, near Birmingham has accepted a call from the First Baptist Church at Fort Worth, Tex., and leaves for his new post soon. Dr. MaGaha is one of the most prominent Baptist divines in North Alabama. He has been in charge of the Pratt Cty Baptist Church since he retired from the educational field.

Three Kansans Are Dead.

News reached Salina, last Thursday of a terrific cyclone which passed fifteen miles northwest of that city about 19:30 Wednesday night. As far as heard from three are dead and a number dangerously injured. The dead are: Mrs. Anna Geesy, aged 34; Nona Geesy, aged 13; Ida Geesy, aged 5. Four members of the family are also badly hurt.

A lot of Wisconsin farmers will soon move to Dodge county and go extensively into the hay making business.

Social Democracy Colony.

George Harrison, of Birmingham, a former railroad man, who has been the local leader of the American Railway union since the strike of 1894, has a scheme on foot looking to the location of the southern end of Debs' social democracy colony in South Alabama, near Mobile. Harrison says that Washington state is too far away for Southern people in sympathy with Debs' plan to go, and he has written to the leader with regard to establishing a Southern colony in this state. He says that the American Railway union has 1,900 members in Birmingham, 1,000 in Montgomery and 400 in Mobile. He says there are vast tracts of land which could be obtained near Mobile for the purposed colony and he believes Debs will approve the scheme. Harrison says he is arranging for the American Railway unions all over the south to take up his project and help him push it to consummation.

University Faculty Announced.

President Powers, of the University of Alabama, has announced the following as the faculty elected by the board of trustees for the next scholastic year. James K. Powers, president; W. L. Wyman, Latin, re-elected; B. F. Meek, English, re-elected; William A. Parker, modern languages, re-elected; Eugene A. Smith, geology, re-elected; Thomas C. McCorvey, history and philosophy, re-elected; William B. Safford, Greek, formerly held by John C. Calhoun, George S. Wilkins, civil engineering, formerly held by W. A. Hardaway; Thomas W. Palmer, mathematics, re-elected; George M. Edgar, physics and astronomy, re-elected; J. M. Pickel, chemistry, re-elected; John J. Harris, quartermaster, re-elected, Mrs. Amelia G. Gorgas, librarian, re-elected; Dr. Wm. Hester, surgeon, formerly held by Dr. Somerville; John Y. Graham, biology. No elections in the law department yet. The trustees have vested President Powers with full power to control the university for a term of three years. His executive committee is composed of J. E. Webb, W. S. Thorington and William Richardson. The fees of the university have been reduced from $172 to $130. Of the now men elected in the faculty Professors Wilkins and Graham are Princeton men and Professor Stafford is from Johns Hopkins.

Preparing to Meet Competition.

News has reached Birmingham of a conference which was held in Washington recently between the officials the Southern railway and representatives of the American Coal company, the Virginia and Alabama Coal company, the Corona Coal and Coke company and the Sloss Iron and Steel company, with regard to taking steps to provide better facilities for the Alabama coal trade down the Mississippi river, from Greenville, Miss., in order to meet competition from Pittsburg. In view of the fact that private contractors who have undertaken to establish large lines for transporting coal down the river to the sugar plantations have not succeeded very well in the undertaking for a lack of capital and other reasons the Southern railway itself has decided to take up the project and accordingly has leased 100 barges with tow boats sufficient to pull them and will engage in the business of transportation on the Mississippi river on its own account. The road has also determined to reduced the freight rate on coal by rail from the Birmingham district to Greenville, Miss., from $1.25 per ton to $1 per ton, a lowering of 20 per cent. The lease of the barges is for a period of five years with the option to buy. They will ply between Greenville and points on the river not reached by rail and every effort will be made to drive Pittsburg coal out of that market. Coal men in the Birmingham district are very buoyant over the prospects and expect to furnish the section in question a very large part of the million and a half tons of coal it annually consumes.

Russia Will Not Protest.

The Berlin correspondent of the London Standard says: Russia will not join in Japan's protest against annexation of Hawaii by the United States, but she regards the measure as a dangerous precedent.

Degree for Mr. McKinley.

At Cleveland, O., the trustees of Western Reserve university at their meeting conferred the degree of L. L. D. upon President McKinley.

TWENTY KILLED.

The St. Louis Express Plunged Through a Trestle.

AN APPALLING CATASTROPHE.

A Farmer Saw the Impending Danger, and Stood in the Storm Trying to Warn the Engineer, but His Signals Were Not Seen.

The St. Louis express on the Wabash railway, which left Kansas City at 6:20 Saturday evening, plunged through a trestle at Missouri City, Mo., at 6:55 o'clock, carrying down the entire train, with the exception of the rear car, a Pullman. The gorge, which a few hours previous was practically empty, had become a raging torrent, because of a tremendous downpour of rain, and the structure weakened.

Seven people are known to be dead, and the lost may reach twenty-five passengers in the chair car, and only a few of these are accounted for.

The number of dead is estimated from nine to twenty-five. The known dead number nine. Their names are:

Chas. C. Copeland, of St. Louis, conductor of the train.

Edward Greidrod, of St. Louis, expressman and baggagemaster.

C. M. Smith, of St. Louis, postal clerk.

Frank W. Brink, of St. Louis, postal clerk.

Saul Winters, of St. Louis, postal clerk.

W. S. Mills, of St. Louis, postal clerk.

Gus Smith, of St. Louis, postal clerk.

C. P. Cressley, of St. Louis, brakeman.

Train boy, name unknown.

A farmer tried to flag the train, but owing to a heavy rain, which made a murmuring creek a raging torrent, the engineer was unable to see the signal. A freight train was flagged within 300 feet of the gaping trestle. Two newsboys who were on the front end of the car, are supposed to be dead, as are the baggagemaster and the express messenger.

The engine passed safely over the trestle when the structure gave way and the tender and rest of the train plunged through. The recent heavy rain had weakened the trestle and the weight of the train broke it through. All of the trainmen except the engineer, fireman, and a Pullman conductor were killed.

The accident came without warning and the scene which presented itself was an absolutely indescribable one. The cries of the wounded were frightful. Fortunately the agony of fire was not added to the other horrors of the occasion.

The bodies of the conductor, express messenger, brakeman, five postal clerks and an unknown boy were recovered.

Staff Officers, Second Regiment.

The following order has been issued by Col. H. B. Foster, announcing his staff as commander of the Second Regiment, Alabama National Guards:

National Guard, Tuscaloosa, Ala.

Regimental Orders No. 13:

The following named are hereby announced as the staff officers on the staff of Col. H. B. Foster, commanding the Second infantry regiment of the Alabama National Guard:

Adjt H L Carter, captain, Anniston, Ala.
Quartermaster John D Elliott, captain, Birmingham, Ala.
Captain Rev L O Dawson, captain, Tuscaloosa, Ala.
Surgeon Dr G B Wimberly, captain, Vernon, Ala.
Assistant Surgeon Louis J Robinson, first lieutenant, Birmingham, Ala.
Inspector Rifle Practice W B Foster, captain, Bessemer, Ala.
Non-Commissioned Staff—Sergeant-Maj John T Bradford, Tuscaloosa, Ala; Quartermaster Sergeant Charle B Townsend, Tuscaloosa, Ala; Ordinance Sergeant D C Cantelou; East Lake, Ala; Hospital Steward D B Luckie, Birmingham, Ala; Assistant Hospital Steward D H Goss, Birmingham, Ala.

Dr. Depew's Opinion.

The London Echo publishes an interview with Dr. Chauncey M. Depew, in which he is quoted as expressing the belief that the arbitration treaty between the United States and Great Britain will be a law before the end of President McKinley's term of office.

SWEEPING

EVERYTHING BEFORE IT

BIG SALE

FOR SUMMER CLOTHING

Bought at a price named by us, and selling at a price less than the cost of the raw material. This is the largest sale of Men's reputable Clothing at such, sweeping prices that has ever taken place in the Magic City. We have also started a

Shoe Sale

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$3.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

DR. O. T. DOZIER,
(The Renowned Southern Specialist)
Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice. Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. Many valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his unusual success has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south

(The Southern Odd Fellow.)

We cannot add anything to the reputation of Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at "the head of the profession."

(People's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. He is a georgian by birth, a high toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Address

DR. O. T. DOZIER,
Lock Box 119 BIRMINGHAM, ALA.

The Call will be sent to any address in the United States or Canada for one dollar per year.

THE SAME OLD WAY.

A-dancing, a-glancing,
The sunbeams out of heaven lancing,
The tide beneath green shadow trancing
With sweet delay.
Wild voices through the forest falling,
The wood-thrush to the wood-thrush calling
The same old way.

A-flowing, a-blowing,
Its showers of dew each low bough throwing
In storms of fragrance round your going
With toss and sway.
Murmur of bees in blossom swinging,
And children's cries more sweet than singing,
The same old way.

A-flushing, a-gushing,
The roses on their red stems blushing
Before they close, with soft airs hushing
The dying day.
And all the woody ways discover
Down glimmering depths a lass and lover
The same old way!

—HARPER'S BAZAR.

MRS. MABERLY'S NEIGHBOR.

BY MARY A. DENISON.

"Paul! it is the loveliest little house I've seen yet. Let us take it."

"I confess I like that long veranda," said Paul, "and those beeches and chestnuts on the roadside are simply superb."

"Yes, they are very beautiful, and, —let me see—two cherry trees, one peach, one pear, and six apple trees, all in good condition, in the side and back yard," said the young wife, reading from the slip of paper she held in her well-gloved hand—pretty shaped hands she had.

"And the view is not half bad, either. I think more of that than of the fruit, which, like the peach of emerald hue, can do some harm. Remember, we have a two-year-old boy who is very ambitious where climbing is to be considered. I'm afraid these fruit trees will tempt him too sorely."

"How very ridiculous, when I am around!" was the laughing rsponse. "Ernest is scarcely ever out of my sight, and he is very obedient. I like this bay window, it commands such a pretty view; the parlor just suits me, it is exactly what one needs in a country home. My lace curtains will fit the windows; there is just enough room for the furniture. I can see just where to put everything. The floors are oiled, and our rugs will go down nicely. The people who lived here have taken good care of the house."

"The people who lived here built the house," her husband said, "and evidently took great pains to make it comfortable, but something happened that caused them to break up."

He did not admit that the something was a forgery, and that the man had fled, leaving his helpless little wife and children to go on as best they could. Why should she know it? It might lessen her pleasure in living in the place if she did.

They went upstairs, down cellar, and found all the appointments perfect. Mrs. Maberly was in raptures. If they had built it for themselves, she said, it could not have been more to her liking; indeed, she had planned a house exactly like it.

The veranda went round two sides of the building, and there were still hanging from the beams overhead, baskets of last year's plants, some of them yet thrifty. Vines had been carefully trained over the lattice-work and a thick mass of foliage rendered it almost impossible for wind or rain to get in.

The next house on the right was but a few rods away, a bright-looking stone cottage against which clung English ivy, the sun's level rays turning the leaves to crimson and gold.

"I wonder who lives there?" Mrs. Maberly asked.

"The name is Warren," said her husband. "I have seen him once or twice, but have never spoken to him."

"Warran; it is a good name, and it seems to me I have heard it in connection with some of my friends, but I forget. I hope they are nice; one has sometimes to depend upon neighborly offices. They certainly show good taste. I can see from here that the garden is beautiful, and the baby carriage in the yard is very pretty and costly. The nurse wears a cap, too. How trim she looks—and well dressed! That speaks volumes for the mistress of the house. Of course none but nice people would live in a cottage like that, or," she added, laughingly, "this."

"That goes without saying," said her husband, "but hadn't we better be going? The horse is getting impatient."

"O, yes, and the boy will be fretting for me, poor little fellow! I'm so glad there's a barn on the premises—don't you think we could afford a cow? I could make such delicious ice cream."

"We'll see about it," her husband said, smiling.

In less than a week the house was ready for occupancy, and Mrs. Maberly was as happy as the day is long, settling things. Of course it took weeks to get everything in place, and then a rearrangement was often decided upon, but at last the piano was satisfactorily disposed of, the furniture and the bric-a-brac set out to advantage, and the little woman felt very proud of her house, which really reflected great credit upon her taste and ingenuity. As for the boy, he lived out of doors. His quarters in the city had been rather limited, but here he had, as his father expressed it, "all creation to roam in."

Often as Mrs. Maberly sat on the veranda, the white-capped nurse came by, drawing the exquisite baby carriage, in which sat a fairy princess, so white and sweet, so wrapped in fine fabrics, rich laces and lovely carriage blankets, that the little woman wondered more and more who her neighbor could be. One day she met the nurse and child on the road. She had been to the unpretending cottage on her left where she occasionally bought eggs and cream of the good farmer's wife who lived there, and she stopped as the carriage came towards her.

"I must have a glance at that beautiful baby!" she said, placing her basket of eggs on the ground. "What a lovely child! how old is she?"

"Sixteen months," said the nurse, with a broad smile, that someway looked familiar to Mrs. Maberly.

"I don't know as I ever saw quite as lovely a baby," said Mrs. Maberly, smiling down upon the child, whose great blue eyes were fixed upon her face. "How I wish I dared to kiss her! But babies are so capricious."

"She'll let you," said the girl. "Mabel, kiss the lady."

The cherubic little lips came toget her at once in a charming pout tha made them look more than ever like two ripe cherries.

"You perfect darling!" exclaimed Mrs. Maberly, as she received and returned the coveted kiss. "I'm dead in love with you. Whose child is it?" she asked, as she resumed her basket and prepared to move away.

"Why, ma'am, is it possible that you don't remember me?" was the astounding form of the girl's answer.

"Remember you!" exclaimed Mrs. Maberly with unfeigned astonishment, and then it slowly dawned upon her that the face she was looking at was not unfamiliar.

"Yes, I'm changed, of course, 'cause it's years ago since you used to come to Miss Mabel's for to stop in your vacations. Don't you remember the old plantation down in Georgy and the old hands? I'm old Marthy's daughter—Marthy, that used to be laundress, and I'm growed up, you see."

"Old Martha!—Mabel!—the old plantation down in Georgia!" Mrs. Maberly felt dizzy as she heard the well-remembered names.

"You see Miss Mabel married a Northern gentleman, after all, and came here to settle."

"And she—she is— our next-door neighbor!" said Mrs. Maberly in a faint voice. She felt dazed. "I think I understand how one might be knocked down with a feather," she said, in speaking of the matter to her husband afterwards.

"Mabel—Georgia," she kept repeating to herself, "and she is my next neighbor! If I had known it I would never have taken the house."

The brightness had all died out of her face. She wanted to ask some questions, but would not allow herself to do so. The nurse's chocolate-colored face was on a broad grin. How much did she know of the state of affairs between these two women who had once been the closest friends?

"No, I would never have taken that house!" she said over and over, as she moved on, still in a dazed, startled mood, that even the sight of her beautiful boy, waiting outside the gate for "mamma," failed to change. A cloud seemed to have been suddenly thrown over the gray stone cottage. Vines and flowers and all the belongings were as if they had never been. Mrs. Maberly turned her face resolutely away and went into her own house.

"O, dear—I have found out at last who our next-door neighbor is!" she exclaimed, as her husband entered the hall, where she was awaiting him that evening.

"You don't seem to be very much delighted over the discovery," was his reply. "I met the gentleman to-day in a business affair. He is very genial. It seems his wife is something of an invalid, and seldom goes out."

"I'm so glad!" exclaimed Mrs. Maberly, with heartfelt emphasis.

"That don't speak much for your Christian charity," said Mr. Maberly, smiling.

"I don't mean that I'm glad she is sick, but that she seldom goes out," said his wife.

"That will make it encumbent on you to call on her, won't it!"

"I'll never call on her," was the reply, delivered with almost spiteful energy.

"Why, what on earth has happened?" her husband asked, now really puzzled. "Heretofore you have seemed to wish for her acquaintance. I'm sure I have heard you wonder why she did not call."

"Very true, but then I did not know who she was—I do," and she narrated her interview with the nurse that morning.

"So you see I know her; she used to be one of my dearest friends. I think at one time I almost worshipped her."

"And you have spent days at her house?"

"Indeed I have; one of the loveliest plantations in the State of Georgia. In my vacations, when mamma and papa were abroad, I always went home with her. But now I dislike her quite as much as I loved her then. When we last parted I told her nothing would induce me ever to speak to her again or to treat her with respect. O, we said very bitter things, both of us; but it was she who was the first offender. And now I am sorry you bought the house."

"Don't you know you are nursing the spirit of revenge?" her husband asked gravely.

"I know that I never could respect myself, after what she said to me, if I as much as noticed her, and very likely she feels the same towards me. What a pity that we are neighbors?"

"I am sorry to hear all this, as I like Mr. Warren remarkably well, and promised that you should call. However, it can't be helped. Here we are, and here we shall stay, so we must make the best of it."

"Yes, we must," his wife said, regretfully, "but I shall never feel again the interest I once did in our pretty home."

"To change the subject," said Mr. Maberly, "I bought a cow to-day."

"O, a real cow for our own!" cried Ernest, looking up from his toys.

"Yes, a real cow—and we shall have real cream," said his father. "She is coming here to-night."

Mrs. Maberly said nothing. She had been very anxious for the cow, but her thoughts were all taken up with the knowledge she had gathered that day.

"And I kissed her baby!" she said over and over, "and that girl will tell her! I would never have made such a concession if I had known."

The next day she carefully shut the blinds to all the windows that overlooked the pretty gray stone cottage, thus denying herself a view that had come to be almost a necessity of her beauty-loving nature.

"They never shall be opened again," she said bitterly. "I want nothing to do with her or hers."

The time went on and winter came with its deep snows and keen, biting winds. The blinds were still kept close on the south side of the house, and the next neighbor was seldom mentioned. One day Mr. Maberly spoke of him on his return from business.

"It is a bitter night," he said, "and I wouldn't like to be in Warren's place."

"Why, what is that?" his wife asked, with some show of interest.

"His wife's father is not expected to live, and Mrs. Warren is not able to go. There are some business matters to be attended to, and his presence is needed. It's a long, cold journey. It must be hard for the poor wife that she cannot see her dying father. I feel very badly for them both."

"It is—very hard," Mrs. Maberly forced herself to say, and once or twice in the night she thought of the lonely woman, as the snowflakes were whirled against the window in the heavy windbeat of the storm. She could not help picturing her, wide-awake and tearless in her misery. And yet she never suggested to herself she ought to call or betray any interest in her neighbor's sorrows.

"I said I never would speak to her again," she said, "and I never will. She brought it all on herself."

"Don't expect me home till the last train to-night," Mr. Maberly said the next morning. "There's a meeting of business men that I must attend, so I shall be obliged to stay in. Send John down with the sleigh about eleven."

The day proved a pleasant one, and Mrs. Maberly felt unusually light-hearted as she sang and worked about the house. It was not till evening that she realized how very lonesome she was. Ernest had been kept up an hour beyond his time, and it was not until he pleaded to be sent to bed that she allowed herself to carry him upstairs. His prayers were of the briefest, although she tried to prolong the process of undressing, but he was too sleepy; and presently, as his head touched the pillow, he was in the land of dreams. Something prompted the woman as she went out in the hall to open the inside blinds and lift the curtains from one of the windows that commanded a view of her neighbor's house.

All between was one bed of snow—trees, shrubbery, fences, garden; and the moonbeams fell gently over the wide, white, uneven space, and bathed the opposite cottage in its silvery radience. She looked toward the house. On the white surface of the window were shadows flitting and coming, seemingly going to and fro in great haste.

"I suppose they are putting the baby to bed," she said to herself, "or perhaps she has company; it looks like it."

Carefully closing the blinds again, she went downstairs. The parlor looked very cozy with its rich red drapery, made more intense in color by the blazing coal fire, and yet the woman had a vague feeling of uneasiness. Opening the door, she could distinguish voices in the kitchen. John was talking with the cook, and the sound reassured her somewhat; but, oh, how she missed the genial companionship of her husband! Suddenly there was a peal of the door bell, so sharp and sudden that it set all her nerves tingling.

"I'm so glad John is in!" was her inward comment, as she heard his heavy footsteps across the hall.

Presently the front door was open. The accents of a woman's voice, as if in despair, came faintly to her ears. The parlor door was opened, and John was saying, "The madam is in here," when there appeared, pale and drawn in its agony, the face of her neighbor of the gray stone house. The room seemed to whirl round her as she looked—what could it mean?

"O, Anne—O, Mrs. Maberly!" cried the woman in a choking voice, her tightly-clasped hands unconsciously extended as if in supplication, "something sent me here to you. My baby—my beautiful baby is dying!—dying before my eyes, and I am all alone. Come and help me, if ever you loved me—come and help me. You have studied medicine and will know what to do. I have sent for a doctor, but he is ten miles off with a patient—and that horrible croup!" Her voice failed her. There was a noise in her throat like the coming of hysteria. Mrs. Maberly had sprung forward and caught her or she would have fallen. Into her voice crept the old-time tenderness, into her hands the old caressing movements.

"Don't worry," she said, "wait till I get a shawl—wait till I get my medicine box, and I believe I can help you. Don't give up heart. You were too ill yourself to come out; you should have sent for me." All this time she was going rapidly around the room, preparing herself to go.

"Yes, but I remembered—O, I thought if I came myself in all my misery, you would take pity on me! O, my baby! my baby! My poor old father is dying, too, and I can't be with him! It seems as if I cannot bear it—to lose my father and my baby, too," and she wept bitterly.

"Don't give up heart and hope," said Mrs. Maberly. "There, I am ready—I can help you, with God's blessing, I am sure I can. Hush, don't cry so—lean on my arm," and so she tried to comfort her until the two entered the gray cottage, Mrs. Maberly wondering all the time where her resentment had gone.

It was a pitiful sight, the baby in the arms of her nurse, struggling for breath. Giving orders in a low voice, forcing herself to be calm, with the beautiful, agonized face looking up in her own, Mrs. Maberly worked quietly and efficiently with the remedies she had brought, and which for a long time seemed unavailing. But, even as the agonized mother hid her face from what to her were the death struggles of the child, her neighbor bade her take hope; and after nearly two hours of steady battling with the dread disease, and just as the doctor's carriage drove up to the door, the labored respiration gave way to easy breathing, the flush of anguish was gone, and the little sufferer slept on Mrs. Maberly's knee.

"It's mighty lucky you had such a neighbor," said the doctor, speaking to Mrs. Warren; "she knew just what to do. I couldn't have treated the case better, myself."

For answer, Mrs. Warren went on her knees and kissed the hand under the head of her baby—then, bowing her own head beside it, she sobbed and sobbed. Was it thankfulness for the service rendered, or a mute avowal that she had wronged her old friend?

Mrs. Maberly had news for her husband when he returned that night.

"So you really found that you had a neighbor," he said when she had finished.

"I think it was she who found the neighbor," she said, flushing. "And who would not help her worst enemy in such an emergency? Really, nothing could have happened better, since it had to happen, and she will always feel as if I saved the baby."

After that one might have seen frequent crossings-over to the cottages, alternately. Sometimes the pretty baby carriage, with its beautiful occupant, stood for hours in the front yard of the Maberly's—and often the two mothers sat on the porch, talking of old times, and finding pleasure in the renewal of themes that had been so long forbidden to them.

Under Mrs. Maberly's directions, the invalid gathered health and strength, and the two families became, in deed and word, the best of good neighbors.—The Housewife.

A Four Legged Postal Assistant.

A big black dog of uncertain breed seizes the mail bag when it is thrown off the train at a certain rural town in Georgia and scampers away with it to the postoffice. It is said he seems to know the time when the train is due and is always punctually at his post, so to speak. But he is under the surveillance of the postmaster, who might otherwise be thought neglectful of his duty.

Baltimore, Md., is to make two public playgrounds for children this summer.

A RAILWAY ON ICE.

Drawing Trains Over Frozen Rivers in Russia.

It has been reserved for Russia to undertake what will probably rank as the monumental railway enterprise of the nineteenth century—this being the completion of a belt of rails around the world—at least, so far as terra firma is concerned. The Trans-Siberian Railway, which is now in course of construction, has reached as far as Krasnioarsk, which is the exact centre of Asiatic Russia, and in four years' time it is expected that it will be connected to the Pacific Coast, and direct railway communication established between the most western point of Europe and the most eastern point of Asia. The most significant fact in connection with the Trans-Siberian Railway is that it will make possible a journey around the world in less than forty days, and thus Jules Verne's romantic globe-trot will have been reduced to the tune of 50 per cent.

The work of construction has been pushed on with an energy not usually associated with things Russian. The manner in which the Government has gone slap-bang in this work has been a surprise to the engineering world, but like most Muscovite undertakings, the whole line from Chelabinski, in the Urals, to its present termination, has suffered from bad management. The rails are miserably laid, and the road ballasted in a most precarious manner. Smashups are frequent, but as nobody outside Russia hears much of them the world is not worried. The pace, too, of the Siberian trains is wretched, the average speed not exceeding twenty versts (about thirteen miles) per hour.

But what the Russian engineers have lacked in constructional skill they have compensated for by novel experiments. Everybody knows that Siberia is a cold place. The rivers freeze to a considerable depth in winter, but still nobody would conceive that they would freeze sufficiently to bear a locomotive and a whole train of heavy wagons hurtling across from one side to the other. But such is the fact.

The experiment was first tried on the River Obi last year. At first a light train was drawn by horses over tracks frozen on to the icy surface of the river. Then a locomotive was steamed across, and, as it did not go through, it was satisfactorily established that Siberian ice was of a distinctly bearing quality. Once this fact was patent, the brow of the Russian engineer cleared, for, while it was easy to get along rapidly with the construction of the line on the ground itself, the building of bridges over the rivers was a longer job, and, as a matter of fact, the bridges over the Obi and the Achinsk are not yet half finished. "Why not use nature's bridge—the ice?" thought the Russian; and so he did.

My first experience of the railway running on the ice was at the River Achinsk. This is a tolerably broad river, perhaps twice as wide as the Thames, and when on that February afternoon the train steamed up to its western shore, the surface presented one white mass of snow-covered ice. The railway line continued down the slope of the bank and across the ice to the other side.

The train stopped at the edge of the bank, and the conductor bade us get out and walk, humorously remarking that, if the train went through, only he and the driver would be drowned.

The whole motley crowd of befurred passengers thereupon descended and trailed across the ice. At the centre of the river I paused to watch how the train would behave.

Slowly the heavy mass descended the bank and crept on to the ice. There was a distinct "scrunch" as the locomotive left solid bottom. Once all the weight of the train was off the land, I clearly felt a sag in the ice, and as the cars passed me, crack! crack! crack! like a burst of small firework, notifying me that the ice felt it badly. But it bore bravely, and in about five minutes' slow journey the train was on firm land again.—London Answers.

Profits 300 to 500 Per Cent.

The sewing machine, one of the greatest blessings in the way of machines ever offered the public, sold for years at sixty dollars in the United States. The same machine, however, to be shipped to a foreign land, could be purchased below twenty dollars. After the patents ran out the price fell rapidly until now sewing machines are sold for twenty-five dollars and often below twenty dollars. The sewing machine manufacturers became immensely rich from their profits of several hundred per cent. It has been estimated that typewriting machines cost less than twenty dollars to build, while they sell for from fifty dollars to one hundred dollars each.

It is generally understood that an agreement exists whereby these high prices are maintained. Business men are compelled to pay from three hundred to five hundred per cent. profit or go without the machines.

Are there any other machines which yield such profits as the sewing machine did for years, and the typewriting machine has and does, except it be the bicycle?

OR THE YOUNG FOLKS.

THE BOY TO THE SCHOOLMASTER.

"You have quizzed me often and puzzled me long;
You have asked me to cipher and spell;
You have called me a dolt if I answered wrong,
Or a dunce if I failed to tell
Just when to say lie and when to say lay,
Or what nine-sevenths may make,
Or the longitude of Kamtschatka bay
Or the I-forget-what's-its-name lake.
So I think it's about my turn, I do,
To ask a question or so of you."

The schoolmaster grim he opened his eyes,
But he said not a word for sheer surprise.

"Can you tell what 'phen-dubs' means? I can.
Can you say all off by heart
The 'onery, twoery, dickory ann?"
Or tell 'commons' and 'alleys' apart?
Can you fling a top, I would like to know,
Till it hums like a bumble bee
Can you make a kite yourself that will go
Most as high as the eye can see,
Till it sails and soars, like a hawk on the wing,
And the little birds come and light on the string?"

The schoolmaster looked, oh, very demure,
But his mouth was twitching, I'm almost sure.

"Can you tell where the nest of the oriole swings,
Or the color its eggs may be?
Do you know the time when the squirrel brings
Its young from their nest in the tree?
Can you tell when the chestnuts are ready to drop,
Or where the best hazel-nuts grow?
Can you climb a high tree to the very tip-top,
And gaze, without trembling, below?
Can you swim and dive, can you jump and run,
Or do anything else we boys call fun?"

The master's voice trembled, as he replied,
"You are right, my lad. I'm the dunce," he sighed.

BALLOONING TO THE NORTH POLE.

Professor Andree, the Swedish explorer, has left Stockholm for a trip to the far frozen region of the north. He will take with him an enormous balloon, with which he hopes to sail over the north pole, thus being the first man to reach the point on the earth's surface where every direction is south. You will remember that Professor Andree planned to start last year, but the winds did not favor him, so he postponed his trip.

He has a comfortable house on the northern shore of Europe, and here he will inflate his balloon with gas, and on June 20 he hopes to set sail. He will have two other men with him, and the balloon will carry all the necessary instruments for measuring latitude, longitude and temperature, to say nothing of cameras for taking photographs. The trip is full of danger, but Professor Andree and his friends feel sure that he will discover the north pole.

CURING A TRUANT.

A teacher in a large public school at Peckham has recently been much annoyed by the persistency with which one of her scholars plays truant, says a Scottish paper. She was on the point of reporting his class, when she spoke to one of the lady supervisors. This lady believes in kindness rather than harsher measures, and told the teacher to send the offender to her house the next time he was troublesome.

So one afternoon there appeared at the lady's house a boy. The supervisor was all smiles and attention, and she treated him to a "spread" the like of which he probably had never enjoyed before. He was soon made to feel perfectly at home.

"Now" thought the benefactress, "is the time to preach my little sermon." So she put before him the evils of playing truant and besought him to be a model boy in the future.

Imagine her surprise when he said to her:

"I ain't the boy that runs away, ma'am. He gave me a penny to come here in his place."

FISH WITH WINGS.

The flying fish loves deep water, and is found throughout the length and breadth of tropical seas. He is fond of feeding near the gulf weed of the Saragossa, and deposits his stringy, glutinous spawn on its yellow branches. Vessels bound from New York to the Carribee islands upon reaching the "horse latitudes," sometimes encounter vast quantities of drifting weed, strung out into long ribbon-like patches, about an eighth of a mile apart. Among the golden weed, with its delicate leaves and globular seeds, exists a curious family of cuttle fish, crabs, mollusks and small fishes. Upon these the flying fish preys, and they in turn devour its spawn. Every plunge of the steamer as she plows through the blue tropical waters frightens dozens of flying fish into the air, where they scatter in all directions, with the sunlight glistening on their gauzy wings.

The flying fish of the Atlantic attains a length of nearly one foot and a breadth between wing tips of eleven inches. He has a round, compact body, about one inch in diameter near the pectoral fins or wings. There is also an auxiliary pair of ventral fins or wings, not nearly so large as the pectoral pair. The wings are formed by a thin, transparent membrane stretched over a delicate, bony framework, and are either black, white or mottled with both. The upper half of the entire fish is a metallic blue in color, while the lower portion is a nacreous white. Black, prominent eyes, a small, protrusile mouth, forked tail, dorsal and anal fins, complete the picture of one of the most interesting little fishes in all nature's vast aquarium.

A RAILWAY ON ICE.

Drawing Trains Over Frozen Rivers in Russia.

It has been reserved for Russia to undertake what will probably rank as the monumental railway enterprise of the nineteenth century—this being the completion of a belt of rails around the world—at least, so far as terra firma is concerned. The Trans-Siberian Railway, which is now in course of construction, has reached as far as Krasnioarsk, which is the exact centre of Asiatic Russia, and in four years' time it is expected that it will be completed to the Pacific Coast, and direct railway communication established between the most western point of Europe and the most eastern point of Asia. The most significant fact in connection with the Trans-Siberian Railway is that it will make possible a journey around the world in less than forty days, and thus Jules Verne's romantic globe-trot will have been reduced to the tune of 50 per cent.

The work of construction has been pushed on with an energy not usually associated with things Russian. The manner in which the Government has gone slap-bang in this work has been a surprise to the engineering world, but like most Muscovite undertakings, the whole line from Chelabinski, in the Urals, to its present termination, has suffered from bad management. The rails are miserably laid, and the road ballasted in a most precarious manner. Smashups are frequent, but as nobody outside Russia hears much of them the world is not worried. The pace, too, of the Siberian trains is wretched, the average speed not exceeding twenty versts (about thirteen miles) per hour.

Are there any other machines which yield such profits as the sewing machine did for years, and the typewriting machine has and does, except it be the bicycle?

FOR THE YOUNG FOLKS.

THE BOY TO THE SCHOOLMASTER.

"You have quizzed me often and puzzled me long;
You have asked me to cipher and spell:
You have called me a dolt if I answered wrong,
Or a dunce if I failed to tell
Just when to say lie and when to say lay,
Or what nine-sevenths may make,
Or the longitude of Kamtschatka bay
Or the I-forget-what's-its-name lake.
So I think it's about my turn, I do,
To ask a question or so of you."

The schoolmaster grim he opened his eyes,
But he said not a word for sheer surprise.

"Can you tell what 'phen-dubs' means? I can.
Can you say all off by heart
The 'onery, twoery, dickory ann?"
Or tell 'commons' and 'alleys' apart?
Can you fling a top, I would like to know,
Till it hums like a bumble bee;
Can you make a kite yourself that will go
Most as high as the eye can see,
Till it sails and soars, like a hawk on the wing,
And the little birds come and light on the string?"

The schoolmaster looked, oh, very demure,
But his mouth was twitching, I'm almost sure.

"Can you tell where the nest of the oriole swings,
Or the color its eggs may be?
Do you know the time when the squirrel brings
Its young from their nest in the tree?
Can you tell when the chestnuts are ready to drop,
Or where the best hazel-nuts grow?
Can you climb a high tree to the very tip-top,
And gaze, without trembling, below?
Can you swim and dive, can you jump and run,
Or do anything else we boys call fun?"

The master's voice trembled, as he replied,
"You are right, my lad. I'm the dunce," he sighed.

BALLOONING TO THE NORTH POLE.

Professor Andree, the Swedish explorer, has left Stockholm for a trip to the far frozen region of the north. He will take with him an enormous balloon, with which he hopes to sail over the north pole, thus being the first man to reach the point on the earth's surface where every direction is south. You will remember that Professor Andree planned to start last year, but the winds did not favor him, so he postponed his trip.

He has a comfortable house on the northern shore of Europe, and here he will inflate his balloon with gas, and on June 20 he hopes to set sail. He will have two other men with him, and the balloon will carry all the necessary instruments for measuring latitude, longitude and temperature, to say nothing of cameras for taking photographs. The trip is full of danger, but Professor Andree and his friends feel sure that he will discover the north pole.

CURING A TRUANT.

A teacher in a large public school at Peckham has recently been much annoyed by the persistency with which one of her scholars plays truant, says a Scottish paper. She was on the point of reporting his class, when she spoke to one of the lady supervisors. This lady believes in kindness rather than harsher measures, and told the teacher to send the offender to her house the next time he was troublesome.

So one afternoon there appeared at the lady's house a boy. The supervisor was all smiles and attention, and she treated him to a "spread," the like of which he probably had never enjoyed before. He was soon made to feel perfectly at home.

"Now" thought the benefactress, "is the time to preach my little 'sermon.'" So she put before him the evils of playing truant and besought him to be a model boy in the future.

Imagine her surprise when he said to her:

"I ain't the boy that runs away, ma'am. He gave me a penny to come here in his place."

FISH WITH WINGS.

The flying fish loves deep water, and is found throughout the length and breadth of tropical seas. He is fond of feeding near the gulf weed of the Saragossa, and deposits his stringy, glutinous spawn on its yellow branches. Vessels bound from New York to the Carribee islands upon reaching the "horse latitudes," sometimes encounter vast quantities of drifting weed, strung out into long ribbon-like patches, about an eighth of a mile apart. Among the golden weed, with its delicate leaves and globular seeds, exists a curious family of cuttle fish, crabs, molluska and small fishes. Upon these the flying fish preys, and they in turn devour its spawn. Every plunge of the steamer as she plows through the blue tropical waters frightens dozens of flying fish into the air, where they scatter in all directions, with the sunlight glistening on their gauzy wings.

The flying fish of the Atlantic attains a length of nearly one foot and a breadth between wing tips of eleven inches. He has a round, compact body, about one inch in diameter near the pectoral fins or wings. There is also an auxiliary pair of ventral fins or wings, not nearly so large as the pectoral pair. The wings are formed by a thin, transparent membrane stretched over a delicate, bony framework, and are either black, white or mottled with both. The upper half of the entire fish is a metallic blue in color, while the lower portion is a nacreous white. Black, prominent eyes, a small, protensile mouth, forked tail, dorsal and anal fins, complete the picture of one of the most interesting little fishes in all nature's vast aquarium.

In flight he darts from the water to a height of twenty feet, and goes scudding away before the wind, beating the air rapidly with both wings and tail. He sails straight away for 1,000 feet, or even more, occasionally touching the crest of a wave, and seeming to gain a new impetus by the contact.

COSTLY KNIVES.

The most exquisite and valuable specimens of this article of cutlery are in the possession of the principal cutlers at Sheffield.

Scraps, in describing these knives, says that there is one, not larger than a thumbnail, having twenty blades.

Another, only an inch long when closed, with seventy blades, all made in a beautiful manner, illustrates nearly all the shapes ever given to knife-blades.

One specimen has two hundred and twenty blades, all of which are exquisitely etched on the steel with portraits, landscapes, and other subjects; while another has one thousand eight hundred and forty blades, all provided with hinges and springs, and all closing into one handle.

These knives, some of which have ivory and tortoise-shell handles, are valued at prices ranging from ten to one hundred pounds, and no more expensive pocket-knives have ever been made.

A knife with more than one hundred blades was presented by the cutlers of Sheffield to George IV., and it is now among the royal plate at Windsor Castle.

King Humbert of Italy has a hunting-knife the handle of which is of solid carved ivory surmounted by the royal Italian crown.

The sheath is of pig-skin, with massive solid silver mounts, chased to match the knife, with the royal arms of Italy in bold relief.

The price of the knife itself was twenty pounds, and with the sheath thirty-five pounds.

FATHER TIME AND HIS CHILDREN.

There once lived an old man whose name was Time, and he had four children, two boys and two girls. The boys' names were Winter and Autumn, and the girls' names were Spring and Summer. Now Father Time was very fond of his boys and girls, and he was always doing some hing to make them happy, but he believed that it was best for children to have some work to do, and not play all of the time. So he told Winter, who was the oldest, that he should expect him to look after the snow and after North Wind and Jack Frost. Winter was delighted with his work, for he was very fond of the snow, and North Wind and Jack Frost were particular friends of his, and many a merry time these three had together after their work was done. One of the things that they loved very much to do, was to freeze over the rivers and ponds, so that the boys and girls might have skating.

Summer, Winter's elder sister, had a great deal to do, for she had all of the flowers and vegetables to care for, but it was a pleasure for her to take care of the flowers, she loved them so much, she would coax the sun to shine warmly and the rain to fall softly upon them. Then the little flowers would lift their heads and when the morning breeze passed them by they gave him their very sweetest perfume, and that was their way of saying thank you.

Spring was the little baby sister, and every one loved her very much, because she was always so happy and glad. One day Father Time told Spring that she might take care of the little seeds that were lying fast asleep in the ground, and the buds on the trees. Then Spring was happy indeed, because she had been afraid that perhaps Father Time might think she wasn't old enough to do any work, and she wanted so much to help. So she made up her mind to do the very best she could, and she sent the April showers to awaken the little seeds, and then she sent the sunbeams to help them to come to the light, and the sunbeams and the showers helped the buds to blossom. So when the trees were all in bloom, every one said that Spring-time was the most beautiful time of the whole year.

Autumn Time, the younger brother, was a very busy little fellow. He was very fond of bright colors, and sometimes wore a scarlet and yellow jacket. His work was to help the grains, the fruit and the nuts to ripen. Now Autumn knew that this work was very important and that the farmers depended on him for their harvest, so he said to himself, I'll do the best I can, and I'll get the sun to help me. The sun was very glad to help Autumn, and they worked very hard together, so that when the harvest time was over, and the farmers had filled their barns with the grain and fruit, they found that they had enough to last them until Autumn came again.

Father Time was very much pleased with his children's work. They all did so well that he never could tell which one did best.

Amusing French Epitaph.

The Westminster Gazette says that an epitaph as curious in its way as any of the quaint and ingenious gravestone inscriptions recorded of late occurs on a tombstone in the cemetery of a suburb of Paris. The husband died first, and beneath the record of his name was placed, at his request, the line, "I am anxiously awaiting you. July 30, 1827." When his widow died, forty years after, the following line completed her inscription: "Here I am. Sept, 9, 1867."

Valuable Lessons.

"Physical culture is so helpful, it teaches the children to go up stairs properly."

"How about coming down stairs?"

"Oh, they generally slide down the banisters."

NOTES AND COMMENTS.

By the birth of the Duchess of York's little girl the number of Queen Victoria's descendants rises to eighty, seventy of whom are alive. She has had nine children—four sons and five daughters; forty-one grandchildren, and thirty great-grandchildren. Two of her children and eight grandchildren have died.

The Red Cross Cycle Corps, of Chicago, was organized to furnish prompt medical treatment to persons injured in bicycle accidents. The plan is for each member of the corps to be instructed in the preliminaries of surgery, so as to be ready to relieve suffering wherever found. Each member of the organization will be required to carry, strapped to his wheel, a small medicine case filled with bandages, antiseptic dressings and drugs, ready for immediate use.

Big stories are being told of the vitality of the Turks. One man shot through the stomach in a recent battle stayed in the ranks till the fighting was over and then marched ten miles before reporting to the doctors. Another with a wound in each leg and one in the shoulder kept on duty for twenty-four hours, when an officer noticed him and sent him to the hospital. The doctors attribute the quick recovery of the Turkish wounded to their abstemious habits.

An experiment in co-operative farming and manufacturing is soon to be tried in Ray City, Minn. All the work done will be on the co-operative plan, the workmen being stockholders and participating in the profits. They are to own homes purchased from the corporation, are to have wages on the eight-hour system, protection in case of sickness, and loss of home from any cause is to be reduced to the minimum.

One of the recent marine inventions is a multi-keel vessel, a form of ship with a flat bottom, provided with five or seven keels. The inventor claims greater carrying capacity and increased floating power, with higher speed, than any other form of ship. The bow and stern are spoon-shaped, the vessel has two sternposts and two rudders, linked together so as to move simultaneously, and two propellers. It is also claimed for this model that it can be turned in its own length, and will, in smooth water, steer equally as well whether running ahead or astern.

In spite of her many trials and tribulations poor old Spain is not entirely devoid of domestic progress. In the last two years she has built nearly 600 miles of railroad, and in the last ten years considerably over 2,000. Nearly all the Spanish railways are owned by private corporations and subsidized by the government. Railway travel in Spain is a deliberate performance, devoid of all bustle, and free from the rush and hurry of American travel. It is rather trying to the nerves to ride on a Spanish railway. The story that Spaniards put the cowcatcher on the rear of the trains to prevent accidents is, however an exaggeration.

All the guns, standards and other trophies captured by the French from the Russians during the Crimean War were returned to Russia more than a year ago. Emperor Nicholas promised at the time that he would return the compliment, But, in spite of this assurance, no steps have as yet been taken to restore to France the guns and the flags which she was compelled to abandon to the Russians during her terrible retreat from Moscow in 1812. The delay is exciting both surprise and irritation at Paris, and is tending still further to cool off the enthusiasm which, until the beginning of this year prevailed in France in favor of everything Russian.

The Medical Record quotes some statistics on the morphine habit from a work recently published in Paris. From this it will be seen that morphinomania is most prevalent in Germany, France and the United States, although it has victims in Russia, Sweden, Turkey and the remote East. Statistics show that the medical profession supplies 40 per cent. of the male morphinists, which is the largest proportion; after which follow men of leisure, 15 per cent.; merchants, 8 per cent.; while peasants, clergymen and politicians occupy the lowest positions numerically on the list. Among the females addicted to the habit, the largest number, 43 per cent., are women of means, and these are followed in number by the wives of medical men, who make up 10 per cent. of the list. It is said that there are entire villages in Germany whose inhabitants are all addicted to the use of the drug, but the general belief that the morphine habit is more extensively practiced in Paris than in any other city is contradicted. Morphinomania occurs with the greatest frequency between the ages of twenty-five and forty years.

The Cleveland (O.) Plain Dealer gives the following outline of the plan of Australian federation. "The powers, privileges and territory of the various colonies will remain intact. Each will have, as now, its governor appointed by the crown and its legislature of two houses elected by the people and the local affairs of each colony will be administered by its own government. The federation will have as its executive a governor-general appointed by the crown. The federal parliament is to consist of a senate and house of representatives elected by the people and to this parliament will be given the exclusive power of imposing and collecting customs and excise duties and it will also have full control of military and naval affairs. Trade between the federal colonies is to be absolutely free. At present each colony has its own tariff, operative against each other as well as the rest of the world, and many complications have arisen on this account. A supreme federal court, to be the high court of appeals of the colonies, is provided for. Each of the colonies now has a small naval force, the consolidation of which under one control will make a respectable little navy of torpedo and gunboats, with a cruiser and an armor-plated turret ship."

Silver Coin Being Counterfeited.

The discovery has been made by the secret service division of the Treasury Department that the silver fractional coins are being counterfeited, and it is feared to a very large extent. The low price of silver bullion presents a new field for enterprise and one in which the liability to detection is reduced to the minimum. Instead of using base metal and washing it with a solution of silver the work is done with silver bullion bearing the marks of the government assay office, and the spurious coins that have come into the possession of the treasury officials are found to be a few grains heavier and a trifle finer than the coins issued from the mints. Most of the spurious coins discovered bear the mark of the San Francisco mint. Intrinsically the coins issued by the enterprising counterfeiters are as good in every respect as those issued by the government, and when detected and refused acceptance, the holder will only lose the difference between the bullion and coinage value of the genuine coins. This is a consoling reflection to the public, who are liable to have as many of the spurious as the genuine coins in their possession, and as the difference between them can be detected only by weighing and assaying the liability to loss is very trifling. With silver selling at 55 cents per ounce it is not surprising that the government should find competition in the business of emitting coins that bring the manufacturer a clear profit of 100 per cent.

A Peculiar Ohio Community.

"There is a community at Amish, Holmes County, Ohio, that meets a certain idea of Atlantis," said a guest at the Planters' yesterday. "There are no churches and no ministers in the community, which consists of 15,000 to 20,000 souls, residing on 160-acre farms. Every member of the settlement is a producer. Religious meetings are held, but they are at the homes of various members, not in regular meeting places. Draft horses, the best in the country, come from Amish. The customs of the people are primitive in their simplicity. No one ever thinks of knocking at a neighbor's door; they just walk in. Travelers who come through the country are entertained in literal interpretation of the scriptural injunction, and no one is permitted to receive pay for the entertainment. The most curious of the customs of this peculiar people is that relating to its women. Married women wear black caps, those who are engaged go to church in brown headgear, while the young girls proclaim the fact that their affections are disengaged by dainty white bonnets. There is considerable sense at the bottom of this quaint custom, and the social jealousies and heart-burnings of other towns are said to be practically unknown in Amish."—St. Louis Globe-Democrat.

Indian Agriculturists.

The Indians on the Shyshone reservation have to the present time this season sown 125,000 pounds of grain, and it is expected they will sow as much more before the close of the planting season. The department is not giving the seed to the Indians this year as heretofore, but is loaning it, and expects the Indians to repay it when they harvest their crops. The pupils of the Indian school are farming extensively under the direction of the Indian agent, Capt. Wilson, and the teachers of the school. They have put out 12,000 cabbage plants and have a model garden. A test will be made on the farm with sugar-beet seed, the department having furnished a large quantity for experiment. Under the present management of Indian affairs the Indians of the Shoshone reservation are improving rapidly in condition, and the majority of the tribe will soon become self-supporting. Great interest is being taken by the Indians in school work, and the agency school is having a very successful term.—(Correspondence Omaha, Neb., Bee.)

Three-fourths of the $50,000 bequeathed to the Hunt Library fund in Nashua, N. H., has been tied up by the successive closing of three banks in that city.

CISCO'S HOODOOED CARPET.

Rose and Fell Until the Mystery Had Been Investigated.

"I was in Nebraska," said the raconteur of the party, "when I got the neatest surprise of my life, and learned a whole page in the natural history of the country.

"I was visiting a relative, and not having much else to do, I took considerable interest in fixing up the place, as much to pass the time away as anything else. The dooryard was filled with flowers, and I kept those free from weeds. I watched the Indians going up and down to their tepees, and sometimes smoked a pipe of peace with the old chief. I even whitewashed the fence, having all a tenderfoot's reverence for neat surroundings, and laid each stick of wood in the limited woodpile—that is not a timber country—in mathematical precision by its neighbor's side.

"There was a bright red piece of carpet in evidence at the back of the house which tormented my New England soul with its inappropriateness. It was much too good to be thrown away, and was at variance with the rest of the landscape. The chestnut horse browsing on the edge of the bluff was a bit of color in harmony with the rest, but this flamingo-like carpet was a blot, an irritation.

"'Sophie,' I said one day to my estimable relative, 'why do you leave that red square out in the sunlight? It will fade and be worthless. Besides it spoils the looks of your nice yard.'

"'There is a depression of the ground there that is quite unsightly,' she answered, and I saw that she was begging the question. Then I tackled old Cisco, the man of all work.

"'Lors amassy that carpet done hoodooed,' said the old man. 'Ef you watch out you see dat carpet rise an' fall like de waves ob de sea when dere ain't a bref of wind. No, sah, I nebber meddles wif dat yeah carpet.'

"It was a fact. The carpet did move, and I called old Cisco to help me lift it, and had the pleasure of seeing the old fellow take to his heels as if he was chased by wolves.

"'Well, then, here goes alone!' I said, and quickly drew the large square of carpet to one side.

"And then the cause of the carpet's moving was evident, for as I withdrew it from the hole it covered myriads of snakes reared their angry heads at me, shaking their deadly rattles and wreathing themselves together in a column of wriggling, hissing ugliness.

"We are all the creatures of instinct. I followed old Cisco's example with such rapidity that the column of snakes had not disbanded when I was examining them through glass with an interest that was all the more intense because I was safe.

"'That is what you get for meddling,' said my relative laughing, yet with a note of chagrin in her voice. 'I could not manage old Cisco without a hoodoo, and now I shall have to find a new one.'

"'Don't,' I urged. 'No doubt it is the warmth of the sun on the carpet that attracts the snakes from the hole. They will come back when the carpet is replaced, and prove a wholesome terror to the neighborhood.'

"Then I went to the postoffice and dictated a telegram calling me home."—Chicago Times-Herald.

Relatives on Hire.

"Brides find our house very useful," said one of the members of a London firm of costumers. "In this great city there are scores of hard-working girls who are miles away from their relations, and who have always been too busy to cultivate many friends. Well, when these girls are about to marry young fellows who are similarly circumstanced, the question arises as to who shall give away the bride. I can answer that question for them at once, for I have connected with my business an ex-Major in the army, a member of ancient family, and a man, too, of unimpeachable character. He is poor, but he dresses well, has beautiful white hair, and looks the kindly father to perfection. I introduce him to the bride and bridegroom, and he, for a moderate fee, gives the former away. Sometimes he takes the whole arrangements of a breakfast and so on upon himself, and he is a fine speaker on occasion. He is always a welcome guest with these people afterward."

Rulers Not of Same Nations.

There is not a reigning sovereign in Europe whose family is of the nation over which he rules. The house of Austria is in reality the house of Lorraine, the Hapsburgs being of Swiss origin. The King of the Belgians is of Saxe-Coburg. The King of Denmark is a Holsteiner. The young King of Spain is an Austro-Bourbon. The King of Italy is a Savoyard. The founder of the Bernadotte dynasty in Sweden was a country attorney at Pau less than a century and a quarter ago, and the King of the Hellenes is a Holsteiner. The British royal family is, as everyone knows, Hanoverian. The Hohenzollerns were originally Suabians, and are therefore partly Bavarians and partly Swiss.—New York Telegram.

To Drive Away Flies.

A writer in the Medical Record asserts that the odor of the sweet-pea will drive flies out of a room, and he recommends the use of this plant in sick chambers during fly-time.

CHILTON COUNTY CALL

M. B. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

HOT-HOTTER-HOTTEST- HOTTENTOT.

Near a certain station, on a certain Southern railroad, is a great, glaring sign that reads: "Here We Rest!" There isn't a tree in sight, and the sun beats down on the spot with a strength that is phenomenal in this section. While we were riding over the road, the other day, the conductor said to us: "See that sign?" "Yes." "Well, if I wanted to rest there, I think I'd prefer a little shade in mine." But, perhaps that conductor is just a bit too particular.—The Illustrated South (Birmingham.)

The Call has an indefinite impression that the "certain station" in question is our own Thorsby—our own bright and blooming Thorsby. If this is the case, we would mildly and modestly suggest to The Illustrated South, that people who reside in vitreous dwellings should not propel concreted substances—nit!

There is not a more desolate city on top of Southern dirt than Birmingham—not one! A shade-tree there is a curio that causes its citizens to gaze and gape at it in wooly wonder.

When they want a little shade to protect them from the sun—a sun that seems to have a roast ready for every one of the unhappy inhabitants—they must e'en crawl under cover of the fruit-stands, the Dago, where the stench is sufficient to turn the stomach of a stone-image.

And Birmingham is the hottest place this side of the alleged Hades. In fact, it is frequently asserted that Birminghamers have a habit of migrating to Hades during the Summer solstice, for the purpose of cooling off. When they return they remark that Sheol is a delightful Summer resort, and say that when they have "made their pile" by swindling suckers, they propose locating in the Devil's dominion.

Not only does the sun's eye have a redder glare over Birmingham than anywhere else on this ball of dust and dornicks, but the furnaces surrounding the place intensify the heat until there is no rest for the weary, either day or night.

Ta-ta, Illustrated South! Cut and come again.

In a bitter and biting monograph against the annexation of Hawaii, Will Reedy, of the St. Louis Mirror, remarks:

"We have race problem enough for all time in the negroes of our own Southern States."

If the North will let the race problem severely alone, the South will take care of it to the advantage of all concerned. Otherwise, otherwise.

In this free, fraternal land of ours, there continues to linger a "slippered pantaloon"—a vicious valetudinarian—named McMasters—who is writing school-histories of the war that teach vengeance to every Yankee youth of the land—vengeance against the Southern laddybucks, whose fathers fought for their flag and their faith! If McMasters and his fellow-marplots will buy a good, stiff rope, and swing themselves off forever, the balance of the American citizens, without regard to section, party or religious affiliations, will most cheerfully pay for the rope.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

TERRIBLE HAIL STORM.

Many People Seriously Injured by Hailstones in Kansas.

The worst hail storm in the history of Kansas struck Topeka shortly after 6 o'clock last Thursday night.

Hail stones weighing from twelve to sixteen ounces stripped the trees of their foliage, smashed windows on every hand, including the finest plate glass store fronts, cut down telegraph and telephone wires, riddle awnings and inflicted unprecedented damage throughout the city. Dogs were struck in the streets and instantly killed. Horses were knocked to their knees to raise again and dash away in mad fright. When the fury of the storm had passed dead birds were found everywhere. A heavy wind and terrific lightning accompanied the storm.

There are not a dozen buildings in the city that are not almost windowless, and many roofs were caved in. The roofs of street cars were also pierced The damage wrought can be better imagined when it is known that the hail stones ranged in size from that of a hen's egg to an ostrich egg, and that thirty minutes after the storm one hail stone was picked up which measured fourteen inches in circumference. Surgeons are busy dressing the wounds of persons injured in the storm, and the reports of injuries continue to be received.

The damage cannot be estimated, but it will amount to thousands. Window glass in Topeka is at a premium; the night of the storm three carloads were ordered from Kansas City.

FIRST CUBAN ELECTION.

Patriots in the United States to be Permitted to Vote.

Cubans who live in the United States, but who have been contributing toward the expenses of the war of independence, are to have a voice in the direction of the affairs of the young republic, whose constitnent assembly is to meet at Camaguay on Sept. 2.

There will be a general election of members of the assembly before long throughout those parts of Cuba where the insurgents are strong enough to hold one, and it has been decided that two of the representatives may be elected by Cubans in the United States.

Orders will soon be issued containing all the details as to polling the vote, etc. Every Cuban above 16 years of age who, within two months previous to the election, has contributed a certain amount (not yet decided upon) to the cause of the patriots, will be entitled to vote. As to nominations, they are not yet made.

The local junta is issuing a fine souvenir coin to commemorate the struggle. It is the same size as the United States dollar and contains exactly the same amount of silver. This coin will be sent to the different bankers in New York city who are in sympathy with the cause, and any customer who is willing to accept one $1 will get it.

M'KINLEY'S LETTER

Fills Britishers With Pride and Satisfaction, Says the Times.

The London Times commenting editorially on President McKinley's letter of congratulation to the queen says this morning:

"It will be read with pride and satisfaction throughout the empire as an official token of the particular friendship and esteem in which the English monarchy and the great English-speaking republic hold each other."

Then, referring to Mr. Depew's comparison of the jubilee to the reception given to Gen. Washington by the American people on his way from Mount Vernon to New York to assume the position of first President of the United States the Times says:

"Nobody, perhaps, but an American is quite able to appreciate the significance of that felicitous and appropriate compliment, but Englishmen are familiar enough with American feeling to understand something of what it implies."

BURNED AT SEA.

Thirty Passengers of a Russian Steamship Seriously Burned.

Further details received of the burning of the Russian steamer Onni, or Noni, while near Skenaes, show that she had scarcely left the landing stage when smoke was seen issuing from the port holes. A panic ensued on the crowded deck and the fire spread rapidly. The captain and crew behaved noble. Sailors from other ships came to the rescue.

The wife of an artist who rushed from a first-class cabin with her clothes in flames, and carrying her child, slipped and fell upon the deck. She was rescued alive but died in terrible agony soon after she landed.

Thirty passengers were seriously burned.

To become like Christ is the only thing in the world worth caring for, the thing before which every ambition of man is folly, and all lower achievement vain.—Drummond.

WORK OF ANARCHISTS.

Report That the Bazaar Fire Was Planned by Them.

The Chicago Post publishes the following:

"According to a story which has reached Chicago from Paris via Washington, the terrible holocaust which which wiped out over one hundred lives at the French capital May 4, was the work of anarchists thirsting for revenge on the upper classes of France. It is claimed that, while the official inquiry into the circumstances surrounding the catastrophe threw little light on the cause of the fire, the secret service department is working on a clew that points to an anarchists conspiracy of stupendous magnitude. It is said that the Paris detectives have not only satisfied themselves that anarchists were at the bottom of the awful crime, but that the leaders who planned it fled to America as soon as they had seen with what frightful success it had been executed. It is also asserted that several persons are under arrest in Paris on the suspicion of knowing more about it they care to tell."

A member of the French legation at Washington is said to be authority for the story.

The officials of the French embassy at Washington refuse to impart information concerning any connection that the anarchists may have had with the holocaust in the early part of May.

A VICTIM OF STARVATION.

Sad Fate of a Member of the Famous Orleans Family.

A telegram from San Francisco says: Fortune de Conte, an artist, highly educated, once patronized by New York society, erstwhile a dean of the art department of the university of Southern California, and for the past six months an earnest worker here, is dead.

Paralysis is given as the cause of death, but it is believed he was a victim of starvation. Papers found among his effects indicate that he was a member of the famous Orleans family, and that his name was Sainte Salm de Conte. His father was Carlos de Conte, at one time ambassador to England.

The State of Alabama, Chilton County.—In Chancery at Clanton, Alabama, Seventh District Northeast Chancery Division—June 21, 1897. Amanda Martin, pro ami, Complainant, vs. Jack Martin, Defendant.

In this cause it is made to appear to the Register by the affidavit of A. C. Smith, solicitor for complainant, that the Defendant, Jack Martin is a non-resident of the State of Alabama, and that his postoffice and residence are unknown to affiant, and further, that, in the belief of said affiant, the defendant is over the age of twenty-one years.

It is therefore ordered by the Register, that publication be made in the Chilton County Call, a newspaper published in Chilton county, once a week for four consecutive weeks, requiring him, the said Jack Martin, to answer or demur to the same within thirty days after the 26th day of July, 1897, and failing so to do a decree pro confesso will be taken against him in said cause.

Done at office in Clanton, Alabama, this, 21st day of June, 1897.

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping aglong home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.
THORSBY, ALA.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

THE SEA.

I am the sea. I hold the land
As one holds an apple in his hand.
Hold it fast with sleepless eyes,
Watching the continents sink and rise,
Out of my bosom the mountains grow,
Back to my depths they crumble slow;
The earth is a helpless child to me—
I am the sea.

I am the sea. When I draw back
Blossoms and verdure follow my track,
And the land I leave grows proud and fair,
For the wonderful race of man is there;
And the winds of heaven wail and cry
While the nations rise and reign and die—
Living and dying in folly and pain,
While the laws of the universe thunder in vain.
What is the folly of man to me?
I am the sea.

The House of the Ink

BY LAVINIA H. EGAN.

I was lying stretched at full length on the long sofa in the library. It was a drowsy afternoon in spring, and I had been asleep. Even after I awaked, the sweet drowsiness of slumber was on me, and I lay for some time with closed lids in that thoughtless, dreamless state between sleep and waking. Suddenly I became aware of a presence in the room and opened my eyes expecting to see my aunt. Instead I saw a flash of black before my eyes, a flash that shimmered and quivered like superheated air and disappeared while I was blinking my eyes to see what it all meant, but I was alone in the room. The thing gave me a queer sensation, and I lay quite still for some moments shutting and opening my eyes to see if the black flash reappeared. But it did not; there was only a sort of tired feeling back of my eyes.

"Malaria," I said resignedly, and I went to look for Amelia to get her to make me a lemonade.

I found the little maid watering the flowers down in the paved court. I leaned over the banisters with my face in my palms, lazily watching her swab the dusty aloe, her deft little hands glistening like copper where the sun touched their wet brown fingers.

"Do you believe in ghosts, Amelia?" I asked, wearily.

"Oh, yes, mamzelle," said the little maid in her pretty French, as she turned her scared, brown face up to look at me. "Don't you?"

"Of course not," I answered, "but I'm thirsty, Amelia."

Then she flicked the water from her coppery fingers and went away to mix a cool drink of lemon and lime juice which no one could make so well.

When the little maid was gone, Aunt Cilly poked her big white kerchiefed head from her kitchen door, nodded at me a moment and then came toiling up the steps.

"You been sleep in de libr'y, ain't you, honey?" she said when she had waddled quite close to me.

"Yes," I answered, wonderingly.

"Das a mighty po' place to sleep, chile," she said.

"Why, Aunt 'Cilla?" I asked.

"'Case 'tis," she answered, laconically, nodding her head backwards toward Amelia, who was coming up the steps behind her.

"I's jess tellin' mamzelle she better mek you git de feather duster and bresh de dust off'n dem bananas and dat palm 'fo' you sprinkle's 'em, 'Melia," said the old woman as she waddled away.

"All right, Aunt 'Cilla," said the little maid, as she left me to my lemonade and to wondering what the old woman meant.

I had told my aunt upon the first day of possession, that the house we took was worthy to be haunted. I have always wondered why my aunt selected it. It was, in many respects, the least prepossessing of any that the agent showed us, yet to be sure it had a grandeur about it, a sort stately, stuccoed, Creole grandeur, which was altogether charming to our eyes that beheld New Orleans for the first time. But the house was plain and tall and straight and square; there were no quips and cranks about its appearance on the outside, though the interior was all that the most fanciful heart could wish. There was an open court with a rusty-throated fountain in the centre and a scraggy, scaly palm that clambered against one of the brick pillars quite to the upper gallery; there were narrow corridors, winding stairways and sliding panels which let upon niches and closets which were empty enough in reality, but which, to my awakened fancy, became teeming with suggestions of ghosts and romance.

I rummaged all over the house, in every crack and corner, and found many secret closets and hidden springs. One day Amelia was helping me to arrange some books and magazines in the big, empty wall case in the library. Suddenly the little maid let fall a heavy volume. The book had slipped from a pile which she was attempting to lay on the shelf and, striking heavily against the back of the case, opened a secret door therein concealed, and dropped with a sort of broken fall into the niche behind. It is needless to say I lost no time in searching amid the dust and cobwebs of the little closet, where I found two small oil pictures and a little plaster

And the winds of heaven wail and cry
While the nations rise and reign and die—
Living and dying in folly and pain,
While the laws of the universe thunder in vain.
What is the folly of man to me?
I am the sea.

I am the sea. The earth I sway;
Granite to me is potter's clay:
Under the touch of my careless waves
It rises in [illegible]ets and sinks in caves;
The iron c[illegible]hat edge the land
I grind to [illegible]oles and sift to sand,
And beach g[illegible]ss bloweth and children play
In what were [illegible] rocks of yesterday;
It is but a moment of sport to me—
I am the sea.

I am the sea. In my bosom deep
Wealth and wonder and beauty sleep;
Wealth and wonder and beauty rise
In changing splendor of sunset skies,
And comfort the earth with rains and snows
Till waves the harvest and laughs the rose.
Flower and forest and child of breath
With me have life, without me, death.
What if the ships go down in me?
I am the sea.

—Charlotte Perkins Stetson.

The House of the Ink Spot.

BY LAVINIA H. EVAN.

I was lying stretched at full length on the long sofa in the library. It was a drowsy afternoon in spring, and I had been asleep. Even after I awaked, the sweet drowsiness of slumber was on me, and I lay for some time with closed lids in that thoughtless, dreamless state between sleep and waking. Suddenly I became aware of a presence in the room and opened my eyes expecting to see my aunt. Instead I saw a flash of black before my eyes, a flash that shimmered and quivered like superheated air and disappeared while I was blinking my eyes to see what it all meant, but I was alone in the room. The thing gave me a queer sensation, and I lay quite still for some moments shutting and opening my eyes to see if the black flash reappeared. But it did not; there was only a sort of tired feeling back of my eyes.

"Malaria," I said resignedly, and I went to look for Amelia to get her to make me a lemonade.

I found the little maid watering the flowers down in the paved court. I leaned over the banisters with my face in my palms, lazily watching her swab the dusty aloe, her deft little hands glistening like copper where the sun touched their wet brown fingers.

"All right, Aunt 'Cilla," said the little maid, as she left me to my lemonade and to wondering what the old woman meant.

I had told my aunt upon the first day of possession, that the house we took was worthy to be haunted. I have always wondered why my aunt selected it. It was, in many respects, the least prepossessing of any that the agent showed us, yet to be sure it had a grandeur about it, a sort stately, stuccoed, Creole grandeur, which was altogether charming to our eyes that beheld New Orleans for the first time. But the house was plain and tall and straight and square; there were no quips and cranks about its appearance on the outside, though the interior was all that the most fanciful heart could wish. There was an open court with a rusty-throated fountain in the centre and a scraggy, scaly palm that clambered against one of the brick pillars quite to the upper gallery; there were narrow corridors, winding stairways and sliding panels which let upon niches and closets which were empty enough in reality, but which, to my awakened fancy, became teeming with suggestions of ghosts and romance.

I rummaged all over the house, in every crack and corner, and found many secret closets and hidden springs. One day Amelia was helping me to arrange some books and magazines in the big, empty wall case in the library. Suddenly the little maid let fall a heavy volume. The book had slipped from a pile which she was attempting to lay on the shelf and, striking heavily against the back of the case, opened a secret door therein concealed and dropped with a sort of broken fall into the niche behind. It is needless to say I lost no time in searching amid the dust and cobwebs of the little closet, where I found two small oil pictures and a little plaster bust. With eager hands I brushed the dust from the pictures and, taking them to the light, found one to be the portrait of a delicate, sweet-faced boy with timid blue eyes and fair hair. Across the back of the canvas was written: "Jean, aged 10 years." The other picture was of a lad seemingly 15 or 16 years of age, a handsome, black-haired, black-eyed boy, whose expression I did not like. The plaster cast was the head of a grinning Faun, so stained and dust covered as to be scarcely recognizable. Beside the dust and grime the Faun was further disfigured by a crack but poorly patched, running entirely around the head, cleaving the right cheek and slanting downward through the mouth, and dashing squarely across the face so that it spattered both eyes, was a hideous black ink spot.

Here at last was a clue to the mystery, but what it would lead to I could not even conjecture. Was it the shimmering black spot that I had seen so often now, which darted across the Faun's face as I set it on the high library mantel between the two portraits? Perhaps it was only a passing shadow, for someone has crossed the threshold.

"'Fo' Gawd, missy, honey, whar-bouts you git dem things?" said Aunt 'Cilla as she entered. "Better put 'em back whar dey come f'um, honey, better put 'em back."

By this time the old woman had reached the fireplace and stood looking up at the pictures.

"Po' li'll Massa Jean," she said caressingly, "po' li'll lamb."

"Who is the other boy, Aunt 'Cilla?" I asked.

"Da's Massa Pierre, missy, ol' marster's older gran'son," the old woman answered, hesitating.

"Jean's brother?" I asked.

"No, no, missy," she said quickly; "he's li'll Jean's cousin."

"Tell me about them."

"Dere ain't much to tell, missy," she said, slowly. "I wish dere was mo'. Dere ain't nothin' 'tall but jess dat de li'll boys uster to live here wid ol' marster, an' den when ol' marster died he lef' everyt'ing to Pierre an' po' li'll Jean nothin'."

"How long ago has that been?" I asked.

"Long ago," the old woman answered; "when de boys wus li'll fellers, soon arter dese pictures was painted."

"And what became of the boys, Aunt 'Cilla?"

"De Lawd only knows, honey," she said, earnestly. "I wish I did. Massa Pierre he went abroad, an' I spec' he's livin' dere yet. It's him you rent de house f'm. He's got mo' houses here, too, what de same agent looks arter. But po' li'll Massa Jean, I wish I knowed where he is, po' lamb. I been tryin' all dese years to fin' out. Ef I knowed—" The old woman paused, abruptly.

"If you knew, Aunt 'Cilla," I suggested, "what then?"

"Nothin', honey; nothin'," remonstrated the old woman, hurriedly, and she left off caressing little Jean's picture and left the room.

One day in late summer, with the little Amelia for company, I was walking along through a narrow side street above Canal, "up town," as we had come to call it, following the fashion of our neighbors. It was hot and sultry, with not a breath of air to stir the dusty leaves that hung limp on the languorous trees. Suddenly on the hot pavement before me danced the black spot; then waving and skimming it rose and flashed before my eyes, blinding me. I staggered and would have fallen, but the little maid caught me.

A moment later I was in the cool inside of the little shop before which we had been passing, and a kind-faced, blue-eyed, white-haired old man was bending over me, feeling my pulse.

"You became faint, is it not, mademoiselle?" he asked, gently.

"Yes, it is the heat I think," said I.

"Ah, yes, the heat no doubt," he said with a smile, "and the ma'aria."

He gave me something to drink, something that was very cool and very acid, and by and by he called a cab and handed me into it as tenderly as if I had been a child. I glanced back at him as he stood in the little open door, and read on the window beside him the sign painted in gilt letters: "Doctor Jean."

When I got home I was still very weak, so Amelia brought some pillows and propped me up on the leather couch in the library because it was cooler there. Late in the afternoon, when the sun crept round that way for a farewell touch, the little maid closed the blinds, drew back the red tapestry curtains and fanned me to sleep.

I must have dozed for some time, for suddenly I awoke with a sense of heaviness and oppression. The black spot flashed before my eyes, then shimmered and danced across the room till it rested like a scar, blood-red, across the face of the Faun, which in another moment fell to the floor with a loud crash.

I remember to have screamed and covered my face with my hands, and then I must have been unconscious for a long time.

When I came to myself I was in my own room, and the white-haired old man from the little uptown office was bending over me. My aunt was there, too, smiling joyously to see me coming round again, and Aunt 'Cilla was turning my pillows while the little maid fanned me.

"You are much better, mademoiselle, is it not so?" said the old man in his soft French.

"Have I been very ill?" I asked.

"Yes, perhaps, mademoiselle."

"Long?"

"Three weeks."

"And the black spot—do you know about it?" I asked.

"You told me while you were ill," the old man answered. "But it is gone now."

"Tell me about it," I said.

"It is a long story, and mademoiselle is weak," he said gently, "a story about two boys, Pierre and Jean, whose portraits you found in the little closet, and about a will that was hidden in the Faun's head and which was not found till that day when you were taken ill."

"I remember," I interrupted him, "the Faun's face was cleft with a blood-red scar."

The old man smiled. "The Faun's head had been broken," he said, "and mended again with wax. The heat of the sun on that hot afternoon melted the wax and parted the old cleft. There are red curtains to the library windows, mademoiselle; doubtless that accounts for the blood-red scar as the cast fell in two before your excited gaze."

"But the black spot?" I persisted.

"I'd 'a' told you 'bout it befo', missy, honey," said Aunt 'Cilla, "ef Massa Pierre hadn't 'a' hoodooed me. I knowed 'bout it, 'ca'se I was here 'fo' it started, an' I heard folks what lib here talk 'bout it eber since. But Masser Pierre he hoodooed me, an' I's skeered to tell."

"I dunno how come," the old woman went on, "but Masser Pierre was ol' marster's favorite. Look lack Masser Jean was too gentle an' good fer to please him," and Aunt 'Cilla turned her eyes humbly to the old, white-haired man beside me in a way that set me thinking."

"So ol' marster mek a will an' lef' everything to Masser Pierre. Masser Pierre he was allus bol' an' reckless, an' one day, when I went dere in de libr'ry to tek ol' marster a cup o' coffee Masser Pierre was dere talkin' to him an' axin' him fur money. An' somehow 'nuther ol' marster wouldn't let him have it, an' den Pierre got mad an' jerk up de big ink bottle an' dash it at marster's head. It hit him side de head, den glance an' strike 'g'inst dat what you call a Faun an' splash in de face an' break it open. Den ol' marster riz up in his wrath an' he tell Masser Pierre dat he g'wine disinherit him an' fur him to leave de house. 'Twarn't long after dat 'fo' ol' marster died, an' de very day of de funeral, dess as dey's takin' de corpse out, Masser Pierre cum walkin' out er de libr'ry an' him been gone sence de day marster ordered him off. He had a paper in his han' an' look like he didn't want de folks to see him, 'case he pulled me in de libr'ry an' shut de do', an' he rub a hoodoo bag on my face en' gin me de paper an' tol' me ef I didn't 'stroy it my flesh would rot an' my bones would crumble. Den he rub me wid de hoodoo bag agin', an' when I came to myself he's gone, an' de folkses was all gone to de funeral."

"So dat's when I cram de paper in de Faun's head an' got some wax an' stick it togedder an' put it away in de li'll closet to keep Masser Pierre f'm findin' it out. Presen'ly de lawyers come and foun' de will where ol' marster lef' everything to Pierre, an' so he took it all an' went away, an' li'll Jean he was to have nothin', an' the lawyers sent him off to his ma's kinsfolks, an' ol' Mammy 'Cilla what loved him so, she never heard no mo' f'm him, po' lamb." And again the old woman looked at the little man.

"And the paper in the Faun's head?" I asked.

"Was the second will," explained the old man, "leaving everything to Jean,"

"And you are Jean?" I said.

"And I am Jean," he answered, gently, "but you must go to sleep now, mademoiselle." — Philadelphia Record.

Boston is to have a horseless fire engine.

MET WITH DISASTER.

Baron Dhanis and His Expedition Massacred in Africa.

The Brussels Reforme says it learns from a good source that the entire Dhanis expedition to the headwaters of the Nile, including Baron Dhanis himself, has been massacred.

Baron Dhanis last year enlisted 6,000 men in the Congo Free State to take part in the secret expedition. The British government allowed a number of its hussars troops to join the expedition, but it officially denied that an Anglo-Belgian movement had been concerted against the Mahdists. The general impression, however, was that this force was intended to act in conjunction with the Anglo-Egyptian expedition up the Nile and take the Mahdists between two fires and eventually complete the reconquest of the Soudan.

Early in December last it was reported that the expedition had met with disaster and Baron Dhanis had been killed. Later it was authoritatively stated that there was no ground for the report and that when last heard from, in September, the baron was at Stanley Falls, 600 miles from the nearest Dervish forces.

WIND AND RAIN STORM.

Buildings at St. Louis Occupied by Cripples Partly Demolished.

The terrific wind and rain storm which prevailed in St. Louis Thursday of last week was very destructive in the southwestern section of the city, where are located several of the city institutions. The poor house suffered most. One of the buildings, in which were sheltered seventy-five inmates, all of them cripples, was partly demolished and glasses were shattered in the others.

Forest park, one of the largest in the country, suffered considerably, trees being leveled in every direction.

The storm was particularly severe in river towns. Reports from Springfield, Decatur, Effingham and other Illinois towns say the rain was very heavy there.

WILL DROP OUT.

The International Bell Telephone Company Has Had Enough.

A New York preparations are being made by the International Bell Telephone Company to discontinue business. The company once had a capital of $1,750,000, but it was reduced to $1,000,000. It has now decided to reduce to $750,000 by the payment to the stockholders of a cash dividend of $250,000.

This concern introduced the telephone in several foreign countries, the principal one being Russia.

Among telephone men this action is indicative of some changes in the business in this country. They assert that a patent right in this country lapses when the same patent expires abroad, and that it is possible a new phase of the telephone business will develop.

WANTED.—Persons to accept, gratis, in view of future orders; rubber stamp of their own name for making clothing, books, etc. Write plainly and enclose four postage stamps to defray mailing, packing, etc. H. P. MAYNARD, 16 Arcade, Cincinnati, O. Agents wanted for rubber stamps, rubber type, pads, daters, white letter signs, "Bottled Electricity," for catarrh and pain, electric belts, etc. Write for agents' terms.

DR. O. T. DOZIER,
(The Renowned Southern Specialist)
Birmingham, Ala.
Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice. Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)
Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)
Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)
We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)
* * * Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)
As a specialist Dr. Dozier is unexcelled by any living physician. * * * He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)
Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)
His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

Address
DR. O. T. DOZIER,
Lock Box 112, BIRMINGHAM, ALA.

GREAT
DEPARTMENT
STORES!

FIRST GREAT GUN OF THE NEW SYSTEM OF MERCHANDISING.

We commence the GREATEST SALE of Dry Goods, Groceries, Clothing, Shoes Hardware, etc., in the history of Birmingham. All goods in our wholesale departments will be forced on through the retail departments. We must have room for our fall wholesale stock. We sell the best of everything the cheapest.

Drennen & Co.,
BIRMINGHAM, ALA.

FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Banish the Scrubs—Thinning Fruit—Evergreens for Windbreaks—The Aquilegia Etc., Etc.

BANISH THE SCRUBS.

To feed good crops to poor animals is the height of folly, and is not excusable under the plea of good farming. Lands are worked for profit, and farming is a business, not a sentiment. While all these things are true as to the consumption of bulky crops upon the farm, as a matter of fact it complicates and does not simplify the problem, because it introduces another factor—the animal—which, if not a good one, becomes a potent factor for evil.

THINNING FRUIT.

In the experiments in thinning apples at the New York station last year, the thinned trees gave fruit of a lighter color and a larger per cent. of No. 1 grade than did the trees not thinned. The fruit grown by the former would usually bring fifteen per cent. more in price on account of its finer appearance. The experiment will be continned systematically for the purpose of studying its influence upon the vigor and productiveness of the tree, as well as the size and color of the fruit.

EVERGREENS FOR WINDBREAKS.

The proper time for planting ever greens is just when the new growth is about to begin to start. Until this begins the roots will be dormant, and no new feeding roots can form. When the increased foliage calls for more sap it arouses the roots into activity to supply the demand. The Norway spruce makes perhaps the best windbreak. It will spread to a distance of six or eight feet each way, Therefore the trees should be planted at least twelve feet apart in the row. This will seem a wide distance while the trees are small, but they will fill the intervening spaces in time. If a second row is made plant it twelve feet distant from the first, and the trees opposite the spaces in the first row. This requires a good deal of room, but the advantage of a fully grown windbreak in saving of heat in house, barns and other buildings, will more than pay the cost where land is not expensive.

THE AQUILEGIA.

In selecting the hardy plants for outdoor planting, the old-fashioned favorites should not be overlooked. The Aquilegias should be included among these old favorites for planting in the hardy beds among the hollyhocks, the Canterbury bells, fox-gloves, sweet Williams and other good old standbys. The Aquilegias, or Columbines, are often forgotten in planning these hardy beds, when in reality they are among the most desirable perennials. In many parts of the country, especially in the West, they grow wild, and some of these are quite as fine as the choicest cultivated specimens, and they will flourish admirably when transplanted to the home garden.

Aquilegia Alpina is a fine variety, which grows about a foot high, with a large tuft of finely cut leaves at the root, and erect leafy stems producing quantities of large purplish and blue flowers, with white centers. The variety known as Cærulea is a fine species.

CARE OF HORSES.

So long as hard work continues, even if it be to midsummer or later, horses should not be allowed any green grass or clover. They like it exceedingly, and are almost crazy to get a bite, but so sure as they are allowed to this their appetite for the dry but more nourishing food begins to fail, and they rapidly become weak. Working horses are more often injured by diarrhoea than by any other ailment. It is partly because timothy hay is so constipating that it is a favorite for horse feed. Clover hay is less so, and needs to be given with caution. A mixture of clover and timothy is better for horses than either alone. If timothy alone is fed, some linseed oil meal, to lessen the danger of constipation, should be given at least once a week, and on Sunday, when the horse will be idle in the stable, and a slight diarrhoea will do no harm. The oil meal is very nutritious, but its beneficial effects is mainly to loosen the bowels. When some clover is fed each day, there will be no need for the oil meal.

THE VALUE OF COW MANURE.

Cow manure does not heat quickly. It is, therefore, not in favor for forcing beds or for crops where early results are important. For this reason it ought always to be partly composted, so as to reduce its bulk before it is used. It is excellent to mix with manure from the horse stable, because the latter being dryer, is much more likely to become "fire fanged" from the entire destruction of its vegetable fiber. Yet in actual value the slower cow manure is more nearly equal to horse manure than is generally supposed. From fattening cattle fed as horses are on hay and oats the excrement is quite as rich as that is from horses, and it does not differ from the latter so much as is commonly supposed. Careful experiments have shown that on a full ration fed to young, growing cattle only six per cent. of the nutrition of food went to make growth. With milch cows giving milk this proportion was increased to ninety-nine per cent. Considering the amount of nutrition which a cow in full flow of milk manufactures from its food every day this result is remarkable. In fattening animals the food eaten furnishes in flesh or fat far less nutrition than this.

PRUNING GRAPE VINES.

Most of our native grapes require more room to grow in than is usual in European vineyards. It has long been the habit of our wild vines to climb trees and bear their fruit much higher than vines are ever allowed to grow in Europe. This tendency has probably been so well established that it cannot easily or quickly be overcome. Whenever our native grape vines are kept down to low growth, the excess of sap furnished by the roots cannot find room to grow in. The result is a succulent and sappy growth, that is especially liable to mildew. The short jointed grape vines which are naturally weaker growers will best bear this close pruning. The Delaware, for example, is more apt to mildew when too much of the previous year's growth is left. It is a profuse bearer, though a weak grower, and will set more fruit than it can mature. The mildewing always begins about the time the grape seeds begin to form. It is due probably to lack of potash to form the seeds for a larger yield. But some of the strong-growing vines, like the Rogers seedlings, need to be pruned long. If pruned as short as will answer for the Delaware grape vine, most of the blossoms will slough off from having too much sap, and the fruit yield will be small.—American Cultivator.

PRESERVING EGGS FOR HIGHER PRICES.

When eggs are preserved and placed on the market, they will not take the place of fresh ones, and commission merchants never sell them for fresh eggs, no matter how well they look. Buyers are naturally suspicious and the highest price is only paid when the dealer can guarantee his stock to be strictly fresh. There are numerous methods for preserving eggs and they will keep five or six months but an expert can easily select them from those strictly fresh. In preserving eggs, the first requisite is to have them strictly fresh. A single bad one in a package will damage those around it. The second requisite is that they be from hens kept apart from males. Infertile eggs will keep much longer than will fertile ones. This statement is based upon observation and there is no theory about it.

The most satisfactory method that I have tried is the boiling water process. The sweetness and natural flavor of the eggs are retained. When broken, the yoke will appear round and the white have its usual firmness. Fill a wire basket with fresh eggs, dip into a kettle of water just boiling and allow to remain ten seconds. The water must be kept boiling, but not vigorously. It closes the pores. A wire basket holding two dozen is a convenient size. One that will answer the purpose can be made of wire netting. If an egg should crack, do not pack it. To prevent loss by cracking, pour a little warm water over the eggs before putting them into the boiling water. For best results, the eggs should be dipped as fast as gathered. When cold pack them in salt bran, oats, etc. Salt is to be recommended on account of its preserving qualities. Buy a good grade. Adulterated salt will often harden around the shell and render unpacking difficult. If this should occur, however, pour on lukewarm water. The eggs can then be taken out of the salt without breaking. Pack in small cases. The eggs ought to be turned once a week, but twice a month, if kept in a dry, cool place, will answer. The turning is to prevent the yolk rising and clinging fast to the shell. I have had good success in preserving eggs by the lime process. They always keep well, but much of their freshness and natural flavor is destroyed. The following is the preparation for the lime liquid: Unslaked lime, twelve pounds; salt, three quarts; water, twenty-four gallons. Mix in a stone or wooden receptacle, stir well and let settle, then stir again and let stand until perfectly clear, then pour off. Dissolve five ounces each of common baking soda, cream tartar, borax and saltpeter and one ounce alum, in one gallon of boiling water. When cold add the lime water. This amount of liquid will cover seventy five dozen eggs. Seventy-five dozen eggs will fill a medium-sized barrel half full. When through packing the liquid should stand an inch above the eggs. Place a cloth over the eggs and spread a bucketful of the lime sediment on it. Great care must be taken not to crack an egg. If one is cracked it will soon decompose and in time contaminate all the eggs in the barrel.

Another popular method of preserving eggs is to dissolve four ounces of beeswax in eight ounces of warm olive oil. Anoint the eggs with this mixture. The oil will be aborbed by the shell immediately and the pores filled with the wax. Pack in salt and keep in a dry, cool place. This method has proved a decided success with many.—American Agriculturist.

THE DIATOMS.

How a Plant Guided Nansen Toward the North Pole.

It is interesting to record the important part taken by the microscopic plants called diatoms in guiding Nansen toward the North pole. Diatoms are excessively minute single-celled forms of plant life, which under the microscope, exhibit very characteristic and sometimes beautiful forms and markings. They are universally distributed over the globe, in fresh as salt water, but are particularly abundant in the polar seas, being, indeed, the only form of vegatable life to be found in high latitudes. Individual diatoms are too small to be visible, but they congregate in such masses in polar seas as to give the sides of icebergs the appearance of being stained with iron rust; and their silicious shells are rained down upon the bottoms of the ocean to form a fine sand, which ultimately becomes hardened into flinty rock.

But is spite of the universal distribuiton of diatoms as a class, there are certain species of the tiny plants that are of very restricted habitat. A considerable number, for example, which are easily recognized under the microscope, have until recent years been supposed to be confined exclusively to the seas about Behring Strait. But when Nansen made his trip across Greenland five years ago he collected dust from the ice flows of the eastern shore of that island, which, on being subjected to microscopic analysis after his return by Professor Cleve, of Upsala, was found to contain numerous specimens of these Siberian species of diatoms. The conclusion seemed unavoidable that there must be open sea connection between these two regions. Darwin had, indeed, while on his famous sea voyage with Captain Fitzroy, collected diatoms in dust that fell from the air on shipboard in mid-ocean; but Nansen's specimens were collected in situations that left no doubt of their having been washed up by the current—not deposited from the air. Hence he inferred that there must be an ocean current which had conveyed the diatoms, on their ice raft, from Siberia to eastern Greenland.

Of course, there were other clews that pointed in the same direction, but perhaps no other single bit of evidence was so influential as that furnished by the microscopic diatoms in giving Nansen that faith in a polar current which his subsequent experience with the Fram so fully justified. This current, as everybody knows now since Nansen and the Fram have returned, flows to the southeast along the coast of Europe, is deflected to the southwest, and, sweeping across the polar region, flows as a return current along the eastern shore of Greenland and on to the south. It was this current which had swept the diatoms to the locality where Nansen had found them, and which came so near floating the Fram to its desired destination beneath the pole.

It would appear that this great current which surges across the polar sea, whose existence few besides Nansen himself were disposed to credit until now, is really a continuation of that current which in temperate latitudes of the Atlantic is called the Gulf stream; a current which owes its existence, it is believed, to the trade winds that sweep the tropics. So we are presented with the curious paradox that the motive power which drove the helpless Fram, cased in an almost boundless mass of ice, through the frigid polar sea, was really the torrid wind blowing along the equator.

Who would have predicted that a microscopic plant would be the chief guide-post and a tropical wind the motor in an all but successful assault upon the polar stronghold?

Shooting Folly as it Flies.

Mutability is a balky horse.

Nature is not ashamed of her clothes.

Home-grown virtues cannot be counterfeited.

Talent unemployed is an engine without steam.

Even a wooden Indian gets taken in sometimes.

He who weaves falsehood is certain to wear patches.

The road of reason is slow but sure to him who travels it.

"A rolling stone gathers no moss," and an empty barrel soon goes to pieces.—Philadelphia Bulletin.

QUEEN VICTORIA.

Queer and Interesting Facts About England's Ruler.

She has 600 Houses, 22 Physicians, and $2,000,000 Yearly Income, Employs 1,000 Persons in Her Household and Owns Four Yachts.

The queen is barely 5 feet tall, but she wears a No. 5 shoe, made in the style of the ordinary congress gaiter. The heels are less than one-half inch in height, and the gaiters are flat and broad. Their only ornamentation are tips of patent leather. She has no fancy for new shoes, and wears a pair of gaiters until they are literally worn out. She pays but 20 shillings a pair for them, or a trifle less than $5.

Twenty-two physicians are employed by the queen to look after her health. Most of them receive a yearly retaining fee of $5,000. These include physicians, surgeons, dentists oculists, and chiropodists. None of these act singly. If a small corn appeared upon one of her majesty's toes it would result in a consultation of chiropodist, surgeons and physicians. The brain of one man is not deemed sufficient to evolve a cure for the tiniest ill afflicting Victoria.

The queen owns 600 houses, not royal residences, but rent-yielding property. These represent a portion of her private fortune. Osborne house, on the Isle of Wight, and Balmoral, her Highland palace, are also private property. The first of these she will leave to her widowed daughter, Beatrice of Battenberg, and the Highland home to the Duke of Connaught.

Osborne and Balmoral are maintained by the queen at her expense, but the crown maintains a great number of royal palaces for her at a considerable yearly expense. Some of these are Buckingham palace, Windsor palace, the White Lodge at Richmond Park, St. James' palace, Kensington palace, Hampton court, Kew palace; Pembroke lodge, Holyrood palace, the Thatched cottage and Sheen cottage, Richmond park, and Bushby house in Bushby park.

Many of these the queen never occupies, but they are maintained year after year just as if Victoria would move into them the next day. Kensington palace, for instance, has cost on an average more than $70,000 a year to keep up for the past eight years, and every penny of the sum was practically wasted. Yet to relieve the hundreds of thousands dying of hunger in India the queen gave $2,500.

Victoria, in truth, is a very parsimonious old lady, although the English papers love to describe her as an ideal Lady Bountiful. A little incident which happened two years after the prince consort's death displays this trait; also another trait, which can only be described as pure, obstinate selfishness.

The queen was in deep mourning and refused to wear the smallest ornament. The court ladies and society, of course, dressed most plainly, as the queen then led the fashions. At that time the great ribbon industry which had supported the whole town of Coventry languished. There was no demand for ribbons, and thousands of men and women were without work. Hundreds of families were literally starving, and innumerable deaths were caused by lack of nourishment.

Finally, as a last resource, a number of men, women and children, all showing the ravages of hunger in a most pitiful way, went to London. They secured an audience, and upon their knees the women begged the queen to wear a few pieces of block ribbon upon her gowns. They told her that it would put new life into the industry and set all the factories of Coventry working again. They exhibited their emaciated bodies and the poor little children of skin and bone.

All this had not the slightest effect upon the queen. She refused absolutely, saying that the wearing of ribbon was inconsistent with her idea of mourning. The ribbon workers departed, and Coventry was ruined. For more than a generation it was a dead city, and its people moved away. Recently it became the centre of the bicycle making industry of Great Britain, and is flourishing again.

Four yachts are maintained for the exclusive use of the queen. They cost originally $1,375,000. She only uses the newest of them for two or three days in the year. To maintain it the crown pays $65,000 annually.

One thousand functionaries are employed in the Queen's household. Whenever she moves from one palace to another many of them accompany her. The nominal head of this army is the lord steward, who receives a salary of $10,000 a year. His office is a sinecure, as he does nothing but appear at court on state occasions in a gorgeous uniform.

The real chief is the master of the household, who receives $5,790 per annum. All disputes arising among the army employed in the royal palaces are settled by two ancient bodies called the board of green cloth and court of the Marshalsea. The green cloth court attends to matters concerning Buckingham palace, and the Marshalsea to disputes in all other royal palaces. In both cases the presiding officers are the lord steward, treasurer, controller and master of the household. Originally this body had the power to try all criminal cases, like murder, forgery and robbery, as well as civil matters, providing they happened within a certain distance of the royal palaces. Of late years the scope of these unique courts has been circumscribed. All questions of etiquette and precedence are decided by them and occasionally they render decisions under the lofty advice of the attorney general.

Part of the household is made up of a state band, consisting of a master, a conductor, twenty-five instrumentalists, a sergent trumpeter, nine household trumpeters and a number of household drummers. These worthies all bask in the sunlight of sinecures.—New Orleans Picayune.

DUELS ABROAD.

More are Fought in Germany than in Any Other Country.

More duels are fought in Germany than in any other country. Most of them, however, are student duels, which culminate in nothing more serious than slashed cheeks or torn scalps. Of all German university towns little Jena and Goettingen are most devoted to the code. In Goettingen the number of duels averages one a day, year in and year out. On one day several years ago twelve duels were fought in Goettingen in twenty-four hours. In Jena the record for one day in recent times is twenty-one. Fully 4,000 student duels are fought every year in the German empire. In addition to these are the more serious duels between officers and civilians. Among Germans of mature years the annual number of duels is about one hundred.

Next to Germany, France is most given to the duelling habit. She has every year uncounted meetings, "merely to satisfy honor;" that is, merely to give two men the opportunity to wipe out insults by crossing swords or firing pistols in such a way as to preclude the slightest chance of injury. In the duel statistics these meetings are not reckoned, as they are far less perilous than even the German student duels. Of the serious duels, France can boast fully 1,000 from New Year's to New Year's. The majority of these are among army officers. More than half of these result in wounds; nearly 20 per cent in serious wounds.

Italy has had 2,759 duels in the last ten years; and has lost fifty citizens by death on the field of honor. Some 2,400 of these meetings were consummated with sabres, 179 with pistols, 90 with rapiers, and one with revolvers. In 974 cases the insult was given in newspaper articles or in public letters regarding literary quarrels. More than 700 principals were insulted by word of mouth. Political discussions led to 559; religious discussions to 28. Women were the cause of 189. Quarrels at the gambling table were responsible for 189.

A summary shows that, as regards numbers, the sequence of duelling countries is: Germany, France, Italy, Austria, Russia. As regards deadliners of duels Italy comes first. Then come Germany, France, Russia and Austrial in the order named. For the most serious duels the pistol is the favorite weapon in all five countries.

Rock Pictures in Oregon.

W. B. Whittemore, while in Alturas, Oregon, recently, discovered some remarkable hieroglyphics about fifteen miles northeast from the north end of Warner valley, on the edge of what is locally known as the "desert" in Lake County, says the San Francisco Call. Mr. Whittemore says the hieroglyphics had been cut with a sharp instrument in the surface of the hard basaltic rock. They cover the face of the bluff for a distance of about three miles, and consist of pictures of Indians with bows, arrows and spears, besides deer, antelope, dogs and wolves, geese, ducks, swans and reptiles of various kinds. Intermingled with those animals are characters, which, of course, he could not decipher. He says that the execution of the pictures was very good, and he is satisfied that it could not have been the work of ordinary Indians. Throughout the entire distance the characters and pictures are in rows.

The Indians of the vicinity have no knowledge of the meaning of the hieroglyphics or of the people who ages ago chiseled them on the surface of the rocks. From the description given the picture writing bears a strong resemblance to that found in Mexico and Central America.

Lost Frigate Found.

Dredging in Brest Roads has led to the discovery off Grande Riviere, half a mile from the coast and at a depth of 40 feet, of a frigate 150 feet long, pierced by numerous cannon balls. The vessel is believed to have been sunk by the English nearly 300 years ago. Diving operations are to be continued.

A Nebraska man has discovered "the trail of the serpent which must be at least eighteen inches wide." Such things as that can only be seen by using a powerful glass and using it frequently.

GAINED IN STRENGTH

Was Confined to the Bed Most of the Time—The Remedy.

"I was much run down in health and had to keep my bed the greater part of the time. I had no appetite and did not rest well nights. I began taking Hood's Sarsaparilla and my appetite returned and I gained strength rapidly, and soon felt like a new man. I attribute my escape from illness of any kind the past winter to taking Hood's Sarsaparilla." ABEL MYERS, Arthur, New York. Get Hood's.

The School "Shows Off."

In illustration of the way in which teachers' lessons are frequently lost on their pupils, a Chicago teacher tells a story of some of her pupils "showing off" under her auspices. She had been drilling into them one afternoon the difference in the meaning of the words "taught" and "learned;" over and over again, in the presence of a late visitor, she had explained the use of each of the words, and had given them several examples in which the words were correctly used.

"Now," she said, "I think you have learned your lesson as well as I have taught it to you. Willie, will you give me a sentence with the word 'taught' in it?"

A fair-haired urchin on the front seat spoke up promptly:

"I t'ought it was time for school to let out!"

"No, no! Mamie, you may give me an example," she said, turning to a bright girl farther back.

"I t'ought it was time to go home," answered Mamie, with an air as if she had done exactly the right thing.

And though she tried several times more, no other form of the word than the variation "t'ought" could the teacher get out of her school.

PAYING THE PIPER.

What the Vanquished in War Have to Pay to the Victors.

Tremendous Payment in Territory and Money Paid by France to Germany Other Indemnities — Settlement for the Fenian Raid in Canada.

Perhaps the most enormous terms ever imposed by a conqueror upon his defeated foe were those to which Germany subjected France in 1871 at the close of the historic conflict that culminated in the capitulation of Paris. They consisted of the cession of the major portion of Alsace and of Lorraine, including the great fortresses of Strasburg and of Metz, and the payment of war indemnity amounting to the colossal sum of $1,000,000,000. This indemnity is worthy of especial notice, for the reason that it greatly exceeds the actual expense to which Germany was put by the war, and was therefore a punitive or "moral and intellectual damage" indemnity, to some extent, such as "Oom" Paul Kruger wants to collect from England for the Jameson Raid—but won't. In the war of 1870-'71 the time was twenty-eight weeks from the entrance of German troops into French territory to the surrender of Belfort. The German troops engaged may be taken, for all practical purposes, as an even million, the official figures of the active forces being 781,000 at the commencement of the war and 937,000 at its close. The total German losses are placed at 128,000, the killed alone numbering 29,000.

Germany therefore received in cash $35 a week for each man's services, or $8,000 for each man lost; on the whole pretty good pay. But Germany—or Prussia, has a habit that way. Only four years before the war with France she took $41,750,000 from Austria and her allies, besides $3,750,000 requisitioned during the campaign. This war lasted only a month. Prussia had 437,900 men in the field and lost 11,000. The indemnity gave her $28 a week for each man's services, or $4,250 for each man.

It is thanks to the intervention of Russia that Japan was prevented from exacting an indemnity of analagous proportions at the close of her war with China. She was forced to content herself with a mere bagatelle of $185,000,000, receiving in addition the island of Formosa and the Pescadores, neither of which had ever been of any use, either financial or political, to China, and which will make necessary the expenditure of much treasure and life before Japan can receive any profit therefrom. The war lasted about nine months, and 80,000 troops were engaged on Japan's side. The indemnity paid, therefore, $60 a week for each man.

The conflict which Italy has been waging with Abyssinia for more than a decade past has recently been brought to a conclusion by King Humbert's withdrawal of his claims to suzerainty over the Negus, by the surrender of the major part of Italy's possessions in Africa to Abyssinia, and by the payment of an indemnity amounting to about $800,000.

The Turko-Russian war of 1877 came to a close with the treaty of San Stefano, the terms of which were revised in 1878 by the Congress of Berlin. They comprised among other things the surrender of the Sultan's protectorate over Rumania and Servia, the practical abandonment to Austria of Herzegovina and Bosnia, the grant of independence to Bulgaria, and of autonomy to Rumelia, the Prince of Bulgaria remaining, however, subject to the suzerainty of the Sultan. The Sublime Porte was compelled to pay a war indemnity to Russia amounting to the sum of $160,000,000.

Great Britain has received two indemnities of considerable amount from China. The first was one of $20,000,000 altogether, but part of it went to compensate merchants for opium delivered up to the Chinese Government, and the portion specifically claimed on account of the expenses of the expedition just equalled the vote of credit. The second indemnity, of 1860, was about $10,000,000, or less than one-third of the vote of credit for the war. The settlement of Canada's claim for indemnity for the Fenian raids from this country is noteworthy. By the first raid Canada lost six men killed and thirty-one wounded; she had to call 20,000 volunteers to arms; she had to guard the frontier with 17,000 regulars and volunteers, as well as several gunboats on the river and lakes. Her farmers lost heavily, as the raid occurred at a busy time of year; and she had to pay away a lot of money in pensions and gratuities. Yet the United States did not pay a farthing compensation! When Canada pressed the matter on the HomeGovernment she was assured that it was not worth while making a claim, as "the amount of compensation would be so small." And, finally, the matter was arranged by the English Government guaranteeing a Canadian loan of $18,000,000, "on the understanding," wrote Lord Kimberley, "that Canada abandons all claims on this country (Great Britain) on account of the Fenian raids."

A VETERAN'S WIFE.

Affected With Heart Disease and Given Up to Die—Saved in a Wonderful Way.

From the Press, Utica, N. Y.

There is no one better known or respected in the village of Brookfield, Madison Co., New York, than Mrs. John Fisk, the wife of an old resident and veteran of the war of the Rebellion. In April of this year, Mrs. Fisk lay at death's door from neuralgia and heart disease, the family physician having recommended her to settle all her worldly affairs, as she was liable to be taken at any minute, and inquiring friends expected at each visit to hear that she had passed away.

But Mrs. Fisk, to the surprise of her neighbors and physicians, suddenly began to mend, and now she is as strong and healthy a woman of her advanced age (76 years) as can be found, and really does not appear nearly as old as she is. The following is her own story of how she was cured.

"I consider it is a duty to myself and the community to tell of my extraordinary recovery from what was thought by my physicians, my husband and friends to be a fatal illness. I had long been suffering from neuralgia in its worst form, enduring agonies that only those who have undergone such torments know, until my heart became so affected funtionally and organically, that the doctor said I was liable at any time to pass away. He had done all in his power for me, and I thank him much for his kindness and attention, and believe him to be a good, faithful physician. I was not disposed to die, however, if I could help it, and he having done all he could, I felt at liberty to use any other means that held out a chance of life, and determined to try a remedy that had been recommended by a friend who had been at death's door from rheumatism and heart disease, but who now is in good health.

"Whatever doubt I may have had as to this remedy's efficacy in a dissimilar disease, to that from which he had suffered, was dispelled on reading in the *Press* of a case identical with my own being cured, with the name and address of the person who had been so benefited. So my husband who now was anxious that I should at once take the treatment, purchased for me a box of Dr. Williams' Pink Pills. I took them according to directions, and within a very short time the pains began to disappear, my heart's actions became normal, and four weeks ago I ceased taking them, as I am entirely cured, and able to do my housework as well as when I was a young woman.

"I had always, until I tried Dr. Williams' Pink Pills, looked with suspicion on all advertised proprietary medicines, but now my ideas have undergone a wondrous change in that direction, for under God's all wise Providence, 'Pink Pills' have renovated me, and apparently given me a new lease of life.

"This is no secret in this locality, and I hope this certificate may be the means of other sufferers in distant places securing the same benefits that I have received.

"CLARINDA FISK."

Pink Pills are sold in boxes (never in loose form by the dozen or hundred, and the public are cautioned against numerous imitations sold in this shape) at 50 cents a box or six boxes for $2.50, and may be had of all druggists, or direct by mail from Dr. Williams' Medicine Company.

Guy—Could you spare me a cigarette? Jontran—My dear fellow, my doctor has strictly forbidden me to smoke. A fortnight later Guy meets his friend puffing away at a splendid Havana.) Guy—I thought you had to give up smoking? Gontran—Oh, my doctor died a week ago.—Le Figaro

Read for Prize List!

It is all that we ask and it will cost but a postal to do it. All we ask is to put your eye for a minute on details and prices. The goods will sell themselves. You know as well as we that the John P. Lovell Arms Co. (of which the indefatigable Col. Ben S. Lovell, known all over the world, is treasurer and acting head) has made and for a half century maintained its great reputation by the manufacture of sterling goods. It is still the world's headquarters for guns, rifles and revolvers, fishing tackle, skates and sporting goods of every description and is no less the headquarters for the highest grade bicycles. The company was the moving spirit in forming the combination of the four leading manufacturers in this country, the "Big Four," so-called, to hold up the grade and hold down the price of wheels. Those who were handling the thousand and one wheels the manufacturers were ashamed to father "kicked." The profit on the cheap wheels was very large. But they kicked to no purpose, and today a cyclist may ride a first-class guaranteed wheel at the price it has before cost to ride one made like the famous razors, "to sell." For this boon the public owes the Lovell Arms Co. thanks. A catalogue of our regular bicycle stock and a special list of wheels issued by the Big Four Combination will be mailed free on application to the John P. Lovell Arms Co., 131 Broad street, Boston, Mass.

TRUSTY INDIAN POLICE.

IN THIS CAPACITY THE RED MAN IS AN EFFICIENT SERVANT.

As a Soldier He Rebels Against Discipline, but He Is Vigilant and Incorruptible as a Guardian of the Peace —Indian Justices of the Peace.

Lo, the poor Indian has been tried and found wanting. His fighting disposition and his indifference to what would be termed discomfort and privation by white men, gave the United States government grounds to believe that the Indian would make a good soldier, and several companies were organized and stationed at frontier posts. The experiment has proved a failure, and the war department issued an order for the disbandment of the company stationed at Fort Sill, Oklahoma, on May 31.

Many of the Indians who were useless as soldiers became valuable members of the Indian police, and it is probable that most of the Fort Sill company will enter that branch of the government service. As members of the Indian police they will have more freedom, will not be restricted so closely as to hours of service, will not be confined to narrow quarters, and on the whole will feel themselves more free in every respect. Those who have already served in that capacity have shown on many occasions that the Indians are well fitted for the duty. This branch was organized by Major John McLaughlin, and among those who became members of the force, and did good service in its early days were some of the braves who had given the country the most trouble when they were on the warpath. A notable example of this kind is Chief Gall, who was one of the judges at Standing Rock Agency, in South Dakota. D. F. Barry, who knew him well, said of this chief: "His bearing was almost regal, his face expressive, and his slightest motion graceful. He was a born leader of men, more brave than crafty, and he knew not what fear was. He was the brainy and intrepid chieftain of the most warlike band I ever saw in any Indian nation. He attracted attention wherever he went, and those who have seen him, I will venture to say, have never forgotten him. It was Gall and Crazy Horse who commanded the Indians that took part in the Custer massacre. To show you how Gall inspired admiration, I will read to you from a lettter I have from Mrs. Custer, widow of the general, written since the massacre. She writes: 'Painful as it is to me to look upon the pictured face of an Indian, I never in my life dreamed there could be in all the tribes as fine a specimen of a warrior as Gall.'"

Gall was succeeded as judge in the Standing Rock Agency by John Grass. These men were of the higher or official class of the Indian police, but the privates are equally notable in their sphere. They are conscientious and diligent in the discharge of their duties, and perfectly trustworthy and reliable. The Indian who becomes a member of the police feels proud of his little authority, and does not hesitate to arrest his best friend. The officers have so little fear as to the loyalty of their Indian police that some of the most desperate Indians have been placed on the force. Of these, Rain-in-the-Face is a good sample. He is a policeman at $10 a month, with the same duties to perform as any other private in that branch of the service, although he has deeds to his credit which would entitle him to great consideration at the hands of his fellow-warriors. He is the man who, according to accepted accounts on that subject, killed "Tom" Custer, the brother of the general, and mutilated his body in the most horrible manner; and he killed and scalped also Drs. Halzinger and Balerano. He has been a member of the police force for a year, and has given perfect satisfaction.

At the various agencies where there is an Indian police there are also Indian justices who occupy similar places to that which was held by Gall. There the Indians who are guilty of any misdemeanor are brought by the police, and there justice is administered. Theft, horse stealing, drunkenness, and all other offences are tried there, and those who are found guilty are sentenced to confinement in the lock-up for various lengths of time, to work on public property or saw wood. Court is held on ration day, about twice every month, and at such times the men who have been arrested by the Indian police are brought up for trial, and are allowed to defend themselves before the judges pronounce sentence upon them.

Cases of drunkenness among the Indians are handled with great severity. The Indian justice makes it his duty to discover the person from whom the Indian received the liquor, and aids the authorities in his prosecution. He also inflicts a punishment of imprisonment on the Indian who was found intoxicated. Some travelers in the Indian country have had occasion since the establishment of the Indian police to note its workings to their own discomfort. According to the law no man has a right to travel in Indian reservations unless he has a permit from the interior department or one of its sub-departments, and if an Indian policeman should find on a reservation a traveler who was not properly armed with a permit, he would be likely to take him to the nearest headquarters, even if it were fifty or sixty miles away. As long as the man went peaceably, he was perfectly safe in the hands of his Indian guide, but neither bribe nor threat would induce the policeman to allow his white prisoner to escape. When Sitting Bull was killed in 1890, the Indian police showed that they would work as diligently against Indian foes, if required to do so, as against those whom they consider their natural enemies.—New York Tribune.

"RAIN GAMBLING."

Trying to Suppress an Odd Kind of Betting in India.

A bill has just been introduced into the Legislative council of Bengal for the suppression of rain gambling. Mr. Bolton, who introduced it, made some interesting statements on the prevalence of this form of gambling in the province. He said it was introduced into Calcutta many years ago by the Marwaris, who are much addicted to wagering, and is practiced in the quarter in which they reside. For some years it was confined to one house containing a large courtyard where the gamblers can assemble; but now facilities for gambling are afforded by three houses. At each house are men who record bets for others on the occurrence of rain within a certain time. The proprietors of the houses offer odds against rain; the public backing the rain. The odds vary with the state of the weather from 2 to 1 to 50 to 1; those who back the rain win only when the fall is enough to cause an overflow from a small raised tank through a spout, which is visible from the courtyard, as is also a clock registering the time. For many years the practice was confined to the Marwaris, and did not attract much public notice or call for the interference of the government; but of late years it has spread to other races.

So general and systematic has it now become that a guide to it was published last year; the streets in which the gambling houses are situated are frequently crowded from morning till after midnight, stalls for registering the bets are kept in the streets. Residents in the neighborhood have prayed for the suppression of these houses, and reports were obtained by the lieutenant governor from various local bodies, and one of the Mohammedan associations thus consulted reported that many Mohammedan ladies were being drawn into gambling through the agency of female brokers secretly employed by the owners of the gambling houses. The bill extends the meaning of "gaming," "instruments of gaming," and "common gaming house" in the existing acts so as to include rain gambling, the tanks, spouts, and clocks used, and the premises in which rain gambling is carried on. The Marwari community have petitioned against the bill, on the ground that rain gambling is comparatively harmless, and that, if it is suppressed, some other mode of gambling will take its place, such as the Bombay system of betting on the number of bales of cotton sold daily on the London market. A select committee has reported in favor of the bill.—London Times.

A Bloodhound's Keen Scent.

A remarkable exhibition of the keenness of scent of the bloodhound was given at the little town of Bronson, in Allen County, the other day. The town recently appropriated $100 out of the city treasury for the purchase of one of these animals, the purpose being the detention and capture of thieves who were operating in the neighborhood, and a test of the hound was considered desirable. At noon three men started out on foot and walked four miles into the country. Then they mounted horses, and by a circuitous route returned to the town. Six hours later the hound was permitted to smell a glove which had been worn by one of the men, and the next instant, with a deep howl, he caught up the trail and followed it on the run. At one point the men had walked for thirty yards on a fence, and when the hound came to this point he carried his nose along the rail with hardly any reduction of speed. Coming to the place where the men had mounted, he took up the trail of the horses and followed it into town, where in a crowd of more than 100 men he picked out the one whose glove had been given him to smell.—Kansas City Journal.

The First Surname.

The first person in Great Britain credited with bearing a surname was John de Clavering, son of Robert Fitzroger, by command of King Henry I., by virtue of and from his barony of Clavering, in Essex. The father was owner of the baronies of Clavering and Waakworth. The oldest surnames in this country in Doomsday Book are taken from places owned by the persons, with the addition of "de," as John de Clavering, Walter de Vernon, etc.

The late Postmaster General Von Stephan of Germany was the inventor of postal cards, and the founder of the Universal Postal union.

The hotel and a private residence at Thorsby.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

CHILT

VOL. I. NO. 14.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

The Thorsby Call says: "There is not a more desolate city on top of Southern dirt than Birmingham—not one! A shade tree there is a curio that causes its citizens to gaze and gape at it in wooly wonder." The ignorance displayed by the writer of the above is surprising and pitiable. It is clear that he has never been in Birmingham, for if he had he would have known that this city contains more shade trees than any in the South, with the possible exception of Savannah, Ga. The Call man should take a run up to the Magic City and learn something about it before he attempts to write on the subject again.—Birmingham Daily News.

We visit Birmingham only three times a week and as we have toiled along its streets under a boiling sun we have never yet had the delight of passing under a shade tree in that Miserable Metropolis. Stop! We take it all back. Birmingham is a "shady" city. In fact it is the "shadiest" city on our continent today.

Miss Florence Caton, a young woman, 18 years of age, who lives about a mile south of town, was brought before Justice Bice last Saturday on the charge of infanticide, and was bound over to the circuit court in the sum of $200. It seems that the family of the young woman were ignorant of her condition; that on the evening of the 17th ult she went out of doors, gave birth to a child, hid it, and, returning to the house, went at once to bed. On the following morning the babe was found by her brother, but it died in a few hours. Dr. Givhan was called in, and when the facts became known, a warrant was issued for the arrest of the unnatural mother.

Sunday night a fire destroyed the home of Prof. McMorris at Clanton. The fire was caused by a defective flue. In a very short time the building was engulfed in flames, and soon consumed. A part of the household furniture was also destroyed, including the Professor's library, which will be a difficult thing to replace. The building was owned by Lee Vivings, of Birmingham, and was one of the handsomest and most costly residences in Clanton.

Sam Adams, the veteran office-seeker, handed in his resignation last week, as Mayor of Jemison. We congratulate Jemison. This thing of seeking an office under the guise of religion has succeeded at times in the past, but the beneficiaries of the practice are beginning to find out that the American people, of the white persuasion, are becoming a bit too intelligent for such a bunco game to be played upon them.

Editor M. E. Taylor, of the Chilton County Call, published at the new and progressive town of Thorsby, was a pleasant caller at the Sentinel office one day last week. He publishes a live, up-to-date paper, and is doing a good work for our neighbor county—Calera Sentinel.

The general merchandise firm of Moore & Collins, formerly of Strasburg, has dissolved partnership. Mr. Moore will hereafter spend his time on his farm, and Mr. Collins has opened a small general store in Jemison.

The fourth of July picnic given by the Thorsby people, last Saturday, was a glorious event, and the day was enjoyed by everyone present.

A shipment of grapes was made Tuesday, from the Thorsby vineyards to the Birmingham market.

DR. RICHARDSON DEAD.

The Well-Known Presbyterian Divine Passes Away at Memphis.

Rev. E. M. Richardson, D. D., secretary of education of the Presbyterian church in the United States was found dead in his bed in Memphis last Wednesday morning. He was one of the best known divines in the south, his official duties calling him to almost every city of any size in the country. The deceased was 63 years of age. Heart failure was the cause.

The Well-Known Presbyterian Divine Passes Away at Memphis.

Rev. E. M. Richardson, D. D., secretary of education of the Presbyterian church in the United States was found dead in his bed in Memphis last Wednesday morning. He was one of the best known divines in the south, his official duties calling him to almost every city of any size in the country. The deceased was 63 years of age. Heart failure was the cause.

DOINGS OF CONGRESS.

BAGGING AND TIES PLACED ON THE FREE LIST.

The House was in Session Only two Days This Week--Fair Progress Made with the Tariff Bill by the Senate--Playing Cards Taxed 20 Cents.

SENATE.

MONDAY.—The senate made good progress on the tariff bill to-day, disposing of the paragraph relating to hides which have been the source of most controversy. Mr. Allison proposed a change in the paragraph, making the rate 20 per cent. ad valorem instead of 1½c per pound; and also striking out the proviso relating to drawbacks. The paragraph as amended reads: Hides of cattle, raw or uncured, whether dry, salted or pickled, 20 per cent. ad valorem. The vote was then taken on the hide paragraph as amended by the committee and it was agreed to, 39 to 20. Mr. Allison proposed a substitute for paragraph 215, relating to cattle, as follows: Less than a year old, $2 a head, on all other cattle, if valued at not more than $13, $3.50 a head; valued at more than $14 and not more than $25, twenty-five per cent.

The substitute was agreed to. The bill was laid aside at 5 o'clock and after an executive session the senate adjourned.

TUESDAY.—After a tedious consideration of the tariff bill throughout to-day, the senate wound up with a half hour of lively and amusing colloquy between Senators Tillman, of South Carolina, and Chandler, of New Hampsire. During the day the senate disposed of the lead paragraphs, the committee rate of 1½c per pound on lead ore being agreed to, 30-33. The other paragraphs considered were of comparatively minor importance.

WEDNESDAY.—As a result of the rapid work on the tariff bill to-day, the close of the long debate in the senate and the final vote is felt to be near at hand. Two of the most important provisions—those relating to the Hawaiian treaty of reciprocity and the duty on coal, were perfected to-day, while another source of much conflict, the reciprocity section, was matured by the finance committee and presented to the senate. Aside from these larger items, a great many minor ones which have caused more or less conflict were disposed of. The Hawaiian provision of the house bill was restored, after brief debate and without the formality of a vote. This has the effect of leaving the Hawaiian treaty of reciprocity in full force and effect. Quite a number of the minor paragraphs of the free list went over for future consideration. At 5:15 p. m. the bill was laid aside and after an executive session the senate adjourned.

THURSDAY.—The finance committee suffered several unexpected reverses during the progress of the tariff bill today, being defeated on three important votes. Cotton bagging was placed on the free list, 30 to 45, and cotton ties also, by a vote of 29 to 23. The duty on white pine lumber was reduced from $2 to $1 per thousand, 31—31. The amendment on pine occasioned the greatest surprise and led to a general breaking up of party lines on both sides of the chamber. During the early stages of the debate the duty on lumber, including pine was placed at $2, after a protracted contest. To-day Mr. Teller returned to the contest and moved to place white pine lumber on the free list. The amendment was defeated by the close vote of 32 to 33, four Republicans, Baker, Carter, Hansbrough and Quay, joining the Democrats, Populists and silver Republicans in the affirmative, while three Democrats, Bacon, McEnery and Martin, voted with the Republicans in the negative. Following this close vote Mr. Mantle moved to reduce the rate on white pine from $2 to $1, and this was carried by a majority of one. Two Republicans, Baker and Carter, voted with the Democrats in the affirmative, and three Democrats, Bacon, McEnery and Martin, with the Republicans in the negative. The bill is now completed, with the exception of the reciprocity section and some comparatively minor paragraphs. Much progress was made today in clearing up detached paragraphs heretofore passed over. Only three of these—coal tar, potash and tea—remain, so that these items, the reciprocity section and the brief internal revenue and administrative provisions are all that remain of the bill to be disposed of before the final vote is taken.

FRIDAY.—Reciprocity and retaliation were the two phases of the tariff bill to occupy the attention of the senate today to the exclusion of all other subjects. Both provisions were agreed to, although the debate on the reciprocity clause was protracted to 6 p.m. Shortly before adjournment Mr. Allison endeavored to secure an agreement on the time for a final vote. Mr. Teller would not consent to fixing the time until proposed amendments had been submitted to the senate. Mr. Allison was not prepared to submit these amendments and he withdrew his request, although there is still hope that an agreement will be reached tomorrow. The retaliatory clause provides that whenever any country bestows an export bounty on any article there shall be levied, in addition to the duties provided by the act an additional duty equal to the amount of the bounty. The clause was agreed to, 33 to 19. The reciprocity clause empowers the president, with the advice and consent of the senate, to make reciprocity treaties, giving 20 per cent. reduction in duties on designated articles or placing articles on the free list. Adjourned.

SATURDAY.—The tariff bill has gone over until Monday. Mr. Allison reported a new amendment from the finance committee, giving a bounty of one-quarter cent. a pound on beet sugar made from beets grown in the United States. Mr. Thurston, of Nebraska, one of the prime movers, arose and withdrew the amendment, saying his action was inspired by patriotic motives and for the purpose of removing all obstacles to the passage of the bill. His colleague, Mr. Allen, immediately renewed the bounty proposition. During the day the bill was brought to a state of practical completion, the only remaining items being the new provisions submitted by the committee and individual senators. Among the features disposed of were the anti-trust sections, the provisions of the Wilson act on that subject being re-enacted. Mr. Mills, Democrat, of Texas, brought forward a new amendment for a tax of 20 cents a pack on playing cards, which was agreed to by unanimous vote, amid much amusement and surprise, as Mr. Mills had not expected this result. All of the administrative sections of the bill and and that repealing the Wilson act were disposed of during the day, and the paragraph proposing a tax on beer was withdrawn by the committee.

HOUSE.

MONDAY.—The session of the house to-day lasted long enough to call the roll on Mr. Dingley's motion to adjourn. As soon as the journal had been approved, the floor leader of the majority remarked that as he was not aware of any matters claiming the attention of the house to-day he moved an adjournment. Mr. Bailey, of Texas, challenged the statement with the observation that the bankruptcy bill and the Cuban beligerency resolutions were unacted upon. The opposition applauded when the rising vote showed them in the majority, the vote resulting 85 to 86 against Mr. Dingley's motion. Thereupon Mr. Dingley demanded the yeas and nays and the roll was called. The motion was carried, 97 to 88. At 12:45 p.m. the house adjourned until Thursday.

THURSDAY.—Mr. Settle, Democrat, of Kentucky, after the journal had been read, raised a question as to the truth of the journal of last Monday's proceedings, by offering a technical amendment to correct the journal. Upon this amendment he got the floor and proceeded with an extended speech on the general question of the power of the house to adjourn over three days at a time, which he declared was a direct violation of the constitution. He drifted into a general arraignment of the Republicans for not taking action on the bankruptcy bill and the Cuban belligerency resolution. Mr. Settle's amendment was rejected by 90 to 105, and at 1:30 the house adjourned till Monday.

Thousands Homeless.

A dispatch to the London Daily Mail from Brail, the principal port of Roumania, says that 20,000 inhabitants, of Galatx, in Moldavi, on the left bank of the Danube, are homeless as a result of the recent floods.

Bank Wrecker Gets Eight Years.

At New Orleans, La., Louis Gallot, the convicted Union bank wrecker, was sentenced the other day by Judge Parlange to eight years in the penitentiary at hard labor. The case will be appealed.

SWEEPING

EVERYTHING BEFORE IT

BIG SALE

FOR SUMMER CLOTHING

Bought at a price named by us, and selling at a price less than the cost of the raw material. This is the largest sale of Men's reputable Clothing at such, sweeping prices that has ever taken place in the Magic City. We have also started a

Shoe Sale

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$3.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

$3.50 for the Famous Royal Blue Shoe; factory price $4.00.

$2.48—Odds and Ends in Patent Leather, Calf and Cordovan; were good value at $4.00 and $5.00.

$2.48 for Tans, in all Shapes and Shades; their former price $3.50.

$1.98—These Shoes in Tans and Calf never sold for less than $2.50.

$1.35 for Men's Shoes, in all Styles that were formerly $2.00.

TRUSTY INDIAN POLICE.

IN THIS CAPACITY THE RED MAN IS AN EFFICIENT SERVANT.

As a Soldier He Rebels Against Discipline, but He Is Vigilant and Incorruptible as a Guardian of the Peace —Indian Justices of the Peace.

Lo, the poor Indian has been tried and found wanting. His fighting disposition and his indifference to what would be termed discomfort and privation by white men, gave the United States government grounds to believe that the Indian would make a good soldier, and several companies were organized and stationed at frontier posts. The experiment has proved a failure, and the war department issued an order for the disbandment of the company stationed at Fort Sill, Oklahoma, on May 31.

Many of the Indians who were useless as soldiers became valuable members of the Indian police, and it is probable that most of the Fort Sill company will enter that branch of the government service. As members of the Indian police they will have more freedom, will not be restricted so closely as to hours of service, will not be confined to narrow quarters, and on the whole will feel themselves more free in every respect. Those who have already served in that capacity have shown on many occasions that the Indians are well fitted for the duty. This branch was organized by Major John McLaughlin, and among those who became members of the force, and did good service in its early days were some of the braves who had given the country the most trouble when they were on the warpath. A notable example of this kind is Chief Gall, who was one of the judges at Standing Rock Agency, in South Dakota. D. F. Barry, who knew him well, said of this chief: "His bearing was almost regal, his face expressive, and his slightest motion graceful. He was a born leader of men, more brave than crafty, and he knew not what fear was. He was the brainy and intrepid chieftain of the most warlike band I ever saw in any Indian nation. He attracted attention wherever he went, and those who have seen him, I will venture to say, have never forgotten him. It was Gall and Crazy Horse who commanded the Indians that took part in the Custer massacre. To show you how Gall inspired admiration, I will read to you from a lettter I have from Mrs. Custer, widow of the general, written since the massacre. She writes: 'Painful as it is to me to look upon the pictured face of an Indian, I never in my life dreamed there could be in all the tribes as fine a specimen of a warrior as Gall.'"

Gall was succeeded as judge in the Standing Rock Agency by John Grass. These men were of the higher or official class of the Indian police, but the privates are equally notable in their sphere. They are conscientious and diligent in the discharge of their duties, and perfectly trustworthy and reliable. The Indian who becomes a member of the police feels proud of his little authority, and does not hesitate to arrest his best friend. The officers have so little fear as to the loyalty of their Indian police that some of the most desperate Indians have been placed on the force. Of these, Rain-in-the-Face is a good sample. He is a policeman at $10 a month, with the same duties to perform as any other private in that branch of the service, although he has deeds to his credit which would entitle him to great consideration at the hands of his fellow-warriors. He is the man who, according to accepted accounts on that subject, killed "Tom" Custer, the brother of the general, and mutilated his body in the most horrible manner; and he killed and scalped also Drs. Halzinger and Balerano. He has been a member of the police force for a year, and has given perfect satisfaction.

At the various agencies where there is an Indian police there are also Indian justices who occupy similar places to that which was held by Gall. There the Indians who are guilty of any misdemeanor are brought by the police, and there justice is administered. Theft, horse stealing, drunkenness, and all other offences are tried there, and those who are found guilty are sentenced to confinement in the lock-up for various lengths of time, to work on public property or saw wood. Court is held on ration day, about twice every month, and at such times the men who have been arrested by the Indian police are brought up for trial, and are allowed to defend themselves before the judges pronounce sentence upon them.

Cases of drunkeness among the Indians are handled with great severity. The Indian justice makes it his duty to discover the person from whom the Indian received the liquor, and aids the authorities in his prosecution. He also inflicts a punishment of imprisonment on the Indian who was found intoxicated. Some travelers in the Indian country have had occasion since the establishment of the Indian police to note its workings to their own discomfort. According to the law no man has a right to travel in Indian reservations unless he has a permit from the interior department or one of its sub-departments, and if an Indian policeman should find on a reservation a traveler who was not properly armed with a permit, he would be likely to take him to the nearest headquarters, even if it were fifty or sixty miles away. As long as the man went peaceably, he was perfectly safe in the hands of his Indian guide, but neither bribe nor threat would induce the policeman to allow his white prisoner to escape. When Sitting Bull was killed in 1890, the Indian police showed that they would work as diligently against Indian foes, if required to do so, as against those whom they consider their natural enemies.—New York Tribune.

"RAIN GAMBLING."

Trying to Suppress an Odd Kind of Betting in India.

A bill has just been introduced into the Legislative council of Bengal for the suppression of rain gambling. Mr. Bolton, who introduced it, made some interesting statements on the prevalence of this form of gambling in the province. He said it was introduced into Calcutta many years ago by the Marwaris, who are much addicted to wagering, and is practiced in the quarter in which they reside. For some years it was confined to one house containing a large courtyard where the gamblers can assemble; but now facilities for gambling are afforded by three houses. At each house are men who record bets for others on the occurrence of rain within a certain time. The proprietors of the houses offer odds against rain; the public backing the rain. The odds vary with the state of the weather from 2 to 1 to 50 to 1; those who back the rain win only when the fall is enough to cause an overflow from a small raised tank through a spout, which is visible from the courtyard, as is also a clock registering the time. For many years the practice was confined to the Marwaris, and did not attract much public notice or call for the interference of the government; but of late years it has spread to other races.

So general and systematic has it now become that a guide to it was published last year; the streets in which the gambling houses are situated are frequently crowded from morning till after midnight, stalls for registering the bets are kept in the streets. Residents in the neighborhood have prayed for the suppression of these houses, and reports were obtained by the lieutenant governor from various local bodies, and one of the Mohammedan associations thus consulted reported that many Mohammedan ladies were being drawn into gambling through the agency of female brokers secretly employed by the owners of the gambling houses. The bill extends the meaning of "gaming," "instruments of gaming," and "common gaming house" in the existing acts so as to include rain gambling, the tanks, spouts, and clocks used, and the premises in which rain gambling is carried on. The Marwari community have petitioned against the bill, on the ground that rain gambling is comparatively harmless, and that, if it is suppressed, some other mode of gambling will take its place, such as the Bombay system of betting on the number of bales of cotton sold daily on the London market. A select committee has reported in favor of the bill.—London Times.

A Bloodhound's Keen Scent.

A remarkable exhibition of the keenness of scent of the bloodhound was given at the little town of Bronson, in Allen County, the other day. The town recently appropriated $100 out of the city treasury for the purchase of one of these animals, the purpose being the detention and capture of thieves who were operating in the neighborhood, and a test of the hound was considered desirable. At noon three men started out on foot and walked four miles into the country. Then they mounted horses, and by a circuitous route returned to the town. Six hours later the hound was permitted to smell a glove which had been worn by one of the men, and the next instant, with a deep howl, he caught up the trail and followed it on the run. At one point the men had walked for thirty yards on a fence, and when the hound came to this point he carried his nose along the rail with hardly any reduction of speed. Coming to the place where the men had mounted, he took up the trail of the horses and followed it into town, where in a crowd of more than 100 men he picked out the one whose glove had been given him to smell.—Kansas City Journal.

The First Surname.

The first person in Great Britain credited with bearing a surname was John de Clavering, son of Robert Fitzroger, by command of King Henry I., by virtue of and from his barony of Clavering, in Essex. The father was owner of the baronies of Clavering and Waakworth. The oldest surnames in this country in Doomsday book are taken from places owned by the persons, with the addition of "de," as John de Clavering, Walter de Vernon, etc.

The late Postmaster General Von Stephan of Germany was the inventor of postal cards, and the founder of the Universal Postal union.

The hotel and a private residence at Thorsby.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmimgham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thoresby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story school-house, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beech, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

CHILT

VOL. I. NO. 14.

HOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

The Thorsby Call says: "There is not a more desolate city on top of Southern dirt than Birmingham—not one! A shade tree there is a curio that causes its citizens to gaze and gape at it in wooly wonder." The ignorance displayed by the writer of the above is surprising and pitiable. It is clear that he has never been in Birmingham, for if he had he would have known that this city contains more shade trees than any in the South, with the possible exception of Savannah, Ga. The Call man should take a run up to the Magic City and learn something about it before he attempts to write on the subject again.—Birmingham Daily News.

We visit Birmingham only three times a week and as we have toiled along its streets under a boiling sun we have never yet had the delight of passing under a shade tree in that Miserable Metropolis. Stop! We take it all back. Birmingham is a "shady" city. In fact it is the "shadiest" city on our continent today.

Miss Florence Caton, a young woman, 18 years of age, who lives about a mile south of town, was brought before Justice Bice last Saturday on the charge of infanticide, and was bound over to the circuit court in the sum of $200. It seems that the family of the young woman were ignorant of her condition; that on the evening of the 17th ult she went out of doors, gave birth to a child, hid it, and, returning to the house, went at once to bed. On the following morning the babe was found by her brother, but it died in a few hours. Dr. Givhan was called in, and when the facts became known, a warrant was issued for the arrest of the unnatural mother.

Sunday night a fire destroyed the home of Prof. McMorris at Clanton. The fire was caused by a defective flue. In a very short time the building was engulfed in flames, and soon consumed. A part of the household furniture was also destroyed, including the Professor's library, which will be a difficult thing to replace. The building was owned by Lee Vivings, of Birmingham, and was one of the handsomest and most costly residences in Clanton.

Sam Adams, the veteran office-seeker, handed in his resignation last week, as Mayor of Jemison. We congratulate Jemison. This thing of seeking an office under the guise of religion has succeeded at times in the past, but the beneficiaries of the practice are beginning to find out that the American people, of the white persuasion, are becoming a bit too intelligent for such a bunco game to be played upon them.

Editor M. E. Taylor, of the Chilton County Call, published at the new and progressive town of Thorsby, was a pleasant caller at the Sentinel office one day last week. He publishes a live, up-to-date paper, and is doing a good work for our neighbor county — Calera Sentinel.

The general merchandise firm of Moore & Collins, formerly of Strasburg, has dissolved partnership. Mr. Moore will hereafter spend his time on his farm, and Mr. Collins has opened a small general stare in Jemison.

The fourth of July picnic given by the Thorsby people, last Saturday, was a glorious event, and the day was enjoyed by everyone present.

A shipment of grapes was made Tuesday, from the Thorsby vineyards to the Birmingham market.

DR. RICHARDSON DEAD.

The Well-Known Presbyterian Divine Passes Away at Memphis.

Rev. E. M. Richardson, D. D., secretary of education of the Presbyterian church in the United States was found dead in his bed in Memphis last Wednesday morning. He was one of the best known divines in the south, his official duties calling him to almost every city of any size in the country. The deceased was 68 years of age. Heart failure was the cause.

DOINGS OF CONGRESS.

BAGGING AND TIES PLACED ON THE FREE LIST.

The House was in Session Only two Days This Week--Fair Progress Made with the Tariff Bill by the Senate--Playing Cards Taxed 20 Cents.

SENATE.

MONDAY.—The senate made good progress on the tariff bill to-day, disposing of the paragraph relating to hides which have been the source of most controversy. Mr. Allison proposed a change in the paragraph, making the rate 20 per cent. ad valorem instead of 1½c per pound; and also striking out the proviso relating to drawbacks. The paragraph as amended reads: Hides of cattle, raw or uncured, whether dry, salted or pickled, 20 per cent. ad valorem. The vote was then taken on the hide paragraph as amended by the committee and it was agreed to, 39 to 20. Mr. Allison proposed a substitute for paragraph 215, relating to cattle, as follows: Less than a year old, $2 a head, on all other cattle, if valued at not more than $13, $3.50 a head; valued at more than $14 and not more than $25, twenty-five per cent.

The substitute was agreed to. The bill was laid aside at 5 o'clock and after an executive session the senate adjourned.

TUESDAY.—After a tedious consideration of the tariff bill throughout to-day, the senate wound up with a half hour of lively and amusing colloquy between Senators Tillman, of South Carolina, and Chandler, of New Hampsire. During the day the senate disposed of the lead paragraphs, the committee rate of 1½c per pound on lead ore being agreed to, 30-33. The other paragraphs considered were of comparatively minor importance.

WEDNESDAY.—As a result of the rapid work on the tariff bill to-day, the close of the long debate in the senate and the final vote is felt to be near at hand. Two of the most important provisions—those relating to the Hawaiian treaty of reciprocity and the duty on coal, were perfected to-day, while another source of much conflict, the reciprocity section, was matured by the finance committee and presented to the senate. Aside from these larger items, a great many minor ones which have caused more or less conflict were disposed of. The Hawaiian provision of the house bill was restored, after brief debate and without the formality of a vote. This has the effect of leaving the Hawaiian treaty of reciprocity in full force and effect. Quite a number of the minor paragraphs of the free list went over for future consideration. At 5:15 p. m. the bill was laid aside and after an executive session the senate adjourned.

THURSDAY.—The finance committee suffered several unexpected reverses during the progress of the tariff bill today, being defeated on three important votes. Cotton bagging was placed on the free list, 30 to 45, and cotton ties also, by a vote of 29 to 23. The duty on white pine lumber was reduced from $2 to $1 per thousand, 31—31. The amendment on pine occasioned the greatest surprise and led to a general breaking up of party lines on both sides of the chamber. During the early stages of the debate the duty on lumber, including pine was placed at $2, after a protracted contest. To-day Mr. Teller returned to the contest and moved to place white pine lumber on the free list. The amendment was defeated by the close vote of 32 to 33, four Republicans, Baker, Carter, Hansbrough and Quay, joining the Democrats, Populists and silver Republicans in the affirmative, while three Democrats, Bacon, McEnery and Martin, voted with the Republicans in the negative. Following this close vote Mr. Mantle moved to reduce the rate on white pine from $2 to $1, and this was carried by a majority of one. Two Republicans, Baker and Carter, voted with the Democrats in the affirmative, and three Democrats, Bacon, McEnery and Martin, with the Republicans in the negative. The bill is now completed, with the exception of the reciprocity section and some comparatively minor paragraphs. Much progress was made today in clearing up detached paragraphs heretofore passed over. Only three of these—coal tar, potash and tea—remain, so that these items, the reciprocity section and the brief internal revenue and administrative provisions are all that remain of the bill to be disposed of before the final vote is taken.

FRIDAY.—Reciprocity and retaliation were the two phases of the tariff bill to occupy the attention of the senate today to the exclusion of all other subjects. Both provisions were agreed to, although the debate on the reciprocity clause was protracted to 6 p.m. Shortly before adjournment Mr. Allison endeavored to secure an agreement on the time for a final vote. Mr. Teller would not consent to fixing the time until proposed amendments had been submitted to the senate. Mr. Allison was not prepared to submit these amendments and he withdrew his request, although there is still hope that an agreement will be reached tomorrow. The retaliatory clause provides that whenever any country bestows an export bounty on any article there shall be levied, in addition to the duties provided by the act an additional duty equal to the amount of the bounty. The clause was agreed to, 33 to 19. The reciprocity clause empowers the president, with the advice and consent of the senate, to make reciprocity treaties, giving 20 per cent. reduction in duties on designated articles or placing articles on the free list. Adjourned.

SATURDAY.—The tariff bill has gone over until Monday. Mr. Allison reported a new amendment from the finance committee, giving a bounty of one-quarter cent. a pound on beet sugar made from beets grown in the United States. Mr. Thurston, of Nebraska, one of the prime movers, arose and withdrew the amendment, saying his action was inspired by patriotic motives and for the purpose of removing all obstacles to the passage of the bill. His colleague, Mr. Allen, immediately renewed the bounty proposition. During the day the bill was brought to a state of practical completion, the only remaining items being the new provisions submitted by the committee and individual senators. Among the features disposed of were the anti-trust sections, the provisions of the Wilson act on that subject being re-enacted. Mr. Mills, Democrat, of Texas, brought forward a new amendment for a tax of 20 cents a pack on playing cards, which was agreed to by unanimous vote, amid much amusement and surprise, as Mr. Mills had not expected this result. All of the administrative sections of the bill and and that repealing the Wilson act were disposed of during the day, and the paragraph proposing a tax on beer was withdrawn by the committee.

HOUSE.

MONDAY.—The session of the house to-day lasted long enough to call the roll on Mr. Dingley's motion to adjourn. As soon as the journal had been approved, the floor leader of the majority remarked that as he was not aware of any matters claiming the attention of the house to-day he moved an adjournment. Mr. Bailey, of Texas, challenged the statement with the observation that the bankruptcy bill and the Cuban beligerency resolutions were unacted upon. The opposition applauded when the rising vote showed them in the majority, the vote resulting 85 to 86 against Mr. Dingley's motion. Thereupon Mr. Dingley demanded the yeas and nays and the roll was called. The motion was carried, 97 to 88. At 12:45 p.m. the house adjourned until Thursday.

THURSDAY.—Mr. Settle, Democrat, of Kentucky, after the journal had been read, raised a question as to the truth of the journal of last Monday's proceedings, by offering a technical amendment to correct the journal. Upon this amendment he got the floor and proceeded with an extended speech on the general question of the power of the house to adjourn over three days at a time, which he declared was a direct violation of the constitution. He drifted into a general arraignment of the Republicans for not taking action on the bankruptcy bill and the Cuban belligerency resolution. Mr. Settle's amendment was rejected by 90 to 105, and at 1:30 the house adjourned till Monday.

Thousands Homeless.

A dispatch to the London Daily Mail from Brail, the principal port of Roumania, says that 20,000 inhabitants, of Galatx, in Moldavi, on the left bank of the Danube, are homeless as a result of the recent floods.

Bank Wrecker Gets Eight Years.

At New Orleans, La., Louis Gallot, the convicted Union bank wrecker, was sentenced the other day by Judge Parlange to eight years in the penitentiary at hard labor. The case will be appealed.

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$3.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

$3.50 for the Famous Royal Blue Shoe; factory price $4.00.

$2.48—Odds and Ends in Patent Leather, Calf and Cordovan; were good value at $4.00 and $5.00.

$2.48 for Tans, in all Shapes and Shades; their former price $3.50.

$1.98—These Shoes in Tans and Calf never sold for less than $2.50.

$1.35 for Men's Shoes, in all Styles that were formerly $2.00.

98c.—A good Shoe, that always sold at $1.50.

$1.29—Men's Oxfords, light, cool and neat; were formerly $2.00.

GOOD-BY.

We say it for an hour or for years;
We say it smiling, say it choked with tears;
We say it coldly, say it with a kiss,
And yet we have no other word than this:
Good-by.

We have no dearer word for our heart's friend,
For him who journeys to the world's far end
And scars our souls with going; thus we say,
And unto him who steps out o'er the way:
Good-by.

Alike to those we love and those we hate,
We say no more in parting. At life's gate
To him who passes out beyond earth's sight,
We cry as to the wanderer for a night:
Good-by.

—Boston Traveler.

A STROKE OF CONSCIENCE.

Mr. Marchmont sat alone in his city office, gloomily realizing the fact that he was a ruined man; and, worse still, that he had involved others in his own financial disasters, without either their knowledge or their consent. It was the old, old tale; ill fortune in business, rash speculative investments to meet extravagant expenditure, then misappropriation of trust funds to repair past losses and enable him to continue his gambling vantures with the wild hope that previous misfortunes could be retrieved. Now all was gone; the fortune of his orphan clients as well as his own; and, in another month or so, when Harold Williams would be 24, and the "trust" would, by the terms of his old friend's will, have to be rendered up discovery of the real condition of affairs must ensue. It was not an agreeable prospect, for Mr. Marchmount, like many another misapplier of trust funds, had never intended to be actually dishonest any more than does the clerk or shopman who "borrows" from his employer's "petty cash," or shop till, to meet his own losses on the race course. Every gambler with the money of other people looks forward to making some "lucky stroke" which shall recoup all his former losses—and is mostly disappointed in this exceptation. For a long time Mr. Marchmount had fought desperately against the evidence of facts, and plunged into yet wilder speculations with the hope of retrieving his financial disasters, but now all was gone; the fortune of the two orphans of his oldest frind engulfed with his own, and this under circumstances which would assuredly lay the defaulting trustee open to a criminal prosecution. Would it be wisest to slip quietly away while there was yet time? But his whole soul revolted against this idea; for, until the fatal speculative mania had seized upon him, Mr. Marchmont had been a man of honor and integrity, and was greatly respected and esteemed by all who knew him. It was, indeed, his known high reputation which had induced his old friend to place the future of his children so unreservedly in his hands.

"If you will consent to become their trustee, Marchmont," he had said, "I shall appoint no one to act with you. I can trust you fully, and shall leave everything in your hands until Harold is 24. I know you'll do your best for him and Ellie, and keep the money where it is—in good, safe, non-speculative investments."

Mr. Marchmont, then a prosperous merchant, had readily undertaken the charge laid upon him, and fulfilled it honestly enough until within a year or so before the time when our story commences. But there had been a time of great financial depression, and Mr. Marchmont's firm had suffered like the rest of the world; and then, in a fatal hour, he had been tempted to gamble on the Stock Exchange; had won, had lost, lost again, grown reckless, and now that £30,000 which should be handed over to Harold and his sister in another six weeks was as non-existent as was Mr. Marchmont's own private fortune. Business was most depressed still; and Jenkins, the other partner, had begun to advocate boldly facing the real condition of things and "winding up" the firm's affairs; but Jenkins was, of course, ignorant of his partner's embezzlement of trust funds.

It is one thing for a business man whose affairs have become involved through unexpected misfortunes, to "call a meeting of creditors" and lay the facts plainly before them, and another to have to confess that a trustee has—to put it bluntly—made away with money that does not belong to him. It was no small addition to the torturing anxiety of the situation that Jenkins was so perpetually advocating a "voluntary winding up" of the firm, and a candid statement of their affairs. Of course, the crash and the discovery were bound to come shortly; even already [illegible] fancied that some suspicions were arising in young William's mind, for the youth had become rather pressing regarding the fixture of a date on which to go into all the trust accounts, and have the investments duly transferred. Alas! all these "investments" had been nonexistent for some time. It had often been a desperate struggle to pay the interest on the vanished capital, and the delays which had occasionally ensued had perhaps aroused some suspicion of the truth in Harold Williams's mind. On one pretence or another, Marchmont had hitherto contrived to put off the evil day of reckoning, but had been obliged to fix a date for it at last. In another six weeks the truth must be revealed: Mr. Marchmont must stand before the world as a convicted thief, a betrayer of the trust of a dead friend, and Harold and his sister must learn that owing to his embezzlement they were reduced from comparative affluence to absolute beggary. Small wonder that, as the wretched man sat alone in his private room, his face looked gray and lined, or that he glanced often at a certain locked drawer, in which some weeks previously, he had placed a tiny phial.

"There is always that means of escape. I can never face the lad and his sister and tell them that I have ruined them," thought Marchmont, who, to do him justice, was even more concerned to think of the calamity which he had brought upon his young friends, than of the probable consequences to himself of his rash acts. "If I'd only drank the contents of that bottle three years ago, before all this took place!" thought the merchant bitterly.

"It's not our fault, but simply our misfortune, Marchmont, that we are in such straits," the junior partner would often say. "It was those unexpected failures abroad that dragged us down. But we're quite clear, thank heaven, from any imputation of 'reckless trading,' and need have no objection to face our creditors fairly, and let them go over our books for themselves. As business men they will be reasonable in the matter, and we're only carrying on now at a loss, and getting worse every day."

True, the accounts of the firm were clear and clean enough; it was in his private capacity that Mr. Marchmont had gambled and embezzled. But to "wind up" his business would precipitate the discovery of his private malpractices; and with the natural desire of putting off the evil day as far as possible, Mr. Marchmont still clung to delay. Six weeks yet remained to him, and then—at the worst—there were the contents of the vial.

"Truth is stranger than fiction," is a trite remark; and the "singular accidents" which novelists are often ridiculed for adapting into their tales not unfrequently take place in real life. One morning Mr. Marchmont, who was usually the last to arrive at the office, found Jenkins, usually so cool and quiet, in a state of extreme, though suppressed excitement.

"Come here," said this gentleman, dragging his partner by the arm into the private sanctum, and carefully shutting the door. "I don't want the clerks to get an inkling of what I have to say. You remember those farms at the Cape which we took over—as the only asset we could lay hands on—when that South African firm failed and let us in so heavily?"

"Yes, and valueless enough they have proved," said Marchmont indifferently.

"Have they?" cried Jenkins exultingly. "Just wait and see. I have received private information—from a source I am not at liberty to disclose—that gold has been discovered in some part of this land, and that if we wait, and play our cards well—we may make a fortune yet out of the sale of that 'valuable estate.'"

And such, in fact, proved to be the case. Jenkins, a shrewd and cautious man of business, successfully negotiated the matter; Marchmont, indeed, being too dazed by this sudden change in the situation to intermeddle much in the affair.

There were delays, and many discussions, and much correspondence, but the matter ended—thanks to Mr. Jenkin's good management—in these erstwhile despised "African farms," proving a veritable "gold mine" to the original owners who sold them for a sum which entirely recouped Mr. March mont for his private losses, and enabled Mr. Jenkins to retire from the firm—as he promptly announced his intention of doing—with a comfortable competence.

"I have made my money, and I don't mean to risk it in any business again," remarked this gentleman.

Thanks to this unexpected stroke of luck, Mr. Marchmont was able to look forward to the dreaded trust audit with more composure. It was necessary, of course, to prepare a very elaborate — and fictitious — series of accounts to conceal the real facts, but at least, the money was there to be handed over and recipients are usually satisfied to receive their own, without indulging in too close scrutiny, as to how it has been dealt with before it arrives in their hand. Mr. Marchmont winced, however, as he saw that Harold Williams, when he kept the long-deferred appointment at the merchant's office to "go into the accounts," had brought his solicitor with him, a shrewd, keen-eyed, middle-aged man of well-known ability in the profession. Nothing, however, could be more courteous than this gentleman's demeanor as he explained that "his young client, being somewhat ignorant of business," had suggested that he should accompany him, and check over the trust accounts. At least, the money was forthcoming, as Marchmont thought with infinite sense of relief, but as the quiet lawyer examined the accounts in silence, the miserable trustee felt well aware that the shrewd solicitor had accurately gauged the real condition of affairs, and could penetrate all the ingenious devices whereby figures had been manipulated to conceal facts.

Indeed, as Mr. Vivian, the lawyer, turned over the accounts, he was saying to himself: "Exactly as I expected; these trust funds have been made away with and replaced. Well, it's no business of mine to point this out, and anyhow, my client has got back his own in the end."

But there was a decided coldness in the tones in which Mr. Vivian thanked Mr. Marchmont for the opportunity he had given them for inspecting his trust accounts, which were all in due order.

"And now we have only to arrange for the formal transference of the property to Mr. Williams and his sister," remarked the lawyer, as he laid down the last paper.

"No," exclaimed Harold, who, like Mr. Marchmont, had noted the coldness of his lawyer's manner to the trustee, "no, I've something else to do first."

Both the other men looked at the speaker in some surprise.

"I have to ask your forgiveness, sir," said the youth ingenuously, advancing toward Mr. Marchmont, and holding out his hand; "I am utterly ashamed to confess that, for some while, I have wronged you, my father's oldest friend, and the kind and faithful guardian of my own and my sister's interests, by wicked and unjust suspicions. Circumstances — not worth recalling now—had led me to fancy that—well, I'm fairly ashamed to say the words—that our money was not quite safe in your keeping. I see now how mistaken—how wrong I was"—here Mr. Vivian mentally ejaculated: "Was he?"—"and I ask your pardon for the wrong I did you in my thoughts. I feel it only due to you, sir, to make this confession, ashamed as I am to have to do it; but you will forgive me, will you not?"

There was a pause. Mr. Marchmont did not take the offered hand, but sat still, with a strange, fixed look upon his face.

"I was so anxious about Ellie, my little sister," went on the young man; we are all alone in the world, as you know. But if I cruelly misjudged you, sir, I am at least ready to acknowledge myself utterly in the wrong and to ask your forgiveness. Were my dear father here," added the young man, with some emotion, "I am sure he would fully appreciate your kindness to his orphan children and thank you as sincerely as I do for your noble and conscientious fulfilment of the trust he reposed in you."

Mr. Marchmont slowly staggered to his feet; an awful grayness was over spreading his face.

"It is—very—touching—and—gratifying," he began, in a strangely altered voice.

Then he suddenly collapsed, and fell on the floor—dead.

"The fellow had some conscience after all," thought Mr. Vivian to himself, whenever he looked back on the awful occurrence; but, lawyer-like, kept his own counsel.

"Failure of the heart's action," was the medical verdict, with the addendum that Mr. Marchmont had long been in a critical state of health.

Harold Williams often reproached himself for having, by a little additional excitement, possibly accelerated the fatal catastrophe; but yet, as the young man once remarked to Mr. Vivian:

"I cannot understand how my merely thanking poor Mr. Marchmont should have affected him so much. It was not as if anything had been wrong with his accounts."

Mr. Vivian only coughed in reply; and, to the end of their lives, Harold and his sister believed their trustee to have been a model of honesty and rectitude. Yet, perhaps, as the lawyer had surmised, it was Marchmont's "conscience" that had killed him after all.—Household Words.

A Dog's Legal Status.

That so august a tribunal as the Supreme Court of the United States should be called upon to define the local status of a dog seems singular; but a decision bearing upon that point has just been rendered. The case was a suit brought by a citizen of Louisiana to recover damages from a railroad company for having run over his dog; and the question was, whether the state law recognizing dogs as personal property only when placed on the assessment rolls was constitutional. The court decided that it was. Incidentally the court ruled that property in dogs is of an imperfect and qualified nature, and that they stand between wild animals, in which, till they are subdued, there is no property, and domestic animals, in which the right of property is complete.—The Youth's Companion.

WARM WEATHER GOWNS.

WHAT WOMEN ARE WEARING IN THE HOT SUMMER DAYS.

Simple But Elegant Costume of Light-Weight Cheviot in Havana Brown—Design for the Blazer and Seven-Gored Skirt—A Waist of Striped Dimity.

Nothing marks the woman of distinction more readily than does her gown of every-day wear, writes May Manton. True elegance demands simplicity for morning and shopping wear, but that simplicity which means perfection of cut and detail. The costume shown in the illustration amply fills every need. The material chosen for the model is light-weight cheviot in Havana brown. The finish is the severe stitching dear to the tailor, not even braid being allowed to enter into the makeup. The shirt waist is of fine Scotch gingham, worn with a standing collar and cravat bow, and belt of the brown. The blazer, which complies with the latest demands of fashion, is cut with a dartless front, back, side forms and underarm gores. The front and collar are faced with the material and stitched about the edge. A strap, attached with invisible buttons, holds the fronts together when needed and allows of leaving them free when the weather permits. The sleeves are cut with the slight fulness at the shoulder which still prevails in all outer garments.

BLAZER AND SEVEN-GORED SKIRT.

The skirt is of moderate fulness, cut in seven gores, which renders it peculiarly good for short, stout figures that call for the perpendicular lines afforded by the numerous seams. It is faced to a depth of eight inches and stiffened to the same depth with haircloth. The style is eminently well suited to canvas cloths, cheviots, light-[illegible]

To make this blazer for a woman of medium size will require two and one-fourth yards of forty-four-inch material. The skirt will require five and five-eighths yards of the same width goods.

Woman's Blouse Waist.

Blue and white striped dimity made the neat and stylish waist depicted in the large illustration. It is mounted upon a glove-fitting lining that has the usual number of seams and double bust darts, and closes invisibly at the centre-front. The back is seamless, with the merest suggestion of fulness at the waist. Smooth under-arm gores are inserted, providing a trim adjustment. The fronts are dartless, fitting smoothly across the shoulders and bust, with the additional material at the waist laid in pleats that turn toward the centre-front. The right-front edge finishes with a graduated box-pleat, through which buttonholes are worked to effect a closing with buttons or studs, as preferred. Bias ruffles, edged with narrow embroidery, appear on each side of the box-pleat, producing a soft and becoming fulness. The sleeves are two-seamed, gathers at the top disposing the moderate fulness; the wrists are completed by deep cuffs, edged with embroidery. The neck is completed by a neat turndown collar, which can be substituted for the regulation white linen collar. The waist is encircled by a bias girdle of the material, but a pretty leather or metal belt would be equally appropriate.

The mode is particularly adapted to wash fabrics, and can be made with or without a lining. Waists of this description can also be made of wash silk or light summer silks in striped or checked designs, and worn beneath a blazer or reefer, thus affording a pleasing variety from the ordinary shirt waist.

To make this waist for a woman of medium size will require three and one-half yards of thirty-six-inch material; and of twenty-two-inch goods, five yards will be necessary.

WOMAN'S BLOUSE WAIST.

Muslin Collars and Cuffs.

Muslin collars and cuffs are appearing under a thousand and one aspects, and perhaps the most successful is the collar cut into tabs, hemmed and machine stitched. Beneath this can be worn the ribbon stock, or the ordinary collar band will serve its purpose, or again, the plaid scarf tied in the front into a short bow with aggressive ends. Most of the new stocks are made of plaid silk, and these are, according to the latest edict of fashion, tied into a short sailor knot after they have passed through the buttonhole at the back and crossed. A very ordinary alpaca dress, with a bodice which pouched at the back and front, looked quite attractive under the influence of a white linen collar and a plaid necktie tied into a sailor knot and a toque of black straw decked with weird looking wings in green and blue and violet and a scarf of black chiffon.

Flounced Skirts.

Flounced skirts are the proper thing and a novel method of following the style is to have the upper tight part of the skirt of cream lace to below the hips from where the flounces fall in stiff elegance. Little jackets entirely of lace go prettily with such skirts and have [illegible] fronts and [illegible]

UNCLE SAM'S JUBILEE.

SIXTY YEARS OF GROWTH IN THE UNITED STATES.

Great as England is, the United States Are Greater—In Population, Wealth, Manufactures, Railroads, Education and Productive Power This Country Leads.

The burden of the Victorian jubilee song, says the New York World, is the great growth of Great Britain at home and abroad during the sixty years of Victoria's reign.

But, in the language of the Man in the Street, "there are others."

Uncle Sam's jubilee, for instance, would be very much more impressive even than Queen Victoria's.

The British Empire in 1897 includes a total area of 11,335,806 square miles and a population of 380,000,000, using round figures. While a great part of this vast territory was acquired either by conquest, treaty or settlement, in the reigns of Victoria's predecessors, yet the population and development thereof have been accomplished mostly within the past sixty years.

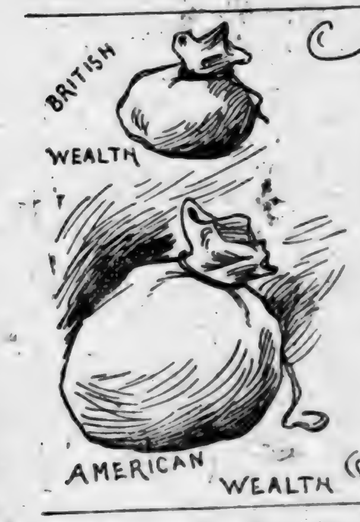
It is not the number of square miles that make a nation great, but the number and the quality of the men to the miles.

In 1841 (the year of the first Victorian census) the United Kingdom had 27,000,000 inhabitants. In 1891 it had nearly 38,000,000. It appears that the Queen is ruling to-day over about 11,000,000 more subjects than she did in 1837.

During the same period the United Kingdom has sent out about 9,000,000 surplus population, one-half of whom have come to the United States.

The actual increase in the number of the Queen's white subjects at home and abroad appears to have been about 23,000,000. Sir Walter Besant estimates that, scattered over the whole of the British Empire, there are now about 50,000,000 people speaking the English language.

But the growth of the United States in population has been far greater. In



1840, three years after Victoria became Queen, the population of the United States was about 17,000,000. In 1897 the population of the United States, according to estimates made for the World by the Governors of the States and Territories, was over 74,000,000. While the people who speak English under the British flag have been about doubling themselves, the people who speak that language under the American flag have multiplied four and one-third times. Putting it most [illegible] easily for our British jubilee friends, we have been adding to our population

To make this blazer for a woman of medium size will require two and one-fourth yards of forty-four-inch material. The skirt will require five and five-eighths yards of the same width goods.

UNCLE SAM'S JUBILEE.

SIXTY YEARS OF GROWTH IN THE UNITED STATES.

Great as England is, the United States Are Greater—In Population, Wealth, Manufactures, Railroads, Education and Productive Power This Country Leads.

The burden of the Victorian jubilee song, says the New York World, is the great growth of Great Britain at home and abroad during the sixty years of Victoria's reign.

But, in the language of the Man in the Street, "there are others."

Uncle Sam's jubilee, for instance, would be very much more impressive even than Queen Victoria's.

The British Empire in 1897 includes a total area of 11,335,806 square miles and a population of 380,000,000, using round figures. While a great part of this vast territory was acquired either by conquest, treaty or settlement, in the reigns of Victoria's predecessors, yet the population and development thereof have been accomplished mostly within the past sixty years.

It is not the number of square miles that make a nation great, but the number and the quality of the men to the miles.

In 1841 (the year of the first Victorian census) the United Kingdom had 27,000,000 inhabitants. In 1891 it had nearly 38,000,000. It appears that the Queen is ruling to-day over about 11,000,000 more subjects than she did in 1837.

During the same period the United Kingdom has sent out about 9,000,000 surplus population, one-half of whom have come to the United States.

The actual increase in the number of the Queen's white subjects at home and abroad appears to have been about 23,000,000. Sir Walter Besant estimates that, scattered over the whole of the British Empire, there are now about 50,000,000 people speaking the English language.

But the growth of the United States in population has been far greater. In 1840, three years after Victoria became Queen, the population of the United States was about 17,000,000. In 1897 the population of the United States, according to estimates made for the World by the Governors of the States and Territories, was over 74,000,000. While the people who speak English under the British flag have been about doubling themselves, the people who speak that language under the American flag have multiplied four and one-third times. Putting it most generously for our British jubilee friends, we have been adding to our population twice as fast as they have for the past sixty years.

Passing now to the comparison of wealth, there are no official figures available to show what the aggregate national wealth of the United Kingdom was in 1837. But there are abundant later statistics to warrant the statement that, great as the growth of British commerce, manufactures, railroads and the resulting total production of wealth has been under Victoria's rule, the contemporaneous creation of wealth in the United States has been much greater.

Editor Stead, in the current Review of Reviews, says that the wealth of the United Kingdom has been multiplied four times since 1837. If he is correct, its valuation when the Queen was crowned must have been about $12,500,000,000.

The census taken in 1840 showed that the aggregate wealth of the United States was about $4,000,000,000, or an average of $410 per capita. As last computed, by the census of 1890, the total wealth of this country is $65,037,000,000. That is just about thirty-three per cent. greater than the computed total of the wealth of Great Britain.

England's total wealth to-day is estimated by her own famous statistician, Dr. Robert Giffen, at $50,175,000,000. So she is behind the United States in the size of her pile by about $14,000,000,000. Uncle Sam's farm is worth more than John Bull's in the proportion of at least thirteen to ten.

In the one item of real estate the valuation of this country stands relatively to that of Great Britain as two to one. The lands and buildings of the United Kingdom were last valued at about $20,000,000,000, and those of the United States at just about $40,000,000,000.

The wealth in houses in this "land of the free" represented an annual investment of about $12.50 per inhabitant for the twenty years ending with 1890. The annual average in Great Britain represented an annual investment of less than $6 per inhabitant for the same period.

Inasmuch as economists tell us that the outlay on houses is the surest gauge of wealth, it thus appears that the average accumulation of property in the United States is more than double what it is in the British Isles.

Coming next to commerce we find Mr. Stead claiming that British trade and shipping are about five times as expensive and valuable in 1897 as they were in 1837. He points to the fact that the value of the annual exports and imports of the kingdom rose from $700,000,000 in 1837 to nearly $3,500,000,000 in the nineties.

But we can dwarf these figures also. Sixty years ago the total imports and exports of the United States were less than $200,000,000 per year. Now they are over $1,500,000,000 a year. While British foreign trade has been multiplying five-fold American foreign trade has multiplied seven-fold.

In the matter of railroads, Mr. Stead says truly that the great bulk of British railroad mileage has been built since Victoria began to reign. Even so, our railroad building record beats it "all hollow."

The total railroad mileage of the United Kingdom to-day is about 21,000 miles. The railway mileage of the United States is more than nine times as large. We have over 180,000 miles of railroads already built, and that is more than the combined railroad mileage of all the nations of Europe put together.

Coming next to manufactures, Mr. Stead gives a diagram showing that between 1857 and 1897 the value of British manufactures has about doubled. That is a good lively gait, but it does not touch the pace at which the manufactures have grown in the United States. Our statistics are not complete enough for close comparison away back in 1837, but we have the figures from 1850 to 1890.

In 1850 the gross value of the manufactured products of this country was $1,000,000,000, using round figures. In 1890 the gross value of the product of American manufactures was $9,400,000,000. So that in forty years American manufactures increased in value nine-fold, as against a two-fold increase in the value of British manufactures in sixty years.

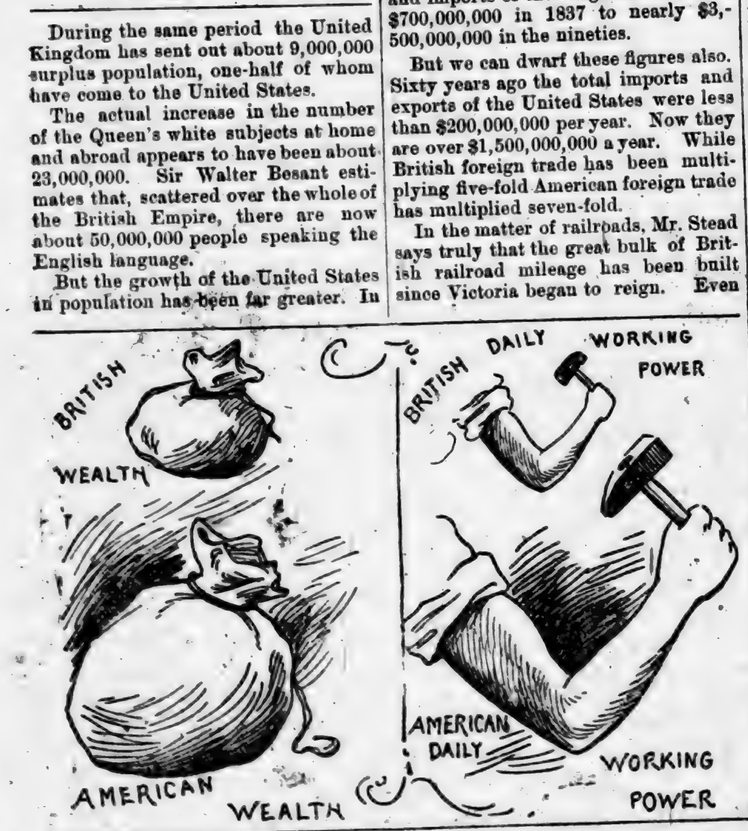
Mr. Mulhall, the celebrated British statistician, has pointed out that "the productive power of a nation can be measured at each census with almost the same precision as that with which the astronomer indicates the distances of the heavenly bodies." An able-bodied male adult has a daily working power equal to that required to lift 300 tons one foot. On this basis Mr. Mulhall reports the physical power of the American nation to-day to be equal to 6406 millions of foot tons per day. To that he adds the horse-power and steam-power of the country, and reports the total daily lifting power in the United States at 129,806 millions of foot tons. The meaning of this statement is better understood when it is added that, by Mr. Mulhall's computation, "the United States possess almost as much productive energy as Great Britain, Germany and France collectively."

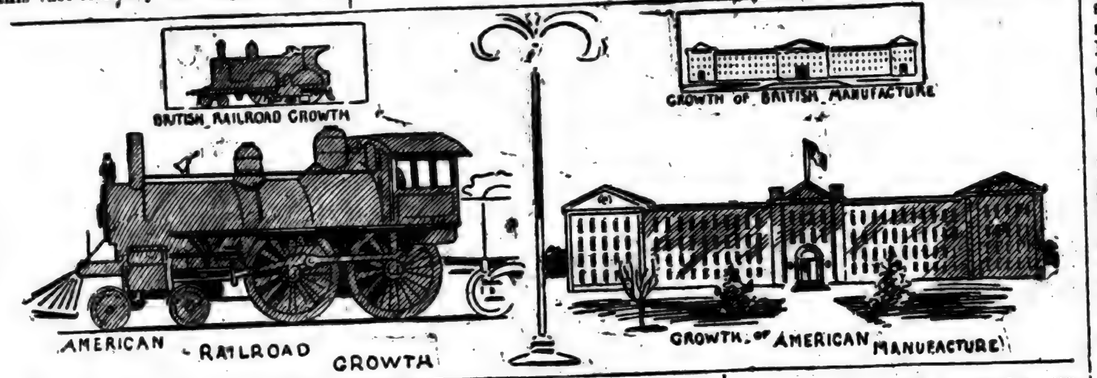
He tells us further that an average farm hand in the United States raises at much grain as three farm hands in England, by reason of his superior machinery and tools. Whence we deduct the fact that the daily working

power, or capacity for productive labor, of the United States is about three times as great at least as that of Great Britain.

Finally, there is the matter of education, and perhaps after all this is the point of comparison of which we have the best right to be proud. The census of 1890 shows that eighty-seven per cent. of our total population above the age of ten can both read and write. In the words of Mr. Mulhall, "In the history of the human race no nation ever before possessed 41,000,000 instructed citizens."

Great Britain is no doubt the leading nation in Europe in the matter of popular education, but the United States had a common school system away back when Victoria began to reign and long before, while Great Britain has only had one for about twenty-two years. Even to-day British expenditure on public schools is only $1.30 per capita, while the United States are spending $2.40 per capita for the same purpose, or nearly twice as much.





NOTES AND COMMENTS.

Professors of Paris medical colleges, finding the freight on bodies from the provinces for the use of the students a heavy drain on their resources, have been shipping them as smoked bacon, the freight rate for which is much less. The discovery has put all France into hysterics.

A Kentucky strawberry grower reports a clear profit this season of $729.63 on seven acres of ground. Numbers of women and children who would have earned money in no other way made one or two dollars a day picking berries. Another grower of strawberries reports his clear profit to have been $357.50 on two acres of ground.

Is it right to make a dog work in harness? Belgium answers yes, England no, the United States is indifferent, and France is deliberating. The French law against using dogs as beasts of burden is often violated in some of the provinces, and a movement has been started for a repeal. Belgians say their draught dogs are quite jolly; but if the dogs could vote on the subject, they would be apt to approve the English view.

The German census of 1895 shows that the population of Germany numbered 52,279,901, or 2,851,434 more than at the previous census in 1890. This increase of more than five per cent. in five years is greater than in almost any other country the popula- of which is not added to by immigration. The number of females exceeds by nearly one million that of the males, viz. 26,618,651 against 25,661,250.

The new Missouri law requiring the owner of swine, sick of any fatal disease, to at once notify those keeping swine on adjoining premises of the fact, and requiring the owners of swine that die of any disease, to bury same within twenty-four hours and prohibiting from burying them "in or immediately adjacent to any water course, ravine or slough leading through or onto other premises," is a good one, and the farmers of that state should see that it is enforced.

Australia, which has led in many socialistic experiments made by the state, is now considering the question of state physic. The president of the Queensland Medical Association proposes that the country be divided into medical districts, under doctors paid by the state to look after all the inhabitants, and that the money for the purpose be raised by a poll-tax of two dollars a year. This would enable the state to pay fifteen hundred dollars for the lowest medical salaries. A New South Wales labor league has declared that "the practice of medicine should be a national service."

There has always been a good deal of dodging of responsibility in cases where overcoats or hats have been stolen while the owners were eating at restaurants and the like. The Supreme Court of New York now says a restaurant keeper is bound to look out for the safe keeping of its patrons' property in such cases. It has just held a restaurant man for $35 for the loss of an overcoat be one of his guests. The restaurant diner can now wrestle with his viands without having to cast an eye ever and anon at his fur-lined overcoat or wonder whether he will have to go home bare-headed.

"Nothing new under the sun," said the preacher. Yet many people think that he did not foresee the bicycle. Nevertheless, Mr. Yang Yu, late Chinese minister to this country, declares that they used bicycles in the Flowery Kingdom twenty centuries ago. He adds that their manufacture was finally prohibited by the Emperor because the Chinese women rode so constantly that they neglected their families and domestic duties. This bit of satire indicates to Youth's Companion that Mr. Yang Yu has attained a very intelligent appreciation of Occidental humor during his residence in this country.

Concerning the Polar basin, whereto, with the opening of the season, the explorers are again scurrying from all quarters, Sir George Nares says that it is a locked-up bay continuing out of the narrowed Atlantic channel, with a warm stream of water constantly pouring into it between Spitzbergen and Norway and a cold, icy one as constantly running out between Spitzbergen and Greenland and also through the narrow straits between Greenland and America, the first conveying an enormous source of heat toward the north, the latter causing the intense cold of Canada and that on the east side of Greenland and North America.

It is estimated that there are 1,000,000 blind people in the world, or 1 to every 1,500 inhabitants. Latest reports show 23,000 blind persons in England, or 870 for each million inhabitants. Blind infants of less than five years, 166 for each million; between five and fifteen, 288; between twenty and twenty-five, 422; between forty-five and sixty, 1,625, and above sixty-five years, 7,090 for each million. Russia and Egypt are the countries where the blind constitute the largest proportionate number of total population, in Russia on account of the lack of experienced medical attention, and in Egypt because of ophthalmia due to irritation caused by movements of the sand by the wind.

Superintendent Smith of the Menagerie Bureau of the New York Park Department has reported that the twenty-five buffaloes lent to the city by the late Austin Corbin estate have eaten most of the grass in Van Cortlandt Park, tramped up the rest and destroyed the shrubbery. He says the city will have to buy food for them. The city was to have one out of every four of the calves born. Only four have been born, and one of them has died. A pack of lawyers may have to be hired to settle whether it was the city's calf or the estate's calf which died. Another thing which makes the calf end of the city's bargain look bad is that only nine of the herd are cows. Maybe the buffaloes are white elephants.

Remarkable dredging operations are being carried on in Arizona in the process of reclaiming arid lands by irrigation. A regular river dredge started in at Salt river and has dredged its own way across miles of desert. It makes its own channel and floats on the water that follows it from the river, thus making the process rapid and comparatively cheap. Remarkable it also is that the canals now being dug in this way follow the course of the ancient irrigation canals dug there by the highly civilized people that inhabited this region before recorded American history began. Here flourished nations that knew as much about irrigation as we do to-day, and no doubt the desert blossomed under their cultivation, for this land is exceedingly productive as soon as water strikes it. Probably the prehistoric inhabitants of the region migrated southward, thus leaving the country to revert to its desert condition. Ruins of large buildings, in the form of great mounds of rubbish, are seen along the lines of the old canals.

Cats are no longer regarded as despised creatures, to be victimized by small boys and permitted to live only on tolerance by their elders. Like the end of the century woman, they are at last beginning to achieve some of the rights for which they have been clamoring so long, and perhaps when they are accorded equal rights with their natural foe of the canine race they will cease to bemoan their fate about the streets and to hold indignation meetings at the midnight hour and display similar anarchical proclivities. That they have already made rapid strides toward the desired end is proved by the fact that they have recently held their "annual convention"—in other words; cat show—in Manchester, England. Champion Xenophone, sent by S. Woodiwiss, of London, was pronounced the best cat in the show. He received the prize for brown or tabby males, and was valued in the catalogue at £1,000 ($5,000). Champion Perfection, who is said to have taken more prizes than any cat living, was worth even more. He took the first prize for red male tabbies, and Peeping Joe the second. Both belong to Mr. Klumell

Sunday Feeding.

Under the heading of the "Sunday Penalty of Irregular Feeding," the Medical Record points out that in our progress from barbarism we have evolved a people with whom regularity in eating is absolutely necessary to good health. As a result of this artificial existence, the secretions are poured out and ready for action with the monotony of clockwork. If this system is neglected, the violator not only suffers bodily discomfort, but an actual injury is done to the digestive apparatus, which has been so educated that it requires a definite amount of exercise and positive promptness in feeding that requirement. The stomach having poured out its secretions, as customary, waits only a short time before allowing them to be absorbed without the accompanying nutrition which goes to the formation of more secretions. After a few such experiences, the secretions become less in amount and activity, and indigestion ensues. Dyspeptics are ordered to eat at inflexibly regular intervals. Normal stomachs are by no means many, yet this rule, so imperative to sufferers, is regularly disregarded by the well. Once a week, the three regular daily meals are replaced by late rising and abstinence, followed by gluttony. The gastric juices know nothing of a seventh day of "rest," and the result is discomfort, stupidity, and loss of appetite on Monday.

Rivers Outlive Lakes.

Professor W. B. Scott, of Princeton, in a recent lecture, explained why lakes are rare in countries whose surface has undergone no sudden change for an immense period of time. It is because the gradual effects of atmospheric agencies, and the power of water to carry solid matter from elevated places and deposit it in depressed places, tend to reduce the land to a general level, and to fill up the basins of lakes. Thus in the southern United States lakes are rare, while in the Northern States they abound, the reason being that the northern part of our country was covered by a great ice sheet during the glacial period, and the lakes produced by the scooping-out and damming-up effects of the glaciers have not yet disappeared, whereas in the Southern States, which were not reached by the ice, the face of the land has lain washed for ages, except by the slow levelling forces already referred to. Rivers are much longer lived than lakes.—Boston Cultivator.

Ingenious Way to Filter Water.

A supply of spring water at Kiel, Germany, is so strongly charged with iron as to be unsuitable for use. To improve it, the authorities first cause it to traverse a system of metallic channels and cascades, then to pass through a bed of coke ten feet thick, and finally through sand filters, each about sixty-five feet long and forty-nine feet wide. The treatment has proven successful in removing all iron, leaving the water unobjectionable in color, taste and smell. The bed of coke is divided into eight compartments, which are washed free from iron once a week by isolating a compartment at a time, and the sand filters are cleansed by replacing a thin upper layer with clean sand.

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

The School Boards of Fredonia and Preston townships, in Plymouth County, Iowa, have arranged to build storm caves at each of the school houses, and they have already advertised for bids. These storm caves are to be twelve feet long and six feet wide and 6½ feet deep. They will be lined with cement, have brick arches and be proof against rats and snakes, as well as cyclones. It is doubtless wise to provide places of refuge in such localities, but there is something grewsome about the necessity of such annexes to school houses.

Electric railway companies are adopting the wise course of offering prizes as an incentive to their employes to take an interest in the corporation. A San Francisco road gives the motorman with the best record $40 and a silver badge with No. 1 engraved thereon. The motorman with the next best record receives $25 and badge No. 2; the third, $15 and badge No. 3. The conductor with the best record has $25 and a badge; the next, $12.25 and badge, and the next $7.50 and badge, the badges being numbered from 1 to 3 respectively.

Admiral Makarof, of the Russian navy, has invented a species of ice-plow capable of breaking through ice from twelve to even twenty inches thick. The experiments have proved so satisfactory that the Government has given orders for the immediate construction of two vessels, of 10,000 horse-power each, armed with these plows, by means of which it is expected to keep, not only the River Neva, but also the various Muscovite ports, open to navigation throughout the winter. When one remembers that the majority of Russia's ports and naval arsenals are icebound during more than four months of the year, the importance of the admiral's discovery will be appreciated in its true light.

The efforts of the Seaboard Air-Line Railroad for the development of the country in the South along its route by the institution of experimental and model farms, the distribution of seeds of plants found to be congenial to the latitude, and the encouragement of horticulture, and floriculture, are to be supplemented by the establishment of a traveling industrial school for the benefit of the people, the New York Post announces. This school is to be fitted up in a train of cars especially prepared for it, and will hold its sessions at different points along the thousand miles of the Seaboard Line in Virginia, North and South Carolinia, and Georgia. Its special work is to teach the people how best to can, preserve, and pickle fruits and vegetables, how to make "fruit butter," jellies, jams, marmalade, cheese, etc., and to instruct them in manufacturing such things as can be made on the farm without a great deal of expense. A large number of the latest labor-saving farm implements will be exhibited, and also such household implements and conveniences as tend to improve the conditions of the home, make its surroundings pleasant, and lighten and lessen the work of the housewife. Experienced, practical, and skilled persons will be employed to give object lessons in all the work included in the scope of the school. The experiment, if successful, is likely to have many imitators, as it seems to be a practical way for railroads to build up tributary territory, besides establishing pleasant relations between the company and the people upon whose patronage the railroad's revenues depend.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

BRADSTREET'S

Says Increased Confidence Is the Business Feature.

THE MOVEMENT OF GOODS

For Fall Delivery Begun—Orders For Prompt Shipment Fewer—Report of Business Failures For the Last Six Months Show Decrease From Last Year.

Bradstreet's says: Better weather has favorably affected the sale of seasonable goods, particularly clothing, hats and shoes. Orders for prompt shipment are fewer; but the movement of goods for fall delivery has begun. The most encouraging feature is the continued and in some instances increased confidence of merchants and manufacturers that the autumn will bring a larger volume of business at higher prices. General trade is reported quite satisfactory at Kansas City, St. Louis, Omaha, Memphis and New Orleans, fair without special expansion at Milwaukee, Minneapolis, Cleveland, Savannah, Galveston and Chicago, and slow or quiet at Birmingham, Little Rock, Atlanta, Charleston, Cincinnati and Detroit. None of the larger eastern centers records any increase. The least favorable feature of the week is found in the disappointment at lack of demand and reaction in quotations for some varieties of iron and steel. The threatened idleness of 200,000 iron, steel and glass workers and soft coal miners, is, except in the latter instance, due in part to the season of the year.

There are 7,024 business failures reported by Bradstreet's throughout the United States during the past six months, a falling off of 578 from the like total last year, with which exception it is the largest aggregate of failures in a like period.

Total liabilities of individuals, firms and corporations failing amount to $93,656,000, a decrease of $11,879,000 from the corresponding total last year, and of $77,204,000 from the liabilities reported in the first half of the panic year of 1893. This total is also smaller than in the first half of the year 1894, with which exception it is the largest recorded for the six months period in eighteen years. While there has been only a moderate decline in the number of failures since last year, liabilities have been unexpectedly increased by the embarrassment of several large manufacturing and other concerns in New England within the past quarter. It is worthy of note that the New England states and the territories alone among groups of states and territories report increases in number of failures compared with last year.

LARGE DEAL CLOSED.

An English Syndicate Ready to Buy the Coal Lands.

Maj. E. E. McCrosby, the agent for an English syndicate in Knoxville, Tenn., has received a cable dispatch from London, England, worded as follows:

"Deal has been closed all right. Taylor will be with you soon."

The deal referred to is that whereby an English syndicate has secured options on nearly all the coal mines now in operation in the Jellico districts of Tennessee and Kentucky, and of many of the mines along the Cincinnati Southern railroad in Morgan county, Tennessee, and Whitely county, Kentucky.

The "Taylor" referred to is the financial agent of the English syndicate, who has already sailed for this country. The lands involved in the deal comprise 100,000 acres, which include seventy mines now in operation. Maj. Crosby stated that the money for the first payment, $5,000,000, is on deposit in the Bank of England.

This announces officially the acceptance of the options and the consummation of the largest purchase of coal lands in the history of the south.

RUSSIA'S POPULATION.

For the First Time a Census is Being Taken in the Czar's Domains.

For the first time in history a general census has been taken of the population of the Russian empire, which is shown to number, 139,211,118, of which total are 64,616,280 are males and 54,594,866 females. United States Consul General Karel at St. Petersburg, who sent the figures to the state department, says they show that in forty-five years the population of Russia has doubled, and during the last twelve years it has increased 20 per cent. To take this census, the Russian government employed an army of 150,000 persons, and its completion in three months is regarded as a great achievement.

HARVARD AND YALE.

Hundreds of Young Men Receive Diplomas From the Famous Colleges.

The commencement exercises at Harvard were held last Wednesday. In the presentation of degrees there were 383 bachelors of art, 26 bachelors of science, 111 masters of art, 25 doctors of philosophy, 1 doctor of science, 2 bachelors of agricultural science, 20 doctors of veterinary medicine, 32 doctors of dentistry, 72 doctors of medicine, 108 bachelors of law and four bachelors of divinity.

YALE'S COMMENCEMENT.

Nearly 700 young men received diplomas from Yale last week. The approximate number of the various departments follow: Academic, 200; scientific, 240; law, 80; divinity, 30; medicine, 80. Besides these, there were many special degrees given for work in music, art, graduate and other departments. This is the largest class that ever graduated from the university.

COULD NOT AGREE.

Twenty-five Thousand Iron, Steel and Tinworkers Out.

Every mill in the United States whose wage scales are under the jurisdiction of the Amalgamated Association of Iron, Steel and Tinworkers closed down last Wednesday. These mills altogether employ 25,000 members of the Amalgamated association, besides those who are not members. The general shut-down takes place on account of the failure of the Amalgamated association scale committee and the manufacturers to agree on a puddling rate at the conference held at Youngstown. The committee held out for $4.50 a ton for puddling and the manufacturers refused to budge from $4.

An adjournment sine die was finally taken, each side to let the other know when it had experienced a change of heart.

Indians Drink Hair Oil.

Five Indians, including Chief Wee Sug, are dead at Malone's Point on Mille Lacs Lake, Minn., and several others are expected to die, as the result of drinking pain killer, hair oil and other preparations containing alcohol.

The State of Alabama, Chilton County.—In Chancery at Clanton, Alabama, Seventh District Northeast Chancery Division—June 21, 1897.

Amanda Martin, pro ami, Complainant, vs. Jack Martin, Defendant.

In this cause it is made to appear to the Register by the affidavit of A. C. Smith, solicitor for complainant, that the Defendant, Jack Martin is a non-resident of the State of Alabama, and that his postoffice and residence are unknown to affiant, and further, that, in the belief of said affiant, the defendant is over the age of twenty-one years.

It is therefore ordered by the Register, that publication be made in the Chilton County Call, a newspaper published in Chilton county, once a week for four consecutive weeks, requiring him, the said Jack Martin, to answer or demur to the same within thirty days after the 26th day of July, 1897, and failing so to do a decree pro confesso will be taken against him in said cause.

Done at office in Clanton, Alabama, this, 21st day of June, 1897.

W. E. STEWART

HOUSE BUILDING

Is the order of the day in Thorsby. We are now prepared to keep up with the procession. Our new planing mill, which has recently been put in, and is now run in connection with our saw mill, enables us to furnish all kinds of lumber for building purposes. Our prices are more reasonable than those of others, and, being prepared to turn out an order on short notice, we can save the builder a large amount of inconvenience and expenses. By buying at home you have no freight to pay and you are helping along home industries. We also are prepared to ship lumber by the car load or in small quantities.

THORSBY LUMBER CO.

THORSBY, ALA.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

SACRIFICE.

He who for an immortal life adopts a mortal creed
Proclaims alone the littleness of egotistic greed.

Enough it is, as sure it is, that ere I reach my goal,
Some deed of mine shall glorify the universal soul.

Light! give us light that we may know the grandeur of the plan
Wherein all seen and unseen growths are common heir with man.

This blade of grass whereon of late some careless pass'r trod,
Is flesh of mine and soul of mine and part with me of God.

The witless scoff, the willful fling maledictions wide,
But Truth triumphant keeps the way with unimpeded stride.

Time proves all things, defines all things, assorts, accepts, rejects;
The years a single sermon preach, with sacrifice the text.

O man, O woman, heed ye not the anguish of the rod,
But learn the bliss of sacrifice, that proves the man a god.

—Frank Putnam, in Chicago Times-Herald.

HIS MOTHER'S MAID.

BY JENNY WREN.

"No, I shall never marry. And don't laugh so incredulously, Lottie, dear. One needn't be a confirmed old maid in years, nor ugly, nor decrepit, to have a buried romance whose ghost would rise to forbid vows of loyalty at any other shrine."

And, heaving a deep sigh, Nettie Clare sadly shook her pretty head, while the dark blue eyes grew darker with the intensity of the feeling which had prompted her words.

It was small wonder that her friend should have greeted them with a merry laugh of incredulity, for Nettie was passing fair to look upon, with a complexion pure and colorless as marble, eyes of Irish blue and hair black as the raven's wing.

No wrinkles marred the low brow to mark the 20 short years which had passed over her young head. No lines had impressed themselves about the sweet, sympathetic mouth to betray this secret sorrow.

As yet the ghastly skeleton had left no outward trace upon either face or form. Nevertheless, Lottie Armstrong knew and loved her too well not to know these words just uttered were no jest, but very sorry earnest.

"What are you talking about, Nettie?" she exclaimed. "Do you mean to tell me that you are a victim to unrequited love—you, whose life has been one long exponent of Cæsar's motto? Nonsense! If, through those mischief-making eyes of yours, you can by a glance of indifference work such havoc, what would it be if they softened with real feeling? Unless, perchance, the man is blind, and compassion for his infirmity has won your heart, but how, then, about the low, musical voice whose praises I have heard sung by a dozen impassioned swains?"

"Don't jest, Lottie. The man is neither blind nor deaf to others; both to me, for he has never seen nor spoken to me since I was five years old!"

"Never seen nor spoken to you!" echoed her friend, in incredulous amazement. "And you have loved him since your babyhood! Nettie, have you gone mad?"

"No, dear, I am very sane. Listen and I will tell you all about it. Our friendship is too close and warm to withhold from it my confidence, and inasmuch as it is all I shall have through the long, empty years of the future, it is due us both that you should understand all this secret romance of my life.

"For it is a romance, Lottie, although very sad and very real to me. You have heard me speak of my Aunt Margaret, who married my mother's brother. When she married him she was a widow, with one son. 'Cousin Harry' I was taught to call him, though, as you see, he was in reality no relation.

"The summer that I was five years old I was spending a month with my aunt, and Cousin Harry was home on his vacation from college. He was then 18 and made of me at once a pet and a plaything.

"Soon after that it seems some slight family difficulty arose, and I never went there again. But always Cousin Harry wrote to me. When he left college he joined the army and went out to India. There he distinguished himself and was promoted. Two or three times he has sent me photographs, taken at different places.

"Well, in one letter he discussed this nonsensical quarrel and determined he at least would not be a party to it. But, two years ago, my Uncle Reginald died. Uncle had always led Harry to suppose that he was to be heir. Instead all the wretched money was left to me.

"This was bad, but uncle made it worse by insinuating that the money might yet be Harry's if he could only win me for his wife. All was arranged just then that I was to pay his mother a visit, and he was coming home from India on leave to see the little cousin who had been his boyhood's pet.

"Instead, he wrote his mother a letter she sent to me, without one self-

HIS MOTHER'S MAID.

BY JENNY WREN.

"No, I shall never marry. And don't laugh so incredulously, Lottie, dear. One needn't be a confirmed old maid in years, nor ugly, nor decrepit, to have a buried romance whose ghost would rise to forbid vows of loyalty at any other shrine."

And, heaving a deep sigh, Nettie Clare sadly shook her pretty head, while the dark blue eyes grew darker with the intensity of the feeling which had prompted her words.

It was small wonder that her friend should have greeted them with a merry laugh of incredulity, for Nettie was passing fair to look upon, with a complexion pure and colorless as marble, eyes of Irish blue and hair black as the raven's wing.

No wrinkles marred the low brow to mark the 20 short years which had passed over her young head. No lines had impressed themselves about the sweet, sympathetic mouth to betray this secret sorrow.

As yet the ghastly skeleton had left no outward trace upon either face or form. Nevertheless, Lottie Armstrong knew and loved her too well not to know these words just uttered were no jest, but very sorry earnest.

"What are you talking about, Nettie?" she exclaimed. "Do you mean to tell me that you are a victim to unrequited love—you, whose life has been one long exponent of Cæsar's motto? Nonsense! If, through those mischief-making eyes of yours, you can by a glance of indifference work such havoc, what would it be if they softened with real feeling? Unless, perchance, the man is blind, and compassion for his infirmity has won your heart, but how, then, about the low, musical voice whose praises I have heard sung by a dozen impassioned swains?"

"Don't jest, Lottie. The man is neither blind nor deaf to others; both to me, for he has never seen nor spoken to me since I was five years old!"

"Never seen nor spoken to you!" echoed her friend, in incredulous amazement. "And you have loved him since your babyhood! Nettie, have you gone mad?"

"No, dear, I am very sane. Listen and I will tell you all about it. Our friendship is too close and warm to withhold from it my confidence, and inasmuch as it is all I shall have through the long, empty years of the future, it is due us both that you should understand all this secret romance of my life.

"For it is a romance, Lottie, although very sad and very real to me. You have heard me speak of my Aunt Margaret, who married my mother's brother. When she married him she was a widow, with one son. 'Cousin Harry' I was taught to call him, though, as you see, he was in reality no relation.

"The summer that I was five years old I was spending a month with my aunt, and Cousin Harry was home on his vacation from college. He was then 18 and made of me at once a pet and a plaything.

"Soon after that it seems some slight family difficulty arose, and I never went there again. But always Cousin Harry wrote to me. When he left college he joined the army and went out to India. There he distinguished himself and was promoted. Two or three times he has sent me photographs, taken at different places.

"Well, in one letter he discussed this nonsensical quarrel and determined he at least would not be a party to it. But, two years ago, my Uncle Reginald died. Uncle had always led Harry to suppose that he was to be heir. Instead all the wretched money was left to me.

"This was bad, but uncle made it worse by insinuating that the money might yet be Harry's if he could only win me for his wife. All was arranged just then that I was to pay his mother a visit, and he was coming home from India on leave to see the little cousin who had been his boyhood's pet.

"Instead, he wrote his mother a letter she sent to me, without one softening word, but with the bitter reproach that I had schemed to gain my uncle's wealth and rob her boy of his own; but Harry's letter was no less bitter, though more just.

"'I am glad Nettie has the money,' he said, 'for I am a man and can make my own way in the world; but certainly I will build it upon no woman's wealth. My little cousin was very dear to me as a sister, not as a wife; but I swear that I will never see or speak to her again until she or I are married. I never will put myself in the position of even the possibility of seeking a woman's love for the sake of her money. It would have been better if my uncle had never led me to believe myself his heir; but except for this, and the almost insulting alternative he leaves open for me, I do not blame him.'

"This was all, Lottie—this and his mother's reproaches, but I was a child no longer. I was a woman, and I knew that always in my childish and my woman's heart there had been one shrine, one hero. He loved me, he said, as a little sister. I—God help me!—loved him with the one passion of my life. This was two years ago. I knew him too well to try to change his purpose; but I have sometimes thought that, perhaps—perhaps, if he had seen me, if we had been thrown together, all might have been different. But you know now, Lottie, why I shall never marry."

"A chance for you, Nettie!" cried Miss Armstrong a week after the conversation just recorded had taken place.

And as she spoke she waived a London paper over her head.

"What do you mean?" said Nettie.

"A chance for you to meet this invincible cousin and he be none the wiser," explained her friend. "Listen to this:"

"'WANTED—A companion and maid to an invalid lady in Kent. Some one willing and refined. Address M. E., Thorburn House, Kent,'

"'M. E.!' Those are your aunt's initials, and surely I have heard you mention Thorburn House! Now, I think you will fill all these qualifications, and really, my dear, to a young lady of your income the salary would be a decided object."

But Nettie did not echo the laugh which finished this speech.

"It is Aunt Margaret!" she said, slowly, "and, though you are jesting, Lottie, I think I will make the jest very earnest. Cousin Harry is in India still; but I should like to go again to the dear old place, even in the position of a menial. Aunt Margaret would never recognize me; but I would try so hard to make her love me, and, if I succeeded, I might one day confess to her how I became her maid."

"But ladies do not love their paid dependents, dear."

"Ah, blood will tell, and Aunt Margaret shall love me."

And so it happened that a fortnight later, in pursuance of this resolve, Nettie Clare's eyes were once more gladdened by sight of the dear old place she had never expected to see again.

The welcome she received was kind, but it was the welcome of the grand lady to the young woman paid to do service, though Nettie saw the almost imperceptible start given by the mistress of the house, when looking on the slight, graceful figure, whose air of elegance and breeding could not be disguised by the simple black dress assumed to masquerade the role.

"How came you to take such a position, child?" asked Mrs. Ellison, one morning, when Nettie had fulfilled her duties for more than a month.

The lady had asked Nettie that day to read to her; but, as she listened to the sweet voice, she had heard none of the meaning of the words, but had been instead intently studying the exquisite face which bent over the book.

"How little I thought, when I inserted my advertisement, I should be so favored!" continued Mrs. Ellison.

"You are very kind, madam, to be pleased with me," Nettie answered; "but you must not ask me of my past life. I shall be glad if by faithful duty I can brighten yours ever so little."

There was real feeling in the voice, which touched the listener's heart. Proud lady as Mrs. Ellison was, in presence of this girl she almost forgot the social gulf between them. She was ill and suffering, too, and she learned to long for the cool, white hand which bathed her brow so untiringly and for the sound of the quiet step which told her her maid was near her.

One morning a letter was handed her, and Nettie saw her eyes glisten and tears of joy drop on the page.

"My boy is coming home," she murmured. "He was to follow his letter almost immediately, he writes. Next week he will be here. Why, child, what is the matter?" for her maid staggered and grew very pale.

"Nothing, madam. I will go to my own room. I shall be better soon," Nettie replied.

But when she returned, though calm, she still was white and grave.

"I must leave you, Mrs. Ellison," she said, sadly. "I am not well, I find, and must send some one to you to fill my place."

"Leave me!" cried the invalid. "Nettie, you must not think of such a thing. If you are ill you shall be nursed as though you were my own daughter, but I must know you are near me. Child, what makes you so near and dear to me?"

But Nettie's only answer was a burst of tears. And so when the young master came to his home she still held there the position of his mother's maid.

"She is a lady, Harry," said his mother. "I am sure of her birth and breeding as of my own, but I can get her to disclose nothing."

To all of which the young man listened indifferently, though he, too, had started at sight of the girl's rare beauty and found himself listening delightedly to the tones of the low, sweet voice.

"I must go," Nettie said to herself, when this had gone on for several days. "I am only making my own misery the greater and signing the death-warrant to my own happiness."

But resolutions are not always made to be kept, and the next morning all else was forgotten at Thorburn House but the sudden illness of the young master.

Captain Harry had been stricken down with a low fever, and who could nurse him, thought his mother, but her faithful maid?

His life was spared. The fight was fierce but short; and then followed the long, tedious days of convalescence, or days which began as long and tedious, but soon grew all too short.

Captain Harry was a proud man, and it was long ere he would acknowledge to himself that to this poor girl, his mother's paid dependent, he had given his heart; but once acknowledging it, he was too honest and too manly to take refuge in any but an open and an honorable course.

"As my mother said," he told himself, "she is a lady. Every act, every gesture, betrays it; and better far that I should marry where my heart has led than stoop to win a woman for her gold. When Nettie is mine we will invite the other Nettie to Thorburn again. Will she come, I wonder? and has she, too, had love's young dreams ere this?"

That very evening Nettie listened to the few, frank words in which Captain Harry told his love—listened with flushed cheek and down-bent head.

But when he would have drawn her to his heart, she resisted the loving effort and held herself erect.

"What is the love you would offer your mother's maid?" she said.

"The same that I hope to offer my mother's daughter," he replied, "if, my darling, you will be that daughter and my wife."

"And what does your mother say? Ask her!" she persisted.

"She echoes her son's prayer," said a voice from the open doorway.

One swift glance Nettie gave toward Mrs. Ellison; then, going to meet her, drew her into an easy-chair and fell at her feet.

"Listen first to my confession," said Nettie, brokenly, "and then tell me whether I must go or stay."

And then, in a quick, low voice, she told the story through.

"Now," she said, when she had finished, "you know all. Must I go, or may I stay?"

Low and sweet as an angel's whisper fell the answer from her aunt's lips:

"Stay, my darling, as my daughter!"

And then it merged in words lower and sweeter still, as her lover lifted her to the shelter of his heart and murmured:

"Stay, my darling, as my wife!"—Saturday Night.

How He Spends $250,000 a Year.

A leading English millionaire, who has his money so invested as to bring him $250,000 a year, spends his income in the following proportions: To poor relations he gives $2500; the allowance to his sons and daughters amounts to $26,000; the rent of his town house, which he uses for four months in the year, is $16,000; and his country house, where he spends five months, employing thirty gardeners and thirty indoor servants, will foot up to about $70,000. The keeping of the town house will cost $17,500, to which may be added $15,000 for his stable and $7000 for his wine cellar. Travel and amusement will take $15,000, and his steam yacht nearly $30,000. While he spends only $500 for clothes, his tobacco costs him $3000. Under the head of philanthropy $10,000 is expended, and the balance, including politics, religion, insurance, art, literature, racing, betting and wedding presents, is set down at $40,000.—Atlanta Constitution.

Oriental Pile Driving.

In Japan and China women drive piles for houses and bridges. Their method is interesting. Attached to the hammer block are twenty-seven ropes, carried up to the top of the frame and on the outside looking very much like the old-fashioned May-pole. Twenty-seven women hold the ends of the ropes, and with a singsong all together pull down; up travels the hammer until at a scream, all let go, and down it comes on top of the pile, which is unprotected by a band or ring. This May-pole driver is in general use throughout Japan and China.

BURIED AT SEA.

Panic Stricken Passengers Found a Watery Grave

YELLOW FEVER ON BOARD

A Pacific Mail Steamer—"Tropical Dysentery" Palmed Off at San Francisco—At Least a Dozen, Including the Captain Died of the Terrible Disease.

New York passengers who arrived here Friday night on the Alliance tell a harrowing story of their experience aboard the Pacific Mail steamer City of Para, which left Panama for San Francisco on May 22 last.

It seems that two days after clearing the isthmus, yellow fever broke out among the crew and passengers of the Pacific liner, which caused a panic on board, which resulted in the death of the commander of the vessel, Captain Martensen.

Three-fourths of the passengers, it is said, were attacked by the disease, and at least a dozen of them found watery graves. When the vessel finally reached San Francisco the facts of the terrible voyage were suppressed, and the sickness and deaths were attributed to tropical dysentery. But the passengers who came here Friday night say that the symptoms were plainly those of yellow fever.

There was no effort at fumigation, and when Mrs. Captain Mitchell, the wife of an Englishman commanding one of the vessels of the Chilian line appeared on the City of Para heavily veiled there was no uneasiness. Three days out she died from the so-called "tropical dysentery." She was buried at sea, and the next to be taken down was Captain Martensen.

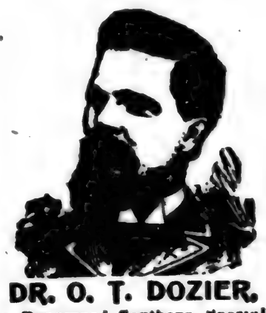
Before he died the fever had spread all over the ship. In first-class cabin and steerage alike the yellow death dealer went, and how many were prostrated will probably never be known. The officers suppressed every scrap of news they could and Dr. Renz insisted on his original diagnosis.

At Punta Arenas the Echveria family, one of the richest in Costa Rica, took passage on the City of Para, not knowing that yellow jack was raging on board. The vessel proceeded on its voyage. Up the coast there were two or three funerals a day and those who were not affected were panic stricken.

After much pleading a number of passengers were put ashore at Corinto and San Jose de Guatemala. It is alleged that the officers of the vessel supplied the passengers with spoiled meat and this is believed to have added to the yellow fever's spread.

At San Salvador a band came aboard and while the passengers were sick and dying the musicians gave five hour concerts daily.

WANTED.—Persons to accept, gratis, in view of future orders; rubber stamp of their own name for making clothing, books, etc. Write plainly and enclose four postage stamps to defray mailing, packing, etc. H. P. MAYNARD, 16 Arcade, Cincinnati, O. Agents wanted for rubber stamps, rubber type, pads, daters, white letter signs, "Bottled Electricity," for catarrh and pain, electric belts, etc. Write for agents' terms.



DR. O. T. DOZIER.
(The Renowned Southern Specialist)
Birmingham, Ala.

Successfuly treats, at office or BY MAIL AT YOUR OWN HOME, all forms of Chronic, Nervous, Blood, Skin and Private Diseases of Men and Women.

CURES GUARANTEED.

All Chronic Diseases of Lungs, Liver, Heart, Kidneys, Bladder, and all diseases of the Genito-Urinary organs are in my line of practice. Diseases peculiar to women, and all venereal diseases of either sex positively cured by mild and safe remedies. Impediments to marriage, as Stricture, Varicocele, Impotency, Emissions and all evil results of self-abuse or excessive indulgence quickly and permanently cured. I guarantee satisfaction in every case I treat. My valuable "Book for Men Only," and Symptom Blanks for men or women will be sent free in plain, sealed envelope to all who apply. Consultation free, whether in person or by letter.

A FEW EXTRACTS FROM PRESS ENDORSEMENTS

Hundreds more of like character, and thousands of high testimonials from patients can be furnished if necessary.

(Atlanta Constitution.)

Dr. O. T. Dozier, the head of the Southern Medical Dispensary of Birmingham, Ala., is a specialist of nearly twenty years' experience in the treatment of chronic, nervous and private diseases and his uniform success has given him a leading position in the medical profession.

(Masonic Guide.)

Dr. Dozier can be relied upon to treat diseases in the most successful manner, and he is known all over the south.

(The Southern Odd Fellow.)

We cannot add anything to the reputation Dr. O. T. Dozier has already acquired in the line of his profession, but we know him to be a brother Odd Fellow that can be relied on to carry out every promise he makes to those needing his services.

(Age Herald.)

Dr. Dozier has resided for many years in Birmingham, and each successive year has added to his reputation, to his usefulness and to the esteem in which he is held by our best citizens. His long record and approved abilities entitle him to the proud distinction of standing at "the head of his profession."

(People's Weekly Tribune.)

As a specialist Dr. Dozier is unexcelled by any living physician. . . . He is a Georgian by birth, a high-toned, cultured, Christian gentleman, strictly honest in all his dealings and financially responsible for all his contracts.

(Daily News, Birmingham.)

Dr. Dozier is a physician and surgeon of education, skill and experience, a man of culture and high literary attainments and a gentleman respected by all who know him. He can be relied on in all matters pertaining to his profession.

(Alabama Christian Advocate.)

His (Dr. Dozier's) professional standing is unimpeachable and his character as a gentleman and citizen is above reproach.

GOSSIP FOR THE FAIR SEX.

Some Items of Interest on Feminine Topics.

Wants to be a Horse Doctor White Cotton Gloves for Bicycling, Etc., Etc.

WANTS TO BE A HORSE DOCTOR.

A woman having passed an examination in veterinary surgery in England, the Royal College of Veterinary Surgeons refuses to grant her a certificate until the courts have decided it is legal for women to be horse doctors. She is a Scotch woman and a graduate of a Scotch college.

WHITE COTTON GLOVES FOR BICYCLING.

White cotton gloves, so 'tis said, are to be fashionable with bicycle gowns this season. This is also a Parisian fancy, and has its good points, for the gloves can be washed many times, but it is doubtful if the women on this side of the water will prefer them to the suede and chamois. Many good riders prefer even in the hottest days to wear a heavy riding glove of kid, contending that it is better for the hands.

EMPRESS, WIFE AND MOTHER.

The Empress Augusta is an ideal wife and mother. In whatever palace she may be stopping her days are as carefully laid out as those of her husband, and, from her own waiting-maids to the scullions, she keeps an eye on every servant. Unless confined to her bed by illness, the Empress is invariably up by 6 o'clock every morning, and 8 o'clock finds her pouring out the Emperor's coffee. This meal their majesties always take entirely alone, serving each other, and gossiping together like any middle-class couple.

A PATRIOTIC MOVEMENT.

The Association of American Women for the Presentation of a Statue of Washington to France, which has been in existence for nine years, was incorporated and organized last week at the home of Mrs. George Hearst, in Washington. "It is the purpose of the ladies," says the Baltimore Sun, "to give an order to Daniel French, the well-known American sculptor, for an equestrian statue of Washington in bronze, to be completed in time for erection in Paris in 1900, the year of the French exposition. The cost is estimated at $35,000, of which $22,000 has already been raised."

THE BRACELET BACK AGAIN.

The bracelet is back again in fashionable favor, but it is entirely unlike the bracelet of twenty years ago. Many beautiful designs are shown. The latest is a very narrow, flexible gold band, which represents either a fine cord or a loosely braided strand. From this a jewel is suspended. Sometimes it is a pendant of gems or a jewel-studded heart, and then again each end of the bracelet is finished with a gem, and is held to the arm by a ring clasp. No stiff bracelets of heavy gold are worn. A bracelet much in vogue is a flexible affair made of square-shaped diamonds connected by any bright-colored small jewels. Diamonds and sapphires are most effective arranged in this fashion. One of the most beautiful of these bracelets is made of rose diamonds set in platinum, with two stones in each setting, so that whether worn inside or out, the bracelet looks just the same.

GIVING AWAY BRIDES.

"In addition to our business of letting our wedding dresses on hire," said a member of a well-known firm of costumers in the west central district of London, "we often perform our little services for the bride.

"You, of course, recognize the fact that in this great city there are scores of hard-working girls who are miles away from their relations, and who have always been too busy to cultivate many friends. Well, when these girls are about to marry young fellows who are similarly circumstanced, the question arises as to who shall give away the bride.

"I can answer that question for them at once, for I have connected with my business an ex-major in the army, a member of an ancient family, and a man, too, of unimpeachable character. He is poor, but he dresses well, has beautiful white hair and looks the kindly father to perfection. I introduce him to the bride and bridegroom and he, for a moderate fee, gives the former away.

"Sometimes he takes the whole arrangement of a breakfast and so on upon himself, and he is a fine speaker on occasion. He is always a welcome guest with these people afterward."

THE BICYCLE TEA.

Extremely informal is the bicycle tea. The families who live in the suburbs who have been coming in town all winter to entertainments now have their own innings.

They were too wise to offer to return the invitations during winter, because people grumble at being asked to go out of town at that season. But now is the time to return such hospitalities. The hostess decides upon a day and dispatches her visiting cards with "Bicycle Tea" written or printed upon them in one corner, together with the date and hour decided upon.

Five o'clock is a good time; an earlier hour would be too soon for the comfort of the guests.

If the day is fine try and have the tables for refreshments set out of doors, if possible under shady trees; but if this is not feasible, upon the piazza. The guests go indoors to refresh their toilets, remove a veil or don fresh gloves, but they do not expect to be entertained there.

The upstairs dressing room is all that is necessary. If the weather is fine the guests will not enter the parlor, but come straight downstairs out of doors. You can safely rob the parlor of its rugs, easy chairs and potted plants, if you have not enough otherwise to dress your porch.

Have small tables conveniently placed. Your easy chairs will be appreciated now, and your hardseated splint or porch rockers will be more comfortable if you set soft cushions on the seats.

Have plenty of ice; it is the chief necessity, for if it is at all warm your guests will be thirsty. Lemonade, iced tea, apollinaris are delicious to thirsty throats.

Lettuce sandwiches, "cocked hats" of brown bread (without crust), spread with pate-de-foie-gras of chicken livers with truffles will do for substantials. Ice cream, crackers and dainty cakes ("sand tarts" are favorites) complete the bill of fare for the "Bicycle Tea" with the exception of the two hot fluids—tea and chocolate.—Orleans Picayune.

SMART OUTING COSTUMES.

Some of the smartest outing costumes shown are of linen duck and pique. A stylish and novel combination to prove that red will be worn the summer through is exhibited by a leading importer. The plain gored skirt of white pique is worn with a well-fitted Eton jacket of the same material in red and a blue waist, combining red and white, in striped wash silk. The whole effect is at once daring and eminently smart.

All the crash, heavy linen and pique suits are made in tailor style and severely finished. Even the braid seen on cloth costumes has so far been omitted. Frills and furbelows are here in abundance upon thin materials and upon silk, but these outing costumes are simply stitched, and are as elegant as they are delightfully comfortable.

Blouses for wear with the Eton jackets and blazers are of wash silk, of lawn and of organdy. For the most part they are simply tucked or gathered. Few frills are seen, and the linen stock collar is the almost universal rule.

For cycling and golf, many lightweight tweeds are worn, and the material is preferred by many riders as being less susceptible to soil, but the luxury of a linen or duck skirt on a July day is not to be gainsaid. The crash has the added merit of being extremely inexpensive and of enduring all sorts of usage exceedingly well. A newer material, known as "crispine," is stylish and cool Its price is only 15 cents a yard, and it has a certain quality of crispiness that is much liked by some; but no cotton stuff can be trusted to wear as will that made in flax.—Chicago Record.

MME. HENRIETTA RONNER.

In a beautiful house in Brussels there lives an old lady, Mme. Henrietta Ronner, whose work has won her fame and money. Like Rosa Bonheur, she is an animal painter, but, instead of horses and cows her specialty is cats. In the early part of the century her father, Joseph Augustus Knip, was well known in Amsterdam as a flower and landscape painter, and educated his daughter in art. Even when his eyesight failed in 1832 he continued to give her instruction by listening to her descriptions of her work. Her destiny was to be that of a portrait painter, but she never liked it, and determined to study animals. At the age of 16 she exhibited at Dusseldorf the picture of "A Cat in the Window," which attracted much attention, but the picture which made her reputation was "The Friend of Man," a canvas 6 feet by 8, representing an old man weeping over the death of one of his dogs which had been used for drawing a cart. The technical skill and the wealth of emotion put into this work was highly praised. Very soon afterward she turned her attention to cats, and she has painted every form and attitude and character and kind of cat and kitten. The usual way that she works is by placing a cat in a glass case made for the purpose, with cushions which invite the animal to a natural position. When puss changes her pose Mme. Ronner puts aside that work and begins another study. Although 75 years of age, Mme. Ronner looks twenty years younger, save for her snowy-white hair. She is upright, and her complexion is remarkably fresh. What is most strange is the fact that one never sees a cat of Mme. Ronner's. Whenever she wants to paint one she has a model brought to her.

THE PHOTOGRAPH GETTER.

The craze for illustration in the weeklies and monthlies and recreation and fashion journals of the day has created a new occupation, that of the photograph-getter. The photograph-getter accumulates a collection of rare likenesses and rents them out at so much a head, to be used for illustrating articles. People who are known to be approachable are not worth so much in the field as those who are suspected of objecting to notoriety. The pictures of conspicuous society women who are frequently heard to declare that they would not give their photographs to anybody for publication, are rated in New York at five dollars, or, perhaps, as high as seven dollars. Those of women whose features have appeared once or twice in proximity to type bring only two dollars and fifty cents, but all have a value. Only pictures of professionals are vals uneless to the photograph-getter. They are a drug in the market, no matter how fair of form and feature or how unique or artistic. The photograph-getter should be, if not actually in the swim, at least close on the verge thereof. Her five-dollar and seven-dollar photographs can be secured only by consummate diplomacy, in regular and not irregular fashion. There must be a personal introduction, with no suspicion of the ulterior motive behind it. "I've turned in six photographs this week," said a veteran of the craft to a Sun reporter the other day; "all never published before. How do I get them? By simply going on my knees to the people and eating whole slices of humble pie. Do I write much? Oh, I don't write at all. I couldn't, with all that is on my mind. After all, the writing does not signify; it is the illustration that is the main point."—Argonaut.

FASHION NOTES.

All silver belts are much in vogue with the summer girl.

Never were there such decided colors in parasols. Vivid greens and pugilistic magentas are very much in vogue.

An Eton jacket with points and a single button over the bust is one of the popular styles.

The woman who ties ribbon into the handlebars of of her bicycle is of the same type of feminine who puts a gay little bow on her whip.

Small boys wear blouse suits of serge with very wide turned-over collars. The collars and cuffs are trimmed with braiding.

A boy's knickerbocker suit has a long sailor blouse, with a very wide, square collar. This collar is trimmed with braid; a leather belt is worn over the blouse.

A basque waist has collar, very wide pointed revers shoulder caps, wide belt and cuffs of the most elaborate embroidery. The waist is of black velvet.

Small boys wear blouse suits o serge with very wide turned-over collar of duck. The kilted skirt is attached to a waist of duck, which makes the front that shows inside of the turned-over collar.

Chestnut brown is reckoned among the stylish colors, with sapphire or turquoise-blue trimmings or scrolls of beige-colored cloth, edged with gold braid.

Purplish blue and lavender are favorable shades. Red costumes are not a few, even in a crowd of stylish women; they are chiefly of cashmere, satin cloth or canvas.

After all the talk concerning green it is more used in silks or as a trimming than alone. Lavender, blue and gray kilted skirts are seen in veiling, cashmere and canvas to wear with odd waists.

A reefer for a little girl is made with square fronts, slightly curved back, full-topped sleeves, and a sailor collar. Above this is a small turned-over collar. The collars and cuffs are trimmed with braiding.

The demand for printed silk muslin of a filmy texture is hardly equal to the supply. It makes the most stylish bodices and sleeves, falls into the softest folds, and seems capable of taking a lovely range of colors.

It is remarkable how much vivid red is worn both in the day and evening; even young girls have poppy red straw hats, surrounded by a ruche of the same shade, with an aigrette at the back, sometimes black, mostly red.

Tucks, ruffles and insertions are used on skirts of various materials. A new model is covered from hem to waist line with bias folds set on around the skirt. These folds are about two inches wide and are beaded with a piping of contrasting material.

Expensive parasol handles are gems of good taste, usually in gold and silver heads, rings, rock crystal heads, enameled heads, oxydized steel, gilded porcelain, Mexican onyx, imitating jade wonderfully, malachite, turquoise, and all the jewels with which some of them are set, though the jewel craze is no longer the smart touch for fastidious taste.

The State University.

If the tone of the State press is any criterion, the selection of Dr. J. K. as President of the University seems to meet the approbation of the whole people of Alabama.

As President of the State Normal School at Florence, Dr. Powers displayed an energy and administrative ability that have no parallel in the educational annals of the State, and the result of his well-directed efforts has placed the State Normal in the very fore-front of schools of its kind in the South.

The friends of Dr. Powers, and the News feels honored in having been one from boyhood, believe that he will achieve a similar triumph in the management of the affairs of the State University.—Oakman News.

It is doubtful if a choice to any public position in Alabama ever commanded such universal commendation. So far as we are able to judge there has not been a discordant note from any quarter. Such confidence must be highly gratifying to President Powers. It certainly argues well for the University.

THE JOKERS' BUDGET.

Jests and Yarns Made and Told by Funny Men of the Press

PROBABLY.

She—Do you love me?
He—I reckon!
She—What on—my money?

EASILY REMEDIED.

She—The tone of our organ is becoming very dull.

He—Well, why don't you get an organ grinder to sharpen it?

IN ABUNDANCE.

Hunter (in Deadgulch)—Is there much game around here?

Resident—I should say so. Faro, red and black, roulette, fan-tan and poker every night at "One-Eyed Pete's."

A SORT OF RELIEF.

Mr. Frothingham—How did you feel when the proprietor discharged you?

Mr. Gildersleeve—I felt relieved of that hired feeling.

VERY TEMPORARY ABERRATION.

Conductor—Did you see the man with the child?

Driver—No.

Conductor—He's the proudest father I ever met. Insisted on paying full fare for the six-months-old boy.

THE CAUSE OF HER MERRIMENT.

Mrs. Benham—Henry, I dreamed last night that you were dead.

Benham—I remember that you laughed in your sleep.

PROVOKING.

The husband, starting for the country—Have you forgotten your new bonnet?

The wife—No; I've sent it on ahead. On whose head?

WILL CONVINCE HIM.

"He said she was cruel to refuse him."

"Yes."

"And now she's going to marry him to show him his mistake."

DISQUALIFIED.

"Madam, is your son expecting to carry off any honors at college this year?"

"No, poor fellow, he injured his knee cap in the first game of the season."

EXTREME DEVICES.

"Gracious, Jack, what immense shirt studs you wear!"

"Well, you know how buttonholes act. I'm going to keep up with them if it takes a dinner plate."

EVERYBODY'S FIXED DELUSION.

"What do you consider the greatest mistake of a man's life?"

"His persistence in the delusion that he never makes mistakes."

UNCOMMON EXPERIENCE.

A—I had a great surprise last evening.

B—How was that?

A—My wife introduced me to a man who never was one of her old admirers.

A FISH STORY.

First Bass—What's got over your brother that he feels so big now?

Second Bass—He dropped off a hook the other day, and overheard the fisherman telling a companion about it.

THE LESSER OF TWO EVILS.

Wife—You snored awfully last night, my dear.

Husband—Humph! Why didn't you wake me up?

Wife—Because I prefer snoring to profanity, darling.

HIS AUTHORITY.

Teacher—What are the earth's movements?

Tommy Julep—In the daytime it turns on its axis and at night pa says it revolves around him.

HOW HE WAS UNDONE.

"Well, how do you like your new wheel?"

"Oh, pretty well, but it's responsible for the fact that I haven't a lady friend in town any more."

"What could the wheel have had to do with the loss of your lady friends?"

"Why, of course, I met them all when I was just learning to ride and couldn't tip my hat."

IN THE GLOAMING.

An English squire discovered a man with a lantern under his kitchen window, who stated that he had only come a-courting.

"Come a what?" cried the irate gentleman.

"A-courting, sir. I'se courting Mary."

"It's a lie!" exclaimed the old gentleman. "What do you want a lantern for? I never used one when I was a young man."

"No, sir," said the man. "Who'd think you did, judging by the missus."

Teacher—Johnny, what is wind? Johnny—Wind, sir, is air put in motion. Teacher—Right. Next boy: What is the cause of wind? Next boy—Rivalry for the prize-ring championship.—Boston Courier.

Three Good Things.

Three good things about Tetterine, besides the one great, good fact that it cures, are that it is painless, harmless and has no bad odor. It is the only sure cure for Tetter, Ringworm, Eczema. Cures them so they stay cured. No matter how long you have had them, 50 cents gets a box at druggists, or by mail for 50 cents in cash or stamps from J. T. Shuptrine, Savannah, Ga.

A colicy baby and a frosty night puts a man to thinking.

E. A. Rood, Toledo, Ohio, says: "Hall's Catarrh Cure cured my wife of catarrh fifteen years ago and she has had no return of it. It's a sure cure." Sold by Druggists, 75c.

Fits permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free. Dr. R. H. Kline, Ltd., 931 Arch St., Phila., Pa.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reducing inflammation, allays pain, cures wind colic. 25c. a bottle.

I can recommend Piso's Cure for Consumption to sufferers from Asthma.—E. D. Townsend, Ft. Howard, Wis., May 4, 1894.

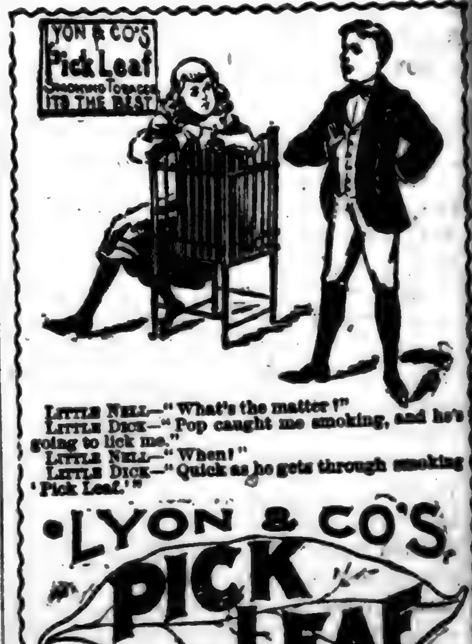
If afflicted with sore eyes use Dr. Isaac Thompson's Eye-water. Druggists sell at 25c. per bottle.

HAVE DONE WONDERS

Was Able to Do No Work—Liver in Bad Condition.

WOODHULL, N. Y.—"I was all run down in health and hardly able to do any work, except a few chores. My liver was in a bad condition and my head ached constantly. I have been taking Hood's Sarsaparilla and I am now entirely well. I have also taken Hood's Pill's with benefit. These medicines have done wonders for me." H. J. MARLATT.

Hood's Pills the best family cathartic and liver stimulant. 25c.



LITTLE NELL—"What's the matter?"
LITTLE DICK—"Pop caught me smoking, and he's going to lick me."
LITTLE NELL—"When?"
LITTLE DICK—"Quick as he gets through smoking 'Pick Leaf.'"

FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Plowing Prevents Drought—Breeding Ground Hogs for Food—Ventilation of Horse Stables, Etc., Etc.

PLOWING PREVENTS DROUGHT.

It will be found that while the soil is kept loose by plowing and cultivation its capacity for absorbing and holding water is much greater than where it is neglected. Thus every weed and surplus growth must be scrupulously kept down, as everything that grows is constantly drawing moisture from the soil. If we can get the upper and lower moisture in the soil to meet the battle is won. If, however, there is a dry streak of soil a foot or more below the surface, vegetation will suffer.

BREEDING GROUND HOGS FOR FOOD.

Henry Singer, a well known and thrifty farmer of near Duvall Station, Scott County, Ky., has for the past two years been domesticating the ground hog with much success. Mr. Singer found a burrow in which he captured seventeen ground hogs, and, taking them into a small lot on his place, he built a close wire fence through which none could escape. Last year the hogs increased to 205, and this year there were 1,673. Of this number Mr. Singer killed 1,000, which he salted away and will smoke dry, as Kentucky farmers do with ordinary pork. The ground hog when so cured is a great delicacy, and Mr. Singer has more than enough to furnish his meat for the coming year.—Southwestern Stockman.

VENTILATION OF HORSE STABLES.

The necessity for working the horse, and therefore for keeping him in working condition, prevents him from having the advantage which every other farm animal enjoys of running in the fields of grass in the summer season. There can hardly be the change from old oats to new when the new crops comes in without causing a loosening of the stools, which always means a weakening of all the muscular system. But, though he must be kept on dry food, the work horse should have, as he is fully entitled to, the purest air that blows. Stables in summer require thorough ventilation. Horse manure heats readily and gives off a strong smell of ammonia. This not only rots harnesses, but it is also very injurious to the horses. We have known many horses to go blind from being kept, in summer, in dark, poorly ventilated stables. Whenever a horse goes blind, if the fact is investigated, the lack of ventilation is more apt to be the cause than anything else.—Boston Cultivator.

WHEN DO HENS STOP LAYING.

A Virginia subscriber who has just bought a lot of old hens desires to know at what age they cease laying, and writes as follows: I am just beginning the poultry business and I have thirty old hens of mixed breeds and have just bought twelve pullets, also mixed. I want to know at what age hens stop laying, or rather at what age it is best to get rid of them. Some I now have are at least three years old, and from the thirty hens I average about three eggs per day, sometimes more and sometimes less. I feed mostly on corn. How long will eggs keep packed in salt, and what is their market value compared with fresh eggs?

The best hen we ever had was seven years old, and she layed more eggs than any other hen or pullet on the place. The difficulty with old hens is that they fatten more readily than the pullets; and that is where the beginner is perplexed. The expression in the above, "I feed mostly corn," is the cause of the few eggs, and not the age of the hen. A hen is in her prime at four years of age, and eggs from hens that are not too fat will produce stronger chicks than the eggs from pullets.—The Poultry Keeper.

CLAY SOIL FOR PEARS.

Sand that contains too much clay to be profitably worked may be made profitable for growing pears if it is made free from surplus moisture. It is better to dig the drains deep on such land, at least three feet, if sufficient outlet can be obtained. But as the clay may at first be impervious to water, the underdrains should be filled with small stone to within twelve or fifteen inches of the surface. Then the soil will be gradually deepened by freezing, and the pear roots will go down to the depth of the underdrain. The result will be that these deep-rooted pear trees will be much less liable to the sudden changes of temperature which cause blight in pear trees in shallow soil whose roots run near the surface and are subject to frequent alternations of temperature. Besides, the clay soil almost always contains the mineral plant food that the pear tree requires, and which

WHEN DO HENS STOP LAYING.

A Virginia subscriber who has just bought a lot of old hens desires to know at what age they cease laying, and writes as follows: I am just beginning the poultry business and I have thirty old hens of mixed breeds and have just bought twelve pullets, also mixed. I want to know at what age hens stop laying, or rather at what age it is best to get rid of them. Some I now have are at least three years old, and from the thirty hens I average about three eggs per day, sometimes more and sometimes less. I feed mostly on corn. How long will eggs keep packed in salt, and what is their market value compared with fresh eggs?

The best hen we ever had was seven years old, and she layed more eggs than any other hen or pullet on the place. The difficulty with old hens is that they fatten more readily than the pullets; and that is where the beginner is perplexed. The expression in the above, "I feed mostly corn," is the cause of the few eggs, and not the age of the hen. A hen is in her prime at four years of age, and eggs from hens that are not too fat will produce stronger chicks than the eggs from pullets.—The Poultry Keeper.

CLAY SOIL FOR PEARS.

Sand that contains too much clay to be profitably worked may be made profitable for growing pears if it is made free from surplus moisture. It is better to dig the drains deep on such land, at least three feet, if sufficient outlet can be obtained, —But as the clay may at first be impervious to water, the underdrains should be filled with small stone to within twelve or fifteen inches of the surface. Then the soil will be gradually deepened by freezing, and the pear roots will go down to the depth of the underdrain. The result will be that these deep-rooted pear trees will be much less liable to the sudden changes of temperature which cause blight in pear trees in shallow soil whose roots run near the surface and are subject to frequent alternations of temperature. Besides, the clay soil almost always contains the mineral plant food that the pear tree requires, and which underdraining makes available. Yet even on clay soils wherever pears are grown, heavy applications of potash and phosphate are always advisable.

THE SHEEP'S FOOT.

The foot is a tender part of the sheep. It is different from that of any hoofed animal, the manner or growth of the horn. The crust of the hoof grows downwards, it is true, but it does not stop at the junction of the sole. On the contrary, it turns under the sole, thus making a receptacle for the collection of sand, mud, filth, gravel and other matters that do much mischief. It is much as if the shepherd had the upper of his shoe growing down over the sole, and having an opening between the two for the collection of all such stuff as mentioned, says the Kansas Farmer.

How would the shepherd feel to be compelled for weeks and months to submit to this unpleasant condition of things? But it is precisely what the sheep suffers, unless it is closely looked after and the mischief prevented. It is going on when the sheep is seen feeding on its knees, painfully crawling about in the pasture, or when it is standing stupidly in a fence corner with its head down and fighting the pestilent flies.

The soft ragged horn, turning under the sole, is to be shorn off, and if the toe is at all projecting, it is to be shortened before it turns up like the slipper of a heathen Turk. It will be a good thing at the same time to disinfect the feet by applying some of this ointment, which every shepherd should keep a stock of, for dressing cuts, wounds, sores, etc., and to avoid fly blowing. Take one pound of pure lard or vaseline, one dram of carbolic acid, half pound of Venice turpentine, two ounces of acetate of copper. Melt the first and third together, then add the others, and stir and grind together to get an even mixture.

This is an excellent remedy for all diseases of the feet, a preventive of foot rot, useful for shearing cuts, and all kinds of sores.

CULTURE OF ROSES.

One welcomes the first roses not alone for their beauty, but also as an indication of genial weather. The early roses have a personal charm and a beauty all their own. Though the species have been known a long time, and are not rare, they seem to be cultivated mostly in large plantations, and make their way slowly into small gardens. Owing to the cool weather, Rosa rugosa did not precede the other species at as long an interval as usual, and the Burnet rose, R. spinosissima, followed it closely. This charming little rose is perfectly hardy, with single, creamy white flowers. The leaves are small, and the thin stems bear enough prickles to merit its specific name as the very spiniest. It makes a neat bush about three feet high, and is always a striking plant in the hardy border. It is to be had readily from seed. J. N. Gerard, of Elizabeth, N. J., says in Garden and Forest, that he has been told by a high authority that Polyantha roses are not of much account, but he has in a border in his garden a Bemoantant form or hybrid of this rose which could not well be spared. It is very hardy, forms a bush about three feet high, and bears, during the season, frequent crops of small single flowers of a beautiful pink color.

Another hybrid much valued is the Dawson rose, which is now coming into flower. If allowed to grow naturally this is a most beautiful plant at flowering time, when its long shoots are covered with small semi-double pink flowers in clusters, the buds opening in succession. A spray six to nine feet long makes a glorious decoration, and the old wood will soon disappear for that service, much to the relief of Mr. Gerard's helper, who objects seriously to untrammeled growths. But the growth of this rose is slight in comparison with that of Rosa multiflora, which in wild luxuriance covers twenty-five feet or more of fence, and would probably spread over the entire garden if left unchecked. One is sorry to touch knife to a plant which evidently so enjoys life and in a few days will be covered with myriads of fragrant blossoms. A few, at least, of the large number of single roses should be in every garden.

The general culture of roses offers some difficulties in this climate, owing to hot summers and to the special fondness of many species of insects for their foliage. It has always seemed that if the small grower would exchange most of his hardy perpetual roses (usually bought under the impression that they were perpetual bloomers) for Teas or hybrid Teas he would have more satisfaction and rid his garden of some unsightly objects, for after the rose season the plants are usually neglected. Tea roses produce flowers all the season, and, naturally, their wants are more apt to receive attention. Perhaps, on reflection, that hint will not be of much service farther north than this, though among the Teas some will be found much hardier than others. La France requires no protection here; neither does Auguste Guinoisseau (the alleged white La France). There are other surviving Tea roses in the garden, but the most interesting and promising one is the comparatively new Kaiserin Augusta; ten plants which came through the winter untouched are now growing strongly and are full of well-developed buds. This variety produces an abundance of handsome white flowers continuously during the season, and Mr. Gerard knows of no rose of its color which is more likely to give complete satisfaction.

POULTRY YARD HINTS.

Rats are demoralizing in the poultry yards. Keep the premises and surroundings clean and free from rubbish, so that the rats can have no abiding places.

Do not trust the cat where there are young chickens. The only safe cat around the poultry yard is a dead cat, and even then be sure it is the cat's ninth demise.

Do not wonder what is the matter with your young chicks if they are troubled with loose bowels, if you are making cold-water-mixed cornmeal their main diet. Growing chicks require a greatly varied diet and space to exercise in.

Do not expect full returns from half-accomplished work. The henhouse should be cleaned out every morning. It cannot, especially in hot weather, be kept in sanitary condition by cleaning out once a week or semi-occasionally.

Farmers who want a good supply of eggs in winter when prices are high should remember that cabbages and roots will be necessary. Every farmer should raise a supply of these essentials for his poultry flock. The increase in eggs will make the trouble a well-paid-for investment.

If your poultry are confined in restricted yards, if you wish to keep them in health, keep the spade bright with frequent use. Frequently spading up the soil will keep the yards in good sanitary condition, and will furnish the hens exercise they delight in.

There are a great many persons offering sure roup remedies. If they took as much interest in properly avoiding the causes which produce the disease as they do in experimenting with remedies to cure it, they would save themselves much worry, and would have a healthier flock of fowls at all times.

Scaly legs on fowls are a pretty sure indication of indifferent poultry keeping. The trouble mainly come from filth and neglect. Watch the legs of the fowls, and the first indication of scurf wash them with soap suds, and anoint with sulphur and lard. Never use a scaly-legged hen for a sitter.

The farmer who keeps scrub poultry is feeding good food and getting poor results. Haphazard breeding produces inferior results. Good returns or results never come by chance. It will pay to keep good pure-bred poultry, but if they are treated as scrubs generally are, better continue with scrubs.

Farmers should get rid of all the male birds soon as the breeding season is over. The hens will lay just as many eggs without the company of the males, and many fanciers declare they will lay more. A lot of males running with the hens during hot weather and during the moulting time are a source of unnecessary annoyance. Eggs that are not fertilized will keep much longer than those that are.

At the summer season of the year it is very easy to overfeed fowls. Do not trust to their appearance, but go at night and lift them and see if they are not getting too heavy. An overfat hen will suffer greatly in hot weather, and is liable to drop dead at any time. Avoid feeding fowls any fattening food —do not give any whole corn during hot weather.

The litter nests are made of are often great sources, in hot weather, for breeding vermin. Change the nesting material at least every two weeks. Fresh cut, green, fine grass, red top, makes excellent material, and if some green tansy can be had to put with it there will not be much danger of such nests harboring insects.—Baltimore Sun.

Pilfering Sparrow Hangs Himself.

A. S. Cooley, of Canandaigua, N. Y., recently found in his yard a sparrow hanging by the neck from a limb of a cherry tree. The bird had evidently attempted to rob the nest of a robin in the tree, and, while affecting an entrance to the nest from the under side, accidentally pushed its head through a noose formed of horse hair, which had been utilized in the construction of the nest. From appearances the sparrow, in withdrawing its head from the nest, had tightened the noose and was hanged.

How to Swing a Hammock in the Yard.

"If you want to swing a hammock in a yard offering but little space," says the Ladies' Home Journal, "have two brackets or davits made of two inch gas pipe and bent at the blacksmith's. At the hanging ends hooks are welded, to which hang the hammock. The pipes are fastened securely to the fence by bands of iron screwed fast to the fence. Wires may be strung overhead upon which vines can be trained.

An Old Minister.

Many stories are told of Dr. Gad Hitchcock, who was a minister in Pembroke, Mass., before and during revolutionary times. He was noted for his patriotism and the fearless expression of his views when opportunity offered. He was chaplain in the army at one time, and preached many a stirring sermon to the men.

The first sermon he published was addressed to a military company at the time when the French were making inroads on the northern frontier. The year before the breaking out of the revolution he preached his famous "Election Sermon," which roused Gov. Gage to great wrath, and struck even the minister's stanchest friends as ill-advised. It is said that when Doctor Hitchcock wrote it, the Governor was not expected to be in the audience at the time of its delivery.

When it was found that he was there, one of the minister's friends suggested that a slight modification of some of the strong expressions in the sermon would perhaps be advisable; but Dr. Hitchcock was of another mind.

"My sermon is written," he calmly said, "and it will not be altered."

On his journeyings to and from Boston he usually fell into conversation with any one with whom he was thrown. One day he traveled to Boston in company with a sailor of whom he asked many questions as to his name, residence, habits and tastes.

At last the sailor began questioning in his turn: "What is your name?" he asked.

"I am Gad Hitchcock from Tuuk" (the name of his parish.).

"Three of the worst names I ever heard!" cried the sailor, bluntly, greatly to Dr. Hitchcock's delight.

A London cablegram says that "Queen Victoria is greatly embarrassed by riches." Her eldest hopeful seems to be embarrassing others by his lack of riches.

The maid from Boston swept the street with her glance. It was noticeable that the asphalt was covered with a glare of ice.—Cincinnati Enquirer.

HALL'S
Vegetable Sicilian
HAIR RENEWER

Beautifies and restores Gray Hair to its original color and vitality; prevents baldness; cures itching and dandruff. A fine hair dressing.

R. P. Hall & Co., Props., Nashua, N. H.
Sold by all Druggists.

"Success" Cotton..... Seed Huller and Separator.

Nearly doubles the Value of Seed to the Farmer.

All up-to-date Ginners use them because the Growers give their patronage to such gins. Huller is PRACTICAL, RELIABLE and GUARANTEED. For full information Address

A LIGHTHOUSE KEEPER.

REGULATIONS OF THE MONOTONOUS LIFE HE IS COMPELLED TO LEAD.

Methods of Appointment and Different Grades in the Service—Paid According to a Station's Importance—What Is Done for a Keeper's Comfort—Causes for Dismissal.

A lighthouse keeper is appointed by the secretary of the treasury on the recommendation of the lighthouse board, and at first receives only an acting appointment. At the end of three months, if he passes an examination by the naval officer who is the inspector of the district, he receives a full appointment; if he does not pass, he is dropped from the service. A keeper must be able to read and write, keep accounts, sail and pull a boat, and have enough mechanical ability to make the necessary minor repairs about the station and keep it in order. There is only one grade of keeper recognized by law, but the custom of the service has divided the keepers into different grades, with different pay and duties, and with promotion from one grade to another. A man may be appointed to the service and assigned to a particular station, but he may be moved at any time if promoted, or if the interests of the service demand it. At stations requiring but one keeper, a retired seafaring man, with a family, is usually selected, and, in general, men of the seafaring class are most wanted. At stations where there is a fog signal, one of the assistants is a man who has an engineer's license and is something of a machinist.

Keepers are paid on an average about $800 a year, but the individual sums paid vary from $100 to $1000 a year, according to the importance of the station and the amount of service rendered. The principal keeper at Minot's Ledge Light, just outside of Boston, receives $1000 a year for his services, and this furnishes the only instance where the pay of a keeper is specified by law.

The keepers who live at isolated lighthouses and on the off-shore lightships lead a very monotonous life, broken only by the sight of passing vessels and the quarterly visit of the lighthouse supply boat. These keepers get considerable leave, about two weeks in three months, during which time they visit their families on full pay. A lighthouse on an outlying reef, for instance, is on the same status as a lightship, except that it cannot be blown away, and the keepers cannot leave it except when they are relieved, as a storm might come up and prevent their return.

Much is done by the lighthouse board to further the comfort of all its employes, but most is done for those who endure the solitary life at the isolated lights and on the lightships. Libraries are furnished the keepers and their families; each contains about forty volumes of works of history, science, and poetry, with a fair supply of good novels. This complete library is left at a station for three months, and is then transferred to another station by an inspector on his quarterly visit. There are nearly 1000 of these libraries in circulation, each in its little portable case, and, by their judicious interchange, the keepers of stations where they are furnished see about 200 volumes a year.

Keepers are forbidden to engage in any business which will prevent their presence at their stations or interfere with the proper performance of their duties. Many have useful and profitable occupations which they carry on at the stations, while some fill pulpits, are justices of the peace, or teach school. All keepers are furnished with quarters for themselves, and in some cases for their families. In some cases they are furnished with food and rations. Other stations have barns furnished for cattle and horses, and boats are furnished all stations inaccessible by land.

The discipline of the service has been always rigid, as befitting a service where negligence or inefficiency may mean the loss of many lives and much valuable property.

Dismissal instantly follows in two cases—where a keeper is found intoxicated, and where he allows his light to go out. Keepers are trained to consider the care of the light and the lighthouse property above any and all personal considerations, and it is rare, indeed, when they fail to realize this high ideal. There have been a number of instances illustrating the esprit de corps of the service; how the keepers of the Minot's Ledge Light first built went down with the light and died at their posts; how one keeper saved his lens and let his family look out for themselves, and instances where they have saved public property and lost their own.

Fortunately, the service is not hampered by any question of politics, and this fact, coupled with the excellent discipline maintained, accounts for the fine class of men now in the service—men who take an honest pride in their work, and whose interest makes the efficiency of the service what it is. It is unfortunate that the navy has no retiring laws for its seamen, which would allow men after twenty, twenty-five or thirty years' service, depending on the physical condition of the man, to be retired and placed in the lighthouse service for the rest of their lives. A valuable class of men would thus be added, and the nation would be paying a debt which now goes unpaid.—Philadelphia Ledger.

BICYCLES USED IN BATTLE.

A French Officer Tells of the Value of a Cycle Corps in War.

In Le Monde Moderne, a Captain Danrit gives an interesting account of the present use of the bicycle in the French army. Formerly horsemen carried dispatches; now the work is done by cyclists. The infantry arm of the service, too, he says, by availing itself of the swiftness of the bicycle, has proved itself able to surprise the enemy in offensive movements and thus secure a great advantage.

To a Captain Gerard belongs the credit of having provided the army with a satisfactory folding bicycle, and in the last maneuvers he had command of the bicycle corps, the first ever organized. Sixty men formed the company. They were attached to the division of a general favorable to the use of the bicycle by the military, and his instructions from the minister of war were to make as much as possible of the new element in the service.

The men were uniformed in a way that did not interfere with the free movement of their limbs, and each carried 120 rounds of ammunition. Their arms were artillery carbines, selected because they are shorter than the average gun and more easily handled. In the rear of the corps was a social tandem, formed of two folding bicycles, on which was carried all the necessary articles for repairing breaks in any of the soldiers' wheels.

The most frequent use made of the cycle corps was in supporting cavalry, and under ten different sets of conditions the riders proved most effectual. General Aubigney, one of the commanders in the engagement, made the following favorable statement in his report:

"A trial of sixty cyclists under the direction of Captain Gerard has proved that a company mounted on cycles, properly instructed and commanded, could rapidly accomplish certain important and difficult missions. The only fault is that the said company was too weak in its number of men. It is requisite to raise its strength to 200 men in order to strike a decisive blow as quickly as possible with greater effect. Two hundred cyclists firing fifteen rounds per minute and per man send fifteen hundred to sixteen hundred bullets in thirty seconds into cavalry charging. It cannot be repeated too often, and experience has just proved it, that groups of infantry supplied with this new motor of rapidity would produce on the flanks and rear of an enemy the most unexpected and demoralizing effects. Panics of every description, telegraph wire cutting, convoys stopped and tearing up of rails, in fact, everything to impede the advance of the enemy—such are the opportunities given to this little band of cyclists if they only possess coolness, and above all that great gift, dash, accompanied with audacity."

There seems to be no reason now why bicycles should not be used in the army.

Heroic Treatment of Hospital Patients.

The hospital physician should be a man of the most thorough methods and the most extreme conservatism. He should be chosen as much for his practical good sense as for his skill in diagnosing disease. He should be a man with intuitions, and ought to be able to decide almost at a glance whether a patient is suffering from brain trouble or alcoholism.

There have been of late a great many instances where this mistake has been made, and it is by no means creditable to the hospital authorities when such blunders are made.

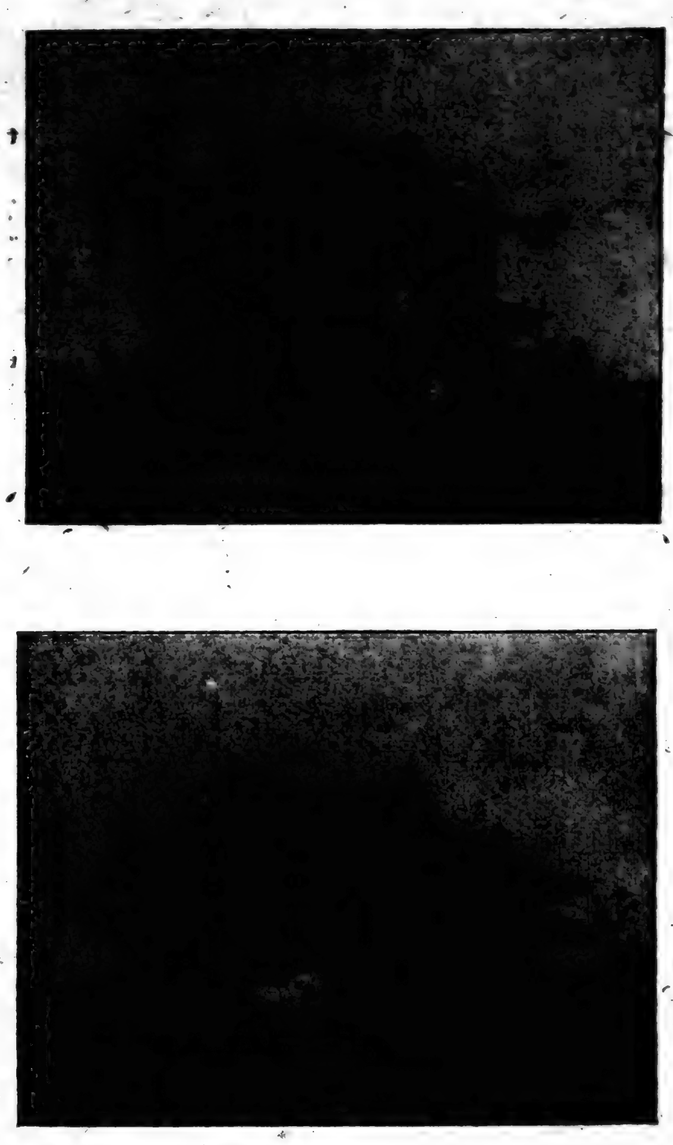
One of the latest exploits of a hospital doctor is to order a cold bath for a consumptive patient who showed some symptoms of hysteria. Shortly after the bath the woman died. Just why a doctor should order such treatment, common sense as well as the medical profession would like very much to know.

Hospitals are in the main supported by the people, and the people have a right to good treatment and courtesy at the hands of those who are put in charge of such institutions. Failing to receive this, the public has also the right to demand an investigation of the situation and to demand the punishment of those who are guilty of such unprofessional and inhuman conduct, and that their places be filled by those who are more intelligent and better fitted for the duties and responsibilities of such a place.—N. Y. Ledger.

Raiding the Poorhouse for a Husband.

Some women want a man so bad that almost any old thing will do. Two years ago Mrs. Price King of Labette County, divorced her husband, who, being thus deprived of his means of support, went to the county poorhouse, where he has since remained. Recently Mrs. Price went to the poorhouse, took her ex-husband out and married him over again.—Kansas City Journal.

The heaviest bell in the world is that at Moscow, Russia, which weighs 432,000 pounds. That in city hall, New York, weighs 22,300



The hotel and a private residence at Thorsby.

A NEW AND NOTABLE COLONY.

THORSBY AS SEEN THROUGH THE SPECTACLES OF OUTSIDERS.

WHAT A LEADING MAGAZINE OF SOUTHERN PROGRESS SAYS CONCERNING OUR COLONY

In Speaking of the more prominent and progressive points in this section. The Illustrated South, of Birmingham, Ala., has the following to say of Thorsby:

A number of Northern colonies have been founded in the South within the last double decade, and we know of none that has failed to realize the brightest dreams of its promoters.

Thorsby is one of the newest and most notable of these colonies, and merits special mention because it is more advanced for its age than any of its competitors. In fact, it is a fin de siecle revelation in the matter of community building, and we know of no place in the wide and wonderful sweep of our Southland that possesses a more promising future.

It is situated in the highlands of central Alabama, on the picturesque and prolific Chilton plateau, and has direct communication with the seaports of the South and the markets of the North through the medium of the Louisville & Nashville Railway, one of the great grand trunk lines of our continent.

Speaking of Thorsby a recent writer remarks: "In June, 1895, Messrs. Thorson and Peterson came to this country on a prospecting expedition, and finally decided to settle their colony on the present site (in Chilton County, Ala). It was several months before any work was begun, but within the last eighteen months a beautiful village and settlement has sprung up like magic. The Concordia Land and Improvemnt Association was organized, with Mr. Thorson as President, and Mr. Peterson as Secretary. They bought up about 2,500 or 3,000 acres of this land, laid off a town into lots and the surrounding country into ten acre blocks and at once began improvements, naming the new settlement Thorsby. Every obstacle vanished before the hand of energy, pluck and industry, and now there are at Thorsby a fine hotel, three stores, a postoffice, a newspaper, a saw-mill, a shingle and lath mill, blacksmith-shop, two churches and a two-story schoolhouse, about thirty-four dwellings and as many families, and more coming all the time. A green-house and experimental garden is a new feature for this year, at which I saw tomato-plants a foot high. This colony seems to be making grape culture a specialty, and now have about 80 acres in grapes, and I understand, are putting out this Spring 18,000 cuttings. Young orchards are being set with all kinds of fruit, the houses are substantial and well-built, mostly two story. The urgent need now is a canning-factory, and negotiations are pending looking toward the establishment of one in the near future."

The Concordia Land and Improvement Association, spoken of in the foregoing excerpt is incorporated under the laws of Alabama, possesses a capital of $150,000, and has land for sale in all directions from Thorsby—some of it adjoining the town limits and some of it further out to a distance of nine miles.

From a booklet lately published by the Association we learn that "this land is of different varieties, but it is all very productive. Some parts are level, while other parts are more rolling. That which is not under cultivation is covered with timber of many different varieties, such as the long leaf yellow pine, all kinds of oak, hickory, chestnut, persimmon, poplar, beach, all kinds of gum trees and black walnut.

"Therefore fuel costs nothing but the labor of cutting it, and lumber is very cheap. Good, fine, hard pine lumber is bought here for only $5 to $7 per 1000 feet. This growth of timber sufficiently shows the good quality and strength of the soil. The Association has some improved farms for sale at very reasonable prices. It has the land surveyed in tracts of from ten to eighty acres each, so that the purchaser may have his choice also in this respect, but it is to be remembered that twenty acres of this fertile farm and fruit land is a good-sized farm, because the crops are so abundant. Each tract of land has a road laid out at least on one side."

The proximity of Thorsby to the Gulf, and the fact that it is 790 feet above tide-water, combine to make its climate ideally equable. It is never too hot, never too cold, and one season melts into another with none of the abruptness that is so unpleasantly common in the higher latitudes. This fact, together with the absolute absence of malaria, and the purity of the freestone water, combine to make this locality one of the healthiest that can anywhere be fond.

The soil of Thorsby and Chilton county cannot be surpassed for fertility. They are of the rich, dark, grayish, red and brown loam lands, with a proper mixture of sand on a clay subsoil, and are adapted for general farming, stock-raising and fruit-growing.

Where the North can only raise one crop of corn, potatoes and other hardy products in a year, this part of the South can raise two, and can raise, at the same time, cotton, sugar-cane and all the other semi-tropic staples, to say nothing of fruit!

Let the new-comer select a spot like Thorsby for his home, let him set to work with a stout heart and a steady hand, and he will find that Fortune will change her frowns to smiles and reward him according to his deserts, no matter what they may hap to be.

CHILT

VOL. I. NO. 15.

FAR AND WIDE.

THE CALL ADOPTS ALL THE FOURTH ESTATE OF AMERICA INTO ITS GENIAL AND GRACIOUS ARMS.

IT SAYS THINGS THAT NO OTHER PRODIGY DARES UTTER.

It remained for a correspondent of the Anniston Hot Blast to discover the youngest soldier ever enlisted in the Confederate—or any other—army. The correspondent in question says:

"I was born November 1846 and enlisted in Co. G, First Alabama Cavalry, in November 1863, under General Wheeler, and remained with the army until the surrender. My brother, John W. Ford, was born February, 1848, enlisted in the same company as I did, in November, 1846.—Hot Blast, June 17.

The Southern soldier who enlisted thirty years before the war began, and two years before he was born, is certainly entitled in all reason, to be recorded as the youngest of Confederate volunteers.

Query—Little Reaper, who is that great grammarian that pushes the pencil on the Chilton County Call?—Pratt City News.

"That grammarian that."

Great guns and gravy!

Where are we living "at?" Is the News abiding in an Arkansas swamp, at the tail end of an alligator pond, where schools are 15 miles apart? We would kindly advise the editor of that paper to leave the name of Alabama off his sheet, for we are supposed to know a thing or two in this Commonwealth.

"If the Thorsby infant had imbibed 'good' manners with its stuffing of 'good' grammar it would be entitled to better consideration. We trust the Waterloo Tribune will take its protege in hand and correct its evil tendencies.—Sheffield Reaper.

There it is now. That youngster has been outside the yard again fooling with poor white trash. O Lord, what's to become of such an incorrigible! It'll be the death of us yet!—Waterloo Tribune.

Attorney General Fitts receives handsome pay from the State of Alabama, and he is also pocketing a fine salary from the M. & O. R. R. Co. to protect its interest in the State. This makes it a business administration twice over. We're smart, we is!—Eutaw Mirror.

Well, let all the anti-administration papers jump in and give him "fitts."

A can of naptha and fifty pounds of dynamite were stolen from the Southern Railway storehouse Sunday night.—Anniston Hot Blast.

The Call would suggest that a search be made for it at once in the Montgomery Advertiser office. It is quite probable that the dynamite will be used to blow up the State administration.

The heat was so great in Demopolis last week that hen's eggs hatched out on their owner's mantlepiece.—Mobile Register.

There, we are stuck again. Guess we will never get acclimated. "Hen's mantlepiece." Now, Brother Register, will you kindly tell us where the mantlepiece is on a hen?

We acknowledge with thanks the receipt of copies of the Chilton County Call, a paper published at the new town of Thorsby, Ala. We certainly wish it the best of success in trying to develop that section of the South.—Hammond, La., Southern Vindicator.

The Sheriff of Bibb county is preparing for the expected boom in Centreville, that the Press tells

at Thorsby.

Great guns and gravy!

Where are we living "at?" Is the News abiding in an Arkansas swamp, at the tail end of an alligator pond, where schools are 15 miles apart? We would kindly advise the editor of that paper to leave the name of Alabama off his sheet, for we are supposed to know a thing or two in this Commonwealth.

"If the Thorsby infant had imbibed 'good' manners with its stuffing of 'good' grammar it would be entitled to better consideration. We trust the Waterloo Tribune will take its protege in hand and correct its evil tendencies.—Sheffield Reaper.

There it is now. That youngster has been outside the yard again fooling with poor white trash. O Lord, what's to become of such an incorrigible! It'll be the death of us yet!—Waterloo Tribune.

Attorney General Fitts receives handsome pay from the State of Alabama, and he is also pocketing a fine salary from the M. & O. R. R. Co. to protect its interest in the State. This makes it a business administration twice over. We're smart, we is!—Eutaw Mirror.

Well, let all the anti-administration papers jump in and give him "fitts."

A can of naptha and fifty pounds of dynamite were stolen from the Southern Railway storehouse Sunday night.—Anniston Hot Blast.

The Call would suggest that a search be made for it at once in the Montgomery Advertiser office. It is quite probable that the dynamite will be used to blow up the State administration.

The heat was so great in Demopolis last week that hen's eggs hatched out on their owner's mantlepiece.—Mobile Register.

There, we are stuck again. Guess we will never get acclimated. "Hen's mantlepiece." Now, Brother Register, will you kindly tell us where the mantlepiece is on a hen?

We acknowledge with thanks the receipt of copies of the Chilton County Call, a paper published at the new town of Thorsby, Ala. We certainly wish it the best of success in trying to develop that section of the South.—Hammond, La., Southern Vindicator.

The Sheriff of Bibb county is preparing for the expected boom in Centreville, that the Press tells us of, and will be able to take care of his share of the influx by putting in two additional steel cages and a steel lining in the jail.

McKinley delegates from Alabama cost Hanna $27,000, so it is said. Entirely too cheap.—Livingston Southern Home.

Too cheap! Mark had better come down and look around before he makes another purchase. We have heard of delegates being bought for $3 and a half pint.

Will the Tusk—or Tuscaloosa papers tell a howling public how the name of their blawsted town is spelled, anyhow? When the Birmingham News says "k" and the Waterloo Tribune says "c," we expect the Alexander City Outlook to scorch along on its wheel and use almost any other letter betwixt "a" and "izzard."

Twelve of our citizens went down to Montgomery to represent Heflin before the locating board on last Monday. They returned Tuesday evening looking some worse than they did before they left.—Heflin New Era.

The dozen of citizens must have run up against a bar while locating the board.

If Alabama could unload 54 per cent of her sapsuckers onto Cuba or the Fiji Islands the old State would make a spirit toward the goal of progress and intelligence.—Sheffield Reaper.

Possible? But who would be left to run the Reaper?

The White Elephant Saloon has on exhibition a good size alligator which was caught in the Warrior river near Tuscaloosa. It was caught in a fish net, and is about 5 feet long.—Tuscaloosa Times.

Mr. Rountree has disposed of his interest in the Birmingham State Herald and resigned his position as manager. He will hereafter devote his time to publishing the Dixie Home.

The Tuscaloosa Times speaks of "a shameful travestry," and, also, of "fermenters of trouble." Will the Times please translate the two expressions into United States language?"

Fine rains have fallen here this week and the crops are looking better. The prospect for a good corn crop in this county is brighter than for many years.—Heflin New Era.

Montevallo is to have a bank. Work on the building will be commenced at once.

The Fourth District Agricultural School will be located at Sylacauga.

HORRIBLE RELICS OF A CRIME.

A Human Body Parrelled and Buried in Mud.

A special from Quitman, Ga., says: Jacob Wooten, while fishing Friday on Mule Creek, in the upper part of the county, in company with several others, discovered a barrel buried upright in the mud and containing a human body. The body had been cut in pieces, placed in the barrel and mud had been thrown in, filling the barrel, which was then headed and buried. Mr. Wooten and his friends first removed the head of the barrel, then the dirt, which had formed into a hard cake, and to their horror beheld a switch of black human hair neatly plaited, about two feet in length and evidently belonging to the head of a young white woman. Next pieces of flesh and clothing were taken out, all in a fairly good state of preservation. The flesh, while partly decomposed, had dried and the skin had a mummified appearance. The dress was of checked homespun, while there was a knit undervest and an underskirt of bleached homespun. The identity of the murdered woman is unknown. No one from the vicinity is missing.

Detroit's Mortality.

During the week there have been 15 deaths in Detroit, Mich., and 71 prostrations. There were but 79 deaths from all causes last week. In the State 92 died from heat.

ALABAMA LETTER.

From the Emmet County, Iowa, Republican, for June 8th, 1897.

I feel it my duty to comply with my promises given to friends in and about Estherville before I left there for my home here in the sunny South, that I should let them hear from me before long. I have received many letters asking for general information, etc., and therefore take the liberty to ask you an opportunity to "let them hear from me" through your valuable columns.

I left Estherville on the 24th day of March and arrived here in Thorsby on the 28th with my car of immigrant goods, including a pair of horses and Iowa poultry, all safe. I at once began to improve my home property, a 10 acre vineyard tract, and had in about six weeks a cosy home complete and my family arrived here, all well, on the 6th day of May.

I am pleased to state that we are well and enjoy this fine climate, I have for my part gained considerable in strength and I am justified in saying that this is the place for a good many of my Iowa friends. A few days after I came here I planted different kinds of vegetables and have them now daily on my table, I have now my 1,500 grape vines, which the Concordia Land Company have planted in my vineyard, all trellised, and they are fine. They were planted in May last year and some are bearing, so I can now see what Thorsby has in store for a future, over 70,000 vines are now flourishing here, and I understand that the association has already contracted for 30,000 to 40,000 for fall and next spring planting.

The weather here is not so hot as I thought I would have to experience it, and I have in several Northern papers seen statements of higher temperature up there than we have here so far.

I and my family are well satisfied with the change and have reasons for so being. Thorsby has two church organizations; good schools and good society, so we are not strangers here, although are in a strange land, and I wish to call the readers attention to the fact that this is one of the main points for a home seeker to consider.

Yesterday I had a pleasant call from H. A. Hanson and G. W. Gilbertson, of Estherville, Jacob Brecker from Graettinger and Ole Larson from Ruthven, Iowa. These gentlemen came here on a prospecting trip and they all told me that they had purchased land for their future homes here. I understand this makes the number of Northern families located here 140 and about one-half of them are now on the ground. Everybody busy, "none idle here" and improvements of all kinds are my daily observations.

I have now been here long enough to experience the climate, the soil and the water, and am justified in expressing my opinion very favorable for Thorsby, and will say to a home-seeker, if he can command a few hundred dollars do not fear the South.

A. MALGREM.

Thorsby, Ala., June 24th, 1897.

HOTTEST OF THE YEAR.

Sixty Deaths in Seven Days in Cincinnati, Ohio.

The heat in Kansas City and vicinity was even more oppressive Friday than the day before. Early in the morning the thermometer registered 89 degrees, at noon 94 and at 5 p.m. 97, the hottest of the year. Many prostrations and two deaths are reported.

The number of heat deaths in Cincinnati, Friday, was six. Thirty prostrations were reported with the usual quota of serious cases. The maximum by trustworthy street thermometers was 96 at 3 p.m. It was 81 at 7 a.m. and 85 at 11 o'clock at night. The number of deaths in the last seven days is sixty.

The Heat at Pittsburg.

The intense heat prevailing since the first of July at Pittsburg, Pa., is responsible for 23 deaths and 47 serious prostrations. Scores of others were slightly affected.

BIG SALE

FOR SUMMER CLOTHING

Bought at a price named by us, and selling at a price less than the cost of the raw material. This is the largest sale of Men's reputable Clothing at such, sweeping prices that has ever taken place in the Magic City. We have also started a

Shoe Sale

as our present stock is entirely too large, and we must reduce it at once. Lovers of neat, graceful, durable and good wearing Shoes can find this combination of good qualities in our Shoes. Note below the startling prices we have made:

$3.95—Men's French Calf Patent Leather, Tans and Cordovans, were $5.00.

$3.50 for the Famous Royal Blue Shoe; factory price $4.00.

$2.48—Odds and Ends in Patent Leather, Calf and Cordovan; were good value at $4.00 and $5.00.

$2.48 for Tans, in all Shapes and Shades; their former price $3.50.

$1.98—These Shoes in Tans and Calf never sold for less than $2.50.

$1.35 for Men's Shoes, in all Styles that were formerly $2.00.

98c.—A good Shoe, that always sold at $1.50.

$1.29—Men's Oxfords, light, cool and neat; were formerly $2.00.

CHICAGO'S STOCK YARDS.

THEY ARE A LITTLE INDUSTRIAL CITY ALL BY THEMSELVES.

Vast Amount of Work of Various Sorts Carried on Within Their Limits—Employ Thousands of Men—A Bank and a Daily Newspaper There.

One who has never seen the great stock yards of Chicago is likely to picture them as made up almost of cattle pens and sheds, but it truth these are only a small part of the great whole. The district includes immense packing houses, an exchange building, a bank, a daily newspaper devoted entirely to the interests of the yards, the business offices of over 100 firms, beside any number of offices occupied by buyers and sellers. A horse exchange is also situated within its gates, and is one of the most interesting features of the whole place. Designed expressly for the trading and selling of horses, it is probably one of the best adapted places of its kind in the country. It has a quarter-mile track on the main floor, and the scene presented within its walls on a sales day is a most exhilarating one to the horseman as well as to the casual visitor.

Altogether the inclosed district known as the Union Stock Yards covers a space of 400 acres.

An idea of the immense proportions of the yards may be gained when it is known that there are within their boundaries 200 acres devoted to yardage alone, 20 miles of streets, 20 miles of water troughs, 50 miles of feeding troughs, 75 miles of drainage and water pipes, and over 150 miles of railroad tracks. The plants of the various packing firms cover many acres of the remaining ground, not to mention the space taken up by the covered sheep and hog pens, and the many hundreds of buildings used for business and tenement purposes.

The stock yards are controled by the Union Stock Yard Company, which represents about $5,000,000 capital and employs about 1,000 men. Altogether in the whole stock yard district employment is provided for on to 28,000 men and women, who for the most part constitute the residents of the little city within the stock yards districts.

As the visitor approches the entrance to the yard he sees before him a plain, though massive arch, with the inscription "Union Stock Yards, Chartered 1865." And within this gate a scene presents itself unlike anything to be found elsewhere in this or any other country. Wherever one may look activity prevails, and the regularity and system governing all is at once apparent.

The systematic way in which the cattle, sheep and hog pens are laid out in divisions distinct from each other is the first feature that attracts the attention of the stranger. Streets intersect each other through the blocks of pens, each of which has a separate gate entrance. At convenient points feed and store-houses are located, and at suitable intervals stand immense scales, with offices connected, and all under the jurisdiction of the corporation.

The pens are all provided with feeding arrangements, and the feeding is done under the supervision of the company. When it is taken into consideration that there are sometimes nearly 100,000 animals including cattle, hogs and sheep, in the yards at one time, it can readily be seen that the cattle feeding is a matter of great magnitude.

The scene of activity, rush and bustle that prevails during the morning hours in the stockyard beggars description. The arrival of the stock, which comes from all parts of the country, generally occurs during the night or in the early morning, and as heavily loaded trains come into the yard they are taken in charge by the company, and the ownership, consignee, quantity, and description and fees are noted, the company in all cases taking the responsibility and directing the movement of the stock until it is properly relieved or has been sold.

With the unloading of the cattle early in the morning, the real life of the day at the yards commences. After the stock has been fed and watered, the work of the selling is begun. In a few minutes the buyers and sellers, mounted on the best of the cattle horses, are madly galoping from pen to pen and a more vivid picture of cowboy life would be hard to find than is here presented during the first half of the day. In a great many cases the buyers and sellers are real cowboys, whose life on the plain make them experts in judging the qualities of cattle and particularly adapted them to the handling of the steers.

With the sale of the stock comes the examination and the weighing. The former is made with a view of detecting any unsound or bruised animals; such are either rejected or bought at a special price. The huge scales used are capable of 100,000 pounds pressure, or 50 tons, and a car load of cattle can be easily weighed at one time.

After the stock is weighed it is taken possession of by the buyers and driven to the different slaughter houses. The visitor to the Union Stock Yards generally goes there with the determination to see the slaughtering, if nothing else, and the yards have a world-wide reputation for the extent and rapidity with which this part of the packing business is carried on. The great packing houses that have their plants in the stock yards do all their own slaughtering, and from early morning until late in the afternoon the work of killing cattle, hogs and sheep is carried on almost continuously.

As every day in the slaughter houses about 25,000 animals are killed, the labor-saving machinery used in dressing them becomes a consideration of high importance. Speed and accuracy are what counts, and with the improved machinery, much of which is of special design, can be seen nowhere else in the world, the work of preparing meat for shipment has been perfected to such an extent that in any one of the large packing houses a hog can be killed, dressed and ready for cutting up in less than four minutes, while the largest beef carcass can be similarly disposed of in from 8 to 12 minutes. —Boston Herald.

Uniforms in War Time.

During the first year of the Civil War there was nothing in the pomp and panoply of glorious war which excited the wonder and amusement of foreigners as the variegated uniforms to be seen at the capital. Although everybody knew that the Federal uniform was blue, it was the rarest thing to find absolute acquaintatance in this central idea. The Bungtown Rangers, Pigwacket Hornets, the Skidaddale Zouaves, as the case might be, all marched complacently in some uniform evolved from their untutored fancies and patriotic intentions. The grotesque combination of green, blue or yellow, with stripes of all kinds and gold braids and knots, and queer copper discs stuck anywhere, brass plates bestowed indiscriminately borne by men who brushed their eyebrows against the grain or flurried their mustaches in unconscious obedience to King Henry's exhortation, were, indeed, a marvel to European officers.

The Confederates, while standing to their colors (Confederate gray) in the main, still had their own variations as off-color organizations. Indeed, rumor had it that a Highland regiment was disporting its bare legs somewhere in South Carolina, where the population was largely Scottish, and zouaves galore swaggered baggily through Louisiana, their ancestors being largely French. But the most eccentric departure from color usage was beheld in the first battle of Bull Run, where several prisoners were found to be clad in a coarse fabric of blue and white stripes, which on close inspection, proved to be common bed ticking. The fabric of such apparel for summer wear was obvious, it being strong, light and not likely to show dirt. By common consent these men were call the bedtick zouaves—New York Sun.

Transplanting Teeth.

"Much is said and written about the transplanting of teeth," said a well known and popular dentist to a Star reporter, "and there are many things in favor of the theory and practice, but so far such operations are not always attended with success. With careful handling may be two successes will occur in each five attempts. That in itself is a great deal, to those who get a solid, healthy natural tooth in the place of a decayed old snag, but more is demanded. I can give the names of lots of people in this city who now have good healthy teeth where they had before very bad ones. In such matters it is only fair to refer to successes, not to the failures. No dentist who thinks anything of his reputation will guarantee any of his results. There are so many uncertainties about the matter that nothing can be guaranteed. My best success has been in taking out the tooth and filling it carefully and then putting it back. Hundreds of such operations have proved perfectly successful. Getting a tooth from the mouth of another, however, is uncertain."—Washington Star.

Size of a Spider's Thread.

Leeuwenhoek, the first microscopist, wrote in 1685 as follows. "I have often compared the size of the thread spun by full grown spiders with a hair of my beard. I placed the thickest part of the hair before the microscope, and from the most accurate judgment I could form, more than a hundred of such threads placed side by side could not equal the diameter of one such hair. If, then, we suppose such a hair to be of a round form, it follows that 10,000 threads spun by the full grown spider when taken together will not be equal in substance to the size of a single hair. To this if we add that 400 young spiders, at the time when they begin to spin their webs, are not larger than one full grown one, and that each of these minute spiders possesses the same organs as the larger one, it follows that the exceeding small threads spun by these little creatures must be still 400 times slenderer; and, consequently, that 4,000,000 of these minute spiders' threads cannot equal in substance the size of a single hair." —Microscope.

The notes of the Bank of England cost about one cent each.

The Dismal Swamp Can

Capitalists of Baltimore are engaged in an enterprise destined to have a marked effect upon transportation between the North and South. The scheme contemplates the general enlargement of the Dismal Swamp Canal and the restoration of that ancient waterway to something like its former importance as a means of bringing freight from the Carolina rivers into Chesapeake Bay, says Modern Machinery, of Chicago. In slavery days the Dismal Swamp was famous as the impenetrable region in which the fugitive slaves sought and obtained a secure refuge. It lies just south of Norfolk, Va., between Chesapeake Bay and Albemarle Sound, and directly west of Cape Hatteras, off which so many good ships have foundered in the last 250 years and so many souls have hastened to their account. This is the reason for the canal. It is but twenty-two miles long, from Deep Creek to Pasquotauk River, and will connect two inland seas less than fifty miles apart, but it will cut off, for shipping purposes, the most dangerous part of the Atlantic Coast from Charleston to New York. In 1763 General Washington explored the swamp, and with some knowledge of the sciences and civil engineering he made the first discoveries of importance about the region. He camped one night on the east shore and discovered that the mysterious lake was some twenty miles in circumference, and that it was situated "neither on a hollow nor a plain, but on a hillside," a phenomenon to be seen in the mountain bogs of Ireland. The lake was found to be in the middle of a swamp or bog thirty-five by over twenty miles in extent, and to comprise an area of over 1000 square miles. The whole region was literally a hillside, a slope that connected the two parallel coast plains of Southeast Virginia by a gradual rise of ten to twenty-five feet above the sea level within a distance of twenty miles.

The Struggle for Existence.

Here is a curious and pathetic incident observed on the Thames embankment by a correspondent of the London Daily News the other day, the counterpart of which, in some form may occasionally be witnessed in New York parks and other resorts for the homeless: "It is very early in the morning, when three men who had obtained the previous evening a thousand wrappers each to address, found themselves unable to raise the price of a lodging, and so as soon as the daylight was sufficient they began to work al fresco. Luckily they had pens and ink, and, squatted on a seat, they began to write, making a desk of their knees. More than once they were moved on, but they persevered and by 10 o'clock they each had done 500 of the 1,000, for which they received 1s 6d. apiece. They were then able to go to a lodging to finish their task, and have what no one will deny was a well-earned breakfast. This is only an instance of the hardships this most poorly paid class have to bear, but they take it philosophically—as one of the men said, "We are used to it.'"

New Idea in Eggs.

Thomas Hendricks, a farmer residing at Lisle, N. Y., recently sold a quantity of eggs to a family in Binghamton, who complained that they were almost worthless, owing to a strong taste of kerosene. He could not account for this, but when a bakery that he had been supplying refused to receive any more goods for the same reason, he began an investigation. He found that the chickens had eaten a quantity of corn left lying in the vicinity of two kerosene barrels. This gave him an idea, and he began to experiment. He confined three hens in a coop and fed them on corn that had been soaked over night in water strongly tinctured with extract of vanilla. The result was that the eggs could not be eaten, but when used in cooking imparted a delicate flavor to the cake or pastry, without the use of other flavoring. He took some of these eggs to the bakery, where they were tested and pronounced superior to anything in the flavoring line.

It Is a Fact.

Playing cards were invented in France for the amusement of the mad King Charles VI. By 1775, 428,000 packs had received the Government stamp in England.

Bells were introduced in Christian churches in A. D. 400.

The Prussian prayer book enjoins that the whole of the service, including the sermon, shall not exceed one hour.

In the Middle Ages pepper was one of the most costly spices, and in the thirteenth century the gift of a few pounds of it was considered a very handsome present.

One pound of gold may be drawn into a wire that would extend around the world.

Temporary warm weather houses may be constructed by setting posts in the ground, running weather boards horizontally, and covering roof, rear wall and ends with tarred felt. Leave front open.

FOR THE YOUNG FOLKS.

WISHING AND WORKING.

The boy who's always wishing,
That this or that might be,
But never tries his mettle,
Is the boy that's bound to see
His plans all come to failure,
His hopes end in defeat;
For that's what comes when wishing
And working fail to meet.

The boy who wishes this thing,
Or that thing with a will
That spurs him on to action,
And keeps him trying still
When effort meets with failure,
Will some day surely win;
For he works out what he wishes,
And that's where 'luck" comes in!

The "luck" that I believe in
Is that which comes with work,
And no one ever finds it
Who's content to wish and shirk.
The men the world calls "lucky"
Will tell you, everyone,
That success comes, not by wishing,
But by hard work, bravely done.
—[Eben E. Rexford.

JEWELS GROWING ON TREES.

Jewels growing on trees seems rather a freak of the fancy than reality. It is true, nevertheless.

Among the curiosities of tropical plant life are the pearls found occasionally in the cocoanut-palm of the Philippine Islands. These pearls, like those of the ocean, are composed of carbonate of lime.

The bamboo, too, yields another precious product, in the shape of true opals, which are found in its joints.

In each case, of course, this mineral matter is obtained from the soil.

The natives of the Celebes use these vegetable opals as amulets and charms against disease.

A LAKE OF BLACK INK.

There are lakes of mud and lakes of lava and salt-water lakes, but who ever heard of a lake of ink? Such a wonder exists in the wilds of Arizona. Moreover, it is hot ink. The water rises to within three or four inches of its level shores, and it is so deep that no bottom has ever yet been found. To the touch the water feels smooth and oily, and when it is in repose ashes and oily matter cover the surface half an inch thick. Although the water is jet black, yet it does not discolor the skin of a bather. The coloring matter seems to be held in suspension, and will adhere to a white cloth dipped in the lake. To the taste the water is warm, salt and bitter. To the bather the sensation is most delightful and exhilarating.

Millions of bubbles, formed by escaping gases, keep the surface at all times agitated, till it rolls, boils and foams as if ready to roll over its banks and escape. Whenever the neighboring volcanoes rage with anger the lake follows suit, and the sight of its maddened waters will not soon be forgotten.

STORY OF A CLEVER MONKEY.

No cleverer monkey ever lived than the ugly old Sally who died at the zoological gardens of London only a few years ago. Her keeper had spent an immense deal of time and patience in training her, and it was astonishing what she was able to do.

"Sally," he would say, putting the cup of milk, with a spoon tied to it, into her hands, "show us how you used to drink when you were in the woods." Upon which Sally stuck all her fingers into the milk and then sucked them greedily.

"Now," he continued, "show us how you drink since you became a lady," and then Sally used the spoon and took her milk in dainty little sips.

Next he picked up a handful of straw from the bottom of the cage and remarked, carelessly: "Here, just tear those into six, will you, all the same length?" Sally took the straws, and in half a minute the thing was done.

But she had not come to the end of her surprises yet.

"You're very fond of pear, I know," said the keeper, producing one out of his pocket and cutting it with his knife. "Well, I'm going to put some on my hand, but you're not to touch it until I've cut two short pieces and three long ones, and then you may take the second long one, but you aren't to touch any of the rest."

The man went on cutting his slices without stopping, and was quite ready to begin upon a sixth when Sally stretched out her hand and took the fourth lying along the row, which she had been told she might have. Very likely she might have accomplished even more wonderful things than these, relates Andrew Lang, but one cold day she caught a chill and died in a few hours of bronchitis.

A LIGHTHOUSE GIRL.

Gustav Kobbe writes a paper on "Heroism in the Lighthouse Service," for the Century. Mr. Kobbe says: Several of the violent storms that have whirled over Matinicus Rock have tried the fortitude of the little band of faithful watchers upon it. One of these watchers, Abby Burgess, has become famous in our lighthouse annals, not only for long service, but also for bravery displayed on various occasions. Her father was keeper of the rock from 1853 to 1861. In January, 1856, when she was seventeen years old, he left her in charge of the lights while he crossed to Matinicus Island. His wife was an invalid, his son was away on a cruise, and his other four children were little girls. The following day it began to "breeze up"; the wind increased to a gale, and soon developed into a storm almost as furious as that which carried away the tower on Minot's Ledge in 1861. Before long the seas were sweeping over the rock. Down among the boulders was a chicken-coop which Abby feared might be carried away. On a lonely ocean outpost like Matinicus Rock a chicken is regarded with considerable interest, and Abby, solicitous for the safety of the inmates of the little coop, waited her chance, and when the seas fell off a little rushed knee-deep through the swirling water, and rescued all but one of the chickens. She had hardly closed the door of the dwelling behind her when a sea, breaking over the rock, brought down the old cobble-stone house with a crash. While the storm was at its height the waves threatened the granite dwelling, so that the family had to take refuge in the towers for safety; and here they remained, with no sound to greet them from without but the roaring of the wind around the lanterns, and no sight but the sea sheeting over the rock. Yet through it all the lamps were trimmed and lighted. Even after the storm abated, the reach between the rock and Matinicus Island was so rough that Captain Burgess could not return until four weeks later.

A GENEROUS LITTLE PRINCESS.

A little anecdote of Queen Victoria's childhood, told by Alfred Story in Quiver, shows that the qualities which have so endeared her to her subjects as queen in a long and prosperous reign were inherent and made her beloved when she was yet a little princess.

When she was seven or eight years old this little lady was particularly fond of dolls, of which she was a lowed to buy a goodly number, always provided that she took good care of them, washing and dressing them herself, and supplying them with the neatest and most becoming clothing. The clothing she bought with money earned by steady application to study.

On one occasion she took a great fancy to a doll displayed in a shop near her home. Unfortunately she had spent her allowance for the month, and no more would be due for a fortnight, but the princess was not discouraged. Having explained the matter at home, she was permitted to ask the shopkeeper to put the doll aside for her. The shopkeeper, who knew her, willingly consented, and the little lady felt that the doll was safe.

It was a happy day when, with six shillings in her hand, she went to the shop after the treasure. The money was paid and the doll handed over to its new mistress, and then the child turned to the door. Before she could step outside, however, her eye fell on a miserable looking tramp, who opened his lips as if to speak to her, and then shut them again irresolutely. He stood aside to let her pass, a mute appeal in his sunken cheeks and quivering lips.

"Did you wish to speak to me?" asked the princess.

"I am very hungry," said the man, in a trembling voice. "If I were not ready to sink I would not ask for help."

"I am so sorry," replied the child. "I have no money, or else—"

His lips trembled forth a humble, "Thank you, lady," and he was shuffling off when the childish voice cried, "Stop." She stepped back into the shop.

"Oh, would you mind taking the doll back and keeping it for me a little longer?" she asked.

"Certainly I will take it back, and return you the money," was the reply.

The child took the money and turned to the door. She placed the whole of it in the hands of the starving man. He stared at it for a moment, and his eyes filled with tears.

"Please go quickly and buy something to eat," she said.

"Yes miss, I will, and may God bless you all the days of your life, and prosper you in everything you do," said the man. Then as he hobbled off he murmured, "If the Almighty made you a queen it would not be more than you deserve."

A Marriage Certificate in Rhyme.

A Dublin newspaper revives the following story of Dean Swift, which is a very characteristic one:

Once, while walking on the Phenix Road, Dublin, Swift was overtaken by a sudden thunder-storm. He took shelter under a tree where a party where sheltering also—two young women and two young men. One of the girls looked very sad, till as the rain fell her tears began to flow. The dean inquired the cause, and learned that it was her wedding day. They were on their way to church, and now her white clothes were wet, and she could not go.

"Never mind—I'll marry you," said the dean; and he took out his prayer-book and then and there married them, their witnesses being present; and, to make the thing complete, he tore a leaf from his pocket-book, and with his pencil wrote and signed a certificate, which he handed to the bride:

"Under a tree in stormy weather, I married this man and woman together; let none but Him who rules the thunder sever this man and woman asunder.—Jonathan Swift, dean of St. Patrick's."

The Kaiser's Quotations.

Emperor William of Germany recently gave a Bible to each of the two new churches in Berlin. On the fly-leaf of one of the books he wrote with his own hand this quotation from St. John: "Without Me ye can do nothing." In the other he wrote, "Obey my voice and I will be your God, and ye shall be my people," which he found in Jeremiah.—San Francisco Chronicle.

Siam's army is to be reorganized by Russian army officers, over a hundred officers having volunteered as instructors in answer to a circular from the war department. The King of Siam will select fifty from among them.

FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Gypsum With Ashes. Soaking Parsnip Seed. Sweet Corn for Feeding. Planting Potato Peelings, Etc., Etc.

GYPSUM WITH ASHES.

In all summer applications of gypsum it is better mixed with wood ashes. The reason appears to be that while both attract moisture, the ashes supplies the mineral element for making nitrate of potash, which is a very active manure. Gypsum alone on corn makes the soil too cold and may do injury rather than good. Yet for potatoes the gypsum alone will benefit the crop some. But even for this it is better mixed with ashes.

SOAKING PARSNIP SEED.

It is very hard to get parsnip seed to grow, probably because the dry, woody covering over the germ absorbs water very slowly. The seed needs so long a time to germinate that weed seeds which have been soaking in the ground all winter get the start and make it a difficult crop to care for. We have always found it an advantage to soak the seed until it was beginning to sprout. At first it should be put in water as hot as the hand can bear, and so keep it fifteen minutes. This will be enough to wet through the outside covering, and will thus hasten germination. When the seed is planted especial care should be taken to compact the soil tightly around it.—Boston Cultivator.

SWEET CORN FOR FEEDING.

There are a good many farmers who grow sweet corn for market who do not care to grow any other kind, because having only small places, if the two kinds are grown, there will be more or less mixed grains in the ears. What corn they cannot sell green they grind and feed to stock. The sweet corn dries down harder than will the corn whose carbon is starch rather than sugar. It is also much lighter than the field corn after its surplus of water was dried out of it. Sweet corn ground with the cob makes a meal that cattle and horses are very fond of when fed with cut feed. But as its weight is less than the field corn meal more must be fed to secure the same results. It is not more nutritious than common corn meal, if so much so, but it may be used sometimes to tempt the appetite of an animal that has been cloyed and thus restore digestion to its normal activity.

PLANTING POTATO PEELINGS.

There is no temptation to potato growers to economize by planting potato peelings for seed while potatoes are so cheap as they have been this year and last. Yet very good crops have been grown that way, and there are growers who believe that for a very early crop the peelings cut into pieces having one or two vigorous eyes on each set, will bring new tubers sooner than will sets cut through whole potatoes. The truth seems to be that the potato peeling is apt to be pretty well dried through when planted in cold, moist soil early in the spring, and it therefore starts to growing at once. The thick piece of potato especially if fresh cut, is moist, and this with the moisture of the soil keeps the potato germs from starting until both soil and seed have dried. When a piece of dried potato peeling comes in contact with moist soil it absorbs water and thus swells itself, while to some extent drying the soil in contact witd it, also introducing some surface air and thus making the soil warmer.

FEEDING CALVES FOR COWS.

When calves are intended to be grown for cows it is a great mistake to feed them so heavily as to increase the tendency to fatten. Often this can be seen at birth in the thick bull like neck and heavy head. In such case it is best to fatten and sell to the butcher, no matter what stock may be its ancestry. But frequently also the calf which seems to be all right for a good milker is fed so heavily and on such fattening food that its tendency for life to produce fat and beef rather than milk and butter is fully established. To grow a good cow the calf should not be stunted. That will impair digestion, which is just as important for the cow as it is for a beef animal. Calves intended to be kept for cows should have much succulent food, with enough of the kind of nutrition required to make large growth. Then it will be well developed and come early into heat. It is always advisable to breed as early as possible. Then when the tendency to milk production has been fully established, good feeding with the best food will turn the product of the feed into the milk pail, where it will be most for the farmer's profit to have it.

THREE POINTS ABOUT ENSILAGE.

Says J. C. Early, of Virginia:—One of the easiest and cheapest ways to prevent ensilage spreading the silo is to get a lot of poles or scantling,

Abby, solicitous for the safety of the inmates of the little coop, waited her chance, and when the seas fell off a little rushed knee-deep through the swirling water, and rescued all but one of the chickens. She had hardly closed the door of the dwelling behind her when a sea, breaking over the rock, brought down the old cobble-stone house with a crash. While the storm was at its height the waves threatened the granite dwelling, so that the family had to take refuge in the towers for safety; and here they remained, with no sound to greet them from without but the roaring of the wind around the lanterns, and no sight but the sea sheeting over the rock. Yet through it all the lamps were trimmed and lighted. Even after the storm abated, the reach between the rock and Matinicus Island was so rough that Captain Burgess could not return until four weeks later.

A GENEROUS LITTLE PRINCESS.

A little anecdote of Queen Victoria's childhood, told by Alfred Story in Quiver, shows that the qualities which have so endeared her to her subjects as queen in a long and prosperous reign were inherent and made her beloved when she was yet a little princess.

When she was seven or eight years old this little lady was particularly fond of dolls, of which she was allowed to buy a goodly number, always provided that she took good care of them, washing and dressing them herself, and supplying them with the neatest and most becoming clothing. The clothing she bought with money earned by steady application to study.

On one occasion she took a great fancy to a doll displayed in a shop near her home. Unfortunately she had spent her allowance for the month, and no more would be due for a fortnight, but the princess was not discouraged. Having explained the matter at home she was permitted to ask the shopkeeper to put the doll aside for her. The shopkeeper, who knew her, willingly consented, and the little lady felt that the doll was safe.

It was a happy day when, with six shillings in her hand, she went to the shop after the treasure. The money was paid and the doll handed over to its new mistress, and then the child turned to the door. Before she could step outside, however, her eye fell on a miserable looking tramp, who opened his lips as if to speak to her, and then shut them again irresolutely. He stood aside to let her pass, a mute appeal in his sunken cheeks and quivering lips.

"Did you wish to speak to me?" asked the princess.

"I am very hungry," said the man, in a trembling voice. "If I were not ready to sink I would not ask for help."

"I am so sorry," replied the child. "I have no money, or else—"

His lips trembled forth a humble, "Thank you, lady," and he was shuffling off when the childish voice cried, "Stop." She ste, pe' back into the shop.

"Oh, would you mind taking the doll back and keeping it for me a little longer?" she asked.

"Certainly I will take it back, and return you the money," was the reply.

The child took the money and turned to the door. She placed the whole of it in the hands of the starving man. He stared at it for a moment, and his eyes filled with tears.

"Please go quickly and buy something to eat," she said.

"Yes miss, I will, and may God bless you all the days of your life, and prosper you in everything you do," said the man. Then as he hobbled off he murmured, "If the Almighty made you a queen it would not be more than you deserve."

A Marriage Certificate in Rhyme.

A Dublin newspaper revives the following story of Dean Swift, which is a very characteristic one:

Once, while walking on the Phenix Road, Dublin, Swift was overtaken by a sudden thunder-storm. He took shelter under a tree where a party where sheltering also—two young women and two young men. One of the girls looked very sad, till as the rain fell her tears began to flow. The dean inquired the cause, and learned that it was her wedding day. They were on their way to church, and now her white clothes were wet, and she could not go.

"Never mind—I'll marry you," said the dean; and he took out his prayer-book and then and there married them, their witnesses being present; and, to make the thing complete, he tore a leaf from his pocket-book, and with his pencil wrote and signed a certificate, which he handed to the bride:

"Under a tree in stormy weather, I married this man and woman together; let none but Him who rules the thunder sever this man and woman asunder.—Jonathan Swift, dean of St. Patrick's."

The Kaiser's Quotations.

Emperor William of Germany recently gave a Bible to each of the two new churches in Berlin. On the fly-leaf of one of the books he wrote with his own hand this quotation from St. John: "Without Me ye can do nothing." In the other he wrote, "Obey my voice and I will be your God, and ye shall be my people," which he found in Jeremiah.—San Francisco Chronicle.

Siam's army is to be reorganized by Russian army officers, over a hundred officers having volunteered as instructors in answer to a circular from the war department. The King of Siam will select fifty from among them.

FARM AND GARDEN.

Items of Interest on Agricultural Topics.

Gypsum With Ashes. Soaking Parsnip Seed. Sweet Corn for Feeding. Planting Potato Peelings, Etc., Etc.

GYPSUM WITH ASHES.

In all summer applications of gypsum it is better mixed with wood ashes. The reason appears to be that while both attract moisture, the ashes supplies the mineral element for making nitrate of potash, which is a very active manure. Gypsum alone on corn makes the soil too cold and may do injury rather than good. Yet for potatoes the gypsum alone will benefit the crop some. But even for this it is better mixed with ashes.

SOAKING PARSNIP SEED.

It is very hard to get parsnip seed to grow, probably because the dry, woody covering over the germ absorbs water very slowly. The seed needs so long a time to germinate that weed seeds which have been soaking in the ground all winter get the start and make it a difficult crop to care for. We have always found it an advantage to soak the seed until it was beginning to sprout. At first it should be put in water as hot as the hand can bear, and so keep it fifteen minutes. This will be enough to wet through the outside covering, and will thus hasten germination. When the seed is planted especial care should be taken to compact the soil tightly around it.—Boston Cultivator.

SWEET CORN FOR FEEDING.

There are a good many farmers who grow sweet corn for market who do not care to grow any other kind, because having only small places, if the two kinds are grown, there will be more or less mixed grains in the ears. What corn they cannot sell green they grind and feed to stock. The sweet corn dries down harder than will the corn whose carbon is starch rather than sugar. It is also much lighter than the field corn after its surplus of water was dried out of it. Sweet corn ground with the cob makes a meal that cattle and horses are very fond of when fed with cut feed. But as its weight is less than the field corn meal more must be fed to secure the same results. It is not more nutritious than common corn meal, if so much so, but it may be used sometimes to tempt the appetite of an animal that has been cloyed and thus restore digestion to its normal activity.

PLANTING POTATO PEELINGS.

There is no temptation to potato growers to economize by planting potato peelings for seed while potatoes are so cheap as they have been this year and last. Yet very good crops have been grown that way, and there are growers who believe that for a very early crop the peelings cut into pieces having one or two vigorous eyes on each set, will bring new tubers sooner than will sets cut through whole potatoes. The truth seems to be that the potato peeling is apt to be pretty well dried through when planted in cold, moist soil early in the spring, and it therefore starts to growing at once. The thick piece of potato especially if fresh cut, is moist, and this with the moisture of the soil keeps the potato germs from starting until both soil and seed have dried. When a piece of dried potato peeling comes in contact with moist soil it absorbs water and thus swells itself, while to some extent drying the soil in contact with it, also introducing some surface air and thus making the soil warmer.

FEEDING CALVES FOR COWS.

When calves are intended to be grown for cows it is a great mistake to feed them so heavily as to increase the tendency to fatten. Often this can be seen at birth in the thick bull like neck and heavy head. In such case it is best to fatten and sell to the butcher, no matter what stock may be its ancestry. But frequently also the calf which seems to be all right for a good milker is fed so heavily and on such fattening food that its tendency for life to produce fat and beef rather than milk and butter is fully established. To grow a good cow the calf should not be stunted. That will impair digestion, which is just as important for the cow as it is for a beef animal. Calves intended to be kept for cows should have much succulent food, with enough of the kind of nutrition required to make large growth. Then it will be well developed and come early into heat. It is always advisable to breed as early as possible. Then when the tendency to milk production has been fully established, good feeding with the best food will turn the product of the feed into the milk pail, where it will be most for the farmer's profit to have it.

THREE POINTS ABOUT ENSILAGE.

Says J. C. Early, of Virginia:—One of the easiest and cheapest ways to prevent ensilage spreading the silo is to get a lot of poles or scantling, three or four inches in diameter, and bore two 1 1-2 inch holes near both ends and at right angles, then drive oak pegs 12 inches long through the holes, so the pegs will project an equal distance out each side. Have the poles a little shorter than the width of the silo, and place them in the silage as cut, and when most needed.

The best silo floor is made by putting the sills on oak blocks sunk two feet in the ground, or stone pillars (not solid walls), having them high enough to raise the sills some inches off the ground. Then fill up for three or four inches above the sills with stone, and on top of the stone two inches of dry clay pounded hard and smooth, letting the clay be a little higher near the sills. Fixed in this way quite a stream of water can run under and off without affecting the silo or contents.

About distance for planting ensilage corn. Last year I planted the usual distance for grain and some much closer for ensilage. To my surprise I found the yield about equal in each case, with the very decided advantage that on that planted the usual distance the blades were very large and grew to the ground, while on the corn planted close for ensilage the blades below the ear were dried up, and mostly blown off. Also there is many times as much corn on the wide planted. The land is very rich in both lots.

EXTRA WORK PAYS BEST.

It never pays to shirk work on the farm. Nature cannot be cheated. It is always the farmer who does his work promptly, and who neglects no point necessary to make a good crop, who succeeds. There is no money made by growing poor crops. In most cases, he who merely plows and sows, without manuring, does a great deal of work for nothing. "Let him that ploweth, plow in hope," said one great apostle in olden time. We have often thought that this is the best possible motto for the farmer. It means that everything, before and after plowing, shall be all that labor and skill can give to make the harvest a success. It is a sad confession that the old-time farmer made that his crop did not turn out as well as he expected, and he always knew it wouldn't. No farmer, coworking with nature, ought to expect failure. Seed time and harvest do not fail to those who do their part of the contract. If they do fail in everything, despite the best care, it means that the locality where this often occurs was not meant for farming purposes. If it is fit for farming, the season will be right to make a success of something. —American Cultivator.

POULTRY NOTES.

Clean the poultry house daily and during warm weather, and spray a little crude carbolic acid over the floor.

Don't give the hens corn during warm weather. In fact, if you have range the hens will gather their own living.

Market all the early chickens not wanted for next year's breeding. If you caponize any, let it be the later hatches.

If done hatching send the useless rooster to market or to the pot instanter. Overfat and broken-down hens, ditto.

Use plenty of air slaked lime. All bare spots should be covered. Grass and lime are the two greatest purifiers of the poultry yard.

Don't send dirty eggs to market. Take a clean rag and wash them and you will be rewarded for the work when the returns are received.

Lack of variety will sometimes cause the hens to lose appetites. When they do not appear to relish their food, give them a change of diet.

Give the hens a rest. Abandon eggs and live on vegetables. The moulting season will be more easily passed and you will have plenty of eggs early this fall.

When the hens are slow to lay, one of the best invigorators is a mess of lean meat twice or three times a week. About an ounce for each hen is sufficient at a meal.

The chicks are now out of danger. Feed as early as possible in the morning and give them their freedom. If at daybreak, so much the better. Bugs and worms disappear after sunrise.

Be careful that all chicks are given an equal share. If some fail to get a full supply of food they will develop runts. Don't feed the large and small ones together. Have separate coops for each size.

Fresh water and shade must be provided for the fowls. If you have not done so, it is not too late to plant a patch of sunflowers. They grow rapidly and make a nice shade during August and September.

Any enterprising hen mother can provide one meal a day for herself and children at this season from the insects and grasses that abound. Feed night and morning and give free range. This course will make hardy chickens, provided, of course, the ranges aren't overstocked.

CURIOUS WEAPONS.

The Boomerang and Its Origin—The Bolero and the Knobkerrie.

Savages all over the world possess weapons which are curious, and generally more or less effective. These peculiar instruments of offence and defence may be divided, says the London Standard, into two classes—those which are merely curious forms of ordinary weapons, representing the eccentricities of the savage mind, and those which are curious from the fact that they are constructed upon complicated scientific principles—principles of which the savages who use them cannot be expected to know anything, and which, indeed, have only been discovered by European scientists within the last couple of centuries. Perhaps the most curious of these is the boomerang. We all of us know about this weapon; in fact, we mostly know more about its powers than the aborigines of Australia, who are the only people who use it. Among other things which we know about it is that it may be thrown at an object, will hit it, and, after having laid it low, return to its owner, like a retriever. The aboriginal Australian is not so advanced as this. The poor fellow does not know that it ought to return to him after he has killed an emu or kangaroo with the weapon; he goes and fetches it. In fact, it is only when the savage has missed the object aimed at that the boomerang will return to him—were it to touch a leaf even, it would be sufficient to turn the course of the weapon. But how came those savages by the weapon? Did the earth-eating aborigines of Australia—a race whose idea of numbers does not extend beyond three, for they count "one, two, three, many"—invent it? Or is the boomerang but the remains of an old, long-forgotten civilization—a civilization as old as that of the Chinese? Nobody but the aboriginal Australian can use this weapon nowadays, but that it has been known before, and that by a race which was not only civilized, but had attained to a considerable degree of scientific knowledge, there is no room to doubt, for in Egyptian sculpture that are many unmistakable representations of it in hunting scenes. It is the same weapon exactly, curved to the same angle, curved on one side, and flat on the other, and was used in the same way. Still it requires a very imaginative mind to connect Australia and Egypt, so that the problem of how the boomerang came to be used by the Australian savage is one the solution of which must probably remain a secret for all time.

A weapon which is constructed on the principle of centrifugal force has been in use among the Indian tribes of South America from time immemorial. Denuded of superficial aspirates, the name of this weapon sounds something like "bolero," and it consists merely of a strip of rawhide, about ten feet long, to each end of which is attached a heavy leaden or stone ball. When the thrower wishes to use it, he grasps the thong in the middle with his finger and thumb, whirls the weights around his head two or three times, and then, with a peculiar twist, flings it at its mark in such a manner that the two balls travel parallel to each other, with the thong stretched out between them. In this way the "bolero" makes its journey through the air until it reaches the object at which it is thrown. Then the centre of the strip of hide strikes the object aimed at, and the balls, continuing to move forward, but being stopped by the thong, coil round the legs or neck of the victim, in the same way as a whip lash will coil around a stick, on a blow being made at it—and so hobbles or strangles the animal until the pursuer comes to release it.

This form of "bolero" is mostly used for catching semi-wild animals on the Pampas; but there is another variety of the weapon which is used for hunting and in warfare, and which is far more formidable. It is the same as that described above, only it has an addition in the shape of a third ball, which is attached to the middle of the thong by another shorter string, about a foot in length. When this is thrown, the short string ball travels in advance of the others, and strikes the animal at which the missile is aimed on the head with great force, after which the other balls wind round its neck or legs, and "make assurance double sure." On a somewhat similar principle is the knobkerrie which the Zulus and Kaffirs use. It consists of a short stick of light wood, at the end of which is a very heavy ball of wood or metal. Still, simple as this weapon may appear, it is not one to be dispised by any means, for in the hands of a skilful thrower, it becomes almost as formidable as the "bolero." A Zulu is able to throw it with wonderful accuracy up to a distance of seventy-five yards, and then woe betide the head with which it happens to come in contact. Should it belong to a human being, he will certainly make an abrupt exit from this world and appear in the next without precisely knowing what it was that sent him there.

Correctness as to the sex of a child in a sworn statement was held to be immaterial by a justice of the Queen's Bench recently on a motion to squash an affiliation order.

GIRL SHIPS AS A SAILOR.

Plan of a Couple to Save Enough for a Start in Australia.

Leaving a comfortable situation in a home in an English provincial town, a woman puts on man's clothes and ships as an able seamen, with her betrothed husband, for an Australian colony, willingly undertaking the hardships of a six months' voyage in order to pass the remainder of her life in banishment with the man she loved, because of inexorable English law.

This is the strange story of Nancy Clifford, now Nancy Anderson, if all be well with her. This romantic story of the sea comes from George Cann, mate of the British ship Hawkesdale, which after making a voyage from England to Australia, put in to Portland, Oregon, for a return cargo of wheat. Anderson married Nancy Clifford's sister. They lived rather unhapily in their English home. At last she died. He did not then fall in love with his sister-in-law. He had been in love with her ever since he had saved her from drowning. An English law is that a man cannot marry his deceased wife's sister.

Anderson had followed the coasting and trading vessels. He hated to leave his country, and so did Nancy Clifford. They were poor and Australia was many thousand of miles away. To that place or some other land they must go. That little money they had must be saved for a beginning in the new world, so Nancy preferred to become a sailor rather than be left behind, and then, if they never reached port, they would perish together.

How Anderson managed to ship an untrained, boyish-looking fellow as a seaman on the Hawkesdale is a matter which can be explained only by him. It is sufficient to say that it was done, and after the hardship of the long voyage they landed in Australia and secured their discharge from the reluctant captain. On the forward deck of the ship Hawkesdale the crew used to talk about the attachment of two very ordinary-looking sailors for each other. To satisfy them, Anderson told them that when his mate was younger he had saved his life.—San Francisco Chronicle.

Ransacking Tombs of Kings.

A correspondent of the Paris Temps gives some interesting details of the ransacking of the palace of the ex-Queen of Madagascar after her departure for the Island of Reunion. Considerable quantities of perfumery, textiles of all kinds, bonnets, umbrellas, china, glass, etc., were found, which evidently came from the customs at the time when import duties were levied in kind. In her drawing and bedrooms were several autograph letters from the German Emperor, the Queen of England and the King of Italy, and enormous addresses, twelve feet long, sent by ladies of Bristol and Edinburgh. Photographs of several Frenchmen who have recently played an important military or political part in Madagascar were likewise found, and some of the inscriptions have excited no little curiosity. In terra-cotta jars underneath were discovered nearly $40,000 in Mexican piastres and demonetized silver. Other discoveries of treasure are hoped for. Several days were occupied in the transfer to a special place of the scattered remains of the old kings of Antananarive and Imerina. The tombs were opened in the presence of representatives of all the noble castes, summoned for the purpose. The coins contained in them tend to prove that the origin of royalty in Imerina is less ancient than was imagined—two and a half centuries at the utmost. The bodies of two old kings had been placed in coffins formed of sheets of silver hammered out, but not soldered. This metal, unknown in Madagascar, is supposed to have been obtained from five-franc pieces melted down. Many bracelets of massive gold were found, as well as silver coats of mail, and Arab and Indian jewelery, all of very poor artistic work. Soon the tombs of the kings at Ambohimanga and Ilafi will be opened and the remains brought to Antananarivo. At Ambohimanga are three massive silver coffins.

Human Hair Growths.

Professor Exner, of the Vienna Medical Society, treating the function of the human hair, remarks upon the somewhat curious fact that writers hitherto occupied themselves mainly with the speculations as to the circumstances which have led to man becoming denuded of his hair covering—the hairs, however, being not only degenerated organs, but having also to fulfil some functions. There is a group, says the Professor, such as the eyelashes and the eyebrows, for instance, which are sensorial organs, possessing tactile functions and, moreover, serve as a protection to the eyes; and in places where two integumentary surfaces are in contact they act as rollers and facilitate the gliding of the integumentary surfaces on each other. Further there is no doubt that the hair of the scalp protects the head against external cold, and also prevents the loss of heat through the very low conductivity of the hair cylinders and of the cushion of air intermingled with them.

SOUTH AMERICAN COWBOYS.

Most of Their Time is Spent on the Backs of Wild Mustangs.

The gaucho, or South American cowboy, is in many respects a duplicate of the rapidly disappearing cowboy of our Western plains, differing only from him in habits and customs that climate and surroundings are responsible for, and possessing many good qualities that are scarcely noticeable to casual strangers who happen to meet him for a few hours at the stations and small towns. At such times he is usually drunk, unamiable, slouchy, and unattractive. He is out of his element, and a judgment based upon such observations is unjust. In his home on the plains his picturesque appearance and his really fine accomplishments are set off to better advantages.

The cowboy, the shepherd, and the plainsman are all classed as gauchos, but the first is more typical of what the word means. His life is spent on horseback, riding over the endless stretches of plains, corraling his cattle and branding them, and occasionally hunting the wild panthers, ostriches, or guanacos. His saddle is the most uncomfortable seat in the world, but he strides it with the ease and grace of an Indian. The wild mustangs of the gauchos are fully as ungovernable as many on our Western plains, and they shy right and left, rear on their hind legs, and even roll on the ground to shake their riders. But once in his saddle, the cowboy is not to be dislodged by man or beast. He will remain in the saddle from the break of day to the going down of the sun, stopping only long enough to eat and drink.

The diet of the gaucho is not noted for its variety, but of its kind it is good. The morning meal is characteristic of the Spanish-American people—a cup of mate, the tea herb of Paraguay, and a fair substitute for coffee, a piece of cold meat and a pipe of tobacco. With this slim repast over, the cowboy is ready for a ride of several hours in the keen morning air. The midday meal is not much more elegant, either in variety or quantity; but when night comes he is ravenously hungry, and a course dinner will be prepared. This consists of some good fresh meat—the flesh of a panther, rabbit, partridge, or steer—a cup of the inevitable mate, the wild berries of the plains, and possibly an ostrich egg. In the course of the day the gaucho is very apt to startle up a mother ostrich from its nest, and after killing the bird he will return and look for the nest.

One egg holds enough meat to make a big omelet, and when properly cooked it has a peculiar and delicious flavor. One end of the shell is broken, and then the egg is placed on the hot coals to cook. In a few minutes the egg is ready for eating, and the cowboy digs out the meat with his knife and gulps it down greedily. The mother ostrich is meanwhile skinned, and the feathers are carefully preserved until some time when the gaucho goes to some settlement. There he receives fifty cents a pound for them, with which he buys a few trinkets for his squaw wife and a stock of rum.—Scienitific America.

PARCHED AUSTRALIA.

Cessation of Rains Has Caused Enormous Losses.

Australia, the great land of anomalies and of violent vicissitudes, the alleviations being almost perpetual sunshine and a plethora of mutton, is still undergoing the inflictions of some of its best producing districts of a severe drought. There have already been two years of endurance, and that period has witnessed a reduction in the number of sheep by about 18,000,000, plus the natural increase. It has also witnessed two successive harvest failures in Victoria and South Australia, the yield being about two-fifths of the sufficiently scanty averages of normal seasons. A third year of drought has been entered upon, notwithstanding the coastal regions up to the dividing range in Victoria have lately had more than an average rainfall.

Beyond the dividing range, throughout the the whole basin of the River Murray (the most important river in Australia), and in the Riverine (an extensive fertile country lying between the Murray and the Murrumbidgee) conditions are assuming a Sahara-like aspect. For the first time in a quarter of a century sheep have to be removed from good "stations" (ranches), and where they cannot be moved the dwarfed trees peculiar to the country are being cut down in the hope of affording some sustenance to the poor animals, everything else being eaten up. The wheat-growing districts of the Riverine, which during the last two seasons have been irregular in returning fair yields, are baked up, and the area will be greatly restricted this year. In the north, northeast and west, of the colony of Victoria the conditions are altogether unpropitious for wheat sowing, but in the northwest a good area has already been got in. In South Australia prospects are bad. So far, then, the outlook for the next Australian's wheat crop is unpromising. Plenty of time remains, however, for a complete transformation to take place.—Bradstreet's.

CHILTON COUNTY CALL.

M. E. TAYLOR, Editor and Prop.

Published every Friday at Thorsby, Alabama.

Subscription price, $1.00 per year in advance.

Entered at the postoffice at Thorsby, Ala., as second-class matter.

NOTICE TO THE PUBLIC.

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation, which may appear in the columns of The Call, will be gladly corrected upon its being brought to the attention of the publisher.

E PLURIBUS UNUM.

As will be seen in one of the following quotations, the saintly sky pilot of the Sheffield Reaper has been hit and hurt. We don't propose to quote the stereotyped old saying, that "the galled jade winces," for we don't believe that Brer Comstock is a "jade," though "we feel to believe"—as our Methody brethering would say—that he "winces" like all Halifax.

Here is one of his first breaks, since we dropped in last to diagnose his case:

Henry C. West, late of the Oakman News, has leased the North Alabamian, and takes charge of the office this week. T. R. Gordon retires from the torpid.—Florence Herald.

Torpid? Torpid? That stumps us, and exposes our ignorance again. Will the Thorsby infant rise up in its wisdom and explain to what part of the profession the "torpid" pertains? We would ask Editor Bunting, but he's so busy making his wheels go round.—Sheffield Reaper.

"The Thorsby infant" proceeds to rise up and do honor to the Sheffield valetudinarian, by answering his inquiry. Torpid means numb, sleepy, or, in the vernacular of the Sunny South, no 'count. "The part of the profession to which the 'torpid' pertains," is best illustrated by the old man of the Reaper himself.

Brer Comstock wants to know whether it is proper to say the United States "is" or "are." As that question is now "on" between the Birmingham Times and The Illustrated South, of Birmingham, we personally prefer to postpone our decision in regards to the matter until one or the other of those two giants fall in battle. But, in respect to the other question that the High Priest of the Reaper asks us, in the same paragraph, we will make answer—question as to the meaning of E Pluribus Unum: It means, as any fool schoolboy ought to know, "Many in one."

To illustrate: Brer Comstock seems to think that he has the brains of many men in his one, individual head, but people differ and speak of him as an "is" instead of an "are," and therein is his difference from the United States.

The valetudinarian of the Reaper also criticises the manners of this infant, as he is pleased to term the Call, but looking through the files of this per we fail to see where we have displayed any manners at all that were not "good" and up-to-date. But, let us pause and ponder. We really do come across a paragraph here and there, in which we made a little bit of a good-natured hit at a certain preacher by the name of Comstock, whose eloquence towers to the stars, will ring down through all the centuries to be, and will save even the vilest sinner of his congregation, when he and they appear before the Judgment Throne! At least, his eloquence will do this much, if we are to judge by what he says of it himself in his Reaper. Perhaps this was a departure from etiquet on our part, but if it was, Brer Comstock will just have to make the best of it.

SPEER, THE UNSELFISH.

Judge Emory Speer, a prominent Georgia Mugwump, has come out in favor of life-tenure in office for himself, and every other State Judge in the Union.

He is mightily afraid of the people, too. He doesn't want 'em to have a voice in saying who shall, or who shall not wear the ermine. He says:

"A Judge should be nominated by the Governor and confirmed by the State Senate."

A very nice arrangement, that—for the judicial aspirants who have a pride in the quarters specified. He went on to bemoan the fact that men on the State bench were paid a salary of "only a few cents more than $5 per day!"

Poor, starving fellows! "Only a few cents more than $5 per day!"

Some may think the public ought to pass 'round the hat, and help the poor fellows out, but we don't. We know of struggling lawyers who are just as honest and just as able as any State Judge in the land who would be glad to serve the public in a judicial way at half the sum now paid Speer or any of his kind.

The Elwood, Ind., Call-Leader says: "There are two crimes beside murder for which the penalty should be death—train wrecking and rape."

There is no crime under the blue pavilion of the sky "for which the penalty should be death." The rotten old Mosaic law says to the contrary, but who cares for Moses or his laws in this year of our Lord, 1897? Who cares for the accursed old Common Law of Great Britain, that sent men, women and children to the gallows, two centuries ago, for 137 misdemeanors? As far as we are personally concerned, we wash our hands white, clean and immaculate of every murder that is committed by society—yes!

That Middle of the Road man, Tom Watson, has come out in favor of the A. P. A. This settles it. We always knew the inspired idiot would find his level at last, but we hardly thought it would be so degraded a level as that.

A STARTLING DISCOVERY.

Simple Process of Converting Ore Into Steel.

Mr. Charles W. Stanton, a young man of Mobile, Ala., Thursday exhibited ingots of soft and hard steel, which he asserts he had converted direct from crude hematite ore of the Birmingham, Alabama, mineral district by a single furnace manipulation and without the aid of fluxing. His specimens exhibit a fine, close grain, are easily and permanently magnetized, and withstand all the tests of chemical analysis.

The city was startled recently with the announcement that he had turned into cash nearly a quarter of a million of dollars of active capital. It transpires that these transactions were for the purpose of securing capital to perfect a system of patents upon a process which, if his claims be correct, will revolutionize the iron trade of the world in a manner more startling even than has resulted from the success of Sir Henry Bessemer's pneumatic process.

The possibilities of such a discovery as Mr. Stanton now claims are so amazing that they are received with skepticism and ridicule, such as assailed Sir Henry Bessemer when the English inventor in 1856 announced the result of his process to the British Institute. Conservative men of science here, however, believe that Mr. Stanton has found the philosopher's stone.

UNCLE SAM'S MINT.

Millions Idly Lying in Its Vaults at New Orleans.

Mr. Caleb Whitehead, assayer of the mint department in Washington, D.C., who arrived in New Orleans about ten days ago to count the money in the United States mint, completed his count Thursday and left for Washington Friday evening. Although Mr. Whithead does not make any official report until he returns to Washington, it is understood that he found all the moneys deposited in the mint correctly accounted for. The following sums, in round numbers, are now on deposit at the mint:

Standard silver dollars	$17,000,000
Gold coin	1,100,000
New fractional coin	30,000
Light weight fractional coin for recoining	350,000
Gold bars (value)	550,000
Silver bars (ounces)	1,250,000
Currency	30,000

ASSASSINATION IN KANSAS CITY.

The Slayer Pleads a Ruined and Degraded Home.

Dr. A. L. Bergers, one of Kansas City's foremost physicians, was assassinated on the street Thursday afternoon by John Schlegel, a grocer. Dr. Bergers was standing at Twelfth and Walnut streets, a busy section of the city, reading a newspaper. Schlegel approached from behind and fired two bullets into the doctor's back. Dr. Bergers was hurriedly taken to All Saints Hospital, where he died a few minutes after the shooting. Schlegel made no effort to escape. He was disarmed by men on the street, who gathered around him and his victim. The assassin asked one of the men whether Bergers was dead, and was told the doctor appeared to be alive.

"I am sorry I did not kill him," Schlegel replied, "for he has ruined my home."

Witnesses who were within a few feet of the two men when the tragedy occurred stated that as Schlegel began firing at the doctor he exclaimed wildly: "You assaulted my wife. I tried to get you before, but, d—n you, I'll kill you now."

When a man reaches our age when he has time to be gay, his liver refuses to let him.

SENATOR HARRIS DEAD.

IN THE MIDST OF FAMILY AND FRIENDS HE PASSED PEACEFULLY AWAY.

Outline of His Life and Public Services—Was the War Governor of Tennessee, and an Active Participant in the Great Struggle.

Senator Isham G. Harris, of Tennessee, died at his residence in Washington City a few minutes before 5 o'clock Thursday afternoon. The senator had been growing constantly weaker for several days past. There were times when he would rally slightly, which gave his family hope that he would be able to regain strength sufficient to be removed from the city, but his vitality had become too much exhausted to withstand the strain.

Thursday morning the senator revived somewhat, but only temporarily. During the afternoon he sank rapidly and passed away peacefully.

There were present at his bedside his son, Edward K. Harris, and the latter's wife; Representative Benton McMillan, of Tennessee; Miss Polk, a friend from Tennessee; and the members of the household where the senator had lived for some time. Another son, Charles S. Harris, had left the house a short time before death came. James E. Harris, residing in Tennessee, another son, was expected to arrive in the city Friday, and a fourth son, Isham G. Harris, Jr., was on his father's ranch and stock farm at Abilene, Texas.

HIS REMARKABLE CAREER.

None have been indentified with more of the history of this country than had Senator Harris. He had almost completed his seventy-ninth year, having been born in the year 1818, and first became a member of congress in 1849. His congressional career thus began earlier than that of any member of either house. Mr. Harris had, when he was elected to the national house of representatives, acquired considerable reputation in Tennessee, having the year previously served as a presidential elector on the Democratic ticket, and two years later been elected a member of the legislature. Mr. Harris represented the ninth Tennessee district in congress for two terms ending in 1853, when he declined a renomination. He then moved to Memphis, where he had since resided. Here he was engaged in the practice of law until 1857, with the interruption necessary to allow him to become a presidential elector in 1856. He was three times in succession before the war, beginning in 1857, elected governor of his State, and was serving in that capacity when the war broke out. He took a pronounced stand for the Southern Confederacy, and was known as one of the southern war governors.

He was often with the army in the field. He attached himself at different times to the staff of Gens. Albert Sidney Johnson, Beauregard and Bragg. Albert Sidney Johnson fell from his horse into Senator Harris' arms when he received his death wound.

After Lee's surrender Mr. Harris was one of a small party of political refugees who escaped to Mexico, going across country on horseback. Parson Brownlow, who had become military governor of Tennessee offered a large reward for his capture. He remained in Mexico for several months, going thence to England, where he resided until 1857, when he returned to Memphis and resumed his practice of law.

Mr. Harris was allowed to follow the pursuits of the private citizen until 1877, when he was elected to the United States senate defeating Hon. Mr. Hawkins. He has remained a member of the senate ever since and would have completed his twentieth consecutive year in that body on the 4th of next March if he had lived to that date. He had been four times elected to the senate, the last time in 1895 and his term would not have expired until 1901.

The State University.

If the tone of the State press is any criterion, the selection of Dr. J. K. Powers as President of the University seems to meet the approbation of the whole people of Alabama.

As President of the State Normal School at Florence, Dr. Powers displayed an energy and administrative ability that have no parallel in the educational annals of the State, and the result of his well-directed efforts has placed the State Normal in the very fore-front of schools of its kind in the South.

The friends of Dr. Powers, and the News feels honored in having been one from boyhood, believe that he will achieve a similar triumph in the management of the affairs of the State University.—Oakman News.

It is doubtful if a choice to any public position in Alabama ever commanded such universal commendation. So far as we are able to judge there has not been a discordant note from any quarter. Such confidence must be highly gratifying to President Powers. It certainly argues well for the University.

SOMETHING NEW

For the public in general to rest their eyes on. Our fine new stock of General Merchandise is very pleasing to the eye. New Goods, such as were never brought into Chilton county before. We have everything the housewife desires to do good cooking with. We have not only good, fresh groceries, but a fine line of Dry Goods, Hardware, Farm Implements and everything that can be expected in a first-class

SUPPLY STORE.

We are Money Savers for the people, "Low Prices and Good Goods" is our motto. All kinds of farm produce bought.

SOME HITS AND HAPPENINGS.

NEWS BOILED DOWN AND ADMINISTERED IN BROKEN DOSES.

The questions are often asked by strangers and others: "What do the people of Thorsby expect to do with their grapes, and can they raise enough to make it pay?" In answer to the queries we would advise the querists to write Messrs. J. H. McCary & Co., Birmingham, and find out the price they paid per pound to A. Malmgren, of this place for his grapes that he shipped them last week. Mr. Malmgren has a grapevine in his vineyard which is three years old and which was planted by a former owner of the place. From this one vine Mr. Malmgren picked 60 pounds of grapes this year. He has, also, 1,500 vines which were planted in May last year, from which he picked about two bushels this season.

During the past week our town has had the pleasure of counting with its guests Messrs. Mark Petrel and W. A. Lee and son, of Lucile, W. Va., who came South for the purpose of finding a more favorable location. They found what they were looking for, and expressed surprise at finding so rich and fertile a soil for fruit and farm products so near the mineral districts. Mr. Petrel purchased from the Concordia Co. a ten acre vineyard and Mr. Lee, Sr., bought, at the same time, a 40 acre farm near town. They will come South again in a few weeks and take possession of their new estates and build them a suitable home. Mr. Lee, Jr., will take a business course in Nashville or Birmingham this season.

The Hawkins Lumber Co., in Birmingham, is one of the most reliable firms in Alabama. They have everything the builder desires. Well seasoned lumber from the forests of Alabama and Georgia, sash, doors, blinds, casings, finishing lumber, stair work, cabinet work, office fixtures, church pews, pulpits, etc. Out of town purchasers will receive courteous treatment and get special low prices.

The young people of Thorsby have organized a society called "The Thorsby Literary Circle," and meet in the School House Friday evenings. Its objects are to work for the mutual benefit of all concerned, to gain the benefit of intellectual development, and to discuss questions of public importance. Its by-laws are based on the church organization constitution.

The weather is very favorable for crops of all kinds in Chilton county, and the vineyards of Thorsby are doing particularly well, though many of them are only a year old they are so far advanced that they need the same care that is usually given them in the second year.

Nels. Peterson is laying the foundation, this week, for a new store building, which he will use for a carpenter shop. Mr. Peterson has a reputation as a builder and carpenter, and will put up a building that our village will be proud of.

The cotton crop in Chilton county promises, contrary to expectation, to be an exceptionally good one. The stalk is very small, but the growth will all be in the bloom.

Held for the Murder of Thomas.

Zack Hollams, Chas. Clark and Joe Williams were Saturday bound over by Justice Benners, of Birmingham, Ala., for the murder of Jas. Thomas, colored. In default of $1,000 bonds they went to jail. The dead man and the defendants lived at Blossburg, near Birmingham. Last Thursday night an unknown negro entered Hollams' house and tried to assault his wife. She screamed and the negro fled. The next day Thomas stated that he could point out the criminal, and spent part of the day with a posse of white men looking for his man. The next morning his dead body was found in a gulch near town, and the negroes charged his death to the white men, believing they killed him on suspicion of him being the criminal. The testimony showed that the defendants were seen with Thomas near the gulch Friday night shortly before 7 or 8. Shots were heard there. The case has excited intense interest, as the negro's death almost provoked a race war at Blossburg. The negroes employed good counsel to prosecute the defendants and are delighted.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

The Call office is now prepared to do any and all kinds of printing. We have one of the best job printing plants in the State. All our material and presses are new and up to date. High grade work at low grade prices.

TROY STATE NORMAL COLLEGE.

The Commencement Exercises This Year Eclipsed All Former Efforts.

The decennial year of the State Normal College at Troy was undoubtedly the most prosperous in the history of that institution, and it is but natural that the commencement exercises this year should eclipse all previous efforts. The programme which was of unusual interest, was carried out in a manner that reflected much credit on the president, Dr. Eldridge, and the students.

On Saturday night Dr. E. R. Eldridge, president of the college tendered the graduating class a supper at his residence. This was quite a pleasant occasion and the evening spent was a fit token of the high esteem in which the class is held.

Dr. Eldridge being called on to respond to the toast "Ante-and-Post-Decennial Times in the College History," was full of his subject and gave an unanswerable defense of the 'College Rank and Character" of this training school, claiming it as a necessity to the wants of the Teacher's Profession and the State's needs." That the course of the college was as high as the best in the state and because of it, graduates fo every other college in the state were taking our "Professional Course," a thing they would not do if our institution were simple "College Preparatory," as some other institutions glory in. Dr. Eldridge said: "Let them make their courses of study small and glory in their brevity, and littleness—it is their right if that is all they can do; but we want to do something to lift the teacher's profession to a plain as high as the highest. If the physician should have a "College" course, why not the teacher? If a lawyer or preacher, why not the teacher that teaches them all? As long as you belittle the teachers' course and work, you belittle all who are taught. Elevate the teacher's course and study and you lift up the standard of education everywhere in the state.

Dr. Eldridge made an impassioned appeal to the board and faculty to sustain the college character and rank and to the new class to join the former classes in raising high the teacher's standard for the sake of the boys and girls of Alabama, now or to be, in the schools, to be taught, and board, faculty and alumnus cheered him to the echo, time and again, and stamped their approval on every sentence as it poured from his lips, ruddy and sometimes, even candescent.

The class of 1897 (29) showed very plainly that they drank in the sentiments of advocacy and defense of the State Normal College at Troy, built upon the "New Education" and "Free Public School Idea" and College Rank for our Teachers' Training Schools.

On Sunday morning, an immense crowd assembled at the opera house to hear Rev. J. L. Brownlee, pastor of the Presbyterian church, preach the commencement sermon which was pronounced by many as one of his best efforts.

On Monday the day was turned over to that noble band of sons and daughters, the College Alumni association. There was a most excellent turn out the hall being filled with members and friends. A most interesting programme, well prepared, was rendered.

At 8 o'clock at night the association was addressed by Hon. Chappel Cory, Private Secretary of Governor Johnston. His address was a masterpiece of thought, clothed in the purest English and as smooth and chaste as learning and talent could make it. He showed that he had completely grasped the broad subject of education in the line of its utility.

At the chapel exercises on Wednesday, seating room was at a premium. President Eldridge asked the students and professors to speak their sentiments in regard to the works and status of the college. The professors and a number of students spoke, the professors all agreeing that this had been the best and most satisfactory year's work since the college began, 1887.

Many students expressed themselves as highly pleased with the school, the work in general and the session as a whole. All the professors received their due thanks, but it could be seen in the mind of every pupil that there was a special love and admiration for that scholarly man, Dr. E. R. Eldridge, president of the college, who had been of so much assistance to all of them in their work. He is being appreciated for his deep devotion and ability to direct a student to get the most out of a thing.

Then followed the graduation of twenty-nine young people.

There have been thirty-six counties represented in the college attendance and nearly every other county upon extension course.

The summer school attracted many excellent students from various sections of Alabama and outsides and the grade of talent added was high indeed.

The scholarships issued by senators and representatives to this State Normal college, are bringing the cream of Alabama studentship. It is a grand feature of the college.

Pension Agencies' Order Revoked.

The order of President Cleveland, issued last February reducing the number of pension agencies in the United States from eighteen to nine, will be revoked by President McKinley within a few days, probably early next week. As the original order was not to go into effect until September, next, the only result of the revocation will be to continue in force the present arrangement, allowing all eighteen of the agencies to remain in operation.

NEWS OF THE WORLD.

CRUISERS AT TANGIERS TO ENFORCE AMERICAN RIGHTS.

More Strikers—Young Man Falls in a Hole Within a Cavern—A Thrice Afflicted Family—Fight to the Death in the Dark—Fatal Fires.

Treasury Statement.

Thursday's statement of the condition of the treasury shows: Available cash balance $235,313,129, gold reserve $142,062,813.

More Tennessee Strikers.

Two hundred miners employed in the Rhode Haver and Indian Mountain mines at Jellico have gone out on strike. The operators are willing to make no concessions and take matters coolly.

Many Insurgents Pardoned.

The Queen Regent, of Spain, has pardoned 108 Cubans who had been deported to the Spanish penal settlements at Ceuta Fernando and the Chafferine Islands. The men pardoned will be permitted to return to Cuba.

A Hotel Burned.

Fire early Thursday morning destroyed the Clarendon hotel, Millville, Mass., also two houses and two barns. Two tenements were badly damaged. Daniel Keogh, Jr., fell from a roof and sustained injuries which may prove fatal. Property damage will probably reach $60,000.

Children Burned to Death.

Two daughters, aged 6 and 8, of David Harshman, a farmer near Springfield, Ohio, were burned to death by an explosion of a coal oil can while starting a fire in a cook stove, Thursday evening. Both lingered several hours, the younger dying Friday morning.

Filibusters Land In Cuba.

A dispatch from Havana says: An expedition of Cuban filibusters from Florida is reported to have landed on Sunday in Havana province, at the mouth of the Jaruco river. The Spanish gunboat. Reina Maria Christina, which was cruising about the coast, endeavored to intercept the expedition but without success.

Anarchists Arrested in Rome.

A special dispatch from Rome says that eight Anarchists have been arrested there on suspicion of complicity in the attempt upon the life of King Humbert, made by Pietra Acciarito, on April 23. Acciarito attempted to stab his Majesty while on his way to the races, and after trial and conviction was sentenced on May 29 to imprisonment for life in the galleys.

Imprisoned in a Cave.

A few days ago a party went from Spring City, Tenn., to explore the grassy bowl cave near Crossville. One of the party, James Anderson, fell about 40 feet to the bottom of a hole in one of the caverns. The messenger who brought the news to Chattanooga, Thursday, said that when he left Anderson had not been rescued, though his cries could be heard in the bottom of the pit.

Race Across the Atlantic.

The American Line steamer St. Louis, from Southampton, and the Cunard Liner Campania, from Liverpool via Queenstown, arrived at New York quarantine Friday evening, the former at 8:16, three minutes ahead of her rival, the Campania. Both steamers had had a most exciting race for 16 hours, the American liner winning by only three minutes. The St. Louis made the passage in 6 days 10 hours 37 minutes, and the Campania's time was 5 days 15 hours 16 minutes.

American Cruiser Arrives at Tangier.

The United States cruiser San Francisco has arrived at Tangier, Morocco, and the United States cruiser Raleigh was expected there Friday. The San Francisco and Raleigh have been sent to Tangier to support the protest of United States Consul General Burke against the discrimination of the authorities of Morocco against Americans in refusing to permit them to employ native help, a privilege which is allowed Europeans. American citizens, in consequence have suffered inconvenience and loss.

Warning to Turkey.

The semi-official Fremdenblatt, of Vienna, Austria, warns Turkey that the harmony of the powers is not impaired, and that the policy of the Turkish government is doomed to failure if it counts upon a disagreement. The Fremdenblatt adds: "Russia and France, like the other powers, have agreed that the negotiations must be brought to a close, and the Porte will become convinced that its attempts to deduce extreme consequences from the Turkish victories are vain and must fall before the firm will of Europe."

A Test of Civil Service Rules.

As a result of the announcement by United States Marshal Kenchal that all the Democratic deputies in that office would have to retire in favor of Republicans on August 1, Charles P. Taylor, a deputy, asked Judge Baker, this morning, for an injunction against his chief. The case will afford a test of the civil service law. A Democratic attorney-general has declared that the duties are in the classified list. It was later agreed that Kercheval would retain Taylor till September, when the application will be heard.

A Thrice-Stricken Family.

News of a deplorable accident in the family of Frank Warden, a well known farmer, living near Compton, in the Gaither mountains, Ark., has been received. Two of his children, a boy aged 7 and a girl aged 9, were in the barn yard gathering eggs. In one hen's nest they discovered a huge rattlesnake and were badly bitten. Their mother, hearing the children scream, hurriedly put her baby on the floor and ran to their assistance. Both children bitten by the rattlesnake died in terrible agony, and while the mother was absent from her babe it fell into a tub of water and was drowned.

Holocaust of a Family.

Hugh Joeson and family of five, who lived fifteen miles northeast of Pineville, Ky., were burned to death Tuesday night, being unable to escape from their cottage, which was fired over their heads. The dead are: Hugh Joeson, the father; Mary Joeson, his wife; Fannie Joeson, a daughter 14 years old; Jake Joeson, a son, 10 years old; Maggie, a daughter, 6 years old. The remains of all six were found in the debris. The fire was undoubtedly of incendiary origin, and the Bell county officers are taking steps to discover the guilty parties.

Weyler Again Recalled.

The Sun's Havana cable says: "Gen. Weyler has been recalled by the central government. As soon as the Captain-general enters Havana from Santo Espiritu he will tender his resignation. It is likely he will not turn over the government of Cuba to his second in office and start at once for Spain, as many Captain-generals have done, but will remain in office until his successor arrives. Cable dispatches from Spain, received by way of Key West, say the government intends to replace Weyler with Gen. Ramon Blanco, Marquis of Pena Plata, who was Captain-general of the island in 1878, and who held the same office in the Phillippines when the revolution began there.

Desperate Duel In the Dark.

A dance was held at the home of Frank Finn, a miner, near the Austrian camp, Greenwood, Ark., Thursday night, at which beer flowed freely. Tom Stergule and Antonio Dollar became involved in a difficulty over a woman. When the dance was over Stergule followed Dollar to his room and a bloody fight began. Stergule used a long knife and Dollar defended himself with his razor. The candle was extinguished and they fought in the dark until Stergule lay dead, literally cut to pieces and Dollar was fatally wounded, having received fifteen knife thrusts. The room in which the fight took place presented a gruesome sight when the duel was over, blood being spattered all over the floor, walls and furniture. Dollar's razor blade was found imbedded in the body of his victim.

THE RUIZ CLAIM.

Preparation of the Case Against Spain Completed.

The state department officials, after weeks of hard work, have completed the preparation of our case on the prosecution of the Ruiz claim, and, after receiving the approval of the president, it will be turned over to Minister Woodford for presentation to the Madrid foreign office when he sails from New York on the 28th instant.

In the preparation of this case Mr. Calhoun, the United States special commissioner, has contributed the principal part; but the law officers of the state department have done much to present the facts collected by him in the strongest light and established a good basis for the claim of indemnity originally fixed at $150,000, which is to be urged against the Spanish government.

The University of Alabama.

The new President, Dr. Jas. K. Powers, reached Tuskaloosa at noon on the 1st day of July and went immediately to work. He called the faculty together, and appointed a committee to revise the courses of study, for presentation to the board of trustees for approval on the 8th. These courses as arranged and approved are up to date in every particular. While certain things are required for any degree, considerable latitude is allowed in the matter of election. This latitude increases as students advance in the courses.

EXPENSES REDUCED.

The fees were materially reduced. A year's expenses were cut from $172.50 to $130, exclusive of uniform.

YOUNG LADIES

may now enter the freshman class. Such board in private families and pay no college fees except in the several laboratories. The University is now open to women, but they must be 18 years old. It is hoped they will take advantage of the fact.

JUDGE W. S. THORINGTON,

has been chosen as Dean of the Law School, and he will devote his entire time to the duties of his position. Prof. Ormond Somerville is his assistant. These gentlemen are now preparing a course of study.

In a few days a supplement to the catalogue will be issued, setting forth these facts, as well as other necessary information. This, together with the catalogue, can be had on application to the President, whose address is University, Ala.

Cotton Mill Resumes.

The Everett, Pemberton and Atlantic Cotton mills, of Lawrence, Mass., started up Monday after a week's shut down. The mills employed about 8,000 employees.

Imports and Exports of Specie.

Exports of specie from New York for the week were $372,475 in silver and 9,302 in gold. The imports: Gold $37,686; silver $49,411; general merchandise $8,372,947; dry goods $4,429,307.

We commence the GREATEST SALE of Dry Goods, Groceries, Clothing, Shoes Hardware, etc., in the history of Birmingham. All goods in our wholesale departments will be forced on through the retail departments. We must have room for our fall wholesale stock. We sell the best of everything the cheapest.

Drennen & Co.,

BIRMINGHAM, ALA.

THE TIME.

What time is it?
Time to do well;
Time to live better;
Give up the grudge;
Answer that letter;
Speaking that kind word to sweeten a sorrow;
Do that good deed you would leave to-morrow.

What time is it?
Time to be earnest,
Laying up treasure;
Time to be thoughtful
Choosing true pleasure;
Loving stern justice, of truth being fond—
Making your word just as good as your bond.

FELICIA'S STORY.

There was no sound in the room but the scratch-scratching of Felicia's pen, driven rapidly over the paper above which the pretty brown head was earnestly bent. She wrote of garden parties, of gay and careless people, while she sat in a shabby little sitting room in a cheap boarding house, with faded carpets and curtains and worn furniture.

At length she paused and looked up with dreamy eyes. They encountered those of a young man who lay on a sofa at the other side of the room—a man of perhaps 26, with a face pale and worn by suffering. A pair of crutches rested against the sofa within his reach. His face brightened with a smile as Felicia looked up.

"Well," he said," is genius burning very brightly, that you fix me with that soulful gaze?"

"I was only thinking of the contrast between the scenes of my imagination and the reality we live in," returned Felicia.

She dropped her pen and crossed the room with her swift, light step, and sitting on the floor beside the sofa leaned her head against her brother's shoulder. He threw his arm round her.

"Poor little girl! I wish you could experience some of those 'good times' you write about, instead of having to do them all from imagination. I hoped once to do so much for you,and now it is you who do everything for me, while I can do nothing."

"Oh Phil! You know I like nothing better than to work for you. And, besides, it won't be for always. See how much better you are now. Why, soon you will be able to throw away your crutches, even."

"Well, I hope so," said Philip, but without much hope in his voice.

It was only three weeks from Thanksgiving, but Philip could not feel thankful while he was still confined to his sofa and Felicia toiled to support him.

She taught in a small private school and gave music lessons in the afternoon, deriving from these occupations a sufficient income to keep them in a very simple style. She tried to add to their resources by writing in her evening hours those bright stories which Philip, at least, liked to read, of which it must be confessed very few had as yet been accepted.

"Come," said Philip, rousing himself, after a pause, "read me what you have written. I have not heard of this new venture."

Felicia obeyed.

"That is capital, Felicia," he said, when she stopped. "It ought to be accepted."

"Yes, but will it?" said Felicia, with a comical lifting of the brows.

"But there was that editor who accepted a story last summer, and wrote you such a nice note."

"He was a very exceptional editor."

"I don't see how you do it," said Philip thoughtfully; "you have never seen people like that."

"Imagination," said Felicia, merrily; "sort of 'Aladdin's Lamp' business, you know. I just shut my eyes in the darkness and it all comes before me."

"I wish it did in reality," said Philip.

Felicia's story was duly finished, despatched and—returned. She did not tell Philip of the return of the manuscript, but presently resolved on another trial. She would go to the sympathetic editor who had accepted her story last summer and offer him her wares in person.

The next day was Saturday. After breakfast she put on her plainest dress, and, taking her parcel of manuscript, neatly done up like an innocent looking book, she set forth.

In a short time she found herself in the editor's sanctum, and the editor, a polite and gentlemanly person, was listening respectfully while she offered her modest little manuscript for his august perusal.

She might leave it, he told her politely, to be examined. Manuscripts were examined in order, and hers would be read in its turn, and an answer sent her within a few weeks—as soon as possible, in fact. And then the busy editor gave a significant glance at his interrupted work, which Felicia understood and promptly took her leave.

When she had gone the assistant editor, whom she had scarcely noticed, inquired who the young lady was. For answer the chief read the address Felicia had given him:

"'Miss Crofton, 21 Howard street.' That's all I know of her."

"Her face was somehow familiar," returned Raymond. "I had a college friend named Crofton. I dare say, however, she does not belong to his family."

Nevertheless, he could not get the girl's face out of his mind: and the next evening he made his way to Howard street, resolved to see Miss Crofton and find out if she were in any way connected with his friend, of whom he had lost sight.

He found the house without difficulty, and learned that Miss Crofton and her brother lived there. This was promising. He went upstairs, preceded by the landlady's little boy to show him the way. The door of the sitting room, which was indicated to him as Miss Crofton's, was ajar, and dismissing his small guide, Raymond advanced alone, preferring to announce himself.

As he stood at the half open door before knocking he had a moment's opportunity, unobserved, to see the occupants of the room. Felicia was sitting at the piano, playing and singing softly in the twilight, while Philip lay listening with closed eyes, and the flickering firelight showed the pale face of his old friend, beyond a doubt.

Raymond made three steps across the room to the sofa and caught Philip's thin hand.

"Phil—Phil Crofton, have you forgotton me?"

"Raymond—is it possible? Where—how did you find us out?" said Philip disconnectedly.

Felicia looked on in wide-eyed surprise for a few moments, until Philip remembered her.

"Felicia, this is my old friend Raymond. You have often heard me speak of him."

"Oh, yes. I am so glad to see you, Mr. Raymond." Felicia gave him her hand with a pretty, cordial greeting. After a moment she added, pleasantly: "You are just in time to share our tea, so I will go and see about it and leave you and Philip to have a talk."

She left the room and John Raymond drew a chair to his friend's side, and heard his story.

Raymond was touched by the brief tale. It was easy to read between the lines of poverty and struggle. But he had no time to say anything, for Felicia was coming.

Apprarances are deceitful. She did not look in the least like a literary woman, thought Mr. Raymond, at the end of a very pleasant evening.

He paid them several more visits in the next few weeks, but told them little about himself, except the interesting fact that he was married and had the most charming wife and most wonderful baby in the world.

A day or two before Thanksgiving, Felicia received a letter from her friendly editor—a very kind letter, enclosing a check for her story. Now there was cause for thanksgiving, indeed. Philip could have the new dressing gown she had so long wanted for him.

At this point Raymond tapped at the door and she sprang up to welcome him.

"You look as if you had good news," he remarked as he shook hands.

Felicia looked at Philip. He returned the look and laughed.

"She is too modest to tell you, John, but I will, for I am proud of my little sister."

He explained, and Raymond expressed his pleasure, but without a hint of his previons knowledge of the subject. Presently he changed the conversation.

"My wife would have called on you, Miss Crofton, but you understand, I am sure, that it has been impossible. It is not a mere excuse."

"Oh, yes, I quite understand," said Felicia readily.

"Then I have a message for you from her. She expects to have a few friends to dinner on Thanksgiving, and she enjoined me to beg you both to come to us. It is not an empty form, I assure you. She really wishes it, and so do I. Phil, you will come, will you not? I should like to see you in my house."

Philip and Felicia looked at each other. "What shall I wear?" was the question written in her eyes. He understood it and laughed.

"I'll go if you will, Felicia," he said.

It was settled at last. The white dress, skilfully altered and freshened by Felicia's deft fingers, was pronounced good enough for a quiet dinner party. They went early as Raymond had begged them to do, to save Philip the embarrassment of entering on the crutches before strangers.

Little Mrs. Raymond was expecting them, and came promptly forward with such a bright cordial greeting that Felicia's slight shyness and reluctance vanished at once.

Presently Raymond came in and took possession of his friend, and soon the other guests began to gather. Felicia found herself introduced to one and another, and her old love of society revived. She talked well, in her soft voice, and Philip look at her now and then approvingly.

But the party was not complete.

"I am so provoked," said Mrs. Raymond, when she found herself beside Felicia again. "I expected my brother, and he promised me to come early—ah, there he is."

At sight of him Felicia started visibly and the color suddenly left her cheeks. He made his way to his sister's side to be greeted with reproaches. "Couldn't help it," he said. "I was detained." Here his eyes fell on Felicia, and he also started, but controlled himself immediately. Mrs. Raymond introduced them and moved away. Carroll Mortimer took the vacant chair beside Felicia. Their position was awkward. Three years ago they had quarrelled violently and parted. When Carroll repented and went back to make amends the bird had flown, and Philip and Felicia were lost in the great city. He broke the silence at last.

"Felicia, do you know now I have looked for you?"

"Have you?" returned Felicia, inexpressively, though her heart was beating.

"Have I? How cold you are. Have you forgotten the old days, Felicia? I went back to the farm to beg you to forgive me——" a flash of joy suddenly illuminated her face—"and found you gone. I have cared for nothing ever since but to find you again. Is it too late, dear? Can you forgive and forget?" The room was full of people. He could not even take her hand. Felicia could only sit still and control her face, but her eyes flashed back an answer.

"I am willing, Carroll," she said quietly.

"And isn't it strange how things work themselves out?" said Felicia, talking it over with Philip on Christmas eve. "If it had not been for Mr. Raymond finding us out, you would not have had this nice position offered to you, now that you are able to work again; and if it had not been for Mrs Raymond's dinner party, Carroll and I might never have found each other again," with a pretty blush, for she and Carroll were to be married at Easter.

"Our good fortune begins further back than that, my dear," said Philip. Did you ever hear how it was Raymond found us out?"

"No, tell me."

"Why, he is assistant editor of the magazine that accepted your story, and he heard your name the day you carried the story there—you never told me that, Felicia—and followed up the clew. So it really begins with your clever story."
